

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. # NAVAL INVESTIGATION.

TUESDAY, MARCH 9, 1920.

## UNITED STATES SENATE, SUBCOMMITTEE ON NAVAL AFFAIRS, Washington, D. C.

The committee met pursuant to the call of the chairman, at 10:30 a. m. in room 235, Senate Office Building, Senator Hale presiding.

Senators Hale (chairman), McCormick, Pittman, and

McKean. The committee will come to order. On January 7, 1920, at the first meeting of this committee which was being held on the subject of the awards in the Navy, a letter was read from Admiral William S. Sims to the Secretary of the Navy, dated January 7, 1920, without objection, that letter will be inserted in this record at the present time.

The letter referred to is here printed in the record as follows:)

JANUARY 7, 1920.

Admiral William S. Sims, United States Navy.

Secretary of the Navy.

Dear Sir:—The lessons of the Great War.

The experience of a war in which large naval forces have been engaged, and so much time has elapsed to permit of a careful estimate of the manner in which the war was conducted, it is of the first importance that the lessons to be derived from the experience be recorded in order that they may serve as a guide in

the conduct of a naval war of such a peculiar character that the experience of the past was of little assistance in determining the proper policy and in the tactical tactics that were rendered necessary by the number, geographical position of the countries involved, and by the enemy's method of attacking our merchant shipping in disregard of the tenets of international law and humanity.

It is particularly important that a just estimate be made of the lessons to be derived from the strategy and administration that were committed by our

Government that I submit the following account of what appears to me to be the errors, and the circumstances that led up to them, followed by the lessons to be derived therefrom.

The account is presented solely from the viewpoint of the commander of our naval forces in Europe, but specifically as a result of the experience of the unusual and very responsible position of the Navy Department in the naval council of the Allies, where only all the questions could be continuously discussed, and where only all the information, both current and general, was at all times available.

On March 1, 1917, in response to a request from the American Government in London, expressing the desire of the British Government that a high rank be sent to secure the closer cooperation which had suggested, I was ordered abroad on barely 48 hours' notice.

On my arrival in London, I was delivered to me verbally in Washington. No formal instruction of the Navy Department's plans or policy were received, though I received the following explicit admonition: "Do not let the British pull the wool over your eyes. It is none of our business to get out of the fire. We would as soon fight the British as

TUESDAY, MARCH 9, 1920.

## UNITED STATES SENATE, SUBCOMMITTEE ON NAVAL AFFAIRS, Washington, D. C.

The committee met pursuant to the call of the chairman, at 10 a. m. in room 235, Senate Office Building, Senator Hale presiding.

Senators Hale (chairman), McCormick, Pittman, and

CLAY. The committee will come to order. On January 7, 1920, at the first meeting of this committee which was being held on the subject of the awards in the Navy, a letter was read from Admiral William S. Sims to the Secretary of the Navy, dated January 7, 1920, without objection, that letter will be inserted in this record at the present time.

The letter referred to is here printed in the record as follows:)

JANUARY 7, 1920.

Admiral William S. Sims, United States Navy.

Secretary of the Navy.

Subject: Naval lessons of the Great War.

The conclusion of a war in which large naval forces have been engaged, and so much time has elapsed to permit of a careful estimate of the manner in which the war was conducted, it is of the first importance that the lessons to be derived from the experience be recorded in order that they may serve as a guide in

the conduct of a naval war of such a peculiar character that the experience of the past was of little assistance in determining the proper policy and in the tactical tactics that were rendered necessary by the number, geographical position, and the resources of the countries involved, and by the enemy's method of attacking merchant shipping in disregard of the tenets of international law and humanity.

It is particularly important that a just estimate be made of the lessons in strategy, and administration, that were committed by our

commanders that I submit the following account of what appears to me to be the nature of these errors, and the circumstances that led up to them, followed by a statement of the lessons to be derived therefrom.

The lessons are presented solely from the viewpoint of the commander of our naval forces in Europe, but specifically as a result of the experience gained in the unusual and very responsible position of the Navy Department representative in the naval council of the Allies, where only all important matters could be continuously discussed, and where only all essential information, both current and general, was at all times available.

On the 10th of March, 1917, in response to a request from the American Government in London, expressing the desire of the British Government that a high rank officer be sent to secure the closer cooperation which the British Government had suggested, I was ordered abroad on barely 48 hours' notice.

On my arrival in London, I was delivered to me verbally in Washington. No formal instruction was given of the Navy Department's plans or policy were received, though I received the following explicit admonition: 'Do not let the British pull the wool over your eyes. It is none of our business to let them out of the fire. We would as soon fight the British as

8. I assumed that my mission was to confer with the heads of navies to learn the actual situation and to discuss means for naval action in case the United States declared war against the Central Powers. My assistant commander accompanied me as aid. We were directed not to take to travel under assumed names, I expected to return and supplement my reporting the situation in person. I had no idea that I would be to command the naval forces in Europe in case of war.

9. I arrived in Liverpool on April 9, and in London on April 10, 1917, immediately to the admiralty, where the naval situation was fully explained to responsible officials. This explanation showed that the Navy Department did not understand the seriousness of the submarine situation; that its information was incomplete and inaccurate. This was due to the insufficient scope of its service, very few naval officers having been sent to Europe for information when we entered the war.

10. A review of the cables sent to the department in April, 1917, showed the situation was very serious and that the enemy was rapidly winning the destruction of merchant shipping. Throughout the following year numerous letters and the most urgent possible character were sent with the object of pressing upon the department the vital necessity of our maximum effort being made in the European waters with the least possible delay, but without producing desired results.

11. Attention was frequently invited to the fact that shipping was being sunk faster than it was being built, and that it was a matter of simple arithmetic to determine when the Allies would have to sue for peace if the situation continued.

12. It may be well to state here that the delays in taking action, and the support, involving the efficiency of the United States naval assistance, can be fully understood only through an examination of the communications between the department and the naval headquarters abroad.

13. For some reason which has never been explained, the Navy Department during at least the first six months of the war, failed to put into actual practice a policy of cooperation with the Allies—the policy required for winning the war with the least possible delay.

14. The headquarters in Europe was not infrequently left in ignorance of the department's policies, plans for operation of United States forces, and its action upon my many dispatches. Not until July 10, 1917, did the Navy Department outline a policy as regards naval cooperation with the Allies—in a cable letter to the State Department.

15. As usual in such cases, the policy thus set forth was academically sound, but that it was not carried out, or was not understood by the department, is shown by the fact that for 10 months after its receipt I was still urgently recommending the use of forces—still trying to convince the department that the war was in the Atlantic; that the United States naval "front" was off the European coast; that the United States coast; that it was there only that the naval enemy was that it was there only that United States shipping, let alone allied shipping, was protected with the maximum efficiency.

16. A review of the dispatches makes it apparent that the department accepted my reports and recommendations with the seriousness that the critics demanded. There are many instances that illustrate this. One that makes the case of our battleships that were requested as reinforcement of the Grand Fleet.

17. Following a conference with Admiral Jellicoe, then first sea lord, of the British Admiralty, and Admiral Beatty, the chief of the Grand Fleet, it was strongly recommended, on July 21, 1917, that four of our coal-burning battleships be sent at once. There was great delay, there was even an acknowledgment of this request. This naturally subjected us to much embarrassment. The request, though repeated, was finally refused.

18. In the following November the chief of naval operations arrived in London with the Col. House mission. After discussing this question of the necessity of our battleships, with the same officials with whom I had discussed it, he once again recommended that they be sent. The result was that it was over four months after the original request (Nov. 28), that the four ships sailed from the United States.

19. This is but one of a number of examples of a similar kind and strikingly illustrates the nature of the delays caused by the department's insistence upon its own methods of understanding the intricate details of rapidly changing conditions. As it was, of course, a physical impossibility to keep the department fully and promptly informed, and as the department insisted upon making decisions on both the disposition and the actual operations of the European forces, the inevitable result was unsound decisions, and in some cases long delays before the

to accept the original recommendations that were based upon the actual conditions with the heads of the allied navies. The actions that were finally taken, after extensive cabled and wireless communications, and consequently long delays, it is apparent that if I could have been in Washington to explain fully my recommendations, and the reasons therefor, the conferences upon which they were based, they would undoubtedly have been carried out from two to six months earlier. The point is that it was not considered that there was anyone in Washington more competent than I to do so; he should have been sent to Europe for that purpose; but,

the recommendations of the Navy Department's representative, based upon the actual conditions with the allied commanders, should have been accepted and implemented. The action of the department in this respect was a violation of the principle of warfare—see Mahan, or any authority—and it was a great delay and reluctance in accepting the indisputable fact,

that it was apparent to anyone, that the critical sea area was in the Atlantic, the so-called submarine war zone; that the submarine campaign that was being waged would affect the ultimate decision of the war only in that area. The delay in Washington greatly slowed the sending of the necessary orders, and nearly resulted in prolonging the war.

It is self-evident that the department could not possibly have been kept informed in detail, by cable code messages, of the actual situation, and, particularly, of the rapidly changing conditions during the war in the summer of 1917.

It is a fact that this was a physical impossibility during all of that period. The work of collecting the necessary information, or the mechanical work of transcribing it, would have been away from the capacity of one man assisted by the one aid I was allowed. The best that could possibly be done was to keep the department informed in a general way of the conclusions reached by the Allied commanders at the "front," and of the situation.

When the department declined to approve such decisions, the only way to explain by letter, as fully as time and insufficient assistance permitted, was to do so. The result was, of course, long, embarrassing, and dangerous delays. The department had promptly accepted the recommendations made, beginning with the arrival abroad, and continuing for some months, and had sent the necessary orders and other craft which were finally sent in the next four or five months, so that the United States naval intervention would have been completed.

It is difficult at the present time to believe that any policy involving such delays had been persisted in, particularly when combined with a constant stream of requests for additional staff officers to assist my one aide; the dispatches and letters exchanged with the department during this period, and the end of the war, will show that the department insisted upon the necessity of full and detailed substantiation of every proposition, and that of those concerning the disposition and handling of the naval forces in contact with the enemy.

From the above-mentioned statement of policy, from the Navy to the Allies, a copy of which was sent me, it is clearly set forth that readiness to send our light forces abroad was dependent upon the Allies should keep the department fully informed through me of the situation.

While the department's first statement of policy (which was made three months after we entered the war) was what I had recommended, it nevertheless withheld putting it into effect, apparently because the Allies were not keeping it fully informed of their plans. The matter was that nothing was being withheld, and that the orders which were in writing, which were actually of an official character in any way affecting United States naval cooperation, had been sent to the department as completely as long distance communication—coded messages—

as was made by the British Admiralty as to uses of our forces abroad. For example, in April, 1917, there was anxiety lest the enemy would send a force from the Channel with a heavy force and get away before he could be met by a force from the Grand Fleet, the nearest base of which was at Edinburgh. Accordingly, the Admiralty suggested that a squadron of ships be based on Brest or in the Channel. No reply was made to this—

gestion. Also, the value of submarines in the campaign was first explained in 1917. None were sent until October, 1917, when five arrived in Ireland by seven more in January and February, 1918.

32. In spite of the numerous messages sent in April, the only information up to April 27, 1917, was that six destroyers only would be sent. The situation was then so very critical that I appealed to the American ambassador in London to send a most urgent message to the President, and on May 3, 1917, the information was received of the department's intention to send more destroyers—that ultimately 36 and two repair ships would be sent.

33. Most earnest requests were made for tugs because of the urgent need in the submarine zone. These requests fully explained how many torpedoes could have been beached and salvaged if these tugs had been available. It has shown that such vessels could be repaired and put in service again in a very short time compared to that required to build new ships—that in a great saving of tonnage.

34. A year after we entered the war but four tugs had been sent, and 10 were specifically allocated to Italy by the department. Nine more were sent at various times, but none before April 23, 1918.

35. The department caused serious embarrassment and delays in putting into effect the convoy system which was the most important of all the measures for defeating the submarine war against allied shipping.

36. The department was repeatedly assured that the Allies at all times had accurate information as to the movement of submarines, and that it was tactically certain that they could not reach our coast, or even leave Europe, without advance information being supplied. Subsequent events proved this assurance to be correct.

37. No submarines visited our coast until May, 1918, and the department in all cases informed when they started across, and often as to their exact destination where they were to lay mines, etc.

38. My dispatches show that with all possible emphasis I tried to induce the department to view the campaign as a whole; to consider our naval forces as a relatively small item of an allied naval team; that our mission was the protection of all allied lines of communication and not the United States lines of communication alone; that, particularly in the early part of our campaign, the strictly United States lines of communication, as compared to allied lines, were inconsiderable; and that it was quite possible to give our relatively small commerce quite superior protection at the expense of losing the war by denying essential protection to the vast allied commerce upon which the success of our common cause chiefly depended.

39. There was naturally a strong inclination on the part of the various governments, including the United States, to resist this policy in favor of a disposition of forces which would afford superior protection to their respective commercial vessels.

40. War is always a dangerous game. Military operations conducted by allied powers should never be based upon a policy of "safety first" as in the interests of any particular ally. This is especially true where success depends upon the maximum possible protection being given to the allied commerce as a whole.

41. As the possession of adequate shipping was an imperative requirement in war, it follows that the essential policy was to pool all antisubmarine forces to the best possible advantage for the protection of all shipping, regardless of flag that it happened to be under. As the winning of the war was the primary object, and as our antisubmarine forces and those of the Allies were always in contact, and as it was consequently impossible to prevent a certain amount of loss, it was that the game was to reduce the combined loss of allied shipping below a point which would defeat the objective of the enemy and thus insure victory of the cause as a whole.

42. It was repeatedly explained that if we could actually entice the enemy by shifting his submarines to our coast it would be greatly to the advantage of the cause, even granting that our shipping would suffer somewhat more severely than the chances of the enemy shifting any of his operations to the United States without our having advance knowledge, while remote, was a fully justified risk and therefore that such considerations should not deter us in any way from putting every possible bit of naval strength into the fight on the actual "front"; the "war zone" in European waters. Moreover, that the risk was slight, could be sent back, if necessary, before submarines could reach our coast to do much damage. In making long passages submarines necessarily steam at a slow speed—from 5 to 6 knots.

43. Submarines attacked almost exclusively merchant vessels, thus cutting off supplies essential to the armies. This was their correct mission, and it

and naval vessels. It was, therefore, our mission to adopt the submarine into contact with the Allies' military vessels, and to prevent shipping. This meant antisubmarine craft in such numbers as could not reach their prey without encountering them. It was continuously urged that everything be sent, not only the best antisubmarine craft, but also yachts, gunboats, and craft that could steam across the ocean or be towed across. There were many naval activities outside of the eastern Atlantic, South Atlantic, Pacific, and Asiatic waters. But, at the time in question we were losing the war. These losses were of little importance—practically none as compared with the loss of merchantmen. A great deal of unnecessary effort was expended in these efforts that we could afford to lose some antisubmarine craft and the loss of merchantmen at the rate then being

...that if a considerable number of antisubmarine vessels were to be sent to the Caribbean, there would be risk of public criticism which, in time of war, would be most disadvantageous, because to inform the public would be to invite them to question the information, and I strongly advised that this risk be accepted; that we should not be deterred by the possibility of such adverse criticism; that it was imperative that every possible means be used to protect the Caribbean, regardless of other considerations, and thus

... remarkable situation disclosed by the correspondence with ... during the most critical period - the first four months after ... the aid, and that for more than the first year I had a

As far as possible it was explained, in numerous cables and letters, the absolute necessity of further assistance in order to effectively, but only to receive always the same answer, "not available".

My only aid was unable longer to support the continuous work, including the very anxious task of planning for the boats then arriving. And it was only after this fact had been ascertained and the necessary orders were sent out, though the department still declined to grant that had been requested, with full explanations of the types of boats necessary for each. I urged the department to give me at least the number of one flotilla of destroyers would have in time of

It is apparent that support in this matter need not be expressed simply as a staff by detaching officers from some of the ships, but that as many of the ships were at that time short of officers; that the whole force becoming ineffective through the administrative work getting beyond the capacity of the staff; that this force consisted of about 60 regular and 140 reserve men and clerical force for the administration, and that the dispersed forces of about 370 ships of all classes, 5,000 men, were finally, I believe, tacitly recognized by the end of the war, when a few officers were sent to be detached from the beginning, as well as the necessity of the dispersed forces, there can be no doubt that the end of the war had involved hundreds of thousands of tons of shipping and many

...to understand what I and my single aid were up

... developments which were rapidly changing almost

• 12 • applying and operating the entire force.

...with that of the allies

It was also necessary to keep track of the results of the naval operations from the side of the Allies and from that of the enemy, to determine the supply, repairs, etc., which would affect any United States fleet.

States naval forces that might be sent abroad. The above, to say nothing to solve problems relating to the entirely new forces introduced into the aviation—a tremendous problem in itself.

52. It would take many pages to set forth all the activities and information were to be studied and reports of which, of course, could have been in the department if the staff had been adequate.

53. If the department realized these conditions, it is made clear by that it was not influenced by them. The correspondence shows that I wanted the department to understand that I was confronted with an impossibility that it was actually physically impossible for me and one aide to carry out the necessary operations of the forces, let alone comply with the department for the details of information concerning all the various plans of the Allies of all methods and appliances used, etc. All this not to mention the details concerning new construction, new types of vessels, new methods of gunnery.

54. In a word, it would hardly be possible to conceive of a more complete understanding by the department of the actual situation that confronted me on the side, particularly during the critical period of the war.

55. On a number of occasions I invited the department's attention to the fact that it was impossible intelligently to direct the operation of our forces from Washington that if we were to cooperate with the allied navies, which was the only method of participating in the war, it was essential that we keep in close personal contact with the heads of the allied navies in the war area.

56. To this end it was pointed out that our organization abroad should be as the department's advance headquarters in the field, similar to the general headquarters of the Army in the field; that the personnel of the organization's advance headquarters should be more than adequate rather than inadequate to avoid the great danger of basing the Navy's part in the war upon information.

57. When Gen. Pershing arrived in Europe in May, 1917, he was accompanied by a nucleus staff, consisting of 5 colonels, 6 lieutenant colonels, 16 majors, 11 captains, and 8 lieutenants, or 53 commissioned officers in all, besides many writers and clerical. Ultimately this staff was expanded to about 1,500 commissioned officers.

58. As was repeatedly pointed out, such was the necessity for an adequate organization abroad that the term "not available" should have been applied to activities of vastly less importance; that the headquarters organization in Washington, well as that in Washington, should be adequate, even if it meant laying up a reserve of old ships, especially those of a class which could not possibly be used in the war.

59. The policy indicated by the dispatches in question may be summed up in a statement that ships as well as troops in the field, no matter what their individual skill, would be very heavily handicapped if their combined efforts were not coordinated and directed from the most central source of all available information.

60. The department frequently omitted to keep its naval representatives in the field informed of its plans, intentions, and sometimes even the movements of the European area, and there was at times embarrassment caused by lack of information concerning the Navy's activities in other areas, such as the South Pacific, etc. As foreign forces and shipping were also operating in those areas, it was embarrassing not to be able to answer in conference with the Allies all questions concerning our actual naval activities as well as prospective plans, the cause of which would necessarily influence allied plans.

61. It requires little imagination to understand the great embarrassing position. It was, of course, impossible even to attempt any explanation of the evident fact that the Allies were not receiving the easily possible naval assistance that I was not receiving adequate assistance in personnel.

62. Apart from the resulting lack of coordination, it was very difficult, sometimes impossible—to avoid the impression conveyed thereby to the allied navies that I was not being supported or was not in the confidence of the department.

63. Delays and confusion were caused by the department's dealing directly with Washington with European naval officials in Europe without using its own representatives there to investigate conditions at the "front," discuss all details with allied navies, and thus coordinate effort.

64. For example, on May 8, without previous explanation, the department announced its intention to establish naval bases at Bordeaux and Brest, although on May 5, it had been informed of the results of a conference with the French authorities and their agreement that our forces should remain concentrated in the area of greatest enemy activity.

and confusion were also caused by dealing with representatives of nations stationed in America, who made independent and strenuous demands for coal, and other supplies, etc., without reference to the demands or necessities of their own navies. The department thus ignored its own representative who was present for the paramount purpose of investigating the details of all such matters determining, after conferences with the allied navies, their relative necessities, their relation to the necessities of the antisubmarine campaign, and so on, that a correct policy would have placed a heavy responsibility upon it as it was impossible to decide such questions efficiently and thoroughly to all the information, and without opportunity for personal consideration this policy should have been adopted or else the person or persons assumed to be competent to decide such matters from a distance should have been transferred permanently to headquarters in Europe where personal and available information, and continuous conferences would have been possible.

It is clearly to understand the vital importance of continuous conferences with the officials of the allied navies and Governments who were directly concerned, nothing should be neglected to render decisions sound.

Nothing such as the mass of details involved in a decision—not only the actual situation, but those based upon actual experience in similar situations at former conferences—that it was, of course, impossible for me to attend special conferences to acquire this information in time to be of use. The almost inevitable result in such cases would be unsound decisions by them at the conferences.

There was insistence by the department upon finding new naval plans—a plan such as blocking the enemy in his ports. The objection to this plan was that the situation was critical and their preparation would be inadequate with all available forces. This insistence assumed that the department was completely informed as it necessarily was, and without previous experience the war was more competent to decide upon practicable plans than the department in continuous conference with the leaders of the allied navies who had nearly three years' experience. This attitude was maintained by the Commander in Chief of the Atlantic Fleet and the Chief of Naval Operations in Europe and learned something of the situation.

For the first year of the war the department refused to permit me to enroll in Europe capable Americans who had special knowledge and who offered their services. Many of these men possessed special European experience which was not obtained at home. Some of them felt so impelled to do their part that they returned to the United States in order that they might be enrolled.

For the first year of the war the department refused to trust to my discretion in the selection of officers, both for gallantry in action with the enemy and for other services. Many of these officers were performing services the value of which was in all proportion to the rank they held, and were far junior to the corresponding officers in allied services with whom they necessarily worked.

There was only a grave injustice to these fine men, but the policy deprived them of the advantage of increasing the morale of my forces by prompt rewards, and caused me to assume the attitude of indifference to their demonstrated gallantry, thereby decreasing their morale.

It is true that the most part did not care for the increase of pay, but it was a matter as well as an embarrassment, not to have the insignia corresponding to their rank and the services they were actually performing, and corresponding to the foreign officers with whom they were officially associated. When during the war was I permitted to select my subordinate flag commandants from among the few of my other subordinates.

The war depends so much upon complete mutual confidence and cooperation between the subordinates and their superiors, that it seems hardly necessary to say that at least have been consulted as to these important assignments, and that responsible for the results attained.

At the time, in the ninth month after our entry into the war, the lack of adequate personnel, particularly in respect of the lack of adequate personnel abroad, became known in Washington. This was brought about by the following cable messages.

DECEMBER

From: The Secretary of the Navy.  
To: Vice Admiral Sims, London.

1732. At House committee hearing of conduct of Navy, Representative said "I would like to have copy of complaints which have come from A on the other side." If you desire to make statement of action of reference to sending and supplying force under your command since please send in code.

DECEMBER

From: The Chief of Naval Operations.  
To: Vice Admiral Sims, London.

Effort being made to credit impression you have been hampered by Navy Department to meet your request for various things, particularly I feel that a strong positive statement on this subject from you is highly

77. I was thus confronted with a situation, not uncommon in war, which demanded a decision that no military commander should hesitate to make such a decision as would be most likely, while avoiding conflict, to act in common cause through the loyal support of superior authority by making of existing conditions, no matter how unsatisfactory. As the subject was a public discussion of which in Congress would have supplied valuable information to the enemy, not to mention increasing his morale and decreasing that of our fighting forces, it was manifestly desirable that it should be discouraged. Particularly that no information should be supplied that would render the situation inevitable. The following cablegram was therefore designed to accomplish its purpose:

DECEMBER 2

From: Vice Admiral Sims.  
To: The Secretary of the Navy.

2366. Your 1732. I strongly deprecate any effort to create an impression that our naval forces in European waters have been avoidably hampered by the Navy Department to comply with my recommendations for various things, particularly personnel.

It is of course well known that the antisubmarine campaign and the protection of allied shipping have been and still are hampered to a considerable extent by the small numbers of certain types of vessels, especially destroyers, and by the shortage of personnel, and I have repeatedly made recommendations in accordance with requirements on this situation. To these recommendations the department has responded with the assurance that reinforcements of both vessels and personnel were being sent to the maximum extent consistent with the many other requirements of the department in these respects.

The decision as to the relative importance of the employment of our naval forces and personnel in the theater of actual war operations in European waters must necessarily rest with the department, and I consider it the first duty of the front line to accept such decisions and to make the best of conditions. The fact that the reinforcements are at present admittedly unsatisfactory and must so remain until the necessary measures now being taken to increase our antisubmarine forces produce the desired reinforcements.

78. The above brief account of the manner in which our naval operations have been conducted clearly shows that the following grave errors were committed in violation of fundamental military principles; and it is manifestly desirable that such errors should be avoided in future:

(1) Although war with Germany had been imminent for many months prior to our declaration there were nevertheless no mature plans developed or naval policy formulated in preparation for war, in so far as its commander in Europe was informed.

(2) The Navy Department did not announce a policy until three months after the war was declared—at least, not to its representative and the commander of its forces in Europe.

(3) The Navy Department did not enter whole-heartedly into the campaign from the first many months after we declared war, thus putting a great strain upon the fighting forces in the war area by decreasing their confidence in their leadership.

(4) The outbreak of hostilities found many important naval units widely separated and in need of repairs before they could be sent to the critical area.

in the war zone had been cruising extensively off our seaboard for months and when war was declared were rushed through a brief and hurried training for distant service.

In the critical months of the enemy submarine campaign against the Allies the department violated the fundamental strategic principle of concentration of maximum force in the critical area of the conflict.

The representative with the allied admiralities was not supported in the critical months of the war, either by the adequate personnel or by the information that could have been supplied.

The attempt to command in the critical area of hostilities was never allowed to be exercised by subordinates and was not even consulted as to their assignment. The principle of the art of command is here involved.

The department made and acted upon decisions concerning operations in the Atlantic 3,000 miles away, when the conditions were such that the department did not have been in its possession, thus violating an essential principle of command and decisions necessarily depend upon complete information. The department, upon the judgment of those who had had actual war experience in the war zone, the Navy Department, though lacking not only this information but also adequate information concerning it, insisted upon a course of action that could not be carried out.

The department's actions so strongly implied a conviction that it was unable to make decisions concerning operations in the war zone that it lacked confidence in the judgment of its representative in the field of the Allies and its responsible commander in the "field." The principle that every action on the part of superior authorities is based upon confidence in subordinates. If such confidence is lacking, it should be expressed by ruthlessly changing the subordinate.

The principle that the commander in the field or afloat is one of the most important principles of the Government and is generally disastrous."—The Influence of the Navy, History, Mahan.

The department did not resist this temptation, and its frequent violation of this principle was a dangerous error committed during the naval war.

WM. S. SIMS.

At the conclusion of the reading of the above letter it was stated that there were certain matters contained in this letter which Admiral Sims had read at my request, with the contents of which I was familiar, I should ask the chairman of the full Naval Committee at a meeting to be held, to determine what action the committee should take in regard to this letter.

The Naval Affairs Committee met on the following Monday and the following resolution was passed:

Resolved, That the committee heretofore appointed to investigate the matter of awards for distinguished and heroic services be, and it hereby is, authorized to make its report on the matter referred to, to investigate the matter referred to in the letter of Admiral Sims to the Navy Department, and to report on the action touching operations during the war, introduced before the committee.

The committee has made its report on the matter of awards and has gone ahead with the letter of Admiral Sims of January 7. The report of the subcommittee on the question of the action touching operations during the war, introduced before the committee is not here to determine personal matters between officers of the Navy or between officers of the Navy and the Navy Department. In this case we are concerned with the matters contained in Admiral Sims's letter of January 7.

Admiral Sims will now take the stand.

The committee has the custom in the case of each witness to submit the testimony to the witness for correction, and in the case of every witness. Witnesses have made numerous corrections and the subcommittee feels that all such corrections should be agreed to by the full subcommittee. The volume of testimony

is very great and owing to the pressure of work in the last days of the has been so little time in which to go over the correction of the testimony. The subcommittee has decided to make up the reports of the hearing in preliminary form without correction, with the understanding that at a later period the corrections will be made and the records put in permanent form. These records appear as a verbatim copy of the evidence as published by the stenographer and are necessarily subject to errors both on the part of the stenographer and the stenographers, errors which will be corrected in the finished report.

## STATEMENT OF ADMIRAL W. S. SIMS, UNITED STATES NAVY.

Senator McCORMICK. Mr. Chairman, I wish to remark that I would like to proceed with the hearing that I believe it will occur to the committee, who are present, that approbation of the testimony of the witnesses, probabon directly or indirectly should not be indicated at a judicial character, and if there are other manifestations of applause or disapproval, I shall ask that the room be cleared.

The CHAIRMAN. I think that the Senator's request is reasonable, and I hope that the audience will not make disturbances.

Senator PITTMAN. I want to suggest that, at least for the adjourn when the Senate convenes. The reason for that is quite obvious. There is going to be some very important testimony take place in which each Senator is interested, and I therefore think that we adjourn at noon to-day.

The CHAIRMAN. The Senator from Nevada moves that we adjourn at 12 o'clock to-day until to-morrow morning at 10 o'clock. There is no objection that will be done.

Senator PITTMAN. I would like to make this suggestion for the consideration of the committee, that each witness be permitted to finish his direct testimony before any cross-examination or anything in the nature of cross-examination, and that any member of the committee be permitted to cross-examine that his cross-examination be finished before being interrupted by any other member of the committee, so as to have an order of examination. That is a suggestion.

The CHAIRMAN. I have no objection. Does that appear to Senator McCormick?

Senator McCORMICK. I am satisfied.

Senator TRAMMELL. It is agreeable to me.

The CHAIRMAN. And that the witnesses be allowed to finish their direct testimony before being questioned, if they so desire.

Senator PITTMAN. Yes.

The CHAIRMAN. Admiral Sims, will you hold up your right hand and swear that the testimony you are about to give will be the whole truth, and nothing but the truth, so help you God.

Admiral SIMS. I do, sir.

The CHAIRMAN. Have you any statement to make in connection with your letter of January 7 to the Secretary of the Navy?

Admiral SIMS. Yes, sir. I am particularly glad that the testimony will be allowed to complete his entire testimony before there is any cross-examination.

The preliminary statement I have prepared is as follows:

## 1. REASONS FOR THIS PRELIMINARY STATEMENT.

On permission of the committee, I deem it important to make a preliminary statement before proceeding with my testimony in substantiation of my letter of January 7, 1920, which is the subject of the investigation by the committee.

Such a statement important and necessary, because of the danger of attempting, in the very beginning, to clearly define, and to avoid any possibility of misinterpretation, the real issues which are involved in the entire object of my letter and, in my opinion of this case in its national aspect, will be jeopardized if we are led away from the subject in hand, are allowed to confuse the issue.

My gentlemen, that any subject worthy of the attention of a national investigation is a large one, involving solely national interests and such only, is the subject-matter of my letter. The issues therein are far above personalities or local controversies of naval service. Such questions have not been initiated by me, nor will I initiate them voluntarily. It must be recognized that my letter was not prepared for the consideration of this committee.

It was prepared for the sole consideration of naval officers and their training and their knowledge of the intricate details of the war, their familiarity with the sequence of events, the great mass of relevant facts upon which the questions involved for their true evaluation, are in a better position to answer and determine the merits of the case.

It is extremely difficult for me to convey the comprehensive nature of the case as necessary as a background to the points I aimed to make in my letter.

Difficulties have been increased by numerous fundamental questions which have been indicated, either by direct statement or implication, in testimony presented to this committee in connection with naval awards, and by numerous statements anticipated in this investigation.

One question I would invite attention to what appears to be a deliberate propaganda (at least, so it is believed to be by the service), aimed at prejudicing this case by wholly irrelevant matters prior to its investigation by this committee.

For example. In the testimony before this committee it was seen fit to introduce personal correspondence of a subject quite remote from that issue, and, further, with a view of the publicity which would attend it. Its introduction was so camouflaged under the implication that thereby the allegations on awards were to be in some way invalidated, as to who should have been the commander of the Atlantic at that time, or, in fact, my differences with Admiral Wilson, and their individual merit, had the most remote, if any, connection with that case or this.

Methods of making awards did not affect the morale of the service certainly was calculated to do so. Not content with the publicity which was sure to follow in the press, and to make matters worse, it was also broadcasted by the Navy Radio on its high-powered wireless stations to every ship and every man in the service.

Imagine the effect upon discipline of the fleet when this mental wireless announcement was posted on every bulletin board for the information of every man, from officers to the last boy, this information—whether true or not—casting reflection upon the ability of their leader, the commander in chief of the fleet, and the information which through its method of dissemination actually made invidious comparisons between many higher officers of the fleet.

This was a manifest outrage against the efficiency of the fleet, against Admiral Wilson himself, as well as against the propagation of the important issues of national safety before the committee.

It is for the above reasons that I find it necessary, solely in view of facilitating the task of this committee in reaching conclusions, to present this statement prior to my testimony.

## II. NOT RESPONSIBLE FOR PUBLICITY.

My position has been embarrassed in the first instance by our accusations of impropriety and insubordination and by the imputed impugning of my motives.

I think it is hardly necessary for me to comment at length upon the impression that has been given that I was responsible for the publicity of the letter here under investigation. It appears from the press that a resolution has actually been introduced into the House censuring my action in making this letter public. As I have before, no copies of this letter were at any time out of my possession until it was called for by this committee. Presumably the letter was called for because the department had published the fact of its existence and general nature.

I understand that it is my duty to reply to queries of the committee and that I am not justified in withholding any knowledge from my own which they request. I do not see how I can in any way be held responsible for any publicity of testimony which the committee calls upon me to offer.

## III. PROPRIETY OF SUBMITTING THE LETTER.

I wish also to establish very clearly that there is no question as to the propriety of my submitting this letter to the committee and, furthermore, as to my duty to do so.

(1) *In accordance with Naval Regulations and custom.*—Such action is not only in accordance with Naval Regulations, article 10, but is in accordance with a recent general order of the Navy Department accentuating these regulations.

(2) *Duty to submit the letter.*—As to the question of my writing such a letter, the fact will be established, I believe, to the entire satisfaction of this committee that throughout the war I was in every sense of the word an integral part of the departmental organization. My original mission assigned by the department was to act as its representative abroad, and this remained my primary mission throughout the war.

Throughout the war I was just as much a member of the mental organization, whose errors I now consider it a duty to publish, as any official with a desk and a chair in the Navy Department Building in Washington. The testimony will leave no doubt in *anyone's* mind upon that point.

*action and responsibilities in the war explained.*—The message had been conveyed that my official position abroad was one of independence and at least implying that our naval participations were in no wise dependent either upon my recommendations or being kept informed of departmental general policies. This is entirely erroneous, as I will make clear to the committee the conclusion of my testimony.

As to my power, to myself, as well as to the insurance of proper action by this committee, it seems necessary to make a few statements on this subject.

It was necessary to point out that success on the sea as well as on land was wholly dependent upon teamwork between the allied navies, in a phrase, upon unity of command. All allied navies, except the United States, were in constant personal contact by personal conferences, by telephone, and through a network of officers who could move back and forth in a matter of days. Such were the means of obtaining teamwork between allied navies. Our department, on the contrary, was isolated. It was, therefore, my principal mission to represent our department in these allied councils with the sole object in view of obtaining teamwork. It was not my mission merely to obtain and relay statements from allied leaders and from the department. A competent clerk could have been picked up who could have performed that task as efficiently as I could. On the contrary, it was my duty to speak for the department and to keep in daily touch with allied leaders, and, with the knowledge which I was supposed to have of the state of readiness of our service and our plans and to give the department the benefit of conclusions thereby arrived at on the spot.

The necessity of coordination—of teamwork—between nations is a lesson which Nations, more than individuals, are prone to be selfish in putting their individual national interests ahead of the interests of the world.

My father remarked to me during the war that his experiences had greatly diminished his admiration for Napoleon's strategy because Napoleon had never had anyone opposing him.

It was the impoverishment of all of the allied nations from over a year of war, and of our relatively enormous untouched resources, although it was natural and to be expected that, when the war was over, all allied nations should commence to flood us with requests for cooperation and assistance. Many of these requests were given consideration to the "cause" as a whole, or to the needs of others. It was, therefore, my duty to attempt, by my suggestions and actual presence on the scene, to establish a working basis between the various individual requests, with the object of making our cooperation as effective as possible.

Another part of my mission was that of attempting on the spot to digest the previous three years' war experience of our department so that during that period a most effective wall of secrecy had been maintained around the activities of the allied navies. We had a great deal of information, in fact, our entire service was then at home, and it was of the utmost importance to the efficiency of our participation that we should accumulate and digest in the quickest

grave and additional responsibility which developed later of the safety of our troops on the high seas. The war zone used by every American troop ship, every United States vessel of any description, naval as well as merchant, the one which permitted the certain joining up of our destroyers with all of these ships, all without exception with our naval headquarters abroad. Not one of these was originated in any other place. Anyone, from dough-broader who crossed the ocean during the war, can testify to the thanksgiving when these destroyers turned up there. I am now merely stating facts, in order that there be no question as to the true conditions of the war, and the fact was not only justified, but in duty bound to comment upon the war which should govern us in the future.

In question of the responsibility for the safety of our ships in the war zone there can be no question whatever as to what would have been justly cut if any of these routes were cut down, or plans for destroyer meetings, had resulted in disaster. As I have repeatedly reiterated, this was the work of the destroyers. To them belongs the credit. But it was all done by me, and I necessarily bore the responsibility.

*As to Atlantic Fleet at home.*—For some reason not known to me, a statement has been made that, on paper at least, I was a part of the commander in chief of the Atlantic Fleet, and that the forces under my command were at all times a part of that fleet. I would not have brought this point up myself, and I do not touch upon it now for fear of my remarks being construed as a reflection upon the fleet at home and its great work in the prosecution of the war.

It is true that throughout the war the forces in European waters were, on paper, as a part of the Atlantic Fleet in home

waters. It is unnecessary to discuss at this time, it was the policy of the department a wise course to maintain at all times a concentration of our entire Navy upon which we could fall back in case of emergency. Fortunately, such a contingency never arose, but, in case of emergency, it should be sufficient to set forth the following which I am certain the commander in chief will be able to explain.

At no time during the war did I receive any order from the commander in chief of the Atlantic Fleet at home affecting actual disposition of forces, or plans for the forces under my command in European waters.

All specific orders of the Navy Department, all of my orders were made direct to the department, and all orders were received direct from the department. It is therefore apparent that I had the actual command of all of the forces abroad, and was responsible to the Navy Department for their successful operations.

It is true that, if anyone be so included, the fact is that the exact letter of my specific orders did not comprehensively specify the functions which I was called upon to perform abroad. It is for this reason that I saw fit to point out in my letter of January 7, 1920, how vague and unsatisfactory

were my original instructions. I am confident, however, my testimony is completed, there will be no question in the minds of the committee as to the spirit of my instructions as to what the department expected of me, and, there what was my real mission in the war.

I might refer here to one more point in this connection is that from the very moment we declared war there was central allied direction whose function it was to attempt team work between the different navies. During the early part of our participation in the war, this organization was not given a definite name, although it existed and functioned. It consisted of the Secretaries of the Navies and Chiefs of Nations of the different allied navies, and formal meeting between them occurred throughout the war practically monthly. Soon after 1917 it was thought wise to give this organization a definite name and draw up something in the nature of a constitution. What was selected was "The Allied Naval Council," and the constitution required that the members should be, as stated above, the Secretaries and Chiefs of Naval Operations of the various Navies. At a considerable distance away from our Navy Department, I received definite orders to serve as a member of this Allied Naval Council, representing our own Secretary of the Navy and Chief of Naval Operations. I had, of course, been so serving from the very moment of my arrival in Europe, and I continued so to serve until the signing of the armistice.

I trust that I have made it clear that my position abroad was not from being a local one. I was in every sense of the word a representative official of the Navy Department organization. My staff responded closely in nature to that of Gen. Pershing and G. O. Roberts combined, although naturally the aggregate of their duties was of far greater magnitude than mine. It was a mere incident—a very unfortunate one for the efficiency of our naval part in the war—that my office was located over 3,000 miles away from the Navy Department, instead of a few city blocks or flights of stairs.

(6) *As to accusations of failure to recognize mission of troops.*—I can not pass by the implication which has been given that I failed at the proper time to recognize that the primary mission of the Navy's task was the safe transport of troops abroad. As stated above, the troop movements during the period covered by my letter were very small.

And incidentally let me state right here, with all possible emphasis, that my entire letter of January 7, 1920, refers to this early part of the war. Practically all of it refers to the first six months. Very little of it refers to anything out of the first year, 1917. It is practically nothing to do with the efficiency of the Navy and the Navy Department in 1918.

I expect, during the course of my testimony, to make the same point a number of times, because I want it to be definitely understood that my criticism has nothing to do whatever with the very high efficiency that the Navy Department exhibited and that it was not until the latter part of the war, after they really got into it, that the efficiency began to decline.

I have stated that the troop movements during the period covered by my letter were very small. There can be no argument on that point. The facts speak for themselves. Our troops always received

of protection than any of the allied troops on the high seas, more to ten times as much protection as merchant ships. Every transported to the war area, in so far as our own Navy was without any loss from enemy action.

My statement in this preliminary statement to counteract that that was given out semiofficially at least, that my activity abroad was the protection of merchant ships and cargo. That is the way the issue that is now before this has been camouflaged.

It must be pointed out that, although the safety of our troop was a concern, nevertheless there was another concern which, at that second place, could never be disregarded for a moment.

Whether we liked it or not, we were confronted with the fact, briefly stated, was that we ran the danger at all times of being caught with a larger army, either at home or abroad, and that it was of no effect in obtaining victory. It is not for me to go into a long explanation as to the dependence of the Army abroad on food, ammunition, and a myriad of other things.

We were at all times confronted with the danger of finding that an Army abroad which could not be supplied. In the early days of the war those cargo ships, regardless of the flag at the time, were carrying the stuff necessary to keep the Allies going until they could be gotten across. Throughout the entire time the Army was moving, as the Army authorities will attest, we were faced with the gravest anxiety as to whether we could get the stuff to supply the Army after it got over there. In the early days of the war, we had to beware of having an Army that was not supplied but no place to go.

The United States shipping upon which the outcome of the war depended during that first critical year, but allied shipping, was our fate. As I will show you in the testimony, the danger of enemy success before American military forces were brought to bear at all; and, as I will further show in the early days, the American cargo carriers were a vital part of the available shipping, allied and neutral, necessary to prevent the enemy from winning.

#### THE AMERICAN INTERESTS AND TO THE NAVY DEPARTMENT.

It is not for me to be pro-British and sacrificing identity of our country. I can not avoid reference to repeated assertions to the effect that I am not a natural-born American, or that my allegiance is to the highest degree divided. My father was an American and my family has been continuously resident in the United States before the Revolution. I chanced to have been born in Canada, where my mother was, at the time of my birth, on a visit to her mother who was a Canadian. I notice, of course, also that I am not pro-British. I would not stoop to answer any of these questions if it not that they bring up a very important point in connection with this investigation. In reply to a letter from a friend of mine who wrote to warn me of accusations of being pro-British, I suggested that he ask his informants what sort of a man he would want as a representative in the council of the Allies,

and I said that if pro-British and pro-French proclivities were desirable, why not send over a pro-German with a trunk full of French. Strangely, I have apparently never been accused of being pro-German, although, as a matter of fact, I speak the French language better than I have ever been able to master the British, and, in this thing, I believe that my relations on the whole were more cordial and harmonious with the French than they were with the British. Perhaps this was due to the greater similarity of our methods to those of the British. Possibly we knew each other better. Once the war was on, it was the duty of every public man and particularly those of the military services, to do his best to subordinate all local and selfish interests to the one goal before them—that of defeating a common enemy. We were confronted with an enemy acting under the most perfect unity and command. The requirements to obtain victory on our part were summed up in the one word “teamwork.” It was absolutely essential to naval efficiency and victory that all naval services of the Allies be merged into one team, with one mission—defeating the common enemy.

There was no danger whatever of our losing our identity as one who took part in the war, which involved joining with the navies, can testify to the fact that our identity was accentuated by day, and never diminished. If there was no other reason for making us out, I would say that the principal one was our undivided determination to promote team work. It was the talk of the services in Europe. It attracted more attention perhaps than any other part we played in the war.

In a great and complicated game, such as that of the joint action of four navies, it was to be expected that all sorts of so-called friction would arise. Each service was proud of its own methods, which it had developed at the cost of long and serious study in time of peace. If everybody had refused to play unless their own methods were adopted, or had pursued their methods in their own way, the different methods of the forces with which they were opposed to each other there would have been nothing but confusion, and that would have been a direct contribution to the enemy campaign. It was no easy task to attempt to reconcile these conditions. As far as our own forces were concerned, I preached, from the very beginning, the doctrine that the one test to be applied, whenever any difficulty arose, was how we could best “get on with the war;” what would eliminate friction and speed up the day of victory. I put down the doctrine that, as a general rule, the minority should give way to the majority, and that if we believed our methods to be the best, as they were in many cases, the best course was not to be satisfied and insist upon their immediate adoption by men who had been using different methods for three years, but to prove their efficiency to other fellows in such a way as not to interfere with the operation in their own hand. This in itself is a long story, but I am safe in asserting that whether the score as to who gave way the most is on our side or not, all allied services will admit that we led in setting an example of subordinating everything to “getting on with the war.” And, moreover, that all allied services to-day will agree that they learned as much from us as we did from them.

of the department, and lack of departmental confidence in the imputation that I was not duly obedient to the department's orders and intentions, which are accusations that have been made from time to time, during the progress of the war, I will leave to the committee's own judgment, after they have considered the facts which I will proceed to submit. After the wholehearted cooperation of the Navy for allied team work had been obtained, the Secretary of the Navy said, in his annual report, dated December 1917:

"The Navy has given a demonstration which can be characterized as a complete readiness to join with our associates in teamwork for the common good."

There is the fundamental military principle that loyalty runs down as up. Confidence can not be onesided. It is mutual. There is no question of justice to me. The fact is that as long as I was left in the position assigned me, I was in every phase of our naval activities with which I was intrusted, unimpaired and endangered by any lack of confidence in me. Such a lack should be ruthlessly eliminated from war problems. If the department lacked the slightest confidence in me, it should not have summarily replaced me with someone else who had no confidence.

My "trying period" as will be covered in the testimony—was not only embarrassed by lack of departmental confidence in me, but I repeatedly pointed out in personal correspondence to the department that if I had lost the confidence of the department in any way I hoped no hesitancy would be felt in my removal.

To give to contrast the practice of the Navy Department and its general relations with its commander in the field, the practice of our War Department. The following is taken from page 8 of the last report of the Secretary of War, to the President of the United States:

"The cooperation between Gen. Pershing and the War Department was of course perfect. He dealt, however, with details of men and supplies, and was guided by his original orders (which clearly outlined the character of any particular modified or diminished, and the fundamental character of his orders as to the character of American participation in the war under your direction to the end. Gen. Pershing left America with the confidence of the War Department. Throughout the strenuous campaign of our participation, this confidence supported and sustained him. When he returned to America it was to close a great military undertaking in which no shadow of misunderstanding had arisen between him and the War Department. The theory of these orders of course was that our field of operations was so far removed a great distance from Washington, that it was impossible for accurate judgments of the varying incidents in the field to be made, and in view of the tremendous responsibility for the success of the campaign, under we could not do less than give him full authority to act, and to be informed with knowledge of the situation in which the campaign was being conducted when the plans reached him."

It is to be noted that the same methods been practiced by the Navy Department, the progress of the war would have been greatly furthered.

*Cooperation with the British.* Let me clear up another point of confusion, which has been subject to considerable comment and misunderstanding. Pronounced criticism has appeared recently

because of the fact that an admiral of the British Navy directed the operations of American destroyers at Queenstown. I wish to state very briefly what this particular situation was. That at Queenstown not only commanded the local forces based at the port, but also the British naval station located there, and the British and, in fact, allied naval command of the seas around Great Britain, both to the southward and the northward of Ireland. Other forces stationed in the north of Ireland were also under his general direction. His control of our forces was limited to their actual operations at sea, in which they were employed in conjunction with British forces. The administration of this force, its wants and needs, its discipline, was exercised by me through my local representative, Capt. Pringle. The same principle was adopted by our Army in France, where American brigades, or other units served under the operational control of British or French general officers. Furthermore, this principle was generally and properly throughout the allied navies irrespective of nationality. Frequently in Irish waters alone, British and American vessels acted under American command. In the mine-laying operations in the North Sea, British destroyers furnished the command. On the French coast, French vessels frequently served under the immediate command of our own officers. In the Mediterranean the French admiral exercised control over all allied forces, and otherwise. Again, in the North Sea our division of battlecruisers, under Admiral Rodman, frequently engaged in operations with British forces of light cruisers and destroyers under his command. Moreover, in this case, as Admiral Rodman was given a rank commensurate with his duty, it was necessary in such cases for military precedent to be disregarded, and by mutual gentleman's agreement upon the part of the British, British ships in command of these forces assigned for operations under American command. Rodman actually accepted his command, although they were to him.

I will not take the time to explain the system by which orders were originated and transmitted to our forces whether under allied or national command or our own. Suffice it to say that such orders did not issue directly from our own naval headquarters, were prepared in conference with representatives of those headquarters, and were based upon definite plans which those representatives had taken part in preparing.

Copies of every order issued to our forces, no matter how detailed, were immediately and automatically forwarded to our headquarters for information, and complete and detailed summaries of them were furnished weekly to the Navy Department. This was too small to be followed up by our own organizations of course.

(4) *Undue British dominance in naval war.*—It has frequently been asserted that the British exercised an undue control and influence upon the naval operations of the war. Even granting that to be true, or whether they did or not, such a course should be expected to be considered that they outnumbered any other naval forces in the world about 10 to 1, in anything you wish to consider—guns, men, shore stations, etc. The French, Italian, Japanese, and our own forces abroad were small in comparison. The department announced official policy of July 10, 1917, acknowledged this

tion in all offensive preparations must perforce belongs to the allied government announces as its policy that in general it is willing to accept a fact of the Allies deemed necessary to meet immediate needs.

owing to the strategic situation of England, and her maritime interests prior to the war, she was, in fact, the center of information of the world. All the war lines of communication led there, and it was only there that the most complete information concerning operations of the war and merchant shipping of the world was available. It was therefore, as I have expected that the British voice in naval affairs should cover the other voices of the team, just as the French covered the operations of all land forces. However, ample safeguards against undue British domination were furnished by the principles of command previously established and further by the fact that all big questions of naval operations were referred by the Allied Naval Council, in which each nation had an equal vote, and in which unanimity was required for

being attacked.—I find that I am being represented in the world as initiating an attack upon the part that the Navy played in the war, or, stated more briefly, that my object is to criticize the Navy in the war. Therefore, let me most respectfully state a few salient facts:

I have raised no question whatever as to the efficiency of the Navy in the war, when viewed in their entirety and in relation to the time element.

Speaking of the Navy itself—that is, its personnel and its organization which directed it—I am in the opinion of the country in being unable adequately to express my admiration for its work. That work will grow larger and larger as the facts slowly come out. I am proud to recognize the fact of contradiction, that in so far as the Navy was concerned, the machinery which controlled and directed it, it not only broke all traditions of the past, but as a matter of fact it created new traditions. Without any disparagement of actual achievements, I believe that its greatest accomplishment was its courage and the spirit which it infused into the naval war of the world. It was a new spirit of Americanism; for example, in its irrepressible initiative and versatility, its absolute confidence in its own strength, its unshakable confidence in its own ability to overcome all obstacles, real or imaginary, its ruthless determination to win, and, above all, in its absolute confidence in

#### THE NAVY IN THE WAR COVERED BY THIS LETTER.

Let me state a very essential feature of my letter which seems to be being clearly recognized and understood.

Important. An examination of the letter will show that the scope of the letter is almost wholly concerned with those operations immediately preceding our entry into the war and the first year or less of our participation. In considering the letter, therefore, the case must not be confused with the conduct of the war as a whole.

our failure to meet this emergency, with the means at our disposal, is the principle, which I once more accentuate; and I urge the Navy Department to act promptly in this part of

fact, almost daily, during April and May, 1917, I communicated these essential facts to the department in lengthy cablegrams, in the most emphatic language of which I was capable. The department then believed that the allied officials and the public were estimating the gravity of the situation. Not until the Chief of Naval Operations, about six months after we entered the war, did the department seem to be convinced of the necessity to adopt policies and plans previously recommended by me to engage in the war wholeheartedly.

I regret that our failure to give adequate support with the Navy during these first six months seriously and irreparably jeopardized the outcome of the whole war. In my opinion, this failure resulted in lengthening the war by several months, the increased losses in merchant shipping that were incurred, and the increased cost of preparing adequately during the first six months and the first few months subsequent to our entry into the war, probably postponed victory four months. Since the loss of life per day was about 3,000 and the total daily cost of the war was \$100,000,000, it can be appreciated what this failure meant to humanity and how serious was any fault that contributed to prolonging hostilities.

I particularly wish to emphasize that it is this early period to which I principally refer.

#### MOTIVE FOR LETTER.

I present in the simplest and clearest possible manner, the motive upon which my letter was based. It is that of a great war. The war was won, thanks to a combination of circumstances which it would be entirely unsafe and unwise to depend upon in the future. From the United States naval participation in the war involved numerous violations of the most sacred and fundamental military principles with which every sailor in naval warfare is familiar.

These were:

1. Our tardiness, in spite of the fact that war had been a possibility for at least two years and was, in fact, imminent for some time before its declaration.

2. That we entered it with no well-considered policy or plans for our operations on the sea not in the highest state of readiness. This was owing to the above conditions and to the lack of foresight of our Navy Department, and perhaps to other causes. I am not familiar, we failed, for at least six months, to give the full weight against the enemy; that during this period we were a prey of vacillation, or, in simpler words, a hand-to-hand struggle attempting to formulate our plans from day to day, and an incorrect appreciation of the situation.

3. The war lasted 1,500 days. Five million lives were lost, or were injured daily. This, to say nothing of wealth and resources,

If my assertions of vacillating policy and unnecessary delay during the war, as an integral part of our departmental organization, that it was my duty to point out at least some of the reasons for the fundamental errors which were committed.

I believed, therefore, in view of the unusual position which I occupied during the war, as an integral part of our departmental organization, that it was my duty to point out at least some of the reasons for the fundamental errors which were committed.

My sole object in submitting my letter to the department was to demonstrate who was right and who was wrong, but to insure so thorough an appreciation of our errors, before they were obscured them, that the chances of repeating them would be minimized, if not eliminated, in the future.

In other words, gentlemen, let me state, as forcibly as I can, in this entire question I have no object other than that of the efficiency of the naval services and the safety of the country at the end of my career. I have everything to lose and nothing to gain. There is no possible question of my having a grievance. There is absolutely no question of personalities. I have no ambitions whatever. When this inquiry is over I return to the simple duties of my profession, to finish out the very short remaining time before my retirement.

Reference to my letter of January 7, 1920, will indicate that its object is, first and last, constructive. This object is the possibility of accomplishment without a consideration of such mistakes which may have been committed.

The subject is one which vitally affects the future efficiency of our Navy; it must always be our first line of national defense, the Navy; and a great danger is that because of our ultimate success in this war we may fail to realize that we very narrowly escaped defeat on that point that our state of preparedness when we entered the war was obviously inadequate, and that our administrative methods, especially during the early stages of our participation, were seriously affected. Such defects, in a war in which the enemy is not already so severely occupied at sea as he was in this war, must inevitably jeopardize our national security.

Under these circumstances, expressions of opinion concerning these matters were in no sense an attack, and it is most deplorable that they should have been made so to appear. They were, on the contrary, impersonal, official representations submitted for the consideration of the Navy Department in preparation for future campaigns. They were actuated by motives of duty; they were constructive. I believe them to be entirely in accord with the teachings of naval authorities on the art of war. Should this discussion unfortunately assume the character of personal recrimination or political controversy, the effect may well be so to obscure the issue that no good will result. On the other hand, if these opinions are given full consideration in connection with the preparation of plans for future wars, by the officers detailed to these duties, as was in the past and as would ordinarily have been done, very great benefit will accrue to the Navy.

It is nothing but self-evident camouflage to convey the impression in these modern days that such an issue as this one raised by my attack on civilian control of our naval service. A civilian branch of the military branch of a democratic government is essential.

greatest danger of militarism in this country. The public and the Navy are servants of the public and aspire to be so. The Navy claims to be as representative a national institution as the Congress itself. It is for this very reason that I am willing to risk my personal fortunes at the very end of my life and lay before the responsible heads of the Navy such a statement of their own conduct of the public's interests.

In the public presentation of this case, which has resulted from my part, I am perhaps handicapped by lack of familiarity with the press or experience in manipulating that instrument of public opinion.

I present my case in the vocabulary of my profession, and I trust that the majority of this committee to perceive the only essential thing, namely, a just appraisal of those questions which threaten the public interest.

#### VII. SUMMARY.

In the briefest possible manner, I hope that this statement of my testimony which will be introduced, will establish the following salient points which were raised in the letter addressed to the Navy Department on January 7:

First, that there was no impropriety whatever in submitting this statement for preparation and submission was in accordance with the regulations; and that I am in no wise responsible for the delay which it has received.

Second, that the submission of the letter was a duty which I performed, because of the unusual and very responsible position of the Navy during the war, and because our victory seemed liable to be nullified by the mistakes we committed and the lessons we should learn therefrom.

Third, that my position was in no sense a local one; that it was not that of any other naval official outside of the Navy Department; and that it was twofold in nature. My first and paramount duty was that of acting as the department's accredited representative on the naval council of the Allies. In other words, I was in every sense of the word an integral part of the Allied naval organization. Secondly, my duties included the independent command of all of our naval forces in Europe, and the additional responsibility of insuring the safety of our shipping passing through the war zone.

Fourth, that the period of the war covered by my letter, which I will substantiate by my present testimony, is encompassed by the first six or eight months thereof, during which we have barely escaped defeat.

Fifth, that during this early period the department violated well-recognized and fundamental principles of warfare, as a result, the full effect of our naval participation was delayed, and that this delay is susceptible of conversion into needless and unnecessary losses of national wealth and lives.

Sixth, to state the case in its briefest form, the only purpose of my statement is that, in the interests of national defense, we must learn those lessons of the war which we dare not lose sight of, which must govern our future naval policy if the fullest assurance against future disaster is to be provided.

Seventh. That the policies and plans adopted by the department and their activity, in the last half of our participation in the war, were identical in substance, and generally in letter, to recommendations which they had disregarded or failed to act upon in the early months.

Eighth. That the main issue is not the determination of personal responsibilities, but the recognition of the delays and unsound methods incidental to the adoption and execution of our war policies and plans, in order that the fundamental causes thereof may be removed.

Ninth. That if I am wrong, and we were prepared, and if we had plans before and at the beginning of the war similar to those announced on paper some time after we declared war, and if such plans were in accordance with the policy which was actively and actually pursued at the end of the first six or eight months of the war, then is it not a grave error that all the forces of men and ships which were actively engaged in the war zone at the end of this six months' delay, were not there at the end of the first month?

Tenth. Granting that the work of our Navy was necessary, and was based on sound policy and military principles, it is indisputable that if any delay occurred in putting that policy into effect, the war was thereby prolonged, and as a consequence lives and resources needlessly sacrificed.

If such is not the case, that is, if the work of our Navy was not necessary, then our naval contribution did not amount to much.

It did amount to a great deal, as everyone agrees, and hence it is the motive of my letter to show that unsound methods caused such delays, and that they should be recognized to such an extent as to make them impossible of recurrence in the future.

The issue is that of national safety.

Eleventh. And, finally, may I be permitted to add the following: It is not an easy or an enviable task for an officer to expose the fundamental errors of his own service, particularly after a war that has been won.

It was of course to be expected that, if such exposures were given publicity, a storm of criticism would descend upon me, including accusations of belittling the services of our gallant naval men who have made so many sacrifices.

It is submitted, however, to the judgment of this committee that if any one of my assertions are true, I would have betrayed the trust imposed upon me if I had allowed any considerations, personal or otherwise, to have deterred me from submitting my criticism officially to the Navy Department.

Mr. Chairman, I am ready at any time to go ahead with my attempt to substantiate the allegations made in my letter of January 7, 1920.

The CHAIRMAN. In view of the fact that it is nearly 1 o'clock, and you have finished your preliminary statement, the committee will now stand adjourned until 10 o'clock to-morrow morning.

(Thereupon the subcommittee adjourned until to-morrow, Wednesday, March 10, 1920, at 10 o'clock a. m.)

Seventh. That the policies and plans adopted by the department and their activity, in the last half of our participation in the war, were identical in substance, and generally in letter, to recommendations which they had disregarded or failed to act upon in the early months.

Eighth. That the main issue is not the determination of personal responsibilities, but the recognition of the delays and unsound methods incidental to the adoption and execution of our war policies and plans, in order that the fundamental causes thereof may be removed.

Ninth. That if I am wrong, and we were prepared, and if we had plans before and at the beginning of the war similar to those announced on paper some time after we declared war, and if such plans were in accordance with the policy which was actively and actually pursued at the end of the first six or eight months of the war, then is it not a grave error that all the forces of men and ships which were actively engaged in the war zone at the end of this six months' delay, were not there at the end of the first month?

Tenth. Granting that the work of our Navy was necessary, and was based on sound policy and military principles, it is indisputable that if any delay occurred in putting that policy into effect, the war was thereby prolonged, and as a consequence lives and resources needlessly sacrificed.

If such is not the case, that is, if the work of our Navy was not necessary, then our naval contribution did not amount to much.

It did amount to a great deal, as everyone agrees, and hence it is the motive of my letter to show that unsound methods caused such delays, and that they should be recognized to such an extent as to make them impossible of recurrence in the future.

The issue is that of national safety.

Eleventh. And, finally, may I be permitted to add the following: It is not an easy or an enviable task for an officer to expose the fundamental errors of his own service, particularly after a war that has been won.

It was of course to be expected that, if such exposures were given publicity, a storm of criticism would descend upon me, including accusations of belittling the services of our gallant naval men who have made so many sacrifices.

It is submitted, however, to the judgment of this committee that if any one of my assertions are true, I would have betrayed the trust imposed upon me if I had allowed any considerations, personal or otherwise, to have deterred me from submitting my criticism officially to the Navy Department.

Mr. Chairman, I am ready at any time to go ahead with my attempt to substantiate the allegations made in my letter of January 7, 1920.

The CHAIRMAN. In view of the fact that it is nearly 1 o'clock, and you have finished your preliminary statement, the committee will now stand adjourned until 10 o'clock to-morrow morning.

(Thereupon the subcommittee adjourned until to-morrow, Wednesday, March 10, 1920, at 10 o'clock a. m.)

discussing it with such a body as this committee. It was addressed officially to the Navy Department, which has all the facts and their relative sequence and importance in mind.

It follows that, in order to make these matters clear to this committee, it will be necessary to make certain explanations and give certain details that would not be necessary in considering such questions before a body of naval officers.

The first part of the testimony is intended to explain the seriousness of the military situation at the time that this country declared war; to clearly show that the situation was not only critical, but that the Allies were at that time in fact losing the war; that the Navy Department was furnished with complete information concerning this critical situation; and that I put forth every possible effort to acquaint them with all the facts concerning the situation; that, in accordance with the mission assigned to me, and based upon constant conference with the heads of the allied naval services, I set forth the specific nature of the part which we should have taken; that I was wholly unable to get satisfactory replies from the department and, further, that if the department appreciated and understood the situation, they failed to take action commensurate therewith.

I wish here to state that there is no issue whatever as to whether the information I sent and the recommendations I made were accurate or exaggerated, no issue as to whether I was right and everybody else in the Navy at home wrong, as will be shown later in the testimony. It will be clearly established that by the end, say, of six months, the department accepted and adopted the policies and recommendations that I had made from the very beginning, and hence that there is no disagreement whatever between me and other naval officials as to the United States naval policy in the war, provided the time element is not considered; that is, provided we disregard the first four to six critical months of war, the occurrences during which are, almost exclusively, the issues I have seen fit to raise.

I will adhere in my testimony to the different subjects as they are raised in my letter of January 7, 1920. This will result in not following the chronological order, because as each new subject is taken up I will have to step back to the beginning and sketch what occurred in connection therewith.

In beginning, I wish to read in full my first two reports submitted to the department—one a cable sent four days after my arrival abroad and the other a letter submitted five days later.

Although these two documents will touch on various subjects, it is necessary to read them in full, simply to establish the fact that all of the communications which followed during the next six or eight months were mere elaborations and reiterations thereof, that these two reports were very comprehensive, and that, as a matter of fact, there was no time up to the signing of the armistice when any cause arose for changing any of these original recommendations as made therein.

The cooperation outlined above should be expedited with the utmost dispatch in order to break enemy submarine morale and accelerate the accomplishment of the chief American objective.

It is very likely the enemy will make submarine mine laying raids on our coast or in the Caribbean to divert attention and keep our forces from the critical area in the eastern Atlantic through effect upon public opinion. The difficulty of maintaining submarine bases and the focusing of shipping on this side will restrict such operations to minor importance, although they should be effectively opposed principally by keeping the Channel swept on soundings. Enemy submarine mines have been anchored as deep as 90 fathoms but majority at not over 15 fathoms. Mines do not rise from the bottom to set depth until from 24 to 48 hours after they have been laid.

So far all experience shows that submarines never lay mines out of sight of landmarks or lights on account of the danger to themselves if location is not known. Maximum augmentation merchant tonnage and antisubmarine work where most effective constitute the paramount immediate necessity.

Mr. Hoover informs me that there is only sufficient grain supply in this country for three weeks. This does not include the supply in retail stores. In a few days Hoover will sail for the United States.

That is the end of that telegram. That was a plan proposed or policy proposed, and it was adhered to throughout the war, that is, to send all possible antisubmarine craft immediately to the place where the fighting was going on. Five days later I amplified this with the following letter:

LONDON, ENGLAND, April 19, 1917.

From: Rear Admiral William S. Sims, United States Navy.

To: The Secretary of the Navy.

Subject: Confirmation and elaboration of recent cablegrams concerning war situation and recommendations for United States naval cooperation.

1. *Reception.*—My reception in this country has been exceptionally cordial and significant of the seriousness of present situation and importance to be attached to the United States entry into the war.

I was met at Liverpool by Rear Admiral Hope, R. N., a member of Admiral Jellicoe's staff, and the admiral of the port, the former having been sent by the Admiralty to escort me to London. A special train was provided which made a record run, and within a few hours after arrival in London I was received by the first sea lord (Admiral Jellicoe) and his principal assistants in a special conference.

2. *Conference.*—More or less hesitancy was noted at first in presenting a full statement of the true situation, particularly (as it developed later) on account of its seriousness, combined with a natural reluctance against appearing to seek assistance and a hesitancy in taking chances of allowing information indirectly to reach the enemy, and thereby improve enemy morale.

I therefore positively took the position that I must be considered a part of the Admiralty organization and that it was essential to safe and efficient cooperation that I be trusted with a full knowledge of the exact situation.

They finally consented, only after reference to the Imperial War Council, to my exposing the true state of affairs both as regards the military situation and rate of destruction of merchant shipping.

I have had daily conferences with the first sea lord (Admiral Jellicoe) both at his office and residence, and also have been given entire freedom of the Admiralty and access to all Government officials. I have freely consulted with such officials as the following: Prime minister, first lord of Admiralty (Sir Edward Carson); ministers of munitions, shipping, trade, and other cabinet officials; first sea lord and his assistants; chief of naval staff; directors (corresponding to our chiefs of bureaus) of intelligence, antisubmarine operations, torpedoes, mines, mining, etc.

3. *General statement of the situation.*—Since the last declaration of the enemy government, which from intelligence information was anticipated, the submarine campaign against merchant shipping of all nations has resolved itself into the real issue of the war, and, stated briefly, the allied Governments have not been able to and are not now effectively meeting the situation presented.

4. As stated in my first dispatch the communications and supplies to all forces on all fronts, including Russian, are threatened, and the "command of the sea" is actually at stake.

5. My own views of the seriousness of the situation and the submarine menace have been greatly altered. My convictions and opinions, as probably those of the department also, had been largely based upon press reports and reports of our attachés

Seventh. That the policies and plans adopted by the department and their activity, in the last half of our participation in the war were identical in substance, and generally in letter, to recommendations which they had disregarded or failed to act upon in the first six months.

Eighth. That the main issue is not the determination of responsibilities, but the recognition of the delays and methods incidental to the adoption and-execution of our war policies and plans, in order that the fundamental causes thereof may be removed.

Ninth. That if I am wrong, and we were prepared, and had plans before and at the beginning of the war similar to those announced on paper some time after we declared war, and if such were in accordance with the policy which was actively and vigorously pursued at the end of the first six or eight months of the war, is it not a grave error that all the forces of men and ships which were actively engaged in the war zone at the end of this six months were not there at the end of the first month?

Tenth. Granting that the work of our Navy was necessarily based on sound policy and military principles, it is indisputable that if any delay occurred in putting that policy into effect, that it was thereby prolonged, and as a consequence lives and resources needlessly sacrificed.

If such is not the case, that is, if the work of our Navy was necessary, then our naval contribution did not amount to much.

It did amount to a great deal, as everyone agrees, and here is the motive of my letter to show that unsound methods caused the delays, and that they should be recognized to such an extent as to make them impossible of recurrence in the future.

The issue is that of national safety.

Eleventh. And, finally, may I be permitted to add the following: It is not an easy or an enviable task for an officer to expose the mental errors of his own service, particularly after a war that he has won.

It was of course to be expected that, if such exposures were given publicity, a storm of criticism would descend upon me, in the form of accusations of belittling the services of our gallant naval men who have made so many sacrifices.

It is submitted, however, to the judgment of this committee that if any one of my assertions are true, I would have betrayed the trust imposed upon me if I had allowed any considerations, personal or otherwise, to have deterred me from submitting my criticism to the Navy Department.

Mr. Chairman, I am ready at any time to go ahead with my statement to substantiate the allegations made in my letter of January 1, 1920.

THE CHAIRMAN. In view of the fact that it is nearly 1 o'clock, and you have finished your preliminary statement, the committee will now stand adjourned until 10 o'clock to-morrow morning.

(Thereupon the subcommittee adjourned until to-morrow, Wednesday, March 10, 1920, at 10 o'clock a. m.)

# NAVAL INVESTIGATION.

WEDNESDAY, MARCH 10, 1920.

UNITED STATES SENATE,  
COMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.

Committee met, pursuant to adjournment, at 10 o'clock  
P. M. 225. Senate Office Building, Senator Frederick Hale,

Chairman. Senators Hale (chairman), McCormick, and Trammell.  
SENATOR POINDEXTER, having resigned as a member  
of the committee, Senator Page has appointed in his stead  
Senator Delaware. I offer for the record Senator Poindexter's  
resignation and the letter of Senator Page to me notifying  
me of the appointment of Senator Ball.  
Matters referred to are as follows:)

MARCH 9, 1920.

SENATOR POINDEXTER,  
Committee on Naval Affairs,  
United States Senate.

SIR: I have found it necessary to be absent from the city for a few  
days and therefore unable to give consideration to the investigation of matters  
relating to Rear Admiral William S. Sims, United States Navy, to the  
criticism of its operations during the war.  
In the performance of the work assigned to the subcommittee, I believe it  
should be necessary for a Senator be appointed in my place, as a member of that sub-  
committee, to tender my resignation to take effect to-day.

MILES POINDEXTER.

MARCH 9, 1920.

SENATOR PAGE,  
United States Senate.

SIR: Senator Poindexter, of the subcommittee of the Committee  
on Naval Affairs, having to do with the "investigation of matters re-  
lating to Rear Admiral William S. Sims, United States Navy, to the Navy  
Department and its actions touching operation during the war," has found  
it necessary to resign from that committee and therefore tenders his resignation, which  
I have accepted and I have appointed you to fill the vacancy in the subcommittee  
created by Senator Poindexter's resignation.

I am glad it is convenient to serve as a member of the subcommittee.  
I am, Sir, your chairman of the subcommittee, Senator Hale, of your appoint-

CARROLL S. PAGE.

SENATOR POINDEXTER: Admiral Sims, will you proceed?

TESTIMONY OF ADMIRAL W. S. SIMS, UNITED STATES NAVY—  
Resumed.

ADMIRAL SIMS: In presenting the following testimony it will be  
my endeavor to make a clear and understandable presentation,  
from the sequence of my letter of January 7.

My intention whatever in going outside in any way of the  
letter. The letter was not prepared with a view of

discussing it with such a body as this committee. It was officially to the Navy Department, which has all the facts relative sequence and importance in mind.

It follows that, in order to make these matters clear to mittee, it will be necessary to make certain explanations certain details that would not be necessary in consider questions before a body of naval officers.

The first part of the testimony is intended to explain the necessity of the military situation at the time that this country was in war; to clearly show that the situation was not only critical but that the Allies were at that time in fact losing the war; that the Navy Department was furnished with complete information concerning this critical situation; and that I put forth every effort to acquaint them with all the facts concerning the situation; that, in accordance with the mission assigned to me, as a member of the staff, upon constant conference with the heads of the allied naval departments, I set forth the specific nature of the part which we should take; that I was wholly unable to get satisfactory replies from the department and, further, that if the department appreciated the situation, they failed to take action commensurate therewith.

I wish here to state that there is no issue whatever as to the information I sent and the recommendations I made were not exaggerated, no issue as to whether I was right and even if I was wrong, as will be shown later in the testimony. It will be clearly established that by the end, say six months, the department accepted and adopted the policy and recommendations that I had made from the very beginning; hence that there is no disagreement whatever between me and other naval officials as to the United States naval policy in the war, provided the time element is not considered; that is, provided we disregard the first four to six critical months of war, the period during which are, almost exclusively, the issues I have seen and have raised.

I will adhere in my testimony to the different subjects as they were raised in my letter of January 7, 1920. This will result in not following the chronological order, because as each new subject is taken up, I have to step back to the beginning and sketch what occurred in connection therewith.

In beginning, I wish to read in full my first two reports submitted to the department—one a cable sent four days after my departure abroad and the other a letter submitted five days later.

Although these two documents will touch on various subjects, it is necessary to read them in full, simply to establish the facts of the communications which followed during the next six months were mere elaborations and reiterations thereof, that the two reports were very comprehensive, and that, as a matter of fact, there was no time up to the signing of the armistice when an opportunity arose for changing any of these original recommendations set forth therein.

the Navy, through State Department.

A. J. J.

emphasize that fact particularly. This reply and this plan and the policy suggested and the plan for the suppression of the submarine campaign, which was the whole issue of the war the Navy was concerned. This was the first cable, sent

as follows:

is very much more serious than people realize in America. of submarine operations and the rapidity of construction continues of the war.

the enemy submarine is not broken, only about 54 are known to have been sunk and no voluntary surrenders have been recorded. The reports are greatly in error. Reports recently circulated concerning surrenders depreciate enemy morale and results are very satisfactory.

"satisfactory" appears in the cable, but it was a mistranslation. The word used was "unsatisfactory." That should read:

"unsatisfactory" appears in the cable, but it was a mistranslation. The word used was "unsatisfactory." That should read:

Reports recently circulated concerning surrenders are simply to depreciate enemy morale and results are very unsatisfactory.

Communications of forces on all fronts, including the Russians, are being imperiled of the sea actually imperiled.

Operations are constantly extending their operations further into the Atlantic and the difficulty of patrolling. Russian situation critical.

Admirals, captains, and commanders murdered, and in some cases mutilation.

British neutral and allied shipping lost in February was 536,000 tons; and in the first 10 days of April, 205,000 tons. With better weather losses are increasing.

Attention to the fact there that in April the loss was over 200,000 tons.

It is true that the chances are better now.

It is true that the chances are that hospital ships will continue to be used to draw destroyers away from operations against submarines in this way causing a demand for large convoy forces in all directions and also partially immobilizing the main fleet.

The immense theaters and length and number of kinds of communication resulting from three years' continuous operation with inadequate base facilities the strength of the naval forces is being weakened. This applies to all of the sea forces outside the Grand Fleet.

There are 64 small submarine mine layers; the latter carry 18 mines; 18 mines and guns. All classes submarines for actual commission are being approached three per week. To accelerate and insure defeat of the enemy immediate active cooperation absolutely necessary.

It is inevitable that the focus of all lines of communication in the Atlantic therefore I very urgently recommend the following cooperation:

Destroyers to be sent accompanied by small antisubmarine forces to designated high sea area westward of Ireland based on Queenstown base at Bantry Bay, latter to be an inshore patrol force. Destroyers should be of light draft with as high speed as possible, but low maintenance, repair ships and staff for base. Oil and docks available, but no supply of fuel. German main fleet must be contained south of Scotland no cooperation of the British main fleet. South of Scotland no cooperation of this force.

Destroyers can serve no useful purpose in this area except that two destroyers might be based on Brest for moral effect against anticipated cooperation of the enemy ships in the channel out of reach of British main fleet.

Urgent practical cooperation is merchant tonnage and a concentration of antisubmarine craft to reinforce our advanced forces. There is a large amount of the latter craft. For towing the present large amount of sailing ships and sea-going tugs would be of great use.

The cooperation outlined above should be expedited with the utmost order to break enemy submarine morale and accelerate the accomplished chief American objective.

It is very likely the enemy will make submarine mine laying raids on in the Caribbean to divert attention and keep our forces from the critical eastern Atlantic through effect upon public opinion. The difficulty of submarine bases and the focusing of shipping on this side will restrict such to minor importance, although they should be effectively opposed by keeping the Channel swept on soundings. Enemy submarine mines anchored as deep as 90 fathoms but majority at not over 15 fathoms. A rise from the bottom to set depth until from 24 to 48 hours after they have

So far all experience shows that submarines never lay mines out of sight marks or lights on account of the danger to themselves if location is not known. mun augmentation merchant tonnage and antisubmarine work where necessary constitute the paramount immediate necessity.

Mr. Hoover informs me that there is only sufficient grain supply in this three weeks. This does not include the supply in retail stores. In a few days will sail for the United States.

That is the end of that telegram. That was a plan proposed, and it was adhered to throughout the war to send all possible antisubmarine craft immediately to the place where the fighting was going on. Five days later I amplified with the following letter:

LONDON, ENGLAND, April

From: Rear Admiral William S. Sims, United States Navy.

To: The Secretary of the Navy.

Subject: Confirmation and elaboration of recent cablegrams concerning war and recommendations for United States naval cooperation.

1. *Reception.*—My reception in this country has been exceptionally significant of the seriousness of present situation and importance to be attained by United States entry into the war.

I was met at Liverpool by Rear Admiral Hope, R. N., a member of Admiralty staff, and the admiral of the port, the former having been sent by the Admiralty to escort me to London. A special train was provided which made a record within a few hours after arrival in London I was received by the first sea lord (Jellicoe) and his principal assistants in a special conference.

2. *Conferences.*—More or less hesitancy was noted at first in presenting a statement of the true situation, particularly (as it developed later) on account of nervousness, combined with a natural reluctance against appearing to seek assistance. hesitancy in taking chances of allowing information indirectly to reach the enemy and thereby improve enemy morale.

I therefore positively took the position that I must be considered a part of the Admiralty organization and that it was essential to safe and efficient cooperation that I be trusted with a full knowledge of the exact situation.

They finally consented, only after reference to the Imperial War Council, exposing the true state of affairs both as regards the military situation and the destruction of merchant shipping.

I have had daily conferences with the first sea lord (Admiral Jellicoe) at his office and residence, and also have been given entire freedom of the Admiralty access to all Government officials. I have freely consulted with such officials following: Prime minister; first lord of Admiralty (Sir Edward Carson); munitions, shipping, trade, and other cabinet officials; first sea lord and his chief of naval staff; directors (corresponding to our chiefs of bureaus) of important antisubmarine operations, torpedoes, mines, mining, etc.

3. *General statement of the situation.*—Since the last declaration of the enemy, which from intelligence information was anticipated, the submarine war against merchant shipping of all nations has resolved itself into the real issue of war, and, stated briefly, the allied Governments have not been able to as yet now effectively meeting the situation presented.

4. As stated in my first dispatch the communications and supplies to all fronts, including Russian, are threatened, and the "command of the sea" is at stake.

5. My own views of the seriousness of the situation and the submarine war have been greatly altered. My convictions and opinions, as probably the department also, had been largely based upon press reports and reports of our

with the Americans who have been abroad during the war. All of this must be either rigidly censored or else has been given out in such form as to afford minimum assistance to enemy morale.

Another factor which the British Government has experienced, and which has hampered in London, and even in the Admiralty itself, is impressionable and unexpected leakages of information through the neutral legations of smaller countries are now under strong

the submarine campaign is being waged is in itself excellent and that matters best to it by the enemy, and of the degree to which they are counting upon it.

The Government has reliable information (as reliable as can be) that the enemy believed that the Allies would be defeated in two months through

the weather and the shorter nights now coming on, we may expect some further submarine successes.

The Chief of the Grand Fleet was yesterday in conference in the Admiralty with the greater extent destroyers and auxiliaries of the fleet may be required to counter its power in the remote possibility of another fleet

the opinion seems to be that the latter will not occur, but there is not much of this belief, and of course, in any case, the possibility must be carefully guarded against.

#### GENERAL DISCUSSION OF SITUATION.

In preparing my first report of the situation with a view of obtaining a general impression consistent with the importance of the time element. I was deterred by a natural reluctance to alter so radically my preconceptions as to the situation.

It is now my belief that, regardless of any enemy diversions such as might be made where the critical area in which the war's decision will be made, the Atlantic, at the focus of all lines of communications.

The number of enemy submarines and their rate of construction, allowing for some loss of information, renders it inevitable that the main submarine campaign will be concentrated in the above critical area.

In this critical area it is manifest that the field is relatively large for the number of submarines which the enemy can maintain in it. For example, the enemy's policy, explained below, they are forced to cover all the waters of the Atlantic between the north of Scotland and Ushant.

Notwithstanding the above and all other essential information available, the enemy could not disperse his main submarine campaign into other areas without diminishing results in this and all areas to a degree which would be to accomplish the mission of the submarine campaign, which is more than a final decision of the war.

The attention has been, and still is, concentrated upon the Admiralty's defensive steps and for failing to produce more substantial and effective steps. The principal demands is for convoys of merchant shipping, and for the best protection within the war zone.

The enemy's policy is not publicly known, is simply that the necessary vessels are being used further that those which are available are suffering from the enemy'sarduous service.

When I was asked by myself why shipping is not directed to the enemy's rendezvous and from these conveyed through the dangerous area is the same. The area is too large; the necessary vessels are

the enemy was consulting with the director of shipping as to the practicality of attempting some approach to such a plan in case the United States could provide sufficient tonnage to warrant it.

The enemy's methods of controlling shipping the Admiralty now believes to be a dispersion. They use about six relatively large avenues of approach to the United Kingdom and Channel, changing their limits or direction to meet the enemy's demands.

One of these is to the north of Scotland, another to the north of Ireland, and a third covering the Irish Sea and Channel. Individual ships

of these areas of approach are instructed, generally before sailing, to follow a certain meridian at certain and different latitudes and thence steer east or west.

At times in the past they have found one of these avenues of approach under such conditions as to lead them to concentrate shipping invariably the enemy has become aware of the course pursued.

18. The great difficulty in any method of shipping control is commensurate with the shipping itself and full cooperation by the merchant personnel. The ship is captured the code either becomes dangerous or useless. The men being continually changed and at all times it can not be counted upon for fortnight. The immense difficulty of changing the code and keeping ship the world in touch with changes is apparent.

19. Continual trouble is experienced with some merchant captains taking into their own hands and exhibiting contempt, or at least indifference, for instructions. The American liner *New York*, upon which I took passage, is a typical example. She was advised to make Fastnet Light at daylight but it about 9 p. m., thus passing in daylight through the most dangerous area.

20. The Admiralty has had frequent conferences with merchant masters for their advice. Their most unanimous demand is "give us a gun and let us ourselves." They are also insistent that it is impracticable for merchant vessels to proceed in formation, at least in any considerable numbers, due principally to the lack of skill in controlling their speed or to the inexperience of their subordinates. With this view I do not personally agree, but believe that with a little more merchant vessels could safely and sufficiently well steam in open formation.

I might state in this connection that my opinion as to the value of merchant seamen to handle their ships in convoy came from the fact that I had been associated at one time for three years in the past with young men in navigation and merchant seamanship and I therefore knew those men better than the average officer has an opportunity to know them. At any rate, that opinion turned out, in the end, to be correct. Merchant skippers found no difficulty, with the guidance of a convoy commander, in handling their ships in a line to the number of 40, in close formation, 500 yards apart, 1,000 yards between the lines, or maneuvering those ships simultaneously as a school of fish, zigzagging back and forth, in order to get out of the way of submarines. [Continuing reading:]

21. The best protection against the submarine menace for all classes of shipping is as well as naval, is speed and zigzagging, not more than 15 minutes or so. Upon this point no one disagrees, but on the contrary there is absolutely uniform opinion.

22. In the absence of adequate patrol craft, particularly destroyers, and enemy submarine morale is broken, there is but one sure method of meeting the submarine issue upon which there is also complete unanimity—increased merchant tonnage, preferably small.

"More ships! More ships! More ships!" is heard on every hand.

23. It is also significant that until very recently the admiralty have been completely unable to convince some members of the cabinet that the submarine is a deciding factor in the war. The civilian mind, here as at home, is loath to face the unseen dangers, particularly until the pinch is felt in real physical war.

24. The prime minister only two days ago expressed to me the opinion that it ought to be possible to find physical means of absolutely sealing up all entrances to submarine ports from their own ports. The fact that all such methods (nets, mine obstructions, etc.) inherently involve the added necessity of continuous protection and maintenance by our own naval forces is seldom understood and appreciated. I am finally convinced the prime minister of the fallacy of such propositions by the situation into which we would be led, namely, that in order to maintain our own obstructions we would have to match the forces the enemy brought against us until finally the majority of our forces would be forced into danger where they would be subject to continual torpedo and other attacks, in a position most favorable to the enemy.

25. Entirely outside of the fact that the enemy does and always can find a way through and thereby nullify the close blockage, the weather is a serious added factor. The heaviest anchors obtainable have been used for nets, mines, and obstructions, only to have the arduous work of weeks swept away in a few hours of heavy weather. Moorings will not hold. They chafe through. In this respect we could but have assistance; i. e., in supply of moorings and buoys.

could be set now, and never has been, completely sealed against submarine attack in the vaster areas of escape to the north. Submarines have succeeded in unknown ways in evading and cutting off communications.

Our submarines, heavy forces are free to raid and in fact escape at any time when the enemy decides that the necessity or return of them is less than the suggestion that two divisions of our fast dreadnaughts would be lost primarily for the resulting moral effect against such possible

escape by an important Admiralty official that while he thought the escape through the channel by heavy enemy forces out of reach of our fleet of Scotland were very remote, nevertheless the possibility was not totally thwarted on moral grounds; that is, the uncertainty in the situation which would be encountered. He agreed with others, however, that the addition of some of our heavy forces to those operating in the channel approaches by the French and British would undoubtedly be the possibility of such raids.

It has been found necessary to accept no reports of submarine activity certain unless survivors are captured or the submarine itself is brought up. No dependence even is placed upon evidence of oil trails. A submarine has been attacked and forced down as there is reason to believe an enemy submarine dives to escape gunfire she is fitted to escape for the purpose of conveying the impression that she has been sunk and further pursuit.

Even that the amount of damage a submarine can stand is surprising when it was anticipated before the experience of the war. Upon a submarine submarine was mistaken for an enemy and though struck and escaped to port.

Statistics which are certain since the outbreak of war are as given in

between 30 and 40 submarines operate at a time in the waters between the British and French coast. At least one is now known to be

is "Best antisubmarine weapons." This and other statements in this letter cover purely technical details, with the permission of the committee, I will not read, but will put into the record.

In connection with the last statement that between 30 and 40 submarines were operating to the westward, that it was at that time, the belief being based upon what was then heard, but it turned out later that that estimate was too large. There were seldom more than 25 submarines away from the base at any one time, and the submarines that operated to the west of Ireland seldom more than 15. I have known it to be as high as 15, and as low as 1, 2, or 3. The reason that false estimate was made nobody in any navy in the world knew what was going to be able to do. Admiral von Tirpitz was of the opinion that they had to carry out very careful experiments to see if the submarine could stay out for 10 or 11 days. They found that they would be able to stay out 50 days to 3 months. Nobody in our Navy or any other navy. We had

of the preceding letter, not read by Admiral von Tirpitz in the record as follows:

One of the most efficient weapons now used by our fleet against submarines is the so-called "depth charge." These charges have been forwarded by our naval attaché. These charges are designed to explode at a certain depth, formerly 80 feet. They are dropped overboard where a submarine that has been sighted and are counted upon to badly shake up and demoralize and cause serious damage.

Howitzers and bomb throwers of large caliber are under construction throw similar depth charges to distances of about 2,000 yards. D forwarded.

30. *Torpedo protection.*—This subject may be summed up by the statement of a British dreadnought who said in effect that after a year's experience did not fear being sunk by a torpedo. Unless struck by several torpedoes anticipated is damage to shafts or rudder thus necessitating towing. Ships often been struck and been able to reach port. Vital water-tight compartments continuously closed at sea.

Destroyer officers have been heard to express the curious opinion that ships were more or less unsinkable. This is probably to be explained by the fact that they carry very few supplies; that they have their storage spaces covered or filled with wood or other water excluding material; and that, when at sea, they quarter their crews in barracks and when leaving for a cruise carry a large amount of berthing and supply facilities. These points, however, are not generally known.

On the contrary, all vessels of the British fleet must be kept fully supplied at all times for extended cruising. This is particularly true of battle cruisers.

31. All officers of rank and actual experience consulted are convinced that there have no unusual methods of protection or in fact any surprises or extraordinary fighting equipment.

32. All are agreed that the best protection against torpedoes is speed and maneuver.

33. It is a common experience of the naval as well as merchant service that wakes are reported where none exist. Many reports are received of torpedoes missing ships. This was true in the Jutland battle. The captain on board said that he received numerous reports of torpedoes passing just ahead and nearly all of which he had reason to believe did not exist.

Streaks of suds, slicks, etc., are very deceiving and are easily mistaken for wakes, particularly when the danger of torpedoes is present. This accounts for reports by passengers on liners and other merchant craft of seeing man overboard just miss their mark.

34. *Submarine versus submarines.*—There has always been opposition to submarines against submarines principally on the grounds that the possible accomplishments would not be sufficiently great to justify the risk involved in taken identity and resulting damage to friends.

The director of antisubmarine warfare believes, however, that such promise well and the experiment is now being tried with as many submarines as can be spared from the Grand Fleet. Some enemy submarines have been detected by this method, usually torpedoed. One valuable feature of this method lies in the fact that as long as our submarines are not so used, the enemy submarine is always safe in assuming that all submarines sighted are friends. If this certainty is maintained the enemy will be forced to keep down more and to take much greater care against detection. This is an advantage of no small amount.

In addition to the possible offensive work that may be accomplished by submarines on such duty, the plan furnishes us with more reliable information as to the limitations and capabilities of enemy vessels under the actual conditions of the war. The areas in which they operate. Without this knowledge based on actual experience too much is left to conjecture, which is liable to lead to a great deal of effort.

WM

Before reading selections from my reports to the Navy Department during the first four months of our participation in the war, it is necessary that I should stop here and present a few facts which will establish the critical tonnage situation which we entered the war. These statistics are substantiated in the archives of numerous Government departments in Washington, and if there is any inclination to question them they can be further substantiated by a long train of witnesses of Government officials.

In my letter of January 7, paragraphs 38, 41, 20, 21, referred to the tonnage situation which I am about to explain.

I submit here certain charts showing the situation, which were included or not. There are certain curves which show

at that time and the result of a summary which gives

yes. Do I understand that you wish to have these entered in the record?

Yes. I think those had better appear in the record, as they clearly what the situation is. This is an advanced view of the tonnage situation was at the time and how it was. [Reading.]

*Summary of delays in getting the United States Navy into action.*

	Tons.
U. S. Vessels, 1914 (American tonnage not included).....	31,500,000
Imports, 1914 (not including imports of Russia and other belligerents).....	170,000,000
Imports of these imports.....	25,000,000

**TONNAGE LOSSES.**

From Aug. 1, 1914, to Jan. 1, 1917.....	400,000
From Jan. 1, 1917.....	1,300,000
From Jan. 1, 1917.....	800,000
Required by Europe (annually).....	100,000,000
Imports of these imports.....	18,000,000
Imports for military and naval uses (in addition to tonnage for other purposes).....	8,500,000
Imports of tonnage necessary to allied cause.....	26,500,000
Imports of Allies, Jan. 1, 1917.....	31,100,000
Imports of Allies, May 1, 1917.....	2,100,000
Imports of Allies because of damage or repairs.....	2,000,000
Imports of Allies, May 1, 1917.....	27,000,000
Imports of tonnage losses Feb. 1, 1917, to Aug. 1, 1917.....	640,000
Imports of tonnage losses Aug. 1, 1917, to Feb. 1, 1918.....	390,000
Imports of tonnage losses Feb. 1, 1918, to Nov. 11, 1918.....	250,000

reference, will give you a general summary of the

Yes. I am submitting to the committee an estimate of the tonnage available of the losses caused the Allies and the delays in getting American naval forces into action against my submarines.

Yes. I have before me show clearly that in April, 1917, the Allies seemed doomed on account of the losses of tonnage. For months of the year there had been a net loss of over 10 per cent of the total allied and neutral shipping, and these losses had been increasing every month. In the whole period of the war before January 1, 1917. It is clear that these losses, if continued, would soon reduce the shipping to an extent that military requirements, and requirements of the population of the allied countries, could not longer be met. The imports had already been reduced by 40 per cent of the tonnage. They could not be reduced further without starving or the civil populations of the allied countries. Reduction at the rate then existing would have made it impossible to transport an American army or to maintain it.

Adoption of the convoy system, and the antisubmarine measures put into effect by the Allies with our assistance in 1917, the

losses were gradually reduced until in October, 1918, they had fallen to only 100,000 tons. The period between the beginning of the German unrestricted submarine campaign and the armistice divided into three phases so far as losses of merchant tonnage were concerned:

First. The period from February 1, 1917, to the end of June 1917, when American aid was lacking and when shipping was not convoyed. Average losses, 640,000 tons per month.

Second. The period of August 1, 1917, to February 1, 1918, when there was a partial employment of the convoy system and partial assistance from America. Losses, 390,000 tons per month.

Third. The period from February 1, 1918, to the armistice. Full cooperation was given by America, and consequently the full employment of the convoy system. Losses, 250,000 tons per month.

As will be noted, each of these successive phases of the unrestricted submarine campaign is marked by the degree of naval cooperation received from America. An analysis of the situation, therefore, shows that if the United States Navy had been prepared for war when the war began, and if a whole-hearted policy of cooperation with the Allies had been followed from the beginning, the first period mentioned above would have come to an end within a month after the war began; that is, by May 1, 1917. The second period would probably have ended by August 1, as by that time the full weight of our naval action would probably have been felt. An estimate of the amount of tonnage that would have been saved by prompt action on our part shows, therefore, that, if the first period had ended on May 1, 1917, the second period on August 1, 1917, a million and a half tons of shipping would have been saved to the Allies in 1917. Similarly, a third period of another million tons would have been saved in 1918.

It can thus be said that the failure of the Navy Department to enter the war immediately and whole-heartedly cost the cause as a whole 2,500,000 tons of shipping sunk unnecessarily. While this is of course an estimate only, it is based upon results obtained when our help became effective, and there is no reason to doubt that it is a conservative estimate.

The loss of this amount of shipping can also be translated into definite prolongation of the war and unnecessary sacrifice of men and treasure in accomplishing the victory. As Gen. Pershing clearly shows in his report to the Secretary of War, the practical consideration limiting the number of American troops that could be sent to France was that of tonnage. The tonnage losses caused made it impossible at the time to transport any considerable American Army and, at the same time, continue the absolutely essential military supplies and food for the civil populations of the European countries. It therefore became necessary to limit the number of American troops that could be sent abroad during the first year of the war to an average of approximately 25,000 men per month. If the million and a half tons sunk unnecessarily in 1917 had been saved by prompt cooperation of our Navy, the number of American soldiers sent to France could have been doubled or trebled. If the tonnage had been available and the additional American troops had been sent to France, and the new drafts called more promptly into this country, America could have had a million men in France by March, 1918, instead of 300,000.

of the various books by military experts and of the available information concerning the German campaign of 1918, shows that defeat of the submarine campaign would have had a very greatly shortening the war. The Germans had continued to hope until the beginning of 1918, that the submarine force would force the Allies to peace. The offensive of 1918 was projected and undertaken when the German staff felt the submarine could not bring them victory. If, therefore, losses had been so reduced by August, 1917, that the submarine campaign could have been accomplished, without a doubt, have reacted upon the morale of the German command at that time as it did actually in 1918. The German command would then have been forced into its desperate offensive earlier than March, 1918, when the offensive was launched against the Allies, or would have been forced to a vigorous assault of the Allies in the early spring of 1918, instead of the losses suffered in the first months of the fighting, and because of the delay in getting American reinforcements, actually did not begin until the middle of May. In either of these cases, the presence of a million men in France on March 1, and the arrival of another million men in three months, would undoubtedly have brought a speedy end to the war, if one may judge from what actually happened when American forces did become available, and thus tip the scales in favor of the Allies.

Necessarily of the two and a half million tons of shipping lost, the probability postponed the end of the war at least six months. The average loss of life per day to the Allies was 3,000 men. This prolongation of the war, therefore, cost a million lives. Similarly, as the war cost the allies \$15,000,000,000, of which at least one-third was expended by the United States directly or loaned to the

all this statement not because I assume or pretend that the Navy Department in order to present to you some estimate of what the cost of such delays and military errors as those committed by the Navy Department in this same time cost the Nation and the world. I wish to call your attention as vividly as possible to the questions under discussion are not purely academic, but the most serious consequences that must inevitably be suffered if such mistakes are committed in time of war. It is the cost of the war which cost the cause for which we were fighting half a billion dollars, and two and a half million lives.

I would like to refer to the committee selections from my various dispatches during the first four months, together with certain dispatches from other important Government officials, for the purpose of showing that the department was fully informed of the most serious and critical nature of the war situation at the time it was decided to enter.

I wish to point out that the official documents I am about are but a few of those which I sent and which are available records. An attempt has been made merely to select typical messages. These messages which I shall now read you are in citation of paragraphs 10, 11, 12, 13, 26, and 27 of my letter, the subject of this inquiry.

I would like to say in connection with these dispatches in order to take a certain subject and discuss it if it is necessary, or to introduce the dispatches which substantiate the statement. All of those dispatches contain remarks on different subjects and include and read the whole dispatch would unnecessarily lengthen the record and would be very boring.

It is also my intention to include only any portion of a dispatch which bears on the subject in hand, but if, after I finish my testimony, the committee desires to have a complete file of these dispatches that they can read any dispatch in its entirety, I can submit that. That will add considerably to the length of the record, but that can be submitted if desired.

The CHAIRMAN. We can determine that afterwards.

Admiral SIMS. Yes. To give you an idea of the magnitude of the job, I may say that I do not know how many dispatches there are but they are in the hundreds of thousands. I asked my staff some time ago how many there were, and he said that if the bounds were up in boards and set on a shelf that shelf would have to be 140 feet long in order to contain them. Of course, the committee does not want them all.

Senator TRAMMELL. They are all dispatches that are on file in the department?

Admiral SIMS. Yes, they are all on file in the department.

Senator TRAMMELL. And your references will refer to the paragraph numbers, so that they can be found?

Admiral SIMS. Out of those miles of dispatches I am only selecting representative ones, and out of those representative ones I am selecting those that illustrate the point in question; and of all of those dispatches, of which there are probably 200,000, I am only selecting a certain number, and those can be included; and if, after my testimony is concluded, you decide that it would be advisable, you can put them in in full; but in the meantime there are only selections from these dispatches.

Senator TRAMMELL. Will you refer to them under the file number so that they can be identified?

Admiral SIMS. I will refer to them by dates, and will give you file numbers also, if you need them, and by numbers also.

On the same day that I sent my first dispatch to the department covering the whole situation, I also sent a second dispatch to emphasize the exactness of the information and the importance of the recommendations given in the first cable. This second dispatch is as follows:

[Cable to Department, April 14, 1917.]

The dispatch referred to gives the exact truth of the situation, and the information given is not even known to the majority of British officials. I have absolutely no doubt upon the importance of a complete and accurate statement of the true situation, and the authorities have finally given their consent, but only after reference to the

of the manifest advantage to enemy morale if the information is first with all possible urgency your immediate consideration.

Sims.

In reference to the importance of keeping your informed of the enemy, that I read a dispatch in the paper in which prominent officials in Berlin read aloud the account of the statement of Admiral Jellicoe, and the statement in a magazine of the situation was, and they listened to this language with interest.

From this dispatch, I learned by accident on the following day, at Admiral Jellicoe's office, that the Navy Department had agreed, as I will point out later in my testimony, with the representatives of the British and French Navies in Washington to the extent of American naval cooperation. I did not learn from the department any information concerning this agreement, I will point out later in my testimony. At this point I wish to emphasize the fact that one clause in the agreement between Admiral Jellicoe was to the effect that the Navy Department should have a division of destroyers to base either upon a French or British base. I there-upon sent to the department on the 16th of April the following message:

APRIL 16--11 p. m.

NAVY DEPARTMENT

WASHINGTON

1. Destroyer or other patrol forces sent this side do not base themselves westward as practicable, preferably south coast Ireland, and in designated high-sea area in zone to westward and southward of this area.

Sims.

On April 18, in replying to a suggestion of the Germans as to the feasibility of blocking the German submarine bases, which will also be taken up later, I again emphasized the importance of immediate naval cooperation.

(Telegram to Navy Department, April 18, 1917.)

The enemy has itself to be to a great degree the most efficacious enemy of our commerce. All possible means are taken by the enemy to prevent our other duty, even to sink ships on hospital service. The minimum number required by the Grand Fleet, for carrying out duties, all destroyers are now so used. These vessels are used as extensively as possible, but their number is quite insufficient for the present crisis, particularly as it affects merchantmen. In view of the situation I urgently repeat the recommendations that a destroyer that can reach Ireland as well as all light draft vessels be sent to perform any patrol service.

On April 15, 17, 22, I called attention to my early recommendations for forces.

I had received from the Navy Department a message containing information, at the end of which was the following:

April will be given earnest and serious attention.

From this assurance from the department, the only messages received concerning the sending of forces abroad in April

were the two messages which I shall now read you, w both received on April 22:

From: Operations.  
To: Rear Admiral Sims.  
Received April 22, 1917.

Six destroyers are ready to sail immediately upon receiving inform desired port and best route to follow as they approach the Irish coast information.

From: Secretary of the Navy.  
To: Rear Admiral W. S. Sims.  
Cablegram received: April 22, 1917.

The United States has been requested by the Russian Government to patrol vessels and four destroyers to the Arctic coast for the defense of It is understood that assistance is urgently required at the earliest possible Please confer with the British authorities as to the situation and wire advise.

DANIELS, *Secretary*

It is to be seen from the second of these messages how little tance the department had apparently given to my recommendation In my first dispatch and in later dispatches I had emphasized absolute necessity of concentrating all available American marine craft in the critical area of the submarine zone south of Yet the department entertained the possibility of sending destroyers and four patrol vessels to the Arctic coast at a time so far as I knew, they were intending to send only one division of destroyers to the critical zone.

I immediately replied to this message with my dispatch of April

Sent April 24, 10 a. m.  
To: Secretary of the Navy.  
Through: State Department.

Strictly confidential. Replying to department's April 22. Have considered Admiralty. Conclusion reached is that our destroyers and patrol forces should concentrated in same area, based on Bantry Bay, with all possible repair and facilities. Effort would be diminished by separation and necessary establishment of additional bases. If this is done, Admiralty can augment submarine defense coast from their present bases. Submarines and decoy vessels already sent to Situation continues critical. Nine vessels sunk yesterday. Recommend destroyers now available be sent earliest possible date, if necessary in advance of repair and supply vessels. Admiralty can supply and repair temporarily.

On April 26 I received a message announcing the sailing of destroyers from Boston on April 24, but containing no further information with regard to other forces.

My despair can be imagined.

I felt there was no way to explain the situation any more than I had already done in dispatches to the department. Nevertheless, I did send one more message, which follows:

[Cable to department.]

Sent April 27, 1917.  
To: Secretary of the Navy.  
Through: State Department.

The information which follows must be guarded with the greatest secrecy in spite of the effort of all destroyers and patrol vessels which are available, the situation is increasingly critical. Eighty-eight ships, amounting to 237,000 tons (not into account the fishing vessels), of British, Allied, and neutral nationality were during the week ending April 22. There is a greatly increased number of ships which are unsuccessfully attacked by enemy submarines. This indicates that there is a correspondingly increased number of submarines operating.

was, however, to believe that this one additional message would bring the action necessary. But something had to be done. The stakes were too great for me to be satisfied with inaction.

It seemed to be open. My representative capacity placed me under the ambassador. Throughout my career I always considered it a duty to keep the State Department generally informed of the military situation. I made an urgent appeal to the ambassador, asking him to make an attempt to get our Government to realize the situation. I submitted a memorandum to the ambassador in which I might read the following extracts:

Washington, April 27, 1917.

On April 22, 88 ships, 240,000 tonnage, lost; number of vessels lost shows marked increase in number of submarines operating. One other and other suitable vessel now employed, even to point of British Grand Fleet over enemy Grand Fleet. Allies do not transport of troops and supplies strained to utmost, and maintenance threatened.

Continued cooperation by United States in future, including reinforcement of armies in field, it is imperative that we must possess at least all destroyers and other craft suitable for opposing submarines on this side. Opportunity presented for United States to win the war by immediate maximum cooperation in suppressing submarines.

At 11 a. m. on April 27—the ambassador sent the following to the State Department:

Washington, April 27, 1917.

The Secretary and President. There is reason for the greatest anxiety at the war caused by the increasing success of the German submarine. Official sources that during the week ending April 22, 88 British and neutral, were lost. The number of vessels unsuccessful in action has increased a great increase in the number of submarines in action. The British have lost every month till the shorter days of autumn the sea will be about clear of shipping. Most of the ships are sunk in the Irish Sea. The British have in that area every other craft, but their force is so insufficient that they hardly disperse them. The British transport of troops and supplies is already threatened and the maintenance of the armies in the field is threatened. The British have lost the civil population not more than six weeks or

The United States may render at any time in the future or in any other way is now more seriously needed in this submarine area for more than it can ever be needed again, or anywhere else. After consultation with the prime minister and other members of the British Government I refrain from most strongly recommending the immediate destruction of all other craft that can be of antisubmarine use. The most dangerous crisis of the war and the most dangerous situation for the Allies could arise. If enough submarines can be destroyed in the Irish Sea, the war will be won, and if we can contribute effective aid to the British directly by our aid. I can not exaggerate the pressing nature of this situation. Thirty or more destroyers and other similar craft immediately would very likely be decisive. There is no time

PAGE.

He followed this up on the next day by sending to the President another long dispatch covering the whole situation, stating again the urgent necessity of immediate naval

Owing to the gravity of the submarine situation, although I am unsatisfied as regards our forces available and their material condition, I am urging the importance of the time element, and the fact that the pressing moment is numbers of vessels in the danger area. We can not send too many. If the rate of losses given last week is continued, any other form of cooperation including shipping may be too late. The intensity of the campaign shows now, and within the next two months, is the critical time. My opinion all points to the breaking of enemy submarine morale as the mission. Since the British are concentrating more forces in the critical area, I do not exaggerate the importance of our force being immediately followed by facilities for supply and repair, especially for all needs and for all species. At Queenstown and the neighboring bases because of the volume of work, labor, facilities will be greatly overstrained.

With regard to submarines entering and leaving their bases and their whereabouts while operating, the admiralty is able to maintain information fairly exact.

Of the 34 mine U-boats, two for some days were not located, and the reason was on the point of informing us of the probability of their being en route to the States when their whereabouts were discovered. It is the Admiralty's opinion that at present none are likely to be sent over and that the present effort of a submarine which is successful will be kept up off the channel entrance. The destroyers which can be freed from duty with the fleet are being employed. It has been shown by experience that 50 per cent of the destroyers can be maintained on patrol. The area covered by destroyers is practically untenable by submarines, but this area is ineffective as it is too small. Yesterday the war council and I decided that cooperation of twenty-odd American destroyers with bases at a town would no doubt put down the present submarine activity which is increasing and keep it down.

That, of course, refers to that particular area.

The crisis will be passed if the enemy can be forced to disperse his forces in this crucial zone.

I believe our Navy has an opportunity for glorious distinction and I recommend that there be sent at once maximum possible number destroyers on charges and all supplies necessary will be furnished the six destroyers now at sea and there will be assigned to the staff of our senior officer an expert destroyer officer.

A little bit later I was able to inform the department that I could give them more accurate information about the movements of enemy submarines, and when we come to consider the question of the defense of our coast, I think I can show you some of the most remarkable examples of secret intelligence work that ever have been recorded in any military history. I will explain to you, to a certain extent, how it was that I was able to assure the department that no submarine would leave the other side without the department being warned; and it turned out to be so. No submarine left the other side without the Navy Department having at least a few weeks warning, and being told where she was at least every three days, and being told what her name was, what her number was, and in one case what the name of her commanding officer was, where she was going and what she was going to do; and it all turned out to be perfectly correct.

On the following day I received orders placing me in command of the forces which were being sent, namely, six destroyers, in addition to my other duties as the department's representative abroad.

On May 3, a whole month after we declared war, apparently as a result of the dispatches sent on April 27 and 28, the department sent me the first message giving me any intimation as to the extent of the forces they intended to send. This message was as follows:

the Navy.

visited by the British commission in Washington as a base for the operations which are operating with the Allies. Ultimately there will be a decision as well as the *Melville*, and also the *Dixie* should the latter be recommended after investigating the place as to what equipment should be furnished for use on shore for housing stores, and whether the same can be obtained there. Is there available any floating equipment or storage facilities there? Report in general what kind of supplies can be obtained from here in addition to the stores which are generally available from the fleet. Can oil be obtained from any nearby fleet base? We could replenish the stock used by sending our oil tankers, or by sending our oil tankers sent from this side to Berehaven?

and a mother ship.

In that dispatch I should like to call attention to the final decision that came from the Navy Department. The decision of the war was not until one month, nearly, after the war.

attention to a few features of this dispatch:

1. The fact that ultimately 36 destroyers were little satisfaction. Time was everything. Did it make a difference?

2. The majority of the information requested therein was thoroughly worked out in our war plans.

3. To indicate to the committee the nature of the task which we had, with one aid, with no data or record as to our own situation at hand, to attempt to obtain this information available from the various parts of the British Isles. Of course, the question of personnel as a separate

message on May 7 with the following dispatch:

(Despatch to Department May 7, 1917.)

The British force is established, defended, and used as advanced base, and is suitable for the present area of main activities of submarines. The British and the destroyer force should remain concentrated upon its own supply and should remain essentially a mobile force ready to follow the submarine activity. The British will give us any necessary facilities for repair and supply are strained nearly to the limit. I urge that our force be as self-contained as possible; that our ships be sent with complete stores as for extended West Indian operations. Our ships be sent with meat, provisions, and stores to replenish the stores to usual stores carried by our repair ships, we should have a large stock of stores as our experience indicates will be necessary, such as spare parts, piping, repair material, etc.

The British force should be made and for the British force to relieve present drain on British supply for the British force. Oil will be supplied from small oilers from British oil tankers when over based. Oil situation becoming critical. We should have a continuous supply from our large oil tankers discharging at the British force. It is not to detain large tankers at advanced bases. The British force should be not only as self-sustaining as possible, but also have special equipments necessary for housing stores ashore.

At the end of May I went to Paris, at the request of the British naval authorities, to attend a conference with the British naval authorities, which was held in connection with a military council. I informed the Navy Department of these conferences in a dispatch sent on May 5.

This dispatch is as follows:

[Cable sent Navy Department, May 5, 1917.]

Relations with the French Navy Department very satisfactory. Conf. minister and chief of staff and French attaché London and attaché Pa Sea Lord resulted in unanimous agreement that our destroyer force should be concentrated and should attack the enemy submarines in whatever area they are operating in the greatest numbers. Probably principally in the area from the West Northwest of Fastnet.

The next intimation which I received from the department regarding their probable plans was in a dispatch of May 8:

Cablegram, from Secretary of the Navy.

To: Rear Admiral Sims.

Received May 8, 1917.

The French have requested and United States Navy Department consider establishing temporary bases at Bordeaux and Brest, with one line office officer and one engineer officer. You are requested to advise on this and it is that your reply be expedited.

I

I replied to this on the same day.  
Sent May 8, 1917.

To: Secretary of State, Washington.

Through: State Department.

Following from the Admiral to Navy Department:

Establishment of temporary bases Brest and Bordeaux very desirable but should not divert in any way necessary repair supply and fuel vessels from mobile base. Urgent that destroyer force remain concentrated with mobile base to follow any movement of main submarine activity on high sea trade routes.

Throughout the remainder of the month of May, and for the first three weeks of June, I continued to send, at frequent intervals, cables reiterating recommendations made from the time of the first cable, but received no further reply from the Navy Department regarding their plans and policies and forces to be sent abroad. On June 20, although throughout this period I was in daily communication with the heads of the allied navies. You can imagine my embarrassment in all discussions, owing to my inability to make any statement whatever as to what the United States Navy proposed to do; and, as I will point out at a later time, in dealing with the government's direct negotiations with allies during this period. I was receiving most of my information with regard to American plans and the disposition of American naval forces accidentally through information seen in the Admiralty or related to me by British armed guard officers.

In this series of messages which I now propose to read, in order not to confuse the situation, I will adhere to the point of discussion. There are a great many very important things which I will take up later, for example, the convoy system, which was a period was pressing hard, but I wish now to deal only with the question of reinforcements.

From among the many messages sent during May and June, which I was pointing out the increasingly critical character of the situation and repeated my recommendations for the sending of submarine craft, I will read portions of my dispatches of May 31, June 7, June 14, and June 20:

selections of these dispatches in order (1) to save time, (2) to avoid confusion. Many dispatches referred to subjects. It is therefore better to read only the portion relating to the subject now under consideration. I can, however, if the committee desires, submit a separate list of all dispatches from which these extracts were taken. Of course, these extracts are only a few representative ones to give you an impression in each case. It would take literally months to make the cables. They are up in the hundreds of thousands. The cables alone would occupy about 140 feet of shelf. As for the letters, they would fill 100 letter-file drawers each.

[Cable sent Department May 14, 1917.]

Measures made to increase the British patrols. The measures we take are with utmost dispatch in view of the critical degree of enemy losses and the general allied military and political situation. The matter is important. The need is for destroyers, antisubmarine craft, and submarines in the greatest possible numbers. The British Government has the confidence of America's desire to assist in putting down the sub-

marine that can be considered as only as instance of inter-Allied co-operation, because they are thanking us for sending 6 submarines to date.

We are sending numbers of patrol craft, and as previously reported, too many to list upon the urgency of reinforcing the allied antisubmarine forces to a possible limit.

Sims.

Extracts from a few of these cables.

[Cable sent to Department May 31, 1917.]

With the available antisubmarine craft, the enemy is being forced to restrict his use of gun fire, and this results in shorter cruises and more frequent returns to bases, and difficulty in maintaining definite prearranged routes. We expect from now on alternative periods of greater and lesser activity. It is a pleasure to report officially that the United States destroyer squadrons are rendering most efficient and valuable assistance.

[Cable sent to Department June 7, 1917.]

We are making further additions to our forces here or in France and are making them more effective. The great necessity is numbers of antisubmarine craft the more the better. Also request general agreement on policy concerning fleet and other service vessels. Cooperation as regards their use this side, but would like to be able to make future development or emergencies should bring the

Sims.

Very truly yours,

W. D. L. H. H. H.

United States Chief of Naval Operations from Vice Admiral Sims  
The situation and prospects for immediate future very grave. All fuel, food, and Army assistance which we can render is entirely dependent upon safe passage through dangerous submarine areas this side. The immediate future and available vessels for escort duty is cause for concern. Whatever is done to meet the situation must be done immediately. The difficulties confronting the entire convoy situation primarily depend upon the question of escorts through submarine

zones. There are not now sufficient vessels available for escort of all vital supplies and also prospective movements of our troops. As our troops and their supplies will approach European coast by shipping and shipping convoys it is mandatory that information as to the probable numbers and times of sailing of all Army three months as on this depends the programme of merchant ships be arranged some time ahead. The approach of our first Army of embarrass the shipping situation as it will require all destroyers thus necessitating entire suspension of patrol and escort duty in lay too much stress upon the urgent necessity of increasing the patrol forces here with utmost despatch. Can not other craft be armed which can make above 12 knots and keep the sea will be. Our shipping and our coast is better protected in the field of energy any other place.

Urgently request answer in next 24 hours if possible as to prospective all Army shipping in next two or three months. This information. Also request information as to probable additions to these waters. The Admiralty informs me that present prospect is are protected food supplies can not be. I again urgently recommend that can be brought to the coast of Ireland be sent at once.

Sent: June 20, 1917.

To: Secretary of the Navy.  
(Through Admiralty.)

The immediate dispatch to this area of all possible destroyers craft of any description is mandatory if the submarine issue is to. During absence of destroyers for escort duty with troops transport area reduced to only 10 destroyers and 10 sloops, only 6 of each in. This requires five days at sea with two days in port, which can not reliability. Other areas are similarly short of sufficient forces to. Yesterday the majority of these forces were engaged in escorting bound valuable ships, thereby leaving all shipping following. Ships sunk yesterday as far west as 17:30. It will seem suicidal if as proposed by the British Admiralty is not put into immediate operation to all shipping, thus forcing submarines to encounter antisubmarine attack shipping. It is impossible to carry on partial convoy and patrol. Both can not be done. The former much better than present success. Urgently request information of department's action and upon previous similar dispatches. A decision is necessary before can be taken on this side.

That refers largely to the convoys. I will show you take up the convoys as a separate subject, the operation of the United States to the introduction of the convoy system.

In reply to the increasingly urgent series of messages, I finally received a message from the department, on June 20, which will now read to you:

Received: June 20, 1917, via Admiralty.

To: Commander in Chief, Queenstown.  
Following for Admiral Sims:

Begins. There will be no additional movements before August. You will be furnished fully with information as to sailing of Army supply ships possible in advance, and the actual sailing intended route and arrival will be reported. We hope to sail four Army supply ships about 10 days' time. The 32 destroyers, which are all that are available, 110-foot chasers, which are to be sent to France, should begin sailing vessels, 12 in number, will sail in August for France. The craft available at present, although work on yachts is being pushed, will be ready by 15th July. In regard to convoy, I consider that American guards are safer when sailing independently.

It is useless for us to manufacture, grow, and build munitions, foods, as assemble and train soldiery, unless at the same time, and in time, we also take steps to insure that such measures will safely reach the points where to defeat the enemy. If we attempt to furnish this help in a larger degree the enemy can sink it, we might perhaps eventually accomplish our purpose but grave danger is that the Allies will be brought to terms before such a plan can be carried out.

It remains a fact that at present the enemy is succeeding and we are failing. We are being sunk faster than they can be replaced by the building facilities of the world. This simply means that the enemy is winning the war. There is no doubt about that. The submarines are rapidly cutting the Allies lines of communication. When they are cut, or sufficiently interfered with, we must accept the consequences.

It is a poor plan, indeed, that does not involve attacking the enemy or forcing them to attack ours. Stated briefly, the unsuccessful plan being pursued is about as follows:

(a) Allowing the enemy to concentrate his efforts exclusively against our inadequately protected shipping (our necessary lines of communication) through which our supplies now pass and must continue to pass.

(b) Maintaining a relatively large number of our available antisubmarine forces along the great stretch of American coast lines which lie over 3,000 miles away from the enemy, which the enemy not only is not operating, but can not profitably operate.

The enemy is perfectly content to have us protect our great stretch of coast lines as long as he will never have to, and in fact could not afford to, attack these distant lines in order to defeat us.

Mr. Lloyd George was perfectly right in saying that what we needed were ships, ships, and more ships, but he didn't explain that those ships needed were of certain kinds, namely:

First. Ships to oppose the enemy's war vessels.

Second. Ships to carry the supplies we must have.

The necessity for both in adequate numbers is vital, but either one alone will avail.

The fact must be thoroughly realized that the war is being, and must continue to be fought exclusively on this side of the Atlantic, and that it will be won by us within the next few months.

It can not be won by any accumulation of naval forces on our coast lines or in other areas except those in which the war is being fought, and must continue to be fought.

It must be lost, or very unsatisfactorily terminated, if there is not an immediate sufficient accumulation of antisubmarine forces here in the critical areas. The simple reason that, if the shipping losses continue at the present rate—we can not win.

I feel that I would fail in my duty if I did not continue to keep you informed of the situation.

Practically the same information as was given the Ambassador in this letter was transmitted to the department in two cables sent June 28, and in the further cable of June 29, which are as follows:  
Sent June 28, 1917:

To Secretary of Navy, through Admiralty.

Protection of all allied shipping in time—I repeat in time—is present. Whatever efforts we can exert must be put into operation at once if they are effective. Reliable submarines would be of great use to strengthen British patrols and also as scouts ahead of convoys. All submarines we send to sea in time will therefore be invaluable in insuring success of convoy system in success of war, provided these submarines are supplied from America and not from their own mother ships.

Sent June 28, 1917:

To Secretary of the Navy, through Admiralty, from Queenstown.

I submit that if submarine campaign is to be defeated it must be by aggressive measures. The enemy submarine mission must be destruction of our ships and avoidance of antisubmarine craft.

Concerning department's reference to a scheme for protection of our shipping which will not interfere with present escort duties, I submit that the

1

by expert naval crews with much previous experience with submarine recently been torpedoed without warning. Another case within the month a merchant ship engaging submarine with gunfire at 6,000 yards, but submarine approached unseen and torpedoed ship at close range. The ineffective heavy batteries against submarine attack is conclusively shown by Admiralty's policy always sending destroyers to escort their men-of-war. The comparative of the relatively small number of American ships, especially liners, is believed to be due to the enemy's hopes that the pacifist movement will succeed, on record of submarines making successful gun attacks from advantageous positions against armed ships without ship being able to see submarine.

I submit that if submarine campaign is to be defeated it must be by other measures. The enemy submarine mission must be destruction of ships and avoidance of antisubmarine craft. Enemy submarines are now using for approach an auxiliary periscope less than 2 inches in diameter. This is just acquired. All of the experience in this submarine campaign to date demonstrates that it would be a seriously dangerous misapprehension to base our policy on the assumption that any armament on merchantmen is any protection against submarines which are willing to use their torpedoes. The British have now decided the adoption to the maximum practicable extent of convoys from 16 to 20 ships. This is an offensive measure against submarines as the latter will be subjected to attack of our antisubmarine craft whenever they come within torpedoing range of convoyed merchantmen. Moreover, it permits of concentrated attack forces and obliges the enemy to disperse his forces to cover the various approaches.

Concerning department's reference to a scheme for protection of merchant ships which will not interfere with present escort duties, I submit that the time alone prevents utilization of any new antisubmarine invention. The campaign can easily be lost before any such schemes can come into effective operation. It is certainly counting on maximum effort being exerted before long nights weather of autumn, that is in next three months. Heaviest effort may be made in July and August. I again submit that protection of our coast lines and snipping must necessarily be carried out in field of enemy activity if it is to be of any use. The mission of the Allies must be to force submarines to give battle. Operations in home waters should take precedence over or be allowed to diminish maximum effort we can exert in area in which enemy is operating, and must be to operate in order to succeed.

Similar cables to those just read were sent on June 30, July 1, and July 2. The following message was then received from the Admiralty. Only that part of the message dealing with the reinforcements is here quoted:

Cablegram May 1.

From: Secretary of Navy.

To: Alusna, London.

For: Vice Admiral Sims. No. 44.

Received: July 2, 1917.

With reference to your previous cables, the Navy Department is fully aware of the urgency of sending all possible antisubmarine craft to European waters, and is doing its utmost to meet demands. Five destroyers will sail about the 1st of August for Asiatic waters, whence they have been ordered to duty in European waters. The Navy Department will assign seven cruisers for convoy duty in accordance with Admiralty's request.

There is little to comment on this message. I still was unable to believe that the department could possibly be aware of the full extent of the situation and still take no more action than was taken. The fact that five old destroyers would start a long cruise for Asiatic station about a month hence was little satisfaction. When it was brought out later, the statement that seven cruisers were assigned to convoy duty was the first intimation of cooperation in this work, the necessity of which had been impressed upon the department for more than two months previously. In fact, the convoy system had been in operation at this time for over a year, to the extent that British cruisers were available.

St. pointed out in a message of July 3 that any aircraft would be suitable for antisubmarine work, primary consideration was that of time. [Reading:]

100

If enemy submarine pressure anticipated in July, August, or September, the necessity for additional craft immediately is apparent. Additional craft are needed not only for actual offensive duty but also for the protection of convoys. Can not all destroyers Atlantic coast be transferred? Are there no armed tugs available? Even the small motor launch help. I fully realize the pressure on department to allocate destroyers to other localities, but am particularly anxious that our own effort should have maximum effect in meeting the general submarine approach routes to channel and Irish Sea are critical points. At Bergen and Melville at Queenstown and our personnel in the Atlantic familiar with situation, methods of operation, and administrative details and methods of communication, it will be conducive to the effectiveness of new forces joining to concentrate them in the United States forces together.

Sims.

... messages could be quoted among those which were  
... August, dealing with the same subject in almost  
... but it is believed that it would be merely unneces-  
... the time of the committee to read them.

were at last beginning to perceive that there was a  
European waters. This message of July 5 was

[Cablegram.]

100

1. Capt. Fletcher due to arrive French coast 5th July. Ten

12. What duty would they perform? Would they require  
13. is prepared to supply two or four 14-inch guns  
14. as per Admiralty's request. Guns can be delivered  
15. as to any definite plans for future operations  
16. requests made and our efforts to respond must insist  
17. consideration be submitted for our study.

... as proposed, the letter sent to the Secretary contained  
... as proposed for the suppression of the submarine  
... remained the same throughout the war, so that  
... as made in this telegram that they do not know  
... as, to say the least, extraordinary.

When this message was received, on July 10, 1917, the Navy sent me in a cable dispatch the first full state-

ment of the Navy Department policy which had been. This message was as follows:

From: Secretary of Navy.  
To: Vice Admiral Sims, U. S. S. *Melville*.  
Received: July 10, 1917.

The following letter from the Secretary to the Secretary of State is quoted for information and guidance as an index of the policy of the department in cooperation of our naval forces with those of our allies: "After careful consideration of the present naval situation, taken in connection with possible future developments which might arise, the Navy Department is prepared to announce as its policy so far as it relates to the Allies: First, the most hearty cooperation with the Allies to meet the present submarine situation in European or other waters compatible with an adequate defense of our own home waters. Second, the most hearty cooperation with the Allies to meet any future situation arising during the present war, with the realization that while a successful termination of the present war must be the first allied aim and will probably result in diminished tension throughout the world, the future position of the United States must in no way be jeopardized by the disintegration of our main fighting fleet. Fourth, the conception that the main military role of the United States naval force lies in its safeguarding of the communications of the Allies.

In pursuing this aim there will be generally speaking two classes of vessels engaged, minor craft and major craft, and two rôles of action, first offensive and second defensive. Fifth, in pursuing the rôle set forth in paragraph 4 the department can not too strongly insist that in its opinion the offensive must always be the dominant note in any general plans of strategy prepared. But as the primary nature of offensive preparations must perforce belong to the allied powers, the Navy Department announces as its policy that in general it is willing to accept any joint action of the Allies deemed necessary to meet immediate need. Sixth, pursuant to the above general policy, the Navy Department announces as its general policy, the following: "One, its willingness to send its minor fighting forces, consisting of destroyers, cruisers, submarine chasers, auxiliaries in any number compatible with home needs, and to any field of action deemed expedient by the allied admiralities which would not involve a violation of our present State policy. Two, its unwillingness as a matter of policy to separate any division from the fleet for service abroad although it is willing to send the entire battleship fleet to act as a united, but cooperating unit when after joint consultations of all the allies concerned the emergency is deemed to warrant it and the extra tension upon the line of communications due to the increase of fighting ships in the waters will stand the strain imposed upon it. Three, its willingness to discuss fully plans for joint operations."

JOSEPHUS D.

I will discuss this message more fully later, and then will give my reply when the general question of policy is taken up. I will here merely to state that the policy, as herein stated, is only to be judged by actual results in carrying it out and they speak for themselves. I particularly wish to stress the point that this first statement of policy was received on July 10, a few days over two months after we had declared war, as stated in my original message of January 7. The astounding features of this policy, however, were that, while it stated our intention to cooperate to the fullest degree, still such cooperation was conditioned upon, first, an adequate defense of our own waters; and, second, the future position of the United States after this war was finished. I am wholly unable to conceive of any war policy, particularly in a world war nature, which was certain to exhaust all participants, with the possible exception of ourselves, being based upon the requisit of any possible future war.

As an illustration of the fact that the department was kept fully informed at all times of the progress of the submarine war, I will read you one cable, that of July 5, which is typical of the con-

which were sent with regard to the actual operations and the losses of merchant ships.

to the Navy.

which allied and neutral week ending July, 128,500 tons. Apparently ~~more~~ have been out, but so far impossible to draw conclusions as to ~~estimated~~ activity. was ~~very~~ pleased to know that my visit to Paris was very successful, as ~~it~~ a complete agreement between the French and British Navy Depart-

ment as to the manner in which our destroyers and other forces should be in the campaign against the enemy. Our force and its supply train shot unit in the area of the greatest activity of the submarines.

Very sincerely, yours,

HON. JOSEPHUS DANIELS,

*Secretary of the Navy, Navy Department, Washington, D. C.*

In my letter of April 27 I had pointed out:

The military situation almost daily grows more critical, as is indicated by reports of merchant tonnage lost. The critical area continues to expand eastward and westward of Ireland.

Similarly, there are certain paragraphs in my letter of May 1 of interest in this connection:

12. I have considered it vitally important, and in this decision am in agreement with both the French and British Admiralties that our destroyers should not only remain concentrated and operate together but, what is more important, that they should remain essentially mobile. The destroyer is by far the most effective enemy of the submarine; and I am particularly anxious that our forces should be placed to the greatest possible effect in assisting in putting down the enemy submarine campaign. I am prompted in this decision not only because it is manifestly effective assistance which we can render at this time to the command but also the secondary reason that such a course is certain to be productive of the greatest distinction for the United States naval service.

It is therefore my aim, as reported to the department, to keep our forces to the extreme possible degree, independent of any shore station, in order that the force with its mobile base can be moved at will and follow the center of enemy submarine pressure.

13. As reported by cable dispatch, the situation remains critical, owing in large measure to the enemy submarine campaign. The question at issue is, and must remain, control of our lines of communication. It is of course true that the primary mission should always be the destruction of the enemy's fleet, but this is blind us to the fact that its destructions may often not be an effective form of assistance in itself, but merely a means to an end.

The only apparent solution to the submarine issue lies in numbers of antisubmarine craft with a view to sufficiently dispersing the enemy submarine effort so that the resulting losses will be reduced below the critical point.

And again I said:

29. It is in view of the above and of the large amount of supporting effort obtained that I have so urgently recommended that our primary military effort be concentrated in getting the maximum number of antisubmarine craft of all classes into the enemy's main area of activity.

In my general reports of June 1 and 15, I again especially emphasized the importance of immediate full cooperation with our Allies in meeting the submarine menace. I will read you a few paragraphs of interest in this connection. [Reading:]

It is gratifying to be able to report that the operations of our forces in these waters have proved not only very satisfactory but also of marked value to the Allies in coming to the submarine menace. The equipment and construction of our destroyers proved adequate and efficient, and the personnel has shown an unusually high degree of enthusiasm and ability to cope with the situation presented. It is hoped that the destroyer force operating in these waters can be greatly increased in the near future as this will unquestionably prove to be the most effective assistance which we can afford to the allied cause at the present time. As previously reported, it is of the utmost importance to the success of the operations of our forces that they be concentrated. The material difficulties and resulting interference with the operations which would be involved if they were concentrated beyond their own floating bases would seriously impair their military efficiency.

During three years of war the other allies have gradually established bases suited to their requirements, and hence they are in a better position to operate over widely dispersed areas. By keeping our forces concentrated with a view to being self-sustaining to the maximum degree, they will not only be able to give the greatest possible assistance to the allied cause, but also the future distinction to our service of such special work as they may perform will be better assured.

will continue operations as previously reported. Their range is increased to five days out and three days in, which will result in greater efficiency, and hence greater reliability of service.

Most of the time on duty is now spent in escorting the most valuable cargoes. Prior to the arrival of our forces, it was impracticable to conduct an offensive campaign against submarines, and also to escort the larger the force, the more the valuable cargoes which can

be escorted. Escorting is done in relays, as previously reported, thereby not overloading patrol craft. Valuable cargoes are escorted by a single vessel. Valuable ones require two and sometimes three escorts, and it is very difficult to handle such escorting duty and maintain any regular patrol.

Reports of June 8, 15, and 20, I will be found to contain paragraphs, with the exception of their possibly being dated. I believe it to be unnecessary to read them at length. They are a repetition of the dispatches or letters already

of June 29, however, I made a complete review of the situation, with the Allies rapidly losing the war. It is with urgency with which I was recommending the concentration of forces in the war zone. I will therefore read this letter

LONDON, June 29, 1917.

United States naval forces operating in European waters.

Naval Operations.

Report on the military situation.

In addition to my recent cable despatches which, in view of the urgency, have been made full and detailed.

I repeat briefly, I would repeat that I consider that the military situation is indeed on account of the success of the enemy submarine

operations continue as they have during the past four months, it is submarine will be forced to dire straits indeed, if they will not actually surrender to the peace.

The submarine is very much greater than the rate of building, and the rate is already so great that the efficiency of the naval forces is being reduced. Orders have just been given to use three-fifths speed, which is a emergency. This simply means that the enemy is winning the

the emergency consistent in my cable despatches have been because of the urgency of cooperation which we may take will be inefficient if the cooperation immediately—that is, within a month.

It is to believe that the maximum enemy submarine effort will be reached by the 1st of November (1917), reaching its height probably by the 1st of July, if not earlier.

The only solution for the submarine menace except the present methods of warfare based upon fundamental military prin-

the cardinal military principle of concentration of effort is to be directed by the enemy and not by the Allies.

The enemy's forces while the enemy is concentrating his. The enemy's forces must continue to be the destruction of merchant shipping.

The enemy's forces and the distances over which they must operate prevent the use of naval forces, that is, antisubmarine craft. They can not use antisubmarine craft with guns; they must use torpedoes. If they

to a considerable extent their limited supply would greatly reduce the number of away from base and the number of merchantmen they could

to avoid contact with antisubmarine craft. This they can do. The submarine can see the surface craft at many times the distance

as a periscope, particularly one less than two inches in diameter. The submarine greatly fears the antisubmarine craft because of the great depth charge.

Our tactics should therefore be such as to force the submarine to danger in order to get within range of merchantmen.

7. It therefore seems to go without question that the only course for is to revert to the ancient practice of convoy. This will be purely an offensive because if we concentrate our shipping into convoys and protect it with forces we will thereby force the enemy in order to carry out his mission naval forces, which are not embarrassed with valuable cargoes, and which danger to the submarine. At present our naval forces are wearing down fuel and material in an attempted combination of escorting single ships, can be picked up, and also of attempting to seek and offensively engage whose object is to avoid such encounters.

With the convoy system the conditions will be reversed. Although the enemy easily know when our convoys sail, he can never know the course they take or the route of approach to their destinations. Our escorting forces will be able to work on a deliberate, prearranged plan, preserving their oil supplies while the enemy will be forced to disperse his forces and seek us. In a handicap we now labor under will be shifted to the enemy; we will have the essential principle of concentration while the enemy will lose it.

8. The most careful and thorough study of the convoy system made by the Admiralty shows clearly that while we may have some losses under the new system owing to lack of adequate number of antisubmarine craft, they nevertheless will be critical as they are at present.

9. I again submit that if the Allied campaign is to be viewed as a whole, there is no necessity for any high-sea protection on our own coast. The submarine of war vessel possesses no unusual characteristics different than those of other craft, with the single exception of its ability to submerge for a limited time. The difficulty of maintaining distant bases is the same for the submarine as it is for other craft. As long as we maintain control of the sea as far as surface craft are concerned there can be no fear of the enemy establishing submarine bases in the West Indies.

10. To take an extreme illustration, if the enemy could be led or forced in any part of his submarine effort to the United States coast, or to any other area from the critical area surrounding the coast of France and the United Kingdom, an antisubmarine campaign would at once be won. The enemy labors under difficulties in carrying out his campaign even in this restricted area, owing to material limitations and the distances they must operate from their bases, which are extremely dangerous localities. The extent of the United States coast line and the distances between its principal commercial ports, preclude the possibility of submarine effort in that part of the world except limited operations of divers designed to affect public opinion, and thereby hold our forces from the vital action.

11. The difficulties confronting the convoy system are, of course, common to all. They are primarily involved in the widely dispersed ports of origin of merchant ships; the difficulty of communication by cable; the time involved by communications by mail; and the difficulties of obtaining a cooperation and coordination between Allied Governments.

As reported by cable dispatch, the British Government has definitely reached a decision to put the convoy system into operation as far as its ability goes. Convoys from Hampton Roads, Canada, Mediterranean, and Scandinavian countries are ready in operation. Convoys from New York will be put in operation as soon as ships are available. The British Navy is already strained beyond its capacity, and therefore urgently recommend that we cooperate at least to the extent of handling convoys from New York.

12. The dangers to convoys from high-sea raiders is remote, but, of course, provided against, and hence the necessity for escorting cruisers or reserve battleships. The necessity is even greater, however, for antisubmarine craft in the submarine zone.

13. As stated in my dispatches, the arming of merchantmen is not a solution to the submarine menace, it serves the single purpose of forcing the submarine to peddle instead of guns and bombs. The facts that men-of-war can not proceed at sea without escort, and that in the Queenstown avenue of approach alone in six weeks there have been 30 armed merchantmen sunk, without having seen submarines at all before the attack, seems to be conclusive evidence. A great deal of other evidence and war experience could be collected in support of the above.

14. The week ending June 19 has been one of great submarine activity. It indicates that 15 to 19 of the largest and latest submarines have been operating which 10 to 13 were operating in the critical area to the west and southwest of the British Isles. The above numbers are exclusive of the smaller and earlier submarines and submarines carrying mines alone. Two submarines are working

the Straits of Gibraltar. A feature of the week was the sinking of three merchant ship convoys enroute from Hampton Roads, consisting of 18 ships, having sailed on the 19th of June. One of these convoys has been swept up during the week.

There have been encounters with enemy submarines in waters surrounding Malta have been reported during the week--three by destroyers, two by destroyer ships, one by French gunboat, three by submarines, one by sea plane and one by merchant vessel.

Summary of report of operations by antisubmarinecraft based on

Wm. S. Sims.

As a sample of similar letters that were sent in.

My reports, throughout the rest of the war, continued to contain a full statement of the military situation, and of the campaign against submarines; these but would emphasize the points already emphasized. I, therefore, prepared messages from only one or two more letters, dealing with the situation.

On July 7 emphasized the fact that the war was being

July 7, 1917

First cable dispatches concerning the general military situation. I reported that at the present moment we are losing the war. This is due to the enemy submarine campaign, the demands which it places on our forces in the protection of essential lines of communication and the inadequate number of forces of all descriptions both to meet the demands at the same time to insure readiness for any other unsuspected

demands. To fulfill our obligation to the allied cause, we should sacrifice to placing in the critical areas, the maximum number of forces to be assembled.

On July 1 attended a conference of the heads of the staffs in Paris, at the time of the meeting of the Supreme Council of the Allies, attended by the premiers of the Allied nations and heads of their respective armies. My report on the situation brings out some significant features of the extent of the submarine campaign, which was then not being given by the United States as a whole.

July 30, 1917.

Wm. S. Sims

Summary of operations

At the military conferences at Paris, July 24 to 27.

At the French and British Admiralties, I attended certain naval conferences in Paris between July 24 and 27.

At these conferences in general discussion and exchange of information concerning the allied antisubmarine campaign.

At one of these conferences, the French minister of marine, the French and other leading officials of the French Admiralty; Admiral representing the British Admiralty; an Italian admiral with staff, the Italian minister in chief of staff and the chief of the Italian naval staff, the Japanese naval attaché, Paris.

The subject of the naval conference was a revision of the agreements made at a conference held at Corfu. At that conference it was decided to assign certain zones in the Mediterranean, the senior commander in each zone.

The enemy campaign has shown the necessity for a more central command and hence the proposal at this conference was made by the British that all antisubmarine operations should be put under the command of the British vice admiral commanding at Malta. The plan was to interfere with the various allied commands, particularly of

heavy forces. The proposal submitted was merely that one officer should charge of the antisubmarine operations and that all other allied flag of the Mediterranean should cooperate with him and furnish him all assistance. The area under discussion did not include Gibraltar, which is under a British command who commands the waters in that neighborhood.

This suggestion of the French minister of marine received unanimous approval.

As both France and England felt that the forces of Italy available for antisubmarine work were not being employed to the best advantage, this point was taken up for discussion. That is, particularly as to whether Italy could not use her forces to antisubmarine work.

It was recognized that all submarines operating in the Mediterranean would be at Pola or Cattaro at the head of the Adriatic, and that hence every effort should be made to prevent their egress from, and ingress into, that sea. Over 100 drifters operating at the mouth of the Adriatic attempting to form what might be called a mobile barrage. That is, they constantly sweep the Otranto Straits using their nets for the purpose of intercepting submarines. The work of these drifters is of concern to the enemy has been proven by the fact made upon them by Austrian cruiser forces. The primary demand is for more destroyers and similar craft to protect the drifter service.

All French destroyers in the Mediterranean which can possibly be spared from their vital escort duty are entirely available for duty with the Otranto barrage.

The demand for British destroyers in the North Sea and on the approaches to France and the United Kingdom was so great that it is impossible to assign any British destroyers to Adriatic duty in spite of the fact that British submarines are constantly in communication with the enemy submarines operating from the Adriatic.

Out of 100 British destroyers, which is the maximum number which could be considered as available for the British Grand Fleet in case of a general action, constant patrol duty in the North Sea, an average of 15 are at all times on patrol leaving but 30 in what might be called a constant state of readiness with the Grand Fleet, though some of these on patrol duty could join the fleet before an action takes place, though not with full supply of fuel oil.

Against this number the German High Sea Fleet probably has not less than 15 destroyers available for a high sea action. It has been necessary in the last few months to withdraw destroyers from the Grand Fleet to protect new mine barrages near Ostend and Zeebrugge for the purpose of protecting the monitors and other forces which are assisting in the general combined military and naval attack upon the above mentioned German bases.

A general discussion occurred as to a permanent material barrage to be maintained across the Straits of Otranto but it was unanimously agreed that such a barrage would be wholly ineffective if it could not be adequately protected by surface craft.

The Italian admiral stated definitely that he could not allocate any destroyers to this service on account of the danger of a high sea action between the Austro-Hungarian and Italian fleets. For this reason he dared not risk a single destroyer, and he must keep them in the highest state of readiness at all times for fleet action. He said he realized fully the pressing need for antisubmarine operations, but he was forced to view the other considerations as paramount.

In the general discussion it developed, and in fact the Italian admiral stated that he was prompted in his naval policy primarily by the political pressure which is constantly brought to bear upon him in his own country. The fact was pointed out upon him that destroyers on duty in protecting the barrage would be immobilized for duty in case of an action with the Austrian fleet, and the simple reason that they would be at all times between the enemy and their base. It was also pointed out that the Italian admiral in his discussion had not taken into consideration the French destroyers who were always available for any fleet action.

As stated above, however, it was apparent that the principal consideration in the Italian admiral's statement was the political pressure under which he had to operate.

The effect of raids on the eastern Italian coast, and the effect on public opinion in case even a single vessel should be lost, were considerations, which, in the view of the conditions existing in his country were paramount.

It was finally agreed, however, that the British admiral from Malta, present at this conference—would, after consultation with the French admiral in the Mediterranean and other allied flag officers afloat in that area, proceed to attempt to reach an agreement as to the employment of such forces as were

admiral suggested the desirability of an offensive against the Austrian port of Cattaro. He agreed that the waters in that region were too deep for the relative strength of heavy forces available with those of the allied effort to warrant sacrifices in a purely naval attack upon land. He stated that he thought the attack would be primarily in the air, but more depends entirely upon the number of available aircraft, which is inadequate.

It was intended to make attacks on Cattaro from the air, but it is the number of craft available will never result in effective success.

Another view seems to be one of considering her own forces solely and the other allied forces available, particularly the fact, for instance, that the Italian fleet, in effect, an allied scouting force for the Italian fleet, and a fixed material barrage across the Straits of Otranto depends upon availability and transport of material. Even if the material were estimated that it would take at least 40 weeks to transport it to Italy by rail.

Admiral also showed an inclination to view destroyers as a type of craft which are constantly hounded. They could not be considered as effective if they were kept constantly under overhaul and repair. I called attention to the fact that while this was to a certain extent a view held before the commencement of the war had shown the view to be unsound.

The duty being performed by American destroyers (which was taken over by the cruiser across the Atlantic) and stated that in spite of their primary duty at sea, I nevertheless considered them available at any time for which they were primarily created; that is, offensive duty in the sea action.

Finally I may state that barring the expression of professional opinion on the subject, I took no part in the discussion of the political or military operations of the various antisubmarine forces in the

war. I obtain any promises at all from the Italian admiral concerning the use of the other than holding them in reserve in case of a high fleet action, as stated above, that the primary consideration governing the use of the Italian fleet is of a domestic-political nature.

From the above it was brought out in the conference that 14 Italian destroyers are at Brindisi for extended periods during the month of July. The only definite decision reached by the conference was that the Italian Navy would take over the direction of the antisubmarine operations subject to general approval of, and coordination with, the allied forces in those waters.

It was stated that the relative allied situation as regards destroyers in the Mediterranean is 34 Italian, 10 French, and 22 British.

In connection with this situation, in case of unexpected high sea action the allied forces could probably not count upon more than 50 destroyers in the Mediterranean. England has already sent to Italy two monitors, and a large quantity of aviation material.

The first point considered was the problem presented by the presence of large type submarines of the nature of the *Deutschland* class in the Mediterranean and a large number of torpedoes—perhaps 30. It is understood that the *Deutschland* class are under construction and that four will be ready for service by the end of the year. As reported to the department, one vessel, something like a merchant vessel, is in the general vicinity of the Azores for some time, and is being used by the enemy as a floating base. It is believed that the enemy has a move on the part of the enemy (which could not be an error) is the convoy system of escorting each convoy by a cruiser and the above type of submarine from using their guns, and hence is limited to the use of torpedoes only.

The forces of the allied powers are wholly insufficient to attempt any offensive work more than that now, or soon to be, in operation. Even the defensive duty being carried on now greatly restricts all contemplated offensive operations. That is, against submarines themselves at, or near, their bases of immediate protection of trade.

As to the type of submarine, we only need consider their operations in the zone which are now commonly termed the submarine zone, because the destroyer escorts will prove effective, providing the convoy system is in full operation.

The relatively small numbers of the new type and the large areas over which they must operate outside of the submarine zone, will greatly restrict the number of ships they will present.

If shipping is concentrated in convoys, the routes of which, the submarines determine only by scouting, it is believed that success on their part will be in isolated instances, and, in the presence of a cruiser (which will prove the submarine's guns) it is not believed that the losses they can inflict will be great. For example, a submarine of this nature might be able to approach a convoy at daylight and fire two or three torpedoes, but the cruiser which would intercept it would proceed in that direction on a widely zigzagging course, would prevent further attacks in the same arc of approach. At night fall, if the cruiser has the submarine under in the direction of its approach and if the convoy makes a change of course for some hours, it is doubted whether a second torpedo could be carried out the same day or night.

England has sent a mystery ship and two submarines to the Azores, and the United States will also send two submarines and a mystery ship to that locality at least for the time being.

The advisability of the United States sending one of her older battleships or perhaps one or two small auxiliary craft to the Azores to prevent the use of the islands as a base during the coming winter should be considered. The situation in more vital areas however should be given full weight.

It is believed that no destroyers should be kept in the Azores as their operations are much more seriously needed closer to the European coast from whence they are sent out for important escort duty.

England has at present four convoys every eight days across the Atlantic to cover all trade it will require at least eight convoys each eight days, but this tension can not be realized for some time. There is no prospect in sight of a convoy outgoing ships.

It was stated that the Gulf of Helgoland is sufficiently mined to leave the submarine but two safe channels of access—that is, close to the shores principally in the North Sea waters. An attempt is being made to stop the ingress and egress of enemy submarines in these two channels with England submarines, but the numbers available are inadequate.

The question of mining territorial waters is a very serious one involving the rights of Allies, and is of such a nature that a decision must necessarily be based upon political and military as well as upon naval considerations. This subject has been under consideration for some time, but I am not able to report anything definite as to its present status.

Considerable discussion occurred as to whether any nation had developed means other than the use of surface craft for protecting mine fields from submarine operations. Nothing of an effective nature has been developed to date.

The question of mine fields which would be dangerous to submarines but safe for surface craft was discussed. No entirely satisfactory device has been developed to date. England is attempting to modify some of her mines so that they will be dangerous below a depth of 45 feet from the surface, but arm themselves in case they drag or in any other way rise above 45 feet in the water.

Both England and France are attempting to develop a design of mine of this type. The French stated that they were manufacturing some small floating mines to be used by merchant ships when being pursued by a submarine. They were designed to float for one hour and then sink.

The British have considered various designs of such mines, but none of this type have been developed.

The use of kite balloons were discussed. The British have had some success in using these balloons with a small group of destroyers on the outgoing routes to prevent submarines. The use of kite balloons for merchant convoys was considered, but was not deemed feasible, as they might attract submarines which otherwise would not sight them. If kite balloons can be provided and handled by merchant convoys, their use is worthy of serious consideration. It is probable that they will be tried.

The naval conference was requested to meet on one day with the military for a general discussion of the shipping situation, particularly as it affects the situation in the field.

I might say there that from time to time the prime ministers of the various countries got together for a discussion of the situation and they always asked the military and naval people to get their views on the situation. Upon this occasion it was evident that there was not the same cooperation between the military and naval people, so that G

called naval council to meet with the allied military discussion, and that is referred to in this letter. [Continuing.]

The conference was led by the French military chief of staff, Gen. Foch. It was clear that the French are very much concerned as to the military support to be obtained from the United States. Their urgent need of assistance was clear. Their need of definite assurances, particularly as to the numbers of troops and their time of availability, is extremely desirable from a strategic point of view.

I state here that I am not butting in at all into military matters. I come down later to a question of shipping, if our troops cooperate with the Allies. [Continuing reading:]

There seems to be a lack of definite knowledge of military support, their principal concern being whether there is full realization of the demands which will be made upon lines of communication in maintaining over-seas military forces. There can be no doubt but that the United States is planning to support France, but there seems to be considerable concern as to whether the extent of the supply system which armies of today demand. It seems that it is not only necessary for them to have definite knowledge of our plans in order that their military plans may be governed accordingly, but also to fear the demands which our troops may make upon our shipping over and above the supplies which will be sent from home.

I state there that there are but few people, I think, who understand of what it means to supply a million men, etc. It requires 50,000 tons of sea-borne freighting. [Continuing.]

There is a fear that the shipping which will be taken for the supply of our troops will seriously affect, either directly or indirectly, the shipping which is required to maintain the allied forces. For example: Both British and French troops work from the nearest ports and there is probably a large amount of shipping from the United States which has been brought by United States ships from America and other countries. There therefore seems to be a possibility of our withdrawing a considerable amount of our shipping from the service for troops and troop supply uses which will at once throw a strain upon British and French shipping.

In my telegram of yesterday, the British Minister of War appeared before the combined conference and made a statement concerning the shipping situation from his standpoint. It was noted particularly that in all of his calculations he had nearly not taken into account generally the assistance the United States will probably render. This is on account of a lack of definite information as to America's plans. He stated that the Government was on foot to withdraw about 80,000 skilled men from the western front to increase the output of shipbuilding construction in England, and that if this was done, that by November, 1918, England's construction would commence to yield about 3,000,000 tons per year. Until that time the present entirely essential needs of the country together with the present support which she is giving to the Allies would probably be met. He stated clearly, however, that it must not exceed at all the support she is now giving the Allies. That his estimates would also involve considerably more shipping from the United Kingdom than were now being experienced. It was also noted that they were dependent upon the supply of the necessary raw material. In other words, it is hoped that for the time being up to October, 1918 the continually diminishing

## NAVAL INVESTIGATION.

... suffice for imperative needs, that is, shipping does not increase above it 100,000 tons per month. At present 100 tons of British shipping is all that is necessary, and also large amounts for the European allies.

... believe that the situation can only be counted upon for 1918, and that there are many important considerations for the Allies to tide over the present crisis.

... agreement that closer coordination of effort should be maintained between the United States and the Allies. All military and naval action must be based upon America's action. Although American action is nevertheless absolutely necessary that such demands upon the allied shipping situation considered in the general campaign against the enemy, both military and naval, is really dependent upon the efficient prosecution of the war requires a close coordination between the United States and the European Allies than now exists. War Councils, both military and in other fields, should be kept supplied with more definite information. All experience clearly shows that this is the only way. It can be done efficiently only by the United States to Europe for consultation. The branches of war activity should be coordinated as we send abroad should be formed into one organization that such an organization after their necessary consultations should return to the United States to visit in order that their information may be based entirely upon cabled communication. It is necessary that the combined naval and military conferences of the United States would be fully represented by the United States at the approaching council to be held in

... by the way. [Continuing reading:]

... said that the conferences in Paris both naval and military were of all of the dispatches which I have sent to the United States. I was present at all of these conferences and I am sure that they would warrant modification in any way of recommendations made.

... might to say that there were no plans for a military sense or in a shipping sense. On August 20, I pointed out that, while it is true that the war may be won on the sea, it might very easily be lost. Up to this time, was being lost:

August 2

... available destroyers are even now very difficult to come by. It is necessary to continue to be given to troop ships and troop transporters. The demand for destroyer escort for such shipping is very great. The safety of mercantile shipping which is essential to the war is thereby involved which may easily do more harm than good at home.

... depends upon maintaining the lines of communication. It is of great importance, therefore, that the shipping which is necessary for the war should gradually increase with the transport and supply of United States. It is considered in connection with other essential

... won on the sea, though it may very easily be lost there. It is necessary to give itself into protection and maintenance of lines of communication. It may be said that the plan of campaign on the sea is of two general courses. First, the actual prevention

itself, either at its base or en route to or from its base. Second, the lack of coordination of allied shipping and shipping construction has failed to defeat the submarine's mission, granting that it can not be taken to sea to the high sea.

In the campaign based on the first course, it is vital that every effort be made to insure the success of the latter course mentioned.

That a sufficient number of antisubmarine vessels were available to prevent even a partial convoying of shipping, the tonnage began immediately to decrease in the month commented on this in my letter of the 15th of Sep-

tember 11, 1917. General:

In the anti-submarine campaign, generally speaking, the losses since the beginning of the year have not, on the contrary, appear to be on the decrease. This, however, does not explain the fact that the number of submarines operating has, if anything, increased. There is considerable difference of opinion as to the cause of this. The most reasonable opinion as to decrease in submarine losses is that there is the greatest degree of unanimity as follows:

1. Extension of the convoys system, together with increasing experience in escorting shipping and escorting craft.

2. Increase in submarine craft and constant increase of experience thereof, together with extensive use of the depth charge.

3. Increase in submarine morale from the above, and particularly from the use of depth charges. It is wholly impossible to estimate the number of submarines lost by depth charges, but the fact that depth charges are used whenever a submarine is encountered unquestionably has a marked effect.

The enemy must be experiencing in maintaining an adequate supply of submarines.

Throughout the remaining months of 1917, and, in fact, up to the time of the armistice, to point out that the number of submarines available was still insufficient to meet the requirements of the campaign. Thus, for example, in the concluding paragraph of my report of December 31, 1917, I said:

December 31, 1917. General:

In the anti-submarine campaign, it must be recognized that the situation is still critical. The force commander feels that his dispatches, including the one sent four days after his arrival in Europe, have been influenced by subsequent events. Of course, with the losses being suffered, when the force commander arrived, the situation looked even more serious. If the enemy could have maintained the losses inflicted during that month, the consequences would have been disastrous.

The situation has been heard in public, and has also been disseminated by the enemy, to the effect of enemy submarine effort on American troop movements.

It is to be noted that the enemy have not succeeded in increasing the number of their submarines actually operating at sea. It is probable that they will materially increase them, owing to many conditions out of their control, such as construction. There can be no question but that the enemy are on our side, and ultimate victory is therefore merely a matter of time. These resources can be made available and transported. If the enemy makes an effort to troop movements, he can only do it at the cost of his own supply lines of communication.

It may safely be said that the enemy's best chance of making a successful campaign, the deciding feature, is to concentrate it on these supply lines. To keep our troop movements well clear of the supply lines, the enemy must divide his effort in case he wishes to concentrate on troop

movements to take up the convoy, and so forth, I will explain the situation, and I think you will find it very interesting to see just how little the danger was that troop convoys were in

The need for additional vessels was again pointed out in report of January 8, 1918:

Letter 6044, January 8, 1918. Need for additional vessels—

The need for additional destroyers and antisubmarine craft is just as described in all the Force Commander's dispatches beginning from his arrival in Europe.

The force commander believes still that the demands of the command against the enemy warrants sending all antisubmarine craft which can coast either under their own power or in tow.

It has been the policy for some time to send to the French coast every ship. The last 10 destroyers that were added to the forces have been sent to Brest, number is wholly inadequate. The U. S. S. *May* has been sent from Brest, and all yachts now en route will be diverted to the French coast. Of these yachts will add little to the efficiency of the coast, because they come up with the convoys and hence must be restricted to special uses. The *Ulein* is now en route and on her arrival another destroyer will be added to Brest. It is evident that the most important part of our work in Europe is on the French coast, and steps are under way to provide adequate oil and repair facilities on that coast. Additional destroyers are badly needed to provide proper protection to our transports and storeships. Every new ship arriving from the United States will be sent to Queenstown, and a reliable ship sent immediately from Queenstown to Brest. This plan has many advantages, principal of which are:

1. The destroyers sent to the French coast will be the most reliable ones, require the fewest repairs.
2. New destroyers can better learn methods in Queenstown than at Brest. Problems developing in new destroyers can be better handled at Queenstown than at Brest. What is urgently needed is six or eight destroyers for the French coast.

I might say incidentally, there, that Brest was strategically placed to base destroyers, but unfortunately it had but a tiny navy yard and a capacity of only 7,000 tons of oil. We increased to 28,000 tons, and we had plans on hand to make it 50,000 tons. That is the reason that they were not sent there earlier.

On the same day I had cabled to the department, in my letter

Need for destroyers in all areas is as critical as in past. Can additional be furnished, and if so, request prospective dates of arrival.

That is, even in the middle of January, nine months after we entered the war, I had still received no definite information from the department as to the probable increases in the forces abroad, or the program upon which the department was working in such forces abroad.

As a matter of fact, however, because the contracts for destroyer program were not made until about six months after we entered the war, the new vessels were not available in any quantity until the submarine campaign was practically over. The promises of the department to supply additional forces at times were not kept, and I often found myself seriously embarrassed in dealing with the Allies because, acting upon the information furnished by the department, arrangements had been made for disposition of these new forces, which involved rearranging Allied forces, and these could not be made because of the delay in the new forces to arrive. This I pointed out to the department in my letter of the 23d of April, 1918. The official statistics mentioned in the letter I am about to read were brought over and furnished my staff, as well as to Allied Admiralties, by the Chief of Operations himself, at the time of his visit in November, 1917, in numerous cases it was the Chief of Operations himself, or at least afforded the Allied Ad-

The need for additional vessels was again pointed out in a report of January 8, 1918:

Letter 6044, January 8, 1918. Need for additional vessels—

The need for additional destroyers and antisubmarine craft is just as urgent as described in all the Force Commander's dispatches beginning from four months after his arrival in Europe.

The force commander believes still that the demands of the common enemy warrant sending all antisubmarine craft which can reach the coast either under their own power or in tow.

It has been the policy for some time to send to the French coast every ship of the last 10 destroyers that were added to the forces have been sent to Brest. The number is wholly inadequate. The U. S. S. *May* has been sent from Gloucester, and all yachts now en route will be diverted to the French coast. Unfortunately these yachts will add little to the efficiency of the coast, because they can keep up with the convoys and hence must be restricted to special uses. The *Alvin* is now en route and on her arrival another destroyer will be added to the force on Brest. It is evident that the most important part of our work in Europe is on the French coast, and steps are under way to provide adequate oil supply and repair facilities on that coast. Additional destroyers are badly needed to provide proper protection to our transports and storeships. Every new ship arriving from the United States will be sent to Queenstown, and a reliable line sent immediately from Queenstown to Brest. This plan has many advantages, the principal of which are:

1. The destroyers sent to the French coast will be the most reliable ones, and require the fewest repairs.
2. New destroyers can better learn methods in Queenstown than at Brest. Defects developing in new destroyers can be better handled at Queenstown than at Brest. What is urgently needed is six or eight destroyers for the French coast.

I might say incidentally, there, that Brest was strategically a good place to base destroyers, but unfortunately it had but a tiny navy yard and a capacity of only 7,000 tons of oil. We increased to 28,000 tons, and we had plans on hand to make it 50,000 tons or more. That is the reason that they were not sent there earlier.

On the same day I had cabled to the department, in my No. 1000:

Need for destroyers in all areas is as critical as in past. Can additional destroyers be furnished, and if so, request prospective dates of arrival.

That is, even in the middle of January, nine months after we entered the war, I had still received no definite information from the department as to the probable increases in the forces abroad, or to the program upon which the department was working in respect to such forces abroad.

As a matter of fact, however, because the contracts for the destroyer program were not made until about six months after we had entered the war, the new vessels were not available in any number until the submarine campaign was practically over. The repeated promises of the department to supply additional forces at different times were not kept, and I often found myself seriously embarrassed in dealing with the Allies because, acting upon the information furnished by the department, arrangements had been made for the disposition of these new forces, which involved rearranging the Allied forces, and these could not be made because of the failure of the new forces to arrive. This I pointed out to the department in my letter of the 23d of April, 1918. The official statistics mentioned in the letter I am about to read were brought over and furnished to my staff, as well as to Allied Admiralties, by the Chief of Operations himself, at the time of his visit in November, 1917; in numerous cases it was the Chief of Operations himself, and not me, who made promises, or at least afforded the Allied Admiralties

understand them as promises, but which unfortunately is false.

April 21, 1918. Arrival of new forces.

The force in European waters has been very disappointing. But three new destroyers have been added to the force up to May 1, 1918, that is, *three* *Calcutt*. The difficulties which have been experienced in getting a program at home are realized, but it is hoped that even those that have heretofore been thought possible can be put forward to exchange destroyers.

Based on official figures obtained from the completion lists of Bureau of Naval Affairs, as far back as November, 1917, the French and British have ordered of prospective additions to forces in European waters of *three* *mine craft*, aviation material, and Ford and other destroyers. In order to take up for discussion and begin preparations for the rebuilding and overhaul of the additional vessels and provide for the necessary accidents, etc. Although it is realized that the delays could be avoided still it has been very embarrassing that various programs have not been predicted.

It is in any sense a criticism or a complaint, but merely to point out that the commander has necessarily felt reluctant in advancing and supporting changes involving changes in operation under way and program for operations, as suggested by our Planning Section, and from other sources until the number of our own forces engaged had reached a higher

point. Reports were made to the Navy Department in the letters of August 19 and September 19, 1918:

August 19, 1918. Need for and enquiries for destroyers.

The addition of new destroyers to European forces is extremely desirable. The need for an increased number of destroyers on the French coast is apparent from study of the reports from the commanders of these forces. The survey of the submarine situation, and particularly the Army's situation. It will also be of the utmost importance that the moment when the force is developed to a point of practical use by destroyers, there should be in all respects to take advantage thereof. This requires a great deal of training and experimenting which can only be obtained by actual operations. Unfortunately, it is impossible, except at very infrequent intervals, to have any destroyers for this purpose. The importance of applying the force to the anti-submarine campaign, the moment it can be used on the coast is over-estimated. The force commander is keenly anxious that the Navy should be the first in the field with such a radical development of the anti-submarine campaign.

It is clear there that what we wanted to do, as you were desiring, was to get the devices on this side to be used in connection with the charge, we wanted to put those into operation. At the time subsequently informed that I bore the sole responsibility for our troop transports over and getting our troops out of the danger zone safely; and also that I bore the responsibility for merchant ships through the danger zone, and I could not divert destroyers from the transport of troops to go and attack. That shows you why it was so necessary to get them over there. [Reading:]

August 19, 1918. Disposition of forces:

Based on the increasing the escort forces, based on Brest and Gibralter, as reported. As the harbor facilities on the French coast increase an increased movement of the ships on the Army's lines of communication for even greater increase of escort forces will be accentuated, as weather and ice reduces submarine activity in the western Atlantic. Submarine activity on this side to come closer inshore as is anticipated, recommended that the maximum number of escort ships be transferred to the command.

As for an increase in the number of tugs and barges in French ports, as reported by cable.

## NAVAL INVESTIGATION.

In repeated cables to the department, in the spring and summer of 1918, it was continually pointed out that all arrangements for the protection of American troop convoys on the coast of France were absolutely dependent upon an increase in the number of destroyers available for this escort duty. This was made necessary by the increased number of troop convoys which had to be escorted, the number of troop movements from the United States was increased from an average of about 25,000 a month, for the month of March, 1918, to an average of nearly 300,000 a month, for the month of April on. Thus, in a cable to the Navy Department of March 18 (my 5976), I pointed out that "the increased demand for destroyers, due to the increased number of troop transports, is necessary to coordinate sailings, but priority is given to transport troops. Every possible effort should be made to expedite the acquisition of additional destroyers."

When the submarines began operating on the Atlantic coast, the number of destroyers, which had been designated for service on the coast for escort duty from Atlantic ports, was held on the coast for escort duty from Atlantic ports. The progress of arrivals in Europe was therefore further delayed. I am at this point introducing testimony so far into 1918: I am merely to clearly bring out the accumulated effect of having thrown our utmost into the war at the very beginning, the inevitable consequence of a sort of hand-to-mouth policy, of meeting the situations piecemeal as they arose, was that it ordered the enemy to take advantage of such opportunities to produce such diversions as those on our own coast.

I would also like to add here a point which will be covered fully later on, namely, that it would be impressive, indeed, if I were before the committee in any comprehensive, and at the same time, condensed form, the nature of the requests that poured in from my various subordinate commanders for additional destroyers. Admiral Wilson at Brest, Admiral Niblack at Gibraltar, and even an outlying force as that of the Azores, never failed in any point out the crying necessity for increase of their forces. Although each of them did his best with the forces he had, still I have no doubt that, at the same time, each of them felt that if no more destroyers could be sent from home, other areas should be reduced to meet the demands. The situation was such that, as a general rule, all that I could do was to pass on the appeals of these various commanders to the department, and back them up with urgent recommendations of my own, having already made a distribution of the available forces to meet the situation as a whole, as fully as circumstances permitted.

Incidentally I might say that I once asked Admiral Jellicoe what trouble he had in that respect, and he told me that his difficulties were entirely similar, and that he had recently compiled the requests from their various stations where destroyers were based, and that there was a loud outcry from each one of them for more destroyers. I had that he made a compilation of that and sent it to each of the stations so that they could see what his difficulties were.

To sum up, that is to say, to sum up this particular section, that I have fully substantiated those portions of my letter to the President (1) the seriousness of the war situation at the time, and (2) the manifest and crying necessity for our cooperation.

and completeness with which it was presented to the  
and 4. the department's hesitating methods and lack  
seeing the situation thus so clearly presented. I hope  
have demonstrated a point which will be brought out  
testimony, still to be introduced, as to the nature of  
and the fact that I put forth every effort within my  
out with the personnel and means available.  
stated, the situation was so serious, and the consequences  
terrible, that I went beyond the channels which the Navy  
and enlisted the services of such men as Ambassador

this country can yet realize the great part which that  
of the war, but I hope that I have to-day indicated at  
of his varied and important activities, showing that,  
occasion arose, he was willing to join with the Navy,  
or Government work, provided it would help along the  
cause.

stance of a proper realization of the extreme crisis in the  
as a whole in the spring of 1917 is so vital to an under-  
the committee of the issues that I have raised that I feel  
committee should hear, from other independent sources,  
evidence on this point.

standpoint the greater part of the criticisms of the action  
Department's conduct of the war are based upon their  
the decisive action in the first few months, and this can  
be only to their failure to realize the seriousness of the  
to accept the testimony of their own accredited repre-

by men who could speak with intimate knowledge of the  
Europe in 1917 there is one at present in Washington who  
I arrived in London, one of my first realizations of the  
of the Allies in a short time. He pointed out to me  
a fact which I am emphasizing, that is that the shipping  
such that it would soon be impossible for the Allies to  
essential military supplies and the food to keep them going  
effort could become effective. The one man above  
has been familiar with the world's food and shipping  
for at least five years, and who administered the food resources  
during the war, is obviously in a position to state with  
that the situation was in this respect in April, 1917, and  
before like the committee to call Mr. Hoover at its con-  
sider that there may be no doubt in my mind that I have  
the part of my letter in which I describe the gravity of  
what we faced in 1917, and pointed out how near to a  
crisis of action by the department at that time brought  
about, indeed, barely escaped a peace without victory.

Let from Mr. Hoover this morning that he will be in Wash-  
ton to-day and will be willing to appear before the committee  
committee as desired. It is immaterial to me as to when he  
will come but I would suggest that as he is an extremely busy

Chairman. Without objection, we will ask Mr. Hoover to  
appear before the committee on Saturday, and you will suspend your  
meeting while we hear from him?

Admiral Sims. Yes, sir.

Now, I should like to take up the question of the lack of arguments, and to state specific instances.

It has thus far been established:

1. That the Allies were losing the war at the time the United States entered as a result of mercantile tonnage losses, as this amounted to cutting the allied lines of communications.

2. That the department was fully informed of the fact that this was a vital issue to be faced was this submarine campaign.

3. That whatever plans the department or the Government may have had in mind in future operations, it was pointed out at the time, and subsequent events established the fact, the execution of any other plans depended absolutely upon first, the submarine menace.

4. That at the present time there is no issue whatever as to the correctness or soundness of my recommendations during this period. There is no truth whatever in the assertion that I am claiming that I was right and everyone else was wrong. This is amply demonstrated by the extent to which my recommendations, particularly in the matters of dispatch and employment of submarine forces, were ultimately adopted by the department. I shall show later on, certain recommendations made by me were adopted, but, with one or two possible exceptions, every plan for employment of our forces in the war zone which was finally adopted was in accord with my recommendations.

5. That the primary fault of the department was the initial delay in putting into effect measures which they later adopted, and the delay resulted in the prolongation of the war and in the unnecessary expenditure of at least half a million lives and \$15,000,000,000.

Thus far I have dealt more particularly with my requests for the sending and employment of antisubmarine forces. I now desire to consider in a general way the action taken upon various recommendations, some covering the dispatch of antisubmarine forces, but principally relating to other subjects, in order to show that these recommendations were either disregarded altogether, were adopted with a delay of some months, or were accepted only when recommended by Admiral Mayo and Admiral Benson during their visits abroad in August and November of 1917, respectively.

I will also introduce testimony to show that, as a result of a wrong estimate of the situation upon which the Navy Department acted, and, incidentally, as a result of its failure to adopt the recommendations made by its representatives abroad, after a full and intimate study of the situation, the department concentrated its efforts upon plans which were either of minor importance or impossible of fulfillment in view of the time element, or were completely and entirely impracticable.

I want to bring this point out to show the great evil and the danger of trying to manage the military operations of war by remote control from a distance of 3,000 miles.

To take up, for a moment, the question of the department's regard of specific recommendations, it is only necessary to refer to the cases which I instanced in my letter of January 7. I pointed out in paragraph 31 of that letter, I suggested in my cable and in my first letter, which I have read to you, that Am

it would be very useful, if based on Brest, in meeting any of our German battleships or battle cruisers in the Channel, and such raids by the mere moral effect of their presence, of course, be known to the enemy. Thus, in my cable of April 13, I said:

Battleships can serve no useful purpose in this area except that two battleships might be based on Brest for moral effect against anticipated German ships in the channel, out of reach of British main fleet.

In my letter of April 14, I said:

Our submarines, heavy forces are free to raid, and in fact escape at any time when the enemy decides that the necessity or return be great. Hence the suggestion that two divisions of our fast dreadnoughts be based upon Brest primarily for the resulting moral effect against the enemy.

It was by an important admiralty official that while he thought the escape through the channel by heavy enemy forces out of reach (north of Scotland) were very remote, nevertheless the possibility was principally thwarted on moral grounds; that is, the uncertainty in the operation which would be encountered. He agreed with others, like Lord, that the addition of some of our heavy forces to those already in the channel approaches by the French and British would undoubtedly remove the possibility of such raids.

It was never received from the department to either of these recommendations, although as I had specifically stated, this had been requested by the Allies. As will be shown in the next chapter, this is but one of a series of obstacles which I encountered in carrying out my mission assigned by the department—obstacles were caused by the action of the department in disregard of their plans, if they had any, or at least of the standing of the various recommendations which they had to make.

In dealing with the question of the use of American submarines, I will also take up the case of those battleships which did get into the war zone, and which attracted such attention by the excellent work they performed.

I might here that while some people think, unfortunately, that we never had a real opportunity to come to grips with the enemy, the extent of the cooperation of those five battleships was very great.

Admiral Rodman was one of the best pieces of work of our fleet ever seen. It was a question of cooperation, it was of adopting the system which was being employed by the British. Perhaps it is difficult for a civilian to realize the effect of four battleships to a fleet that is already organized as a fleet weaker than it actually was before they arrived, and that they cannot cooperate together, and new arrivals may ball

the fleet is that they have got to learn the methods that the British used, and actually, after that fleet arrived, we put our books and our flags, down in the hold, we adopted the British. They sent men to instruct our signalmen, and they went to sea with the fleet, and in a little while they were cooperating with them. It was one of the finest stunts I have ever seen. It has been reported to me—in fact I remember that I visited the fleet on one occasion Admiral Rodman

said, at his mess table, "In all the time that I have been here I have received a single order from you as to how I was to handle the fleet. That is giving the initiative to the other man. Of course, that is the reason I did not give him any orders was that he would not obey them if I had; but that was just a mild joke.

While I had not specifically recommended the sending of our battleships as a reinforcement to the Grand Fleet, on July 21, I had repeatedly recommended in letters to the department in accordance with the policy of regarding the whole of our naval forces as a reinforcement to the combined allied naval forces. The battle fleet should be kept prepared for distant service at all times, notice in order that, to quote from my letter of May 11, "if the opportunity should occur will not be in any way delayed."

In my letter of June 15, I again recommended the maintenance of our fleet in readiness for action in the following paragraph:

Except in one of my first cablegrams, I have not mentioned the above recommendations in dispatches or reports, because, as stated above, they have not been officially adopted; and as the submarine campaign is at present the vital issue, and I am not aware of the department's policy or plans regarding any forces now under my command, I have not thought proper to discuss such subjects as my own responsibility. The fact can not be overlooked, however, that some calls for the concentration of our maximum forces as close as practicable to the theater of war, provided they can be supplied there without requiring excessive services of tonnage now vitally necessary.

Again in my letter of July 7, I said:

Letter to department No. 18, July 7, 1917.

11. I would also urge that all coal-burning dreadnoughts be kept in a state of readiness for dispatch to European waters, purely as a measure of precaution. There are no definite plans in view involving such forces, but the uncertainties of the present situation are tremendous, and hence my recommendation.

The oil situation in Europe is now so critical that it would be impossible to rely on oil-burning battleships, even if sufficient oil carriers should be available. To insure the necessary oil, it would be impossible to insure adequate and safe destruction through the submarine zones.

It was at about this time that the question of reinforcing the Grand Fleet, with a division of our coal-burning battleships, was taken up with me by Admiral Jellicoe. At his request, I went with him to the Grand Fleet on July 19 for a conference with Admiral Beatty. As a result of this conference I sent the following letter to the Navy Department:

Cablegram sent July 21, 1917:

To Secretary of the Navy (operations). Serial No. 120.

No. 120. Visited Grand Fleet 19 with Admiral Jellicoe for consultation with commander in chief. The result is that admiralty request that the four coal-burning battleships with six destroyers be sent join Grand Fleet now in the North Sea. Also that our submarines could be very usefully employed in anti-submarine campaign.

The reasons for this request is that five *King Edward* class must be placed on the coast and their place taken by four dreadnaughts to provide officers and crews and torpedo rating for light cruisers, destroyers, submarines, etc., to be commensurate. Shortage of officers will be found 100 after advancing reserve officers from the fleet. Our oil-burning battleships could not be supplied, and more would unduly increase burden on coal supply and would necessitate screening vessels not now available.

The conference agreed that moral effect would be very great, also mutual exchange of ideas and methods. The intelligence service thereby created by the two fleets would be superior to any service which exists or could be easily created. Carefully selected expert staff should be sent. Also recommend temporary representative of our commander in chief on Admiral Beatty's staff.

was received to this message. After waiting for four days that an answer to such an important recommendation might come. I finally sent a second message, on August 17:

[Sims, Admiral United States, 285.]

August 17, 1917.

Need becoming urgent for the four coal-burning dreadnaughts: shortage of personnel has necessitated putting one *King* in commission. One goes out next month and five by end of year. In reinforcements are requested; these vessels must be replaced by older ships from Grand Fleet. Request information as to department's

SIMS.

a little explanation as to why they would have to be more than one. This *King Edward* was employed. They had to keep a certain number in the neighborhood of the Humber to guard against raids, and if they of commission they would have to be replaced from the draughts from the Grand Fleet. That is why they

The Navy Department cabled me on August 20 their reply to this recommendation. Their dispatch was as follows:

August 20, 1917.

Admiral Benson.

United States believes that the strategic situation necessitates force concentrated (that is our battleship force), and can not see the suggestion of sending a part of it across. The logistics of the project the entire force going over, except in case of extreme necessity desires that you discuss situation with Admiral Mayo upon

ADMIRAL BENSON.

September 1 to Admiral Benson I again urged the reinforcement:

Benson, September 1, 1917.

personal file.

about which I am really anxious, and that is as to the final decision of the Department in sending to this side the battleship reinforcement in the Grand Fleet requires. As you know, I do not understand the importance by the disintegration of our fleet. I do not see how it can be for it to engage in a combined operation, as a unit, with the British. For example, in all of the schemes that I have seen proposed against the enemy, the naval forces of the Allies have been distributed in types. The scheme proposed by Winston Churchill required the British fleet, each composed of certain types of British, French, and Italian. Another proposal for blocking the enemy fleet in port would require certain of the older battleships and cruisers of all three nations, leading to German ports.

In my cables and letters why it is that the British Fleet needs a reinforcement of our dreadnaughts. I can not see that the sending of this would be any disintegration of our fleet, but merely an advance between us and the enemy fleet.

I can tell what the outcome of this war will be. But the outcome proves to be, we must at the end find our position which can be justified on sound military principles. Let to have history record that the Allies asked for reinforcement and that we declined to send them?

Benson replied on the 24th of September. I will read extract of his letter with regard to the battleships:

not effective of all means of attacking and destroying a submarine. I have explained that in the articles referred to. I said at this time that such use of our submarines would be dangerous, not only in attacking the enemy submarine, but in obtaining reliable information as to the operating condition of the enemy submarine, through the experience of our own vessels in the

fact that it is the best means of destroying submarines is the same difficulty that I have spoken of before, that the submarines always see a surface vessel miles away and avoid her; but without a submarine to hunt submarines, the advantages if they are both operating on the surface—or submerged, matter, but as a German submarine has to stay on the surface some time except when he dives for business, because he has his batteries fully charged, it follows that our submarine can remain under the surface all the time, showing his periscope in a while for 10 or 15 seconds; and that gives us a stage, and our submarines can do that because they are not destroyers on the surface that they are afraid of, and the result is that in proportion to the number of submarines operating, the submarines destroyed from three to as many enemy submarines as any other type.

On June 28 I specifically recommended that all submarines should be sent. My message was as follows:

June 1917:

to Navy.

All Allied shipping in time—I repeat in time—is present mission. We can exert must be put into operation at once if they are to be effective. Submarines would be of great use to strengthen British submarine force and to scout ahead of convoys. All submarines we send to Irish coast in time to be invaluable in insuring success of convoy system, and hence we should have these submarines supplied from America and based upon the coast.

SIMS.

We have a submarine on anything but its own mother, and are so different.

My report of July 14 I again emphasized the value of the anti-submarine craft.

July 14 July, 1917:

The question is not that submarines themselves will prove of the greatest value as anti-submarine craft. They constitute the one type of ship that can see the enemy submarine, and hence their use as scouts ahead of convoys in which the enemy submarine must approach if a successful attack is to be made.

On July 13, referring to the submarine operations in the Azores, I transmitted to the department a request from the Admiralty for the sending of some of our submarines to the Azores and there. I received no reply to any of these recommendations.

General Mayo arrived in England in August, 1917, the question of some submarines was taken up with him, and he telegraphed the Navy Department recommending that sub-

marines be sent. Almost immediately, on August 24, the reply was received from the department:

August

For: Admiral Sims.

From: Chief of Naval Operations.

Opnav. 228. It is possible that about middle of October five submarines will arrive England followed about two weeks later by five of the L class accompany. What will be their prospective duties and where based? 17

ADMIRAL

After discussion with the various Allies represented at the conference in London in September, it was agreed that a division of these submarines should be based on the Azores for operation against enemy submarines in that area, and that the second division composed of the L submarines, should base on Berehaven.

At the end of October the K boats arrived at the Azores, approximately six months after I had first called the attention of the Admiralty to the value of submarines as antisubmarine craft. The L submarines did not arrive at Berehaven until the end of January, six months after I had specifically recommended in July that they be sent.

I might add here, as a mere matter of information for the Committee, that not only do the final records show that in proportion to the numbers engaged, submarines were the most effective antisubmarine craft, but also, as was pointed out in many letters and dispatches which I have not read, they had a very marked physical and moral effect on the submarine campaign. Before they were used in waters frequented by the enemy, the enemy submarines always had an easy mind as long as no surface ships were in sight. On the contrary, when the allied submarines were put in the game, and every now and then the enemy was attacked by an enemy submarine, it is easy to see that his nerves were bound to be upset. This was the principal reason for recommending submarines in the Azores region. We would have made it a point to allow the enemy to see the presence at once.

Much the same fate met my recommendations with regard to the sending of tugs as in the cases I have just referred to. Thus in my letter of January 7, paragraphs 33 and 34, I pointed out that from the beginning I had specifically recommended the sending of tugs, and that none were actually sent until nearly a year after the war entered the war.

America is, I believe, the country of tugs.

The only reason, to my knowledge, that was ever advanced for not sending tugs was that in some way there was a legal technicality in the laws, which were passed for commandeering privately owned craft, which prevented the department from securing tugs. The only comment that I have to make on that point is that, in view of the other feats of this country in the war, and of the previously surmountable obstacles which were overcome, it is hard for me to accept the explanation that a small technicality in the law has prevented us from rendering this extremely important assistance to the Allies.

In my first cable, that of April 14, I had informed the department that "for towing the present large amount of sailing tonnage to dangerous areas, seagoing tugs would be of great value."

number of cables concerning tugs here, which it would be to read. I have summarized these here, and I will submit for the record.

That submitted by Admiral Sims is here printed in the margin.

JANUARY 28, 1917.

Message regarding tugs other than district tugs.

From France:

From *Edwards, Cahill, Bauman* (sunk), *Hubbard, James, Douglas*, etc., etc., of *Leaves, McNeal*.

From the base 6 with submarines; *Barneget, Concord*, at Azores, will return French chasers.

From the Admiral Benson promised Admiral Sims to send to France.

From *Nahant, Penobscott*, at Azores. Admiral Sims has orders to

return.

From the submarine chaser: *Gypsum Queen*, at Azores, will return

and on the en route Azores, will return to United States from Bermuda

From the *Conestoga, Lykons, Mariner, Hackett*, ready at New

York. (Wilmot, *Henlopen*, ready at New York. Ordered

from the (bought by French Government). *Arctic* en route to Hampton

road.

From the assigned as escort for submarine chasers: *Cherokee*, navy yard,

from the February 1, *Eduards*, navy yard, Boston, completion

from the navy yard, Mare Island, completion February 9; *Dreadnaught*,

from the completion indefinite; *Undaunted*, navy yard, Mare Island,

from the navy yard, Mare Island, completion February 9.

From *Wards, Tavernilla, Gorgona, Chemung*.

From *Peterson, Patuxent, Sonoma, Ontario*.

From *Patuxent, 785*.

From the outside work: *Arapaho*, 575 tons, 800 horsepower, Mare Island;

from the horsepower, Iona Island; *Fortune*, 450 tons, 340 horsepower,

from the 1,000 horsepower, Pacific Fleet; *Mohave*, 575 tons, 800

from the *Narayo*, 800 tons, 935 horsepower, Honolulu; *Oscola*,

from the *Guantanamo: Piscataqua*, 854 tons, 2,000 horsepower, Guam;

from the horsepower, Mare Island; *Wompatuck*, 462 tons, 650 horse-

power, they be sent to east coast.

From the *Princess* are icebound in the St. Lawrence River and will not

return.

From the *Repair* have reported that six new tugs will be completed in a

month.

From the *Repair* under construction, 8 will be completed by March 15 and

the

From the message, sent on April 23, this recommendation was

the statement that "ocean-going tugs are needed for

the work and for bringing in steamers that have been

from the float for some hours. \* \* \*

Large tugs now

can be released if small tugs are sent. Tugs

portable salvage pumps, and be fitted with radio and

The tugs may be built either of wood or steel. The

two or three ships would have invaluable results.

What can be done in regard to the supply of tugs."

was received to either of these messages.

From the 1917. I sent another cable to the department, urging

that tugs be sent, and again pointing out the importance

of work they could accomplish.

On May 8 I sent the following dispatch:

To: Secretary of State, Washington  
(Through State Department).

6166.

May 8, 2 p. m. Following to be transmitted confidentially to Secretary Begin. Situation continues critical. Total loss last week 113 vessels of 2 including 15 vessels of 28,000 tons, of week before not previously reported steamers and sailing vessels being lost which would be saved if tugs were and strategically located. Therefore urgently recommend that as many tugs as possible, at least 10 immediately, be added to our naval forces should be commissioned and armed.

All the figures with reference to the loss of tonnage which in my testimony are taken from the official records. Those which were published from time to time during the war, and many of those which have been published since, have been from newspaper file records and are not correct.

This request was repeated in other dispatches sent on May 24, June 20, and June 21, and in my letters of June 1, July 14, and August 9.

In my cable of May 24, I said:

Cable sent May 24, 1917.

To: Secretary of the Navy (Operations).

All Navy tugs, or commercial seagoing tugs, with naval officer in command could be sent would be of incalculable value in rescuing torpedoed and mined. The salvage and rescue work being done in this area by the limited number of tugs and trawlers from antisubmarine work is astounding. The loss of torpedoed and mined ships which these vessels have beached or brought in is surprising. Derelicts are a most constant source of danger to both sailing and naval vessels. Numerous lumber vessels are adrift bottom up. All vessels employed are necessarily diverted from antisubmarine work, and hence all tug craft which could be sent for this work will amount to an actual increase in marine forces.

No answer was received to any of these cables.

On April 27, the naval attaché in London had sent to the Office of Naval Intelligence a long and detailed statement of the duties that tugs were needed in the war zone, and the duties which they could perform. This letter also forwarded detailed plans for the employment of tugs, which clearly set forth the manner in which all tugs would be employed. But the only reply I received was in a letter from the Director of Naval Intelligence, dated April 22, of two brief paragraphs, stating simply that the department was prepared to cooperate with the Admiralty authorities to the fullest extent possible; that they were experiencing difficulty securing tugs and in building new ones, and also, the rather remarkable statement, in view of our lack of cooperation, to the effect that American sailing vessels would be advised to accept a tow in the war zone.

One point about the necessity for tugs was this, that as damaged vessels went down at the end of a certain number of days or sometimes at the end of a certain number of days, which have been brought in and in a very short time could have been repaired and put back in service; a short time compared with the time it takes to build a new ship.

who has visited our Atlantic ports, to say nothing of who has cruised up and down our coast line, but to understand the fact that, in such a crisis as that we were confronted at the time here under discussion, the United States Government was unable to produce for a period more than four tugs.

On August 8, 1917, the following dispatch was received Navy Department:

22 1917

1. Naval Operations.

1. Tugs

It is the department's intention to take over 12 seagoing tugs from service and fit them for distant service. They will not be ready to sail approximately two months' period. Should they be fitted with mine-sweeping gear 15 to 18 feet. 13108.

ADMIRAL BENSON.

The following reply was sent:

Letter to Opnav. 192, mine sweeping gear not desired. Recommend to be fitted after arrival this side.

SIMS.

There was heard from the department about these tugs, again on December 18, requesting the probable sailing of the same 12 tugs. To this message I received no reply.

At the time I had, in letters and cables, continually pointed out the need for such craft, as, for example, in my letter of 17, 1917, when I said:

244 December 19, 1917:

1. Tugs

As reported in previous correspondence and cables, the urgent need of such craft. A great deal of shipping could be saved if tugs were available. It would be important and invaluable if a sea-going tug could be sent to all convoys through the danger zone, the tug serving as an escort when not in use for towing.

A great need of salvage tugs and equipment and personnel.

Salvage craft in England were badly broken up in the early part of the war and craft being absorbed into the naval service and scattered. The need for their services has developed and every effort has been made to get them for salvage work, and there is a large and useful field for any that could come from the United States under either Government or private ownership.

There is a need at all of our bases for the services of tugs. It is made to increase the amount of time that our destroyers and other craft can keep the sea and hence it is important that when they enter port they be allowed to let fires die out to overhaul and repair. This creates the necessity for tugs to be about the harbor and alongside the docks.

At the naval conferences in London in September, 1917, Italian representatives had requested that two tugs be loaned to the Italian Government for use on the Italian coast. In October, 1917, it was announced that these tugs were to be sent and finally arrived at Genoa at the end of February,

That the department realized the value of tugs for anti-air work is fully shown by a letter sent by the Chief of Naval Construction to the Shipping Board on December 5, 1917:

DECEMBER 5, 1917

Op-28.

From: Chief of Naval Operations.

To: Chairman of Shipping Board.

Subject: Tugs—steam trawlers—fishing craft.

1. The great demands that have been made upon this country, and the need for naval notice, to furnish tugs and trawlers to be used in the following general categories:

(a) For general naval and military service abroad.

(b) For strictly naval service at home in coast defense—patrol and sweepstake.

(c) For general service at home—coast towing—harbor towing, fish trade, etc. This office to consider the probable future necessity for an adequate stock of type of useful small craft.

2. No other types, save, perhaps, destroyers, submarines, and high-class troopships are quite so useful now, and it is a type which this country will need in the future.

3. For the above reasons this matter is brought to your attention. In attempting to meet its own needs in the matter of tugs, but even with those and planned for, the demand will greatly exceed the supply.

4. There is inclosed a copy of letter containing a few characteristics of a Great Britain is finding useful. Also inclosed is a letter from Mr. Hoover, Department, on subject of vessels for fish trade.

W. V. PRATT

A copy of that letter was supplied to me by the Navy Department when I was over on the other side.

It is a rather curious commentary upon the department's attitude toward supplying recognized needs, that this letter is dated December 5, 1917, and not April, 1917.

On receiving the letter from the department, inclosing a copy of this letter to the Shipping Board, I sent, on January 12, 1918, the following cable, again emphasizing the urgency of the need:

JANUARY 12, 1918

Paraphrase.

From: Sims.

To: Opnav.

Your 1693 and general subject tugs. Admiralty letter of January 12, 1918, regarding the importance of tugs in connection with naval work these waters. Letter says now very difficult to obtain tugs, and as large force American vessels now operating in Europe and increasing number United States transports using European ports, corresponding increase number tugs available is necessary. Admiralty letter further states that it is possible that a considerable number of large seagoing tugs might be constructed in the United States, and I am to ask whether any help could be given toward the construction of additional tugs in European waters by the building of tugs in United States. I have in reply given all the information in my possession regarding tugs, and again to urge on department the very great importance of sending all available tugs to these waters. As the number of tugs now in existence is probably insufficient for the war needs, the question of constructing additional tugs warrants serious consideration.

In reply to this message, I received the following cablegram from the Navy Department:

Copy of cable sent Shipping Board with letter. Matter was taken up, December, of advisability of the inclusion of an extensive tug program in the anti-air program.

And this was on the 18th of January, 1918. In my letter of December 31, January 8, January 14, and in many later letters I continued to emphasize the need for tugs.

memorandum furnished to me, dated January 2, 1918, showing tugs were then available, none of which had been since war was declared, and hence all of which must have been available from the beginning of our entry into the war.

Q. How many? A. 1 with submarines, 2 bound for Gibraltar for the Italian Government, 2 escorting submarine chasers, 1 at New York, 1 en route to Hampton Roads from Puget Sound for submarine chaser escort duty, 9 with home fleet in navy yards, but noted suitable for high-sea work, 10 bound in the St. Lawrence River.

Q. It is nearly 12 o'clock now, Admiral, and if you agree the committee will stand adjourned until to-morrow at 10 o'clock.

A. Yes, sir.

Q. At 12 o'clock m., the subcommittee adjourned until Friday, March 12, 1920, at 10 o'clock a. m.)

## NAVAL INVESTIGATION.

FRIDAY, MARCH 12, 1920.

UNITED STATES SENATE,  
COMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.  
The committee met pursuant to adjournment at 10 o'clock  
in the Senate Office Building, Senator Frederick Hale  
and Senator Hale (chairman), Ball, and Trammell.  
The committee will be in order. Admiral Sims,

### TESTIMONY OF ADMIRAL WILLIAM S. SIMS—Resumed.

In going over my testimony of yesterday, I note that it may have been susceptible of misinterpretation. My object was to give the committee a volume of communications of our naval headquarters to all official communications for the period of which I am now introducing selections in substantiation of my letter of January 7. My only object in making the selection was a further attempt to give the committee an idea of the vast and complicated background of the issues now being confronted by the great difficulty confronting me in presenting them to a body which was not in a position to be able to follow a background.

The armed United States merchantmen sunk should be among the first ships to be sunk, after we entered the zone which were well armed. I have not the records to show whether they were sunk on their first or second voyages. The fact is that their armament was not and could not be sufficient to safeguard against submarine attack without warning. When the committee adjourned yesterday, I had just finished a statement from the Navy Department, saying:

The Shipping Board with letter. Matter was taken up, early in the morning of inclusion of an extensive tug program in their building

On the 15th of January, 1918. In my letters of December 15, 1918, January 14, and in many later letters, I emphasized the need for tugs. I then mentioned the fact that a memorial memorandum had been furnished to me, dated January 15, giving a list of the tugs available, and I presented the record.

I may say nothing of the multitude of tugs which were in our hands on our coast lines.

In my cable No. 4137, of February 19, 1918, in reply to from the department, I made specific recommendations tugs required.

Cablegram sent February 19, 1918:

Prep. by Cs. NCT. 25 ADR.

4137. Your 2873, tugs desired for duty as follows:

British waters, 12; French waters, 6; Azores, 2; Mediterranean, 16, of Italy. Number of tugs that could be used advantageously is not like numbers specified, but these are very much needed under present conditions would be constantly employed to advantage if now available. This is not to be construed as changing my previous recommendation made in January 18 regarding convoying and towing submarine chasers.

Many other similar dispatches and letters could be quoted is believed that enough has been said to show that in the case where recommendation was made for the sending urgently needed—a need which the department themselves nized, as is shown by their letter to the Shipping Board—except the two assigned to the Italian Government actually European waters for duty until April, 1918—that is, one year war was declared. Up to the time of the armistice there were less than a dozen tugs in European waters.

Apart from the tremendous value of tugs as an auxiliary marine craft (through their ability to thwart submarine by towing ships in before sinking), we had to have them for many essential purposes—for example, moving our naval ships in harbors, handling barges, assisting the Army in discharging stores in harbors without docks, etc.

The supply was always less than the demand. I have stated that the Allies were woefully short of such craft. I could take the time to paint the picture of how our officers in England and France for any old harbor tugs or barges which be repaired and pressed into this service. It was from such that our essential tug assistance came during the early months of war. Such tugs worked constantly in support of our naval and transports on the French coast.

At sea we were largely dependent upon British tugs. It was tugs who first reached and towed in the large transport *Cl* torpedoed off the French coast; also the *Westbridge* and other States Army supply ships.

If this was naval preparation or naval cooperation from a country of such great resources as ours, I do not know the meaning of the words.

As the department not only failed to approve my recommendations, but did not even inform me of their disapproval and in suspense all the time, I naturally assumed that they were proceeding to carry out the recommendations, but had merely failed to inform me.

In a way these last two cases that I have given may be considered details; and so they were, but they were details which show more strikingly the relations which existed between the Navy and their representative in the councils of the Allies.

A case, however, infinitely more serious in its consequences—delay of the department in accepting the recommendations of the convoy system, in delaying its establishment for some months.

that some hundreds of thousands of tons of shipping unnecessarily to the allied cause as a whole.

On my first day's conference with British naval leaders that occurred to my mind was the ancient convoy system that pursued in Napoleonic and many other wars. It naturally came to everyone's mind. I found, of course, that it received the fullest consideration by the British authorities. Confronted with a great mass of data which had caused me so far in resorting to this measure. Principal amongst the arguments against the convoy system, I might cite two: First, the service itself was violently opposed to any such system, claiming that it would greatly slow down the movements of the fleet. Of course, it would, and also they proclaimed loudly that to steam in close formation. Second, the shipping interests were almost unanimous in resisting anything approaching a convoy system. Figures could easily be given to show the loss of a year the slowing down of ships by the convoy system constitute in itself a serious loss of essential supplies. I could not agree from the first with these objections, but I placed on the side of those who favored this measure. I fully appreciated all the obstacles.

The department fully informed of all developments in regard to the convoy system. It is rather a long story, but it is sufficient to say that the situation became so critical that in May, 1917, the Admiralty were simply forced to do something different from what they were doing, and they therefore overruled all of the objections that had been advanced against the convoy system, and carried it out.

From the dispatches I am about to read, that, beginning on the 1st of May, I tried to get a promise from our Navy to the cooperation of our Navy, which was essential to carry the convoy system into effect whole-heartedly. Here I will give the same experiences described above, in regard to the other forces.

I was informed by the admiralty that they were about to carry out the system. I sent the following cable to the department on April 1st.

TO THE NAVY, THROUGH STATE DEPARTMENT.

URGENT study of convoy system for shipping. Tentative plan proposes that the American coast for assembly every four days all ships under escort to Gibraltar and other trade routes. Escort one war vessel and two destroyers meet convoys at war zone. Two escort ships resting at Gibraltar. Plan would require our furnishing some escort vessels at Gibraltar this side, and would necessitate abandonment present plan. Not yet decided by admiralty. This advance information for cooperation.

SIMS.

Following my first dispatch I again cabled the Navy with the following dispatch:

TO THE NAVY.

URGENT has decided to give trial to the convoy scheme described in my dispatch of present plan of naval force operating independently against raiders, such convoy to be established on all main trade routes, and on approach to dangerous areas.

on this side will be met by destroyers and escorted into port. Hampton, New York have been proposed as assembly ports for east bound vessels of the Atlantic and Gulf, with convoys sailing every fourth day. Plan decided on after consideration by admiralty and war council, and is considered absolutely. It will strain British resources of personnel and ships to the limit and will be by taking one route, at least, if the plan is to be carried out. Admiralty informed whether we can provide escorts for convoys sailing from the rear New York. British estimate about 14 ships will be required for New York and larger numbers for other routes, including Mediterranean and South Atlantic. Escorts should have sustained sea speed of at least 12 knots and 6-inch guns. I urgently recommend favorable action. Through British naval representatives in Washington details of plan will be communicated from time to time as needed.

At the same time the British naval officers who had accompanied Mr. Balfour on his trip to America, had endeavored to secure the approval of the Navy Department to the convoy plan. As I was informed by Admiral Jellicoe, a complete and definite proposal for conveying all Atlantic shipping was given to the Navy Department by these officers on the 5th of May.

I received no answer to the message I had sent on the 1st of May, and, in fact, no communication whatsoever from the Navy Department with regard to the convoy proposal until June 20, nearly two months later.

In the meantime I learned from the Admiralty, some time after May 10, that the Navy Department were formulating a plan of their own for handling shipping from American ports, and were building up an independent organization for the routing of American ships. Realizing the importance of securing immediate action I called on the request to the naval attaché in London while I was at Queen's Hotel at the end of May, to inquire of the department what action had been taken.

He cabled on May 25 as follows:

Sent: May 25, 1917.

To: Nav. Intel., Cl.

The principle of conveying merchant ships in accordance with general plan approved by the Admiralty. The British would like to know if we could furnish cruisers for all convoys leaving New York Harbor. They are willing to contribute ships from Hampton Roads. Be so good as to reply to this cable.

MacDou

No reply was received from the department.

On May 31 I again cabled, urging an early reply. This cable is as follows:

Sent: 31st May, 1917.

To: Secretary, Naval Operations, through State Department.

With reference my two previous dispatches concerning convoy system of merchant shipping. Scandinavian and North Sea convoys now in force over the Atlantic have proved very successful. First ocean convoy from Gibraltar arrived at New York May 20. Second ocean convoy from Hampton Roads of 12 merchant ships escorted by British cruiser sailed May 24. They will be met outside and escorted by submarine danger zone. The department's cooperation with the plan set forth in my dispatch of May 1 is urgently recommended. Early reply important in order that Admiralty plans may be governed accordingly.

In all the cables and letters which I have read to you here and which were sent at the end of May and throughout June I continually emphasized the vital importance of adopting immediately the convoy system, in order to save enough shipping to make possible the continuation of the war.

of June 13 I outlined the method of handling convoys which was ultimately adopted by the department. It is long and technical, as it deals with the detailed methods of handling convoys, and I will therefore not read it, unless, of course, the committee desires it. read.

SENATOR. I think it would be well to put that letter in the record. Very well.

OFFICE VICE ADMIRAL COMMANDING  
U. S. DESTROYER FORCES, EUROPEAN WATERS,  
London, June 13, 1917.

Dear William S. Sims,  
Chief of the Navy (Operations).  
Re: operations in submarine danger zone.  
Department's cable 21009.

Reference to the department's cablegram 21009, concerning methods of handling convoys of troops or supplies for our Army and Navy forces while in the danger zone.

Regarding considerations in the question of escorting through the submarine danger zone concerning enemy activity.

It is not entirely abandoning our own offensive campaign in favor of the defensive.

Regarding the number of craft available for such duty and their disposition. If enemy activity is concentrated to the westward of Ireland and extending in well to the southward of this area, it manifestly is important to conduct a defensive campaign in the area in which the enemy can be most effectively dealt with.

Regarding the number of types of ships to be diverted from offensive operations. It is always given, of course, to convoys carrying troops. Consequently whether it be munitions, animals, or food supplies are escorted by destroyers, but such escorting duty is not allowed materially to interfere with the offensive campaign in operation at the time in question.

Regarding the ships which are constantly being covered by destroyers or other anti-submarine vessels, such as sloops (specially built antisubmarine vessels, about 1,200 tons), are made to avoid taking such vessels out of their designated patrol areas. The vessel which first picks up a valuable cargo escort it through the danger zone, the patrol vessel on the next square inshore, and turning over to the meeting of the ships is effected. If by reason of thick weather, the vessel cannot make the conveying vessel continues on the next square.

Regarding the ships which will be followed by our troop and supply ships bound for the coast, speaking, outside of the main areas of submarine activity, and the areas continuously patrolled by destroyers and other antisubmarine vessels, a short distance off the west coast of France.

Regarding the handling such convoys and also the merchant shipping convoys, the operation from Hampton Roads to the Mediterranean, the ships are established, for convenience in their own administration, a common rendezvous well out to sea, and encircling the British Isles and France. Also a comparatively large number of locations on the coast of France have been given designating figures or symbols. It is the practice each time that one of their convoys sails from a foreign port, a rendezvous which they are to pass through and a point on the coast, the point for after passing through the rendezvous.

Regarding the time well in advance giving as closely as possible the time that the convoys pass through the rendezvous points designated. Escorting destroyers are to intercept the convoys at some point on the route between the rendezvous point designated on the coast, the position of interception depending upon enemy activities at the time. It manifestly must also be possible to intercept with convoys at sea and divert them from one rendezvous point to another.

Regarding the lettering and numbering of rendezvous and points on the coast, primarily for convenience of reference in administration in the future.

The significance of such symbols if circulated even to our own allied officers must necessarily be limited to the maximum extent in order to preclude the possibility of the enemy becoming aware of them.

6. If the greatest possible degree of safety for convoys is to be insured, it is necessary that their movements should be under control of one source, and as all enemy activity is concentrated on this side of the Atlantic and his must necessarily remain in its present zone, it follows that selection of routes and other directions in regard to movements of convoys should be made and directed from this side; that is, in the Admiralty itself. It is for this reason that the Admiralty has requested, and I strongly recommend, the immediate appointment of a competent and tactful officer whose duties in the Admiralty under my general direction will be confined to those above indicated.

7. The following procedure in regard to convoys is therefore recommended:

(1) Early advance information regarding prospective sailing of convoys of a definite character.

(2) Immediate information as soon as definite hours of sailings can be fore-

As soon as this information is received, and after consultation with the Admiralty, a rendezvous and route to be included in sailing orders will be selected. Definite information should then be given when convoy sails, as to its point of departure and time of passing through rendezvous designated.

8. It is urgently requested that only British Admiralty codes be used for communications, addressed to the Admiralty, the first word of the message being "Admiralty".

9. Under no circumstances, if convoys are divided into groups, should they use the same rendezvous and the same routes after reaching the danger zone. In such a case if the enemy should become aware of their movements he would be able to concentrate for successive attacks.

10. Ships of convoys should zigzag together from two to four points in the zone. Organized irregularity is one of the principal requirements in opposing submarine attack.

11. Escorting destroyers should be allowed the maximum independence of movement and the exercise of initiative. They should not be held to strict formal reference to bearings and distances from the convoy. This procedure is necessary in order that full advantage may be taken of their experience in operating against submarines and their later information in regard to enemy methods, which are constantly changing.

12. It is mandatory that the wireless should be used as little as possible. It would be better not to use it at all, except for important directions which must be sent from shore as to changes of routes. Evidence indicates that the enemy has been successful in the use of radio direction finders, particularly in locating large ships or radio work of an unusual or distinctive character.

13. It is apparent that once a convoy enters the danger zone an escorting force of little or no protection against submarines, and virtually becomes one of the targets itself, also requiring protection.

14. Up to April 1 there is no evidence to indicate that any German submarines carried beam tubes, and this is one of the principal reasons why they have not attempted attacking a formation from ahead—that is, approaching from ahead and firing as they pass through the formation. With bow tubes they would be forced to use the helm before reaching the formation, with considerable danger to themselves which they seldom if ever incur. Hence the principal arc for destroyer protection is the bows and wings of formations.

15. The two principal requirements of formations of a considerable number of ships for defensive purposes against submarines, are:

(1) Minimum depth of formation—that is, minimum length of formation and direction of course. This in order to reduce the arcs on the bows and beams which must be protected by destroyers.

(2) The second consideration is to concentrate the formation as much as possible, that is, it is also necessary to reduce the dimension of the formation at right angles to the course.

This not only reduces the range of visibility of the force, but also restricts the tactical positions of attack which the submarine desires to attain.

It is for the above reasons that line of divisions formation is generally adopted, the distance between columns as small as consistent with zigzagging evolution.

I cite that merely to point out that, as in all other cases, I put my utmost endeavor to keep the department fully informed of Allied war experience, and that, in the particular case under discussion,

the convoy question, they had the fullest possible knowledge of every phase of the problem.

On June 14, 15, and 17, 1917, I repeated my recommendations regarding to convoy. My message of June 15 will probably show the urgency of these recommendations:

United States Navy  
Washington.

Subject: Our putting convoy system into effect immediately from the New York, and North Atlantic ports as previously recommended, in order to assemble Canadian convoys to join ours. Convoy system is essential. At present our fuel is being expended and machinery being an enemy whose primary object must be to avoid action and destruction. We are also necessarily attempting to combine escorting and offensive operations, escorting such individual ships as the need with our limited number of vessels permit.

By spreading in convoys, we would thereby force the enemy to seek to locate him the necessity of dispersing his forces in order to locate the benefits of the principle of concentrated attack upon his forces. The principle of the convoy system shows that, even if a few ships of each type are lost, the loss would be much less than at present. The enemy has to travel a long distance from his bases, and limited ammunition and fuel. It is manifest that the enemy can not afford to expend much on his submarine force. Experience indicates that submarines have been defeated in numbers, owing to difficulty of coordination of their attacks. Such attacks, if attempted, would facilitate offensive operations of our destroyers.

The attacks on shipping the objective of the enemy campaign is lost. We must consult with British commander in charge of assembling convoys. If the plan proposed is to be adopted at all, it is manifest that it must be put into force without delay, and while the campaign is most severe. It is essential that the department's action. A convoy may be started at once with a number of ships the better, escorted by cruiser or reserve battleships with naval officers and signalmen on each ship.

SIMS.

On June 17, 1917, I said, in substance: It will seem suicidal to put a convoy system into effect immediately, and it was not until the latter part of June that the decision was made. The last sentence of the reply was this: "I consider that merchant vessels having armed guards are not so vulnerable."

DANIELS.

It is supposed that anyone who had even casually read the newspapers would have known that the arming of merchant vessels would have just the opposite result, as it obliges the enemy to proceed without warning instead of sinking a ship without notice.

On June 20 I said, in substance: It will seem suicidal to put a convoy system into effect immediately, and it was not until the latter part of June that the decision was made. The last sentence of the reply was this: "I consider that merchant vessels having armed guards are not so vulnerable." On June 20 I said, in substance: It will seem suicidal to put a convoy system into effect immediately, and it was not until the latter part of June that the decision was made. The last sentence of the reply was this: "I consider that merchant vessels having armed guards are not so vulnerable." I recently request information of department's action on this subject and upon previous similar dispatches. A decision must be made before decisive action can be taken on this side.

I have explained further along that until a decision was made on the American side, it was extremely difficult for the people to decide to put a convoy system into operation.

With regard to the arming of merchant ships, I replied to the Secretary's assertion in my dispatch of June 21. This is from Queenstown. [Reading:]

Cable sent June 21, 1917.

I trust I have made the critical nature of the military situation evident. I consider it my duty to report that if we can not offer more immediate assistance, even to the extent of sending the majority of the vessels patrolling the coast lines, which can not materially affect the general situation, we can not render the service to the allied cause which future history will show to be necessary.

My recommendations concerning the convoy system were not based upon the use of vessels, but upon all allied shipping, for it is upon the preservation of the continuity of this shipping that our success against the enemy is entirely dependent. I assumed here that the comparative immunity of American shipping from attack is due to German hopes that such a policy will strengthen the propaganda in America. This is apparently clearly shown by the German press and extended experience has shown that arming merchantmen does not protect them from attack, but simply forces the submarine to attack without warning, thus forcing her to use up her torpedoes and shorten her cruise. Armed merchantmen are sunk daily off this port.

That is, Queenstown.

The success of the convoys, so far brought in shows that the system will be successful in a submarine campaign if applied generally and in time. The system merely requires that it obliges the submarine to fight antisubmarine craft in order to attack merchantmen. The present campaign is not succeeding. The necessity is again presented for the use of all destroyers, tugs, yachts, and other craft which can reach the critical points themselves or towed part way by reserve battleships or any naval vessel. The situation is not made clear, I hope the department will indicate the further action desired. Time is a vital element in any measures taken.

Again, on June 22, I urgently advised the supply by the United States of necessary convoy escorts for the convoys from New York and explained the arrangements made by the British: If a man has had the curiosity to read Admiral von Tirpitz's book, he will find in there that everything I had to say or will have to say about the convoy system or the patrol system is entirely sustained by the opinion of that admiral. [Reading:]

To: Secretary of the Navy.

Sent: June 22.

The British Admiralty have now adopted the convoy system and will put it in full effect as fast as ships can be obtained for high sea convoy against reserve battleships for escort duty in submarine zone. As previously reported, convoys are in successful operation from Mediterranean and Hampton Roads. Plans are made for total of eight convoys a week as follows: Two from Gibraltar, two from Hampton Roads, two or three from New York, one from Canada—the latter preferably combined with the New York convoys. One a week from New York will be put in operation as soon as possible with British cruisers, in absence of our support. I urgently advise our full support, assisting and cooperating in assembly of convoys and furnishing one cruiser or reserve battleship a week for high sea escort. Battleships are admirably suited for this duty, which will not interfere with their training, for which I understand they are now being used.

In reply to these cables a message was received from the Admiralty on June 24, which has been previously read. [Reading:]

[Cablegram.]

From: Secretary of Navy.

To: Alusna, London.

For: Vice Admiral Sims, No. 37.

Received: June 24, 1917.

This is a reply to your various letters and cables.

Another thing that the department recognizes is the necessity of sending *submarine* craft which can be spared from the home waters into active

the high craft become available will send them. In making the local use of such forces, the department requests and will be guided by what should be given after consultation with the various admiralities in view of requirements.

It is strongly of the opinion—based on recent experiences—that the use of adequate guns and trained gun crews to merchant ships is one that should be treated as a minor issue. Coupled with a rigid system of escort it is believed to constitute one of the most effective defensive measures.

Exactly the same thing as was said in the cable from the United States Navy. There was the opinion formed in America, without the information that should have been considered in connection with it, which was holding up a convoy system, and for two or three months, and which cost the loss of a number of thousands of tons of shipping and some lives. [reading:]

However, as its policy, its willingness to cooperate in every way, for the question of supplying additional naval forces of types other than high craft whenever the advisability of so doing is justified. The department is considering the outline of a scheme which it is hoped will allow of a more efficient cooperation and ability to supply escort to vessels through the danger zone, in connection with the destroyers' other duties as much as does the present method of escort, and it will not displace the present method of handling convoys from United States ports. Details when prevented (perfected) (?)

DANIELS, *Secretary Navy*.

It is the same that is proposed in the last paragraph of that cable, the royal road to victory scheme, which was never presented as I know.

It is stated that in this cable the department reiterates the views expressed by the Secretary, four days before, that the armament of merchant ships constituted one of the most effective defenses against submarine measures, and implying thereby that it merited consideration rather than the convoy system, or, at least, that until it was developed, it was unnecessary to take the convoy system up. In any case it is difficult to construe these answers to the department, to my specific and urgent recommendations concerning the convoy system, as anything less than what they constitute substitutes for the convoy system. The committee can imagine my state of mind when confronted with this. It was impossible for me, 3,000 miles away, assisted by a commissioned officer, to know just what was in the department. I could assume nothing less than that they failed to take the issue which I had attempted to present. I, therefore, made the more attempt to put forth the case of the convoy system in the following dispatch sent from Queenstown on June 28, 1917, for the committee's particular attention?

United States Navy.

The department's opinion, reported in last two cables, to the effect that armament and trained crews constitute one of the most effective defensive measures, I again submit with all possible stress the following, based on the war experience. The measures demanded, if enemy defeat is to be effected, are not defensive, but offensive-defensive. The merchantmen's crews lack of speed and protection. Guns are no defense against a surprise attack without warning, which is necessarily the enemy method of attack in this area alone, during the last six weeks, 30 armed ships

were sunk by torpedoes without submarine being seen, although three escorted each by a single destroyer. The result would have been, of course, no matter how many guns these ships carried or what their caliber. These ships, heavily armed, manned by expert naval crews, with much previous experience with submarine attack, have recently been torpedoed without warning. The case within the month of mystery ship engaging submarine with gun yards, but submarine submerged and approached unseen and torpedoed at range. The ineffectiveness of heaviest batteries against submarine is conclusively shown by Admiralty's practice always sending destroyers to men-of-war.

The comparative immunity of the relatively small number American merchant ships, is believed here to be due to the enemy hopes that the pacification will succeed. Cases are on record of submarines making successful gun attacks on advantageous sun position, against armed ships, without ship being able to sink submarine. I submit that, if submarine campaign is to be defeated, it must be by defensive measures. The enemy submarine mission must be destruction of and avoidance of antisubmarine craft. Enemy submarines are now using, for approach, an auxiliary periscope less than 2 inches in diameter. This is just acquired. All of the experience in this submarine campaign to date demonstrates that it would be a seriously dangerous misapprehension to base on the assumption that any armament on merchantmen is any protection against submarines which are willing to use their torpedoes. The British have not yet decided the adoption, to the maximum practicable extent, of convoys for merchant ships. This is an offensive measure against submarines, as the latter will be to the attack of our antisubmarine craft whenever they come within a certain distance of convoyed merchantmen. Moreover, it permits of concentrating our forces, and obliges the enemy to disperse his forces to cover the various approaches.

Concerning department's reference to a scheme for protection of merchant ships which will not interfere with present escort duties, I submit that the time alone prevents utilization of any new antisubmarine invention. The time can easily be lost before any such schemes can come into effective operation. It is certainly counting on maximum effort being exerted before long night weather of autumn, that is, in next three months. Heaviest effort may be in July and August. I again submit that protection of our coast lines and shipping must necessarily be carried out in field of enemy activity if it is to be effective. The mission of the Allies must be to force submarines to give battle. Hence operations in home waters should take precedence over, or be allowed to divert maximum effort we can exert in area in which enemy is operating, and must be operated in order to succeed.

All of this time I was keeping in close touch with the French navy department, and hence it came to my notice that the department was calling upon the French, by direct communication, for their opinion concerning the convoy system, and I did so without my knowledge. This was, of course, quite within the province of the department, but I mention the fact merely to show the confusing situation created by such methods.

The French reply, of which I here have a copy, shows complete agreement with all that I had been recommending:

From: French naval general staff, first section, Paris.

Date: June 26, 1917.

To: French naval attaché, Washington.

[Translation.]

Replying to your telegram, at the request of Admiral Benson, we have been in concert with the British Admiralty, before the entrance of the United States into the war, the principle of the grouping in convoys of merchant ships across the ocean with protection by cruisers.

The cruisers are intended to protect the ships against pirates and the submarines. They shall conduct the convoys to the approach entries, where they will assure the escort to the port of discharge. Admiral Grasset has received instructions to make arrangements with the British admiral at the Bermudas for these cruisers to perform escort duty.

and Commander, in concert with the American Admiralty, a new system of communications for the protection of merchant ships and transports.

I communicated to Capt. Jackson all the information we possess on

and was my representative in Paris.

Secretary. I am sure, to point out to the committee how much this is but one of many similar incidents, demonstrating a lack of coordination which existed between the methods the Navy employed and that which we all understand by the phrase "common sense."

During the meantime was apparently still working on a plan for the control and routing of shipping, of which I learned accidentally in May.

I established the department (in reply to a number of inquiries from the control of American merchantmen), recommending that all efforts should be coordinated with those of the Allies in the shipping. My message was as follows:

NAVY DEPARTMENT  
WASHINGTON

For the notification of sailings of American merchantmen. If the same is to be afforded American as other allied merchantmen, it should be handled in same manner. Therefore coordination with the British in New York is necessary. Communications with London, and with the Allies, and protection in dangerous zones, would be simplified, if all communications were made in same codes and from same points, and other allied shipping. Separate communications via radio are confusing and are not safe. The essential information is the time of sailings, times of arrival at the rendezvous, and call letters. It is not that there are not sufficient ships available in submarine warfare to protect even all specially valuable cargoes, not to mention other cargoes.

SIMS.

My message was received to my recommendation, but on July 10, 1918, outlined a complete plan of their own in the following:

NAVY DEPARTMENT  
WASHINGTON

NAVY DEPARTMENT, Washington.

The Department is inaugurating shipping intelligence offices under the British Admiralty in United States ports, where British admiralty now has no offices. The Department desires to cooperate with British and other Allied shipping intelligence service along following lines. United States shipping intelligence offices in United States ports, British in British ports, French in French ports. Foreign assignments in United States offices welcome. The Department desires to cooperate. Navy Department will keep cooperating with British and other Allied shipping intelligence service, and regulations, concerning shipping in United States ports, and will expect similar confidential information from abroad. Routes rendezvous and convoys in danger zones will be coordinated to directions of admiralties responsible for these zones. The Department will arrange details. Department will approve if above plan is adopted. 1918.

DANIELS, Secretary Navy

My message I replied as follows:

NAVY DEPARTMENT

NAVY DEPARTMENT No. 42. In view of present critical stage of war, with the developments in next few months, which will be entirely dependent on the coordination of shipping, I submit that it would be a fundamental mistake in any way to change present established administration of shipping communication in connection with control of shipping.

DANIELS

Undoubtedly the most serious military handicap of this war, as of all, has been difficulty in coordination between allies. It would manifestly be the safest military policy to allow any one ally to control and direct all operations as this can not be done, we should certainly subordinate every interest to such an end. To attempt at this time to establish new shipping offices, personnel, introducing necessity for increased number and different methods of communication, would certainly involve delays, misunderstandings, and which would be direct assistance to enemy.

If success is to be assured and accelerated, there should be no lines of demarcation or introduction of complication. The shipping to be controlled is all of the neutral shipping, which should be treated as a whole. It needs protection from the field of enemy's campaign. We may, and should, assist by adding extra personnel to present established system of control, but under no circumstances should we attempt to supplant or take over any shipping offices now in efficient operation. We submit that central control for all shipping should be concentrated here in the center of war area, where all information of enemy methods is constantly being received and from whence daily control of naval forces should originate. British Government has been consulted and is in complete agreement with this dispatch. It is our duty to adequately present this case by cable, and it is therefore hoped that the United States will accept these recommendations, based on one consideration only, namely, the interests in the one cause against common enemy.

I am going into this thing at some length because it is the most important measure that was taken during the war, and consequently the continuous resistance for a number of months to the introduction of that convoy system by the Navy Department is the most serious error that was committed.

For the information of the committee, I should perhaps briefly explain what the point at issue here really is. The routes followed by convoys which were vital and which in great danger, were in the so-called submarine zone; that is, the coasts of France, Great Britain, and Ireland. In this area no other convoys were confronted with the danger of submarine attack. What in the minds at least of merchant captains was considered an even greater danger was that of collision with other convoys. All ships were running without lights. It must be remembered that convoys were not only coming from Canada, New York, and Hampton Roads, but also from the Mediterranean and from Africa—the latter being ships from Australia and other localities. To add to this congestion, we always had the outgoing convoys to consider. The routes followed by convoys outside of the submarine zone were, of course, not of particular consequence, as the amount of sea room there caused little fear of collisions.

It was for this simple reason, together with the fact that the latest information as to submarine whereabouts was available in London, that it was essential—in fact absolutely necessary—that the routings and control of convoys in the submarine zone be handled from one source and not from many.

The plan proposed by the department, to suddenly displace the extensive system of offices which the Allies had built up in order to supply shipping with its routings, war warnings, and secret intelligence, was apparently based largely upon sentiment. I submit without fear of contradiction, the assertion that no reason whatsoever except that of increasing efficiency, could warrant, in the very midst of a war of this nature—a period in which victory was doubtfully and defeat quite possible—the throwing out of gear of an extensive organization which was working and upon which the safe shipping depended. It must be noted, too, that this system,

It should be possible to divert convoys, if necessary, before escorting join.

This is now accomplished by broadcasting from Poldhu, on high power who don't reply, and in fact even beyond wireless sending range of cruising convoys from Hampton Roads have arrived safely 350,000 tons. Convoys being loaded and grouped according to European destination.

### Not speed.

For instance, all cargoes bound for eastern British ports are grouped in convoys from Hampton Roads include cargoes from Chili, Panama, Gulf of Timore, and Philadelphia. Two convoys a week are now being started from Hampton Roads and one from Cape Breton, Canada.

In view of information available here, and present stage of development of the convoy system, I strongly recommend that we cooperate to the maximum extent possible at least. Can our escorting cruisers leave convoys outside of submarine zone and return without refueling? The plan is to escort outgoing empty ships outside submarine zone and then disperse them. It is undesirable to add the escorting of convoys in submarine zone, if it can be avoided. Admiralty desires information immediately as to whether first convoy can be started from New York on July 1. I urgently recommend that carefully selected commander be sent immediately under me in British Admiralty in connection with convoys. Admiralty desires this.

The only explanation I can give—the only guess I can give for the proposal put forth in the cablegram, for the handling of the convoys, is that it was done by some one who had never been to sea.

In the cables and letters which I have been reading to you should be emphasized that, from the 1st of May, I had endeavored to convince the department of the necessity of assigning a sufficient number of cruisers for convoy escort duty to provide for the convoys from New York. On May 1, in my cable, I had estimated that 14 would be necessary for this duty. The first intimation I had from the department that they intended to take any action on this recommendation was on the 2d of July when, in its cable 44, the department stated that they would assign seven cruisers for convoy duty, in accordance with the Admiralty's request.

There was a delay from the 2d of May to the 1st of July, which time they resisted helping out to the extent that they did in the convoy system.

This was confirmed by their dispatch of July 5, in which they stated that seven vessels of the *Denver* class would be detached to assist in convoy operations. As I have previously pointed out, the Admiralty had been using the convoy system for six weeks, time when this first assurance from the department was received. As I had pointed out to the department in the letters and cables that I read you, it was practically impossible to attempt to handle commercial merchant shipping partially by convoys and partially by independent sailings, in view of the number of ships to be escorted, and the lack of antisubmarine craft.

It was absolutely necessary that so far as possible all important shipping should be immediately placed in convoy. Yet at the end of six weeks after the first convoy had successfully arrived, the Admiralty had yet no information to the effect that the United States was willing to cooperate in this matter, and the cable received from the department indicated that they were considering many plans to avoid adopting the convoy system, but had decided to cooperate fully with the Allies in convoys. Sometimes the distress and confusion resulting from this attitude of the

inferred from the following letter, which I received from you on the 11th of July. [Reading:]

"I am worried about the convoy question. As you know, we are making some progress, but it is quite impossible to organize the system unless certain vessels are available as escorts through the submarine zone, and unless the whole system of sailings from ports abroad to New York is organized some way ahead, and by some way ahead I mean at least a fortnight before ships requiring escort leave ports abroad, so as to being that convoys have to be arranged about three

months we have arranged four distinct convoys, namely, two from New York every eight days, one from Canadian waters every eight days, and one from Europe every eight days.

"The ships which are escorted through the submarine zone by British destroyers are absolutely dependent upon United States destroyers being in New York. Therefore, we must be certain of having 11 United States destroyers on duty. Do you think you can guarantee that we shall have them, and that you can inform your Government that you have

"The most necessary will be to make it perfectly clear to the United States that they must give a fortnight's notice before it is proposed to sail any ship, or anything but the smallest numbers. We have, for instance, in the last few days of troops being sent over in two White Star liners, and in another vessel, and of four ships with valuable cargoes requiring escort, and we received the notice as the ships were about to sail. We also have troop convoys arriving at about the same time. The greatest difficulty, I am sure, in providing adequate escorts would be if a little notice were given, we could suggest the position of sailing of some of the ships, perhaps for a few days, so that we could be ready when they arrived.

"It is so important that I would suggest to you the desirability of making it essential that you should be given notice immediately of any sailing in the next fortnight. Otherwise I fear that we may be in a position. If we know that we are pretty clear for about a fortnight, we can decide definitely whether the four destroyers could be taken for duty, or not, on this morning.

J. R. JELICO.

"When he refers to there was a proposal to send four of our destroyers to the Channel for certain operations with British destroyers for patrol service. It was my opinion about the continuous service of our destroyers escorting and protecting our convoys would get on their nerves, and it might be necessary to make some change, so that it was proposed to make an arrangement to send some of our destroyers into the channel and to have them be replaced by British destroyers, and in this way give our people, in succession, an opportunity to see some of the British ships. But that is one of the things in which I was mistaken, and I did not get stale on the job at all, all during the war. I continued to have been receiving occasional announcements of the sailings of Army supply ships and of convoys carrying American troops, all of which required escort. I was given only a few days' notice, and it became impossible to protect shipping and provide escort for these convoys. On the 12th of July I therefor sent the following letter:

"I am sure that ample warning be given of prospective sailings of all convoys, and particularly groups of ships with troops or supplies which are going on outside of usual merchant routes, similar to those re-

ported yesterday as having sailed on July 11. Every possible effort is to be put to put convoy system into full operation, and its success is dependent on the presence of British destroyers in addition to British destroyers and patrol ships. At the prospect of severe congestion of convoys in submarine zones latter part of July, not only to United Kingdom, but also to France and from Russia.

Please cable to-day concerning any further prospective sailings of supply ships before August 1. In case of such sailings, it will be necessary to have a merchant convoy sailing from New York on July 14. Without advance of at least 15 days before sailings, there is grave danger of coincidence of a submarine zone, with necessity of inadequate protection for some convoys, and possibility of disaster. I again urge the importance of our not attempting to independently, or of replacing present established British shipping officers, but that we solely cooperate in regard to all shipping, American, British and other allied shipping. Sailings of all British or American ships should be arranged in cooperation with British shipping officers as to rendezvous and time. Communications should be made in accordance with usual procedure, notifying me for information if desired. I recommend that in future, Army supply ships join merchant convoys, in order to increase the strain on limited number of escort vessels available, and permit plans to be made for adequate protection. This subject is of the utmost importance to the success of our campaign against enemy submarine campaign, and prevention of serious losses.

On the 11th of July I had received from the department asking what steps were necessary in order to insure safe transport of troops and troop supplies. To this I replied in my message of July 14, again emphasizing the importance of coordinating Army supply transports with the merchant convoys. The following:

Sent: July 14, 1917.

To: Secretary of the Navy.

Unnumbered. It is impossible for me to guarantee safe escort protection of a submarine zone for troops, troop supplies, and valuable Government cargo unless the following conditions are fulfilled:

First. A schedule of prospective sailings, giving at least two weeks advance of all sailings.

Second. That such shipping be concentrated in convoys, even if delay is caused.

There are not sufficient destroyers to meet demands imposed by independent sailings and insufficient warnings.

Sending troops by individual ships at brief intervals requires nearly as many destroyers that would be required if grouped in convoys.

All supply ships should sail with merchant convoys.

Third. It is essential to safety that my staff be increased, as previously stated. Without this assistance there is grave danger of mistakes which may result in serious losses.

I will take up especially, by and by, that question of assistance. In all the stuff I have been reading you since here, three days ago, I was assisted by only one man in my staff, and such assistance as I could get from outside, from attaché, and patriotic Americans who came in and went out, was nothing.

The situation, as it then existed, was fully explained in my message of July 14 to the Navy Department:

11. Convoys and valuable merchant shipping. The problem of escort for merchant ships, either singly or in convoy, is a very complicated one. Convoys are now coming from the Mediterranean, from Russia, and from other places of origin besides America; and in view of the inadequate number of vessels available for escort duty, it is absolutely essential that this complicated question of destroyer escort be coordinated in some central place.

The shipping to which I refer is not American shipping or British shipping or other allied or neutral shipping alone, but solely the combined allied shipping which is essential to combined allied military and naval operations.

convey in my dispatches the idea that I consider the British shipping as the best. Improvements are doubtless possible, but not to be improved at the cost of lack of cooperation and hence at the cost of not being afforded.

It seems to attempt to point out the entire necessity for thorough

control in handling shipping arises from the necessity for long-distance and the danger of the enemy thus obtaining vital information. The principal requirement is to reduce the number of sources that must handle the work and to adopt and be guided by a central source. There has been cause for serious concern over the department to establish separate shipping offices and shipping control would mean an extra system of communication, an enlarged staff through whom information must pass, and hence would involve

with the greatest urgency that we first merely put such extra offices in the British shipping offices to cooperate with them, and, as for the systems and procedure and lines of communication, at this beginning we could gradually introduce such modifications as are considered advisable, and perhaps in the course of time to be made in our own ports.

It is of importance for the safety of shipping, and hence success in the course should be adopted gradually, and that in any case to utilize the central control here in London, where all information should be issued to the escorting forces.

It will be only too glad to accept a representative from our Navy to share the share of responsibility, in the Admiralty. This is the past.

It has been experienced in the last few days owing to the elements from the United States of an Army hospital units on the *Mongolia* and the *Adriatic* and other liners. It happened that the prospective arrivals of these ships with the arrivals of merchant convoys from Russia, from the Hampton Roads, and from New York.

It was definitely whether the ships referred to were the British ships. In the case of the *Mongolia* no rendezvous was given.

Advance information of at least two weeks is essential to the success. Without such advance information there is danger of the submarine zone and the possibility of being unable to do so. Such a course might easily result in disaster for some of the merchant ships.

It is contemplated United States destroyers escorting only United States and supply ships and the New York merchant convoys, in the patrol duties in Queenstown area, which includes escorting independently.

It has been grave danger of oversights or errors in the handling of all dispatches received. The responsibilities involved, and the nature of the duties required, are considered to warrant an sacrifice of other important demands upon the available staff. This point has been explained in full in various cable dispatches

about that is that God was good to us that we did not suffer serious losses, with all that confusion.

In accordance with the department's request, I have ordered guard officer, a full and detailed recommendation of troop convoys.

I received a cable from the department, in which they stated that for convoy, contained in this letter, were accepted, and the department's action.

Although it referred only to troop convoys, was, as a matter of fact, identical with the general plan for handling all convoys, that it involved control of the convoy routings and source, and that source in London. As a matter of fact, in the case of troop convoys, their routings were handled

exclusively from my own office, but the officer who handled of course, in the Admiralty convoy section daily, and was in his daily work by the merchant convoy system. This is utterly essential. The two were interdependent.

I will refer to this question of handling troop convoys I adding at this time that the reason for holding the troop routings strictly in my own organization was merely that of greater secrecy in this all-important measure, upon which all of our troops fundamentally depended.

It was not until even later that, in the case of troop transport department finally accepted my recommendations as to the of Army and Navy supply ships. In the case of those sent abroad in July, so much confusion attended the plans for the and for their escort through the war zone, that it was apparent the only way to handle them would be to sail them with the mercantile convoys that were being organized to sail weekly, from New York and Hampton Roads. I could not get dozens of messages here, dealing with the confusion and element occasioned by sailing these ships independently, reference to other convoys; and in each case with the definite from the department to me that I should, in each case, supply ships, whether sailing singly or in groups, with danger-zone.

What they wanted me to do in that respect was simply a impossibility.

In my cable of July 31, I therefore recommended that a policy be adopted for handling these supply ships. My message as follows:

Sent: July 31.

To: Opnav, Washington.

No. 172. I strongly recommend that for all Government supply ships, Navy, one of the following courses be pursued: First, that such ships be grouped in separate convoys of 12 or more, the sailings coordinated with other sailings, or second, that as fast as such ships are ready they be consolidated with merchant convoys from New York and Hampton Roads, which will be through danger zone, and a detachment of destroyers will take over the escort when convoy separates. Either of these plans will increase safety by permitting better concentration of protection, considering the inadequate number of destroyers available. Escort will be thereby greatly facilitated, with increased steaming and better state of readiness of destroyers.

The department on August 1 replied as follows:

SIMSADUS, London.

Opnav 73. Referring to your 172: This office concurs in expression of policy in your cable referring to the proper methods of routing cargo supply ships, Army and Navy.

ADMIRAL B

You note the same experience; first, proposal of impracticable plans, a long discussion by cable, etc.; and a final acceptance of simple, ordinary plans which had been suggested.

An excellent illustration of the attitude of the department in respect to convoy and shipping control at this time, is afforded by their reply of August 10:

AUGUST 10

Origin: Admiral Benson.

Vice Admiral Sims, London.

Opnav 116. Your 197: The following is the situation in regard to American shipping. A few vessels route in the established convoys. More sail direct. I will confer with British shipping offices to get the latest information and re-

to induce American ships to take advantage of the protection. It is not possible to compel this except in Government-owned ships. When the Government takes over the control of all shipping. After the war, on the subject, this office is of the opinion that what is to be furnished, after departure, names, dates of sailing, etc., of the American ships only. Those American cargo ships sailing direct and not in convoy. In the case of all ships carrying troops, and all supply ships, you wish the information forwarded you. Unless you instruct otherwise. All other reports of sailings, except reports through you, will cease. 19008.

ADMIRAL BENSON.

It is a most discouraging message. For at least four days, exhausting my vocabulary in attempting in both English and French to explain this convoy system. I feel sure it is impossible to go any further in explaining it to this command. I have read the previous cables. For example, note that at this late date, that a few vessels were being routed to convoys; that most ships confer with British shipping for the latest information and routes. Heaven knows, I have said hundreds of words in attempting to explain that and what they should do, as that was the only place where information was obtainable. Note also the statement that, "an effort" was being made to induce American ships to take advantage of the protection offered by convoys, and that it is not possible to compel them to do so.

It is evident to the Allies, at this stage of the war, and it was evident to the Navy Department, that the problem was to save shipping, whether shipping wanted to be

It made no difference whether the shipping was under Government control; our fate was sealed up to that point. It was the issue of the war at that moment. I had seen the war had demonstrated that almost anything was possible for this small problem, any shipping man could suggest many means for its quick and radical solution. I had suggested the effect on shipping if they had been told that they would have protection whatever would be given them in the event they did not accept Governmental instructions; or how they would have been to issue a Governmental warning which would have affected the insurance on every ship lost.

I know what the Allies did. Sometimes I think that they had no idea what thing there did not know anything about at all.

As to the question as to the soundness of the various reasons I have been explaining, I would invite attention to the subject of this cable, which states that, as I had repeated, all reports of sailings, except through one channel, should thereafter cease.

As to the question of this convoy system, I wish to clear up the misunderstanding which seems to have gotten abroad, to the effect that we were concerned with the safety of foreign shipping and not of our own. What I was after was winning the war. I have clearly shown above, during the period under discussion, that the question was wholly bound up in the saving of shipping. It was not American shipping, or British shipping, or Italian shipping, but it was allied shipping. It was the life of the team which was lined up against the enemy.

exclusively from my own office, but the officer was of course, in the Admiralty convoy section daily in his daily work by the merchant convoy system, absolutely essential. The two were interdependent.

I will refer to this question of handling troops, adding at this time that the reason for holding routings strictly in my own organization was much greater secrecy in this all-important measure, upon which all of our troops fundamentally depended.

It was not until even later that, in the case of the department finally accepted my recommendation of Army and Navy supply ships. In the case of the ships abroad in July, so much confusion attended the plan and for their escort through the war zone, that it was the only way to handle them would be to sail the mercantile convoys that were being organized to sail weekly, from New York and Hampton Roads. I received dozens of messages here, dealing with the confusion occasioned by sailing these ships independent of reference to other convoys; and in each case with reference from the department to me that I should, in each case, advise the ships, whether sailing singly or in groups, with due reference to the possibility of their being delayed.

What they wanted me to do in that respect was impossible.

In my cable of July 31, I therefore recommended that the policy be adopted for handling these supply ships, as follows:

Sent: July 31.

To: Opnav, Washington.

No. 172. I strongly recommend that for all Government supply ships, one of the following courses be pursued: First, that such ships be grouped in separate convoys of 12 or more, the sailings coordinated, or second, that as fast as such ships are ready they be sent on merchant convoys from New York and Hampton Roads, which are through danger zone, and a detachment of destroyers will take over the escort when convoy separates. Either of these plans will insure a better concentration of protection, considering the number of destroyers available. Escort will be thereby greatly facilitated and better state of readiness of destroyers.

The department on August 1 replied as follows:

As a matter of fact, United States shipping was a proportion of the whole in those critical days. For July, 1917, there were a maximum of about 160 arrivals per month, in the war zone, of American-owned ships. Consider this number against over 3,000 arrivals and departures of British vessels alone. Even such a comparison does not show a large number of British and French vessels which were moving in the war zone, practically all of their time. Most vessels were on the high seas a good share of their time, and only a small part in the submarine zone. The traffic up and down the French coast carrying many supplies upon which the French armies were absolutely dependent, and our armies also, was never out of the war zone at all. I think it would be a safe estimate that, during the critical months, not more than 5 per cent of the arrivals and departures in the war zone were American ships.

I have before me figures showing that as late as 15 months after we entered the war, American shipping was less than 12 per cent of the total making up the allied lines of communication.

It is very difficult for me now to convey to you the actual situation which existed at that time, and the real state of despair which I found myself almost daily, during those early months of the war. It should be noted that the cause of this was no single matter, such as the failure to act upon my convoy recommendations, but that in a dozen different matters, at the same time, I was dealing with the same situation, always hoping from day to day that the War Department would finally realize the situation, and either accept the recommendations, or send over somebody in whose judgment they could trust. And I again wish to reiterate that the main question as to whether these recommendations were right or not, in fact remains that they were virtually all adopted by the department in the end.

I could read you, for the next week, copies of letters and reports sent by me in regard to the inauguration and control of the convoy system, but that would hardly contribute further to an understanding of this matter. I think that enough had been said to you by what I wrote in my letter of January 7, 1920, was a very plain statement of the serious embarrassments and delays and difficulties in putting into effect the convoy system, which was the most important of all the measures used in defeating the submarine campaign against allied shipping. Paragraph 35 of that letter is the one here in question.

#### NAVY DEPARTMENT MISCONCEIVED PROBLEM OF DEFENDING THE COAST.

It became evident, in the early part of my mission abroad, among the reasons which were keeping the department from hearty and vigorous cooperation in the war was a misconception of the problem of the defense of our own home coast. I have already pointed out, in a cable of June 24, the department has

Another thing the department recognizes is the necessity of sending all the naval craft which can be spared from the home waters into active European waters when such craft become available will send them.

the department's cable of July 10, in which they outlined it was again specifically stated that the department

cooperation with the Allies to meet the present submarine threat in other waters compatible with an adequate defense of our own

Since my arrival abroad I had continuously pointed out by cables and letters, that full information was available concerning submarine movements. Throughout the first and the first few months of 1918 I informed the department that no submarine operations should be expected on our coast, except as a possible diversion for political reasons have already been fully described. I need not repeat to my first letter written on April 19. The whole of it summed up therein, and all my numerous letters thereafter were mere repetition.

I particularly emphasize that fact, that in the very first nine days after I arrived in London, the whole of the information recommended throughout the war was contained in it. After these long, trying periods of resistance by the department these things were all accepted.

In my cable of April 14 I had said:

April 14, 1917:

The enemy will make submarine mine-laying raids on our coast or elsewhere to divert attention and keep our forces from the critical area in the Atlantic. The effect upon public opinion. The difficulty of maintaining the free use of shipping on this side will restrict such operations although they should be effectively opposed principally by mines swept on soundings. Enemy submarine mines have been and are being laid, but majority at not over 50 fathoms. Mines do not rise to the surface until from 24 to 48 hours after they have been laid.

It is dangerous that submarines never lay mines out of sight of landmarks and the danger to themselves if location is not known. Maximum effort should be made in anti-submarine work where most effective concentration is of immediate necessity.

In my letter of April 19 I explained why the submarines should operate on the American coast:

April 19, 1917:

It is conclusive that, regardless of any enemy diversions, such as may be made elsewhere, the critical area, in which the war's decision will be made, is the Atlantic, at the focus of all lines of communications.

The enemy submarines and their rate of construction, allowing for the lack of information, renders it inevitable that the main submarine effort will be concentrated in the above critical area.

It is necessary to take up your time by reading many similar letters. It should be borne in mind, however, that the same information, or these same recommendations, were being repeated usually more often during those first six months, and in my letter of June 20, in my letter report I stated:

June 20, 1917:

It is a reasonable dispatch, it would seem that the maximum protection we can give should be concentrated in the area in which the enemy is operating and where he is most likely to operate or fail.

And in fact it has been a source of surprise that it has not occurred to the enemy to send one, or perhaps two or three submarines to operate in a trial period, for the mere purpose of agitating public opinion and to test our forces in home waters. All evidence indicates clearly, however, that such a move would be primarily a diversion and a temporary one.

From cable to department, June 28, 1914:

I again submit that protection of our coast lines and of allied shipping must necessarily be carried out in field of enemy activity, if it is to be effective. Therefore the Allies must be to force submarines to give battle. Hence, no operations in our waters should take precedence over, or be allowed to diminish, the maximum effort that can be exerted in area in which enemy is operating, and must continue to operate until it can succeed.

Letter, June 29, 1917:

I again submit that, if the allied campaign is to be viewed as a whole, the necessity for any high-sea protection on our own coast. The submarine as a war vessel possesses no unusual characteristics different than those of other craft, with the single exception of its ability to submerge for a limited time. The difficulty of maintaining distant bases is the same for the submarine as it is for other craft. As long as we maintain control of the sea, as far as surface craft are concerned, there can be no fear of the enemy establishing submarine bases in the Western Hemisphere.

It should not be considered that I overlooked or minimized the importance of the defense of home waters, but, as I clearly pointed out, such defense in the first year, if not throughout the war, was best carried out in the submarine zone, where the major activity of the enemy were concentrated. It is an old and time-worn principle that the best defense is a vigorous offense. This principle is applicable to dog fights and street brawls as to military operations. There was every reason to believe, and events proved the case, that the only submarine operations which might occur on our coast would be sporadic and intended, as repeatedly stated in cables, major diversions which, if met with anything in excess of the minimum force required, would merely play into the hands of the enemy and accomplish the very enemy object of such diversions. In fact, from 1917 on, I submitted to the department suggestions and recommendations as to the best means of meeting such activity as might occur.

Actual experience had shown that we could depend upon our intelligence service to keep reasonably accurate track of all submarines at sea.

Incidentally, while not so important, that is one of the most interesting incidents that happened during the war—the extraordinary efficiency of the allied secret service. We hardly ever lost track of a submarine; and you will see presently we never failed to give adequate warning of when they left, when they would arrive here or what they would do after they got here.

I do not mean here to convey that we knew where they were with sufficient accuracy to go out and sink them, but merely that we could at all times keep general track of comparatively restricted areas which they were occupying from time to time. Apart from secret service information, intercepted radio, and plotting by bearings, it is evident that the submarine could not accomplish his work at all without disclosing his presence; for example, if he came ashore here [indicating] or if he were sighted there, knowing his speed and having followed his operations previously, we could draw circles on the chart and be assured that for various periods he would be somewhere within those circles. This means that as long as the submarines were not too numerous in any one area, as long as that area did not have to be traversed by ships, we could provide for safety by routing the ships around the circles. In the matter of fact, I am certain that history will show, when all the

more shipping was saved through thus keeping routes and routing ships clear of them than by any measure. That was the constant work of the staff at our office in London throughout the war. As stated elsewhere in my testimony, every route, every course followed by every naval, merchant, or troop carrier, was furnished by the staff. Diversions of routings made while the ships were at sea were likewise directed and controlled by the staff. However, that I wish to bring out here is that, as we were that we would never have to deal with but one or two submarines on our own coast, it was possible to do a great deal for the safety of shipping in our home waters without any antisubmarine craft at all.

#### SHIPPING IN AMERICAN WATERS WAS GIVEN CONSTANT CONSIDERATION.

The safety of shipping in our own home waters was always a matter that I gave it full consideration in all the recommendations I made. It could be easily substantiated by a long series of facts I might quote.

For example, I discovered about the 1st of September, some months after we had entered the war, that apparatus had been done in the way of establishing and controlling a system in our own home waters. This information was furnished me by many officers coming abroad, and also by contacts who visited our headquarters. I shall read to you an official letter sent to the department under date of September 17. [Reading:]

SEPTEMBER 4, 1917.

SIR:

Naval Operations.

Reference to Atlantic coast ports.

It is probable that German submarines may operate off the main coast of the Panama Canal. In addition to torpedoing ships, they may harass by planting mines in localities not far from our principal ports. If more discovered off any of our harbors, there would result the closing of the ports, and allied ships bound from Europe for the United States would have need of information as to how to be routed to American ports.

As this matter has already been taken up, I recommend that the department meet this submarine situation by having lines of approach prearranged, and by having well defined channels of entrance that would be constantly sweeping, if necessary.

The shipping office, in New York, full information, with charts, etc., of the situation is handled in European waters.

It is probable that submarines can not operate advantageously on our Atlantic coast for any great length of time, but it is quite possible that they will, and this office would be immediately flooded with information. Admiralties as to what instructions they should give their submarines not to enter American ports without danger.

It is also in the German interest to create abroad the rumor that they were about to undertake submarine attacks on our coast, and it is to be noted that such rumors have been circulated by German agents in Europe and in the United States for the purpose of influencing the Navy Department and the American side. This enemy policy was very much pursued by them in other fields throughout the war.

For example, the bombardments of a port in Liberia by a submarine had no bearing whatever upon the outcome of except in so far as the Allies allowed it to cause them to some of their forces from the central strategical area where enemy was trying to win. Throughout the war there were cruises by enemy submarines in the vicinity of the Azores where far afield all for this same purpose.

The fact that such propaganda was not without effect on the Navy Department was illustrated by the fact that I received numerous cables throughout 1917 and the early months of 1918 the department mentioning these reports of probable submarine activities on the Atlantic coast. In my letter of October 1 I referred to this enemy propaganda and again repeated my recommendations, as follows:

#### REPORTS OF SUBMARINE ACTIVITY IN WESTERN ATLANTIC.

Letter No. 1254; October 9 1917:

With reference to the information which has reached the department from various sources concerning the possibility of a force of large enemy submarines operating off the Atlantic coast or in the West Indies, the force commander has given practically all information available here. The force commander is strongly of the personal opinion that no extensive overseas campaign of this kind will be initiated by the enemy. He is further of the personal opinion that such a campaign is a practical impossibility.

No evidence gathered during the war indicates that enemy submarines are more free from material casualties and the general restrictions which obtain with respect to surface craft than surface craft themselves; in fact, it is considered that submarines are much more restricted in their operations than surface craft. They require frequent docking, and hence it is not believed that even an efficient ship—should such a ship be available and if it were possible to maintain her in distant fields—would be able to furnish the facilities that the submarines on our coast would demand.

It is always, of course, quite possible that the enemy may send a small number of submarines to operate temporarily on our coast or in distant fields, with the object of affecting the disposition of our forces. It would be greatly to the interest of the enemy to force the removal of our antisubmarine force from the critical areas near to the enemy bases and in the local areas of allied trade, upon which the success of the war is largely dependent.

It has been a source of more or less surprise that such an operation as this has never been undertaken before, and the only theory offered to explain the fact that it has not been undertaken has been that the enemy apparently did not consider it of sufficient interest to arouse the American public unnecessarily.

It has been believed that the enemy hopes that peace will arrive before the war has reached the pressure of the United States has become at all serious. The population of the United States, now in the fourth year of the war, has reached what might be called a "bitter stage," which will react upon the enemy following the war during the reconstruction period. The theory is therefore advanced that it will be greatly to the enemy's advantage during the reconstruction period if the American public has not been given any cause to reach the so-called "bitter stage."

On the other hand, it may be urged that a few submarines sent to operate temporarily on the American coast, or on the trade routes from South America, particularly in the vicinity of the canal, might result in sufficient popular agitation to force the department into withdrawing either all or part of its forces from European waters. The possibility of this contingency must therefore, of course, receive serious consideration.

The fact was that the enemy was about as short of submarines for accomplishing his purpose as we were of craft for thwarting him. It was for this reason that we always were perfectly safe in assuming that these various far-flung operations, aimed at leading us to disperse our forces, could never be performed except by one or two submarines—this for the simple reason that, if at any time they

submarines out of the only area in which they could operate. A campaign would then have ceased immediately.

In other cases of recommendations made from the department, after some months, recognized the soundness of adopting it. (I do not know that that is very common.) And I think I am safe in saying that by about 1917 it was their well-established and adopted policy to keep them out of European waters; but during the war this policy had not been followed, and many vessels were in Atlantic home waters which would have been kept abroad; and these vessels at the same time had to be moved and hence, when the policy was finally adopted, it was to move which involved further delay.

The necessity for complying with the recommendation of the maximum number of craft into the war zone at that time at home, is shown in a report of a member of the Secretary of the Navy, in February, 1918, to the defense of home waters, and whose conclusions, were accepted by the department.

One of this board, under the heading "General policy,"

states: "The United States is to send the maximum possible force to operate in the active theater of the war. This policy the board adopted to the end that there might be no weakening of it.

It is recommended, as a means of defending shipping on the coast, the establishment of shipping control and of apportioning the Atlantic ports, which should be put into effect to keep submarines operating off Atlantic harbors. It should be noted that these recommendations of the board, which are too numerous to detail, were substantially of the same character as those in my letter of September 4, which I have already mentioned, and was to be supplemented by various auxiliary measures, such as aircraft patrols. The board decided that a small number of submarines would be sufficient craft to keep on the coast at all times, and they found that it would be possible to keep them busy by utilizing new destroyers and new submarines during down periods before departure for European waters. They found by experience that all these new craft were sent to sea in the early part of their cruise and had to be sent back to the navy yards. It is very significant in this connection that these craft would be considered as being busy while they were on the coast and while going through the waters of the coast, which would involve periods under repair at the navy yards. A member of the board stated that he was influenced in this decision by my numerous reports to the department warning of the approach of submarines could be expected. They considered that all of the destroyers and submarines under repairs at the yard or not, would have to be thrown together and get out in case of an emergency.

On April 11, 1918, to the Navy Department I again stated the areas in which submarines might operate, and indicated the measures to be taken to meet possible operations on the

American coast. In my letter of April 30, 1918 (No. 16406) I furnished the information contained in this cable.

This is what I referred to as the interesting movement of submarines.

#### INFORMATION OF MOVEMENTS OF ENEMY SUBMARINES

The best proof of the fact that I had available at all times information concerning submarine movements sufficiently accurate to warn the department in advance of submarine movements off the American coast is well demonstrated by what actually happened when submarines did arrive off the American coast in the summer of 1918. In my cable of April 28, 1917, I had said:

April 28, 1917.

To: Secretary of the Navy.

Through: State Department.

With regard to submarines entering and leaving their bases and their whereabouts while operating, the Admiralty is able to maintain information fairly exact.

Of the 34 mine U-boats, 2 for some days were not located, and the Admiralty was the point of informing us of the probability of their being en route to the United States when their whereabouts were discovered. It is the Admiralty's belief at present none are likely to be sent over and that the present effort of the Admiralty, which is successful, will be kept up off the channel entrance.

And these assurances I repeated many times in letters and cables before I cabled the information that a German submarine was en route for the United States coast, fully a year later. At the end of April, 1918, I learned that one of the submarines of the Deutschland type (U-151) had left Germany prepared for a long cruise, and the information indicated that her destination was the American coast.

The department was promptly informed, and further received numerous messages during the slow progress of this submarine en route to the Azores region across the Atlantic. As I have repeatedly stated elsewhere in this testimony the department was not only given advance warning of the sailings of all submarines for our home waters, but further was given follow-up and confirmatory information together with details, as regards the character of the submarine, its habits and methods, and even in many cases the names of the commanding officers, with their previous records. I have before me a rather large batch of messages, all of this nature, which I will not take time to read, but I am sure that the committee would find them very interesting, and further that they would prove rather astonishing, because of the remarkably accurate and detailed information we had of submarine movements.

I will read complete or in part one group of messages concerning the first submarine, merely as typical messages.

[Dispatch sent 16-15-26. EJ134.]

Date May 1, 1918.

To Opnav.

Prepared by CS. Approved NCT. Code 34 ADR. No. 7289.

Highly secret. To Department May 1.

7289. Admiralty informs me that information from reliable agents states that a submarine of *Deutschland* type left Germany about April 19 to attack either American troop transports or ships carrying material from the States.

on the German formed conclusions that:

1. transports sail from New York via Nantucket Shoals and direct to Europe.

2. transports go from Newport News to a point north and then to Azores and thence to destination.

3. incidentally there that while a great deal of this was wrong, I am trying to bring out the point that the captains of German submarines did have we got.

4. that the submarine is taking a northern route across Atlantic, average

5. It is important in this connection now, as to the information as to the starting of the submarine because there was plenty of time to send all the destroyers to put them in dock, and paint their bottoms, and put out before the submarine got over there. [Reading:]

6. the submarines ready for service.

7. the class of submarine, similar to the *Deutschland* that they were for military purposes.

8. the class with *Deutschland* class establishes following conclusions:

9. operate a long distance from shore, and seldom in less than 100

10. are very vulnerable to depth charge attack.

11. when submerged.

12. an instance of attack against convoy, and but two of torpedo were successful. They attack by gun fire almost

13. type to oppose them is the submarine.

14. operating area as soon as presence of submarine is discovered.

15. Admiral Grant be given copy of this cablegram. 26001.

SIMS.

16. is the admiral in command in America, here.

[Dispatch sent 16-15-26. J13.]

17. Type used Code B4Ar. No. 7997.

18. sent May 15.

19. Information contained in this cable is given me by the British and is necessarily somewhat paraphrased for transmission, but I have no doubt it is authentic. There appears to be a reasonable probability that the vessel referred to in cablegram just read) may arrive off the coast at a time after May 20, and that she will carry mines.

20. In fact, we had exact information as to what she was doing, but I paraphrased it in the cable, and did not give it, for we did not get hold of it. [Continuing reading:]

21. indicates the favorite spot for laying mines to be the position where they stop to pick up pilots. For instance, for Delaware Bay, where they are picked up south of the Five Fathom Bank Light Vessel. These are some of the most likely spots for a submarine to lay mines.

22. In fact, we had the exact information that that was the place where they were going to lay mines, but, for the reasons given, we did not do so. [Continuing reading:]

23. information passed by Germans on subject of anti-submarine patrol, and also neutral sources information that a patrol is maintained off the coast.

most of the harbors, and especially off Chesapeake Bay. A neutral has the patrol extends as far as Cape Skerry. (*sic*.)

It should be noted that, except for mine laying, submarines of this work in deep water, and that the Germans have laid mines in water in 70 fathoms. So far as is known, there is no reason why they should not depths up to 90 fathoms.

The foregoing completes the information furnished by British Admiralty following is added by me.

There are circumstances which I can not explain more fully, which render important that nothing whatever should be given out which would lead even to surmise that we had had any advance information concerning this, even in the event of our sinking her, and that such measures as are taken by the department be taken secretly as possible, and without public disclosure of reasons.

It seems, as I remember, that the department was criticized for letting the public know that the submarine was coming over about to arrive, but it was absolutely essential that they should give that information out. [Continuing reading:]

I venture to remind the department in this connection that the employment of surface vessels to patrol against this submarine would probably result, merely driving her from one area to another, whereas the employment of submarines against her might lead to her destruction. It is suggested that, having established the most probable areas of operation, submarines be employed in a patrol as stationary as may be, some of them covering the point south of Five Fat Light Vessels, remaining submerged during the day with periscopes only. Of five submarines certainly destroyed in four days, three were torpedoed submarines. 7997. 22215.

[Continuing reading:]

I may say that the indications given in that cablegram as to whether she would probably lay mines turned out to be entirely accurate. She did lay mines there, and those mines were responsible for the sinking of the steamship *Pratt*, sunk at the entrance to the Delaware water, and also the steamship *Scapia*, and also the United States battleship *Minnesota* struck a mine there, but did not sink. [Continuing reading:]

[Confidential.]

From: Department, June 4.  
Simsadus.

6800. Enemy submarine commenced operation 60 miles southeast Barnegat Bay, 3 p. m.; sunk by bomb schooner *Edward H. Cole*; sunk by method not yet known; Jacob Haskell; U. S. S. *Preble*, reports now engaging submarine. Captain reports sighting periscope of second submarine.

B1

That is the message of the department to me. I replied as follows:

[Confidential.]

To: Department, June 4.

9029. Your 6800. It is practically certain that there is but one submarine on the Atlantic coast of United States, which is probably U-151. 9029.

I did not want to say that it was entirely certain, because I did not want to paraphrase those things. Then here is a cablegram received from the Navy Department, June 5, 1918. [Reading:]

SIMSADUS.

6852. Enemy submarine operating this coast, identified as U-151, has crew of 75, commanding officer formerly employed Hamburg-American Line, has been sighted off this coast. About 22 May, mine located off Overfalls Lightship; presence of more than one submarine not definitely established.

B1

that I not only gave information that the submarine left on the 19th of April to go to the American coast, but I also gave the probable area in which the submarine was off the American coast; and these were the areas in which it was to be noted also that this submarine began operating on June 2, 32 days after I had informed the Navy of the exact area and of the approximate time, as in the cables as quoted I gave additional information of the submarine, and the areas in which it would operate. I sent them a full description of this submarine, in request from the department, giving even the name of her. I believe at this time the American public was ignorant of the fleet of submarines, or certainly more than one, operating off coast.

The department in advance of prospective movements of submarines which operated on the American coast. Thus, in June 20 and July 5, 1918, I informed the department:

JUNE 29, 1918.

(Highly secret.)

A submarine at sea. At present off west coast of Ireland. Her position unknown. Can not reach longitude of Nantucket before July 10. Department informed.

SIMS.

A German cruiser submarine outward bound, reported July 4 about 10.00 a.m. heading southwesterly.

SIMS.

These messages by numerous other dispatches which furnished accurate information of her progress across the Atlantic. On July 6 I informed the department that a third submarine was at sea, probably proceeding to the American coast. This information was also confirmed in a series of messages. On July 12 I informed the department that precautions were being taken against probable bombardments of certain points, along the Atlantic coast. This was in my dispatch of July 12. At a later date, on July 14, 1918, I reported that a fourth submarine, one of the latest type, was on its way to the Atlantic coast. None of these submarines began operating until at least three weeks after the first dispatch concerning them. I have before me a number of messages which are but a few samples of the information concerning enemy operations on our own coast, with which the department at all times.

Let me read you a couple of paragraphs from a letter to Admiral Benson on May 17, 1918, summing up the attitude in this matter:

MAY 17, 1918.

The question of enemy submarines—which is never absent from the mind of the Navy—is quite clear that it very rarely happens that the position of a submarine is known. The information is ascertained by cross wireless bearings and other means, but that the exit and entry of each submarine is known, and that

her track is known with sufficient accuracy from the time she leaves and gets back.

I tell you this so that you may have no apprehension that you will get warning of the approach of any submarines that may start for America. You will always be safe in assuming that there are no submarines there that have been warned about. I have no idea at all that Germany will do more than is now doing; that is, send an isolated submarine to the other side for the purpose they believe it will have on our people. To put the extreme case, if she sends all of her submarines to the other side, the antisubmarine campaign would be successful.

(At this point at 12 o'clock m., the subcommittee adjourned to-morrow, Saturday, March 13, 1920, at 10 o'clock a. m.)

# NAVAL INVESTIGATION.

**SATURDAY, MARCH 13, 1920.**

UNITED STATES SENATE,  
COMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,  
*Washington, D. C.*

Committee met pursuant to adjournment at 10 o'clock  
in the Senate Office Building, Senator Frederick Hale  
and Senator Hale (chairman) and Trammell.  
The committee will be in order and Admiral Sims

## **TESTIMONY OF ADMIRAL WILLIAM S. SIMS—Resumed.**

Q. The largest number of submarines that ever oper-  
ated on the coast of the United States was three,  
and there was only one. This was in entire accordance  
with the expected, and I mention it merely to show what  
difficulties it was to meet such operations. Quite apart from  
the difficulties taken against them, it was a comparatively  
easy matter to keep our important shipping clear to them. Their  
movements were kept track of from day to day. We were bound  
to keep them from them, but that was merely part of our share  
of the work. These losses were not serious in the aggregate  
and of no influence whatever upon the outcome of the cam-  
paign. As far as they influenced the department to hold  
the strategic center of operations. The Secretary  
of the Navy's annual report for 1918, stated:

"The operations of the German submarines against our coast can be  
considered as the most serious incidents of the war.

"The subject of the department's lack of informa-  
tion as to the department's activities and imperfect coordina-

"In the report as far submitted, I have pointed out specific  
instances where the department either disregarded my recommenda-  
tions or failed in acting upon them. The recommendations  
which I have made at all times be remembered, were all based  
upon a full and complete discussion with allied leaders, in  
accordance with the basic instructions under which my duties were  
defined.

"On the subject discussed in paragraphs 60 to 66  
of my report of July 7, 1920. In these paragraphs it was pointed  
out that the ignorance of many of the departmental plans,  
the important dispositions and movements of forces in  
the command as well as elsewhere and of delays and  
mistakes were caused by the department failing to use me

her track is known with sufficient accuracy from the time she leaves port until she gets back.

I tell you this so that you may have no apprehension that you will not receive warning of the approach of any submarines that may start for America. I think you will always be safe in assuming that there are no submarines there that you have not been warned about. I have no idea at all that Germany will do more than she is now doing; that is, send an isolated submarine to the other side for the effect which they believe it will have on our people. To put the extreme case, if she should send all of her submarines to the other side, the antisubmarine campaign would at once be successful.

(At this point at 12 o'clock m., the subcommittee adjourned until to-morrow, Saturday, March 13, 1920, at 10 o'clock a. m.)

matter before the responsible allied naval leaders—and then of the allied naval council, before that body—expressed in all its phases, in the light of the fullest and truest and to cable the result to the Navy Department here. This procedure insured, so far as was humanly possible, consideration would be given to the cause of the world rather than to the often conflicting interests of the nations concerned.

And for the Italian Navy Department and the French Navy Department and the British Admiralty, to continue to communicate their attaches in Washington, as they had done during these years of the war. In fact, a great many such communications were automatic and were made without the direct approval of the leaders themselves, although actually made in their instance, one section of the British Admiralty, operating in America, would drive through a message to the Navy Department in Washington in the name of the head of the Admiralty, not taking into account, of course, the fact that messages might be sent in at the same time from the French Admiralty.

And so to a certain extent before the end of the war.

Q. Now Admiral Sims, Mr. Hoover is here now, and if you have a while, we will hear from him.

A. Yes, sir.

#### TESTIMONY OF MR. HERBERT HOOVER.

(Mr. Hoover sworn by the chairman.)

Q. Now Mr. Hoover, in his testimony of March 12 Admiral Sims has given you well-known intimate knowledge of food conditions in Europe in 1917, and he suggested that he would be willing to appear before the committee and give testimony on this matter. The committee will be very glad if you will give us some information about general food conditions in Europe in the spring and summer of 1917, and also about shipping conditions during that time.

A. My contact in the matter arises over a request that I make to the government in Washington to make some investigation of the food and shipping situation in the month of April, 1917, and I carry through officials of the French, Italian, and British governments, and at that time I came into contact with Admiral Sims, and we naturally discussed the position with him.

Q. Now it was that owing to the intensity of the submarine warfare there was a great deal embarrassed over their food situation at the time the submarine sinkings had reached about that intensity. They were at the rate, I suppose, of some 600,000 to 700,000 tons of shipping a month, and that food situation in the three countries might be such that the breadstuff supply, which was the most critical situation, did not exceed three to four weeks' reserve stocks. Now, when we usually refer to the stocks outside of those stocks that are in process of distribution, such as marketing and wholesale dealing, and so forth.

The situation of France and Italy was rather more acute situation in England, and the result was, of course, to utmost anxiety on all sides as to the situation as a whole.

The shipping position was, roughly, that at that rate of sinkings the war was at a measurable end, and that, as we subsequently the rate of sinking was greatly diminished, shipping produced, and we managed to struggle through.

One of the alarming features of that situation was that shipping were largely loaded vessels. They were large cargoes. So that, with the loss of that quantity of shipping, represented a very large monthly loss of food supplies, and the situation had naturally diminished the existing stocks. That, I may say, the position so far as I could describe it.

The CHAIRMAN. It is true that there was just about enough available in April, 1917, to supply the absolute needs of the Allies at that time?

Mr. HOOVER. The problem is one of a great deal of adaptation, because, as desperation drives, resources were discovered that were not originally contemplated. For instance, it was found from time that shipping could be withdrawn from routes and localities that were considered impossible, and ships were applied to special duties that had not been adapted to it.

We directed the shipping onto the North American market, instead of to the Canadian and American market—as being the shortest route, and threw the large load of food supply onto the North American States, instead of relying on the Argentine and elsewhere, where transportation required two or three times the amount of shipping and by devices of that kind what might have been a very desperate situation was ameliorated by degrees.

As I recollect, the total available mercantile tonnage for food supplies was somewhere in the neighborhood of 40,000,000 tons. I have not the accurate figures with me, but, as I recollect, something like 10,000,000 tons in naval and military tonnage, leaving somewhere about 30,000,000 tons for transportation of food supplies. That amount of tonnage would have been sufficient on the reduced supplies that resulted from the cutting of the allied countries and the diversion of that tonnage to North America to the shortest route, provided that there were no continuous losses. It is very difficult to outline, in the present situation that looms up ahead in any given emergency.

The CHAIRMAN. But it was a fact, was it not, that if the supplies had been cut off and the submarine blockade had been successful, in the end the Allies would have had to give in?

Mr. HOOVER. Oh, it is obvious that the war would have ended almost in a moment if the supplies had been cut off. In a desperate period, I might say, was between April and the end of September. With September arrives the continental harvest, and that harvest supplied an available amount of food supplies to the allied countries. The French would have eight months' food supplies, the Italians six months', and the British four months' food supplies. So that, at that time, it was possible to get by until the harvest came in, then a period of possible relaxation.

The CHAIRMAN. Admiral Sims has testified that in the month of April, 1917, 800,000 tons of shipping were destroyed by the

anywhere near that rate, would it have been possible feeding of the Allies and the taking care of the armies?

Q. Well, just my own personal opinion would be that it is better so; but, again, I would want to make a reservation—one can not tell how far a population may itself,

A. and stricter and stricter rationing, more or less, a deprivation of that sort. The allied countries were in the final stage of privation during the war.

Q. But they were on the border line at that time?

A. They were in a very serious condition, not only at that time, but in the following winter.

Q. Again in the following winter?

A. Yes.

Q. And you were looking at the feeding of the allied armies as one of the critical things in the war?

A. Certainly. I have always felt that it was one of the things that the American people furnished that served to win the war. That any one special effort of the American people brought entire success; but certainly it was one of the big factors.

Q. And nothing that the American people could have done of more advantage than to destroy this submarine so far as it lay in their power to do so; and every effort has been made to prosecute this campaign with vigor?

A. Oh, most certainly; but I would not want to be taken into account. Efforts were not made, simply because I know nothing of policy or procedure.

Q. You are not familiar with that?

A. No, sir.

Q. You returned to America in the latter part of 1918?

A. I arrived here the 2d of May, I believe.

Q. Did you report on conditions to the Navy Department in this country, or soon thereafter?

A. I do not think I ever made any special report to anybody. I did report to, I think it was, the Council of War, and I reported to the President.

Q. And to the President?

A. Yes, sir.

Q. And you spoke to them about the importance of the submarine menace?

A. Oh, yes, that was uppermost, I think, in everybody's mind. The submarine menace at that time looked to all of us as the question with which we were confronted.

Q. If we had had available destroyers and smaller boats of the submarines, do you think it would have shortened the war if we had used them for that purpose?

A. Well, I hardly know how to answer a theoretical question. I assume that if we had had a great surplus of boats of that sort and could have applied it directly on the submarines, it would certainly have helped.

Q. If we could have applied it, you think it would have shortened the war?

Mr. HOOVER. I would not want to go so far as that. The question of the length of the war is one of the most complicated that one can go into, as it embraces the whole plan of land and the economic collapse internally in Germany, and all the factors that may have been predominant in bringing the war to end, even the propaganda that broke down the morale of the German armies. That is, I do not refer to allied propaganda but to German propaganda. So that I feel that is a problem that I would like to express an opinion upon. It seems to me that can only be determined by history itself.

The CHAIRMAN. Have you any questions to ask, Senator TRAMMELL?

Senator TRAMMELL. Yes. The questions of the character of the war are rather hypothetical, Mr. Hoover. I would like to know, as a matter of fact, did not those who were in charge, even though the situation was very acute and very alarming, meet the situation by supplying food supplies?

Mr. HOOVER. So far as my department was concerned, that was my concern—I honestly believe that we made every endeavor possible to meet the situation.

Senator TRAMMELL. You know of no great losses or interference with the progress so far as the supplying of food was concerned?

Mr. HOOVER. No; except the enormous destruction of shipping that was sunk in progress.

Senator TRAMMELL. I think that is all that I have to ask.

The CHAIRMAN. You speak of your department. Do you know the conditions in Belgium at that time?

Mr. HOOVER. No; I was referring to food problems, although the Food Administration was not created until 1917, but it did serve as the medium of furthering the food supplies of the Government on behalf of our Government, by request of the President.

The CHAIRMAN. And while there was no failure to send food over, you have already stated that the condition was such that the food supply was practically on the border line, and had been cut off it would have done great damage?

Mr. HOOVER. The situation was dangerous almost beyond description, and the anxiety in the whole of that period was terrific. I do not overemphasize the critical character of that position, the dangers in which the whole allied cause rested.

The CHAIRMAN. I think that is all.

Senator TRAMMELL. The conditions were very critical, and there was impending danger, but those conditions were met, so that we did not suffer the disaster that was impending?

Mr. HOOVER. No.

Senator TRAMMELL. Is not that true?

Mr. HOOVER. It is manifest that the war was won and even if it had not been, it was kept alive. That is the answer to that.

Senator TRAMMELL. That is all.

The CHAIRMAN. I think that is all, Mr. Hoover; and the committee is very much obliged to you.

Mr. HOOVER. Thank you.

The CHAIRMAN. Will you proceed, Admiral Sims.

# REPORT OF ADMIRAL WILLIAM S. SIMS—Resumed.

As I have previously stated that some days after sending reports from London I learned, quite by accident, of the disposition of our naval forces in the war zone that had been made between the Navy Department and French naval representatives in Washington early in

1917 Admiral Jellicoe had directed the British command in the North American station to proceed to Washington after our declaration of war and to lose no time in securing cooperation, at least in areas outside the war

zones, which were set forth in a dispatch from the British chief, which I will quote in part:

APRIL 13, 1917.

1. The British W. I. via ambassador, Washington.  
2. The agreement have been arrived at with United States Navy Department sending telegram to Paris. Questions raised by British

3. The British immediately read to proceed from North Atlantic port on reconnaissance of raider. Operations of ships of this squadron will be limited to the parallel of 40° W., thence south to the parallel of 20° N.

4. The British on the east coast of South America will be provided as follows: Area of operations from Brazilian coast along parallel of 20° W., thence south to 15° S., then parallel with the coast to the west along that parallel to the coast.

5. The British will be sent over in the immediate future. These will be sent to the port as may be considered most necessary.

6. The British will look after west coast of North America from Canadian

7. The British are excellent. United States armed Government nitrate service for the present, which will be utilized.

8. The British a squadron will be maintained for the present.

9. The British will supervise Gulf of Mexico and Central America, as far as possible, from West Point and Jamaica, along north coast of Virgin Islands, thence north to the southeastern limit

10. The British submarines appear, they will attempt to send to the Canadian coast, but this only possible if a parent ship or station is provided.

11. The British French minister of marine:

12. The British vessels for French coast not yet possible owing to lack of fuel. When available, however, they will be supplied, and manning, if necessary. Every possible effort will be made to supply these. Too much reliance should not be placed

13. The British naval transports for carrying (?) railway material) are being sent immediately, a second and third as soon as possible.

14. The British that the agreements, except as to the third paragraph, the employment of forces elsewhere than in the

15. The British I learned of this agreement by accident. I was not at any conference had been held. I learned from

16. The British that he did not regard the agreement as embodying the cooperation needed from the American Navy;

17. The British that the specific arrangements provided for in the agreement were intended to cover only the situation outside

18. The British the marine zone. How it was regarded in Washington

It very early became apparent to the other naval officers in Europe, that nothing but confusion could result, if each allied Government were to go independently to the Navy Department with every request that they had to make for force and assistance. Thus, for example, the American naval attaché, Commander W. R. Sayles, came to London to see me in the middle of April, 1917, with regard to requests being made by the French, and I found that he was in entire accord with the view that immediate concerted action was necessary to combat the submarine menace, and that the military necessity of the situation demanded the immediate centralization of all recommendations and policy, made to the Navy Department by the European Governments. He cabled this recommendation to the department on April 10, and, throughout the next three months, worked in complete cooperation with me in an endeavor to coordinate our relations with the British and French navies.

I will say throughout the first three months, because at that time I had a special representative there, who took up the duties.

In order to show clearly what confusion resulted from the lack of coordination followed by the department, of acting upon recommendations made in many different quarters, it is only necessary to review the case of the establishment of naval bases in France, and the sending of a patrol force, and our first aviation unit, to France. This was referred in paragraph 64 of the letter which is under investigation before the committee.

As I had learned from Commander Sayles, the French naval attaché in Washington had requested the department to send vessels to France, and to establish bases on the French coast. I learned of this during my visit to Paris in the first week in May. At the end of these conferences that were held at that time, I had a conference with the department on May 5 the following dispatch:

From: R. Admiral Sims to Navy Department. Sent from Paris, May 5, 1917.

Relations with the French Navy Department very satisfactory. Conference with minister and chief of staff and French attaché, London, and British attaché and first sea lord resulted in unanimous agreement that our destroyers should remain concentrated, and should attack the enemy submarines in whatever area may be operating in greatest numbers. Probably principally in the area south to the west-northwest of Fastnet.

Fastnet being the south point of Ireland.

As will be noted, the French navy department was in complete agreement as to the necessity for concentrating all of our forces in one area. I learned later in the month, from the naval attaché in Paris, that the Navy Department intended to send patrol vessels to the French coast. I had received no information, directly or indirectly, from the department of this intention. It should be understood that I am criticising the department for sending vessels to the French coast, or acting with the French naval attaché in making that decision, but there were many preliminary arrangements to be made for the handling of any forces to be sent to the coast, which required definite information. On May 15 the French attaché in Paris cabled the Secretary of the Navy as follows:

Ministry of marine has asked for information to be furnished, at the same time giving the characteristics of patrol vessels of the Navy to France, and inquires also if they are to be accompanied by supply vessels. A copy of this cablegram to Admiral Sims for his information.

The department replied to the naval attaché:

MAY 21, 1917.

TO THE

With wishes of the French commission, the department will send 10 destroyers against submarine boats off the coast of France. Leave here for definite information in regard to supplying with coal and provisions French Atlantic or channel ports. 14020.

DANIELS.

Most of this only through receiving a copy from the naval attaché in Paris.

On May 23, informed the department that such vessels sent would require their own colliers and supply vessels to be self-supporting.

Information thus far received from the Navy Department had not enabled any plans to be made for receiving the vessels to the French coast. In a cable of May 14 I had been saying among other things:

Secretary in work here if department could send information dis-  
tinctive plans affecting United States forces in European  
theater particularly needed as to following: Number and character  
of vessels which are available, or may possibly be sent this side;  
and what patrol vessels to be sent to France.

Was received to this cablegram. After further con-  
sideration Commander Sayles cabled the Secretary on the 1st  
of June similar information, as follows:

AMERICAN EMBASSY,  
Paris, June 1, 1917.

In work with French ministry of marines we are in accord in urgently  
needing information regarding naval and military units en route for  
deployment, their protection off French coast, efficient  
French Navy require that ministry of marine would receive full  
information of forces, intended employment, what bases to be used. If  
possible, on account of possibility of enemy having my secret  
information sent through French naval attaché in Washington. My  
present campaign demands that French ministry of marine  
be kept fully informed. 12001.

SAYLES.

At this time, I repeated my request for  
sending these forces. On June 7 I cabled again:

Request for any further addition to our forces, here or in France, and  
for sending

Naval attaché, it appears, nor I, received any reply to  
my messages. In a message which I received from the  
attaché on June 20, in reply to my many cables in May and June,  
was made to forces to be sent to France, except for a  
few fishing vessels would sail in August for France.

It was clear at this point that, when I first went abroad in  
1917, my paramount duty was to act as the representative of  
the Government. On April 28, 1917, I was designated to  
command United States destroyers operating from British bases.  
On June 14, 1917, that I received the title of commander

of all the United States naval forces in European waters. On that date, then, June 14, 1917, I was in command of all of our vessels in European waters: still the department continued on negotiations direct with French representatives and our naval attaché in Paris, thereby tending to diminish my authority and hence weaken the efficiency of our naval participation in the war.

On July 3 I received a message from Brest to the effect that the *Corsair* and *Aphrodite* had arrived there, and that eight other vessels all under the command of Capt. W. B. Fletcher, were due to join him. On July 5, in a dispatch from the department, I was informed that "eight patrol boats under Capt. Fletcher due to arrive French coast about July 5. Ten more yachts will sail about July 15 to join him." It is true that the yachts had arrived at Brest three days before the first message I had received from the department concerning them. It is true that the naval attaché in Paris had been informed by the department of the sailing of the yachts under Capt. Fletcher, but no information had been given concerning their orders, or the respective plans of the department for their operations. The result was that when they arrived, the French had made no plans for their reception; neither the French nor our naval attaché in Paris had received any information as to the character of their operations. It had been impossible to make any arrangements for caring for the ships, or utilizing them immediately in the campaign against the submarines, and it was nearly two weeks after their arrival before they were actually employed.

Much the same situation arose in connection with the establishment of our naval bases at Brest and Bordeaux. I received information of the plans of the department in this connection on the 8th of May, in the following dispatch:

[Cablegram.]

From: Secretary of the Navy.  
To: Rear Admiral Sims.  
Received: May 8, 1917.

The French have requested, and United States Navy Department contemplates, establishing temporary bases at Bordeaux and Brest, with one line officer, one deck officer, and one engineer officer. You are requested to advise on this, and to request that your reply be expedited.

DA

To this I replied:

[Cable sent department May 8, 1917.]

The establishment of temporary bases at Brest and Bordeaux are very desirable, but should not divert in any way the necessary repair, supply, and fuel vessels from our mobile destroyer base. It is urgent that the destroyer force remain concentrated with mobile base ready to follow any movement of main submarine activity and to protect sea trade routes.

In later dispatches, I requested further information with reference to the plans for the establishment of these bases, and requested that experienced line officers, with a knowledge of French, should be detailed to this duty. The specific recommendations that I made were disapproved by the department. Plans were drawn up in June by the French ministry of marine for the establishment of a shore base at Bordeaux for the American Navy. Copies of these plans were transmitted to Washington, with a request for approval, but no information was received by me or the French from

what their plans were or their action on the French coast. I was informed that two retired officers had been assigned to command the bases at Brest and Bordeaux, and that they would be accompanied by a paymaster and a doctor each. In spite of repeated requests, I received no information concerning the plans for these bases until several weeks later, and then only in a personal letter, dated New York, from the engineer officer detailed for one of the bases. This letter is very illuminating as showing the conditions. It is as follows:

NEW YORK, July 13, 1917.

SIR: I am writing advising you of a situation that will no doubt be of interest to you. I am to be assigned to duty in connection with the base at Brest. The time to be done over there is very indefinite, and no one in authority here has any definite idea of what is expected of the place, how long it will be there, and what should be sent over there. From the number of vessels to be sent over I think a fairly well-equipped base will be required. The department, as near as I can gather, has the idea that the work that will develop. This I doubt, as they probably will be doing their own work.

As regards the base, I think we ought to have a considerable number of vessels and a thoroughly planned base organization provided; also a hospital and a hospital ship designated for special use to supply the base. A tentative order inclosed be issued to cover the situation, and a watchful-waiting policy may prevail.

As regards the facilities, if you will ask for adequate facilities attention might be given to much planning ahead in the department and there is no one here planning for such things as base facilities and maintenance. I have no information or instructions as to what I will do or what I will want. I can promise that a lot will be required, preparation must be made immediately, but some authority to start must be given. I expect to have Commander Baldwin report what is needed, but he will not have full information of the number of craft that are to be provided. That is concerned, I can't get that completely either. I do not know what equipment that can be made available can be used. I do not have too much than too little. So if you would bring to the attention of the need of repair facilities, preparatory action might be taken. I don't think there will be much preparatory action. I think you make your wants well known in advance. It may be that what is needed in the shape of material upkeep and repair facilities in the light of experience covering similar situations I don't think that will not be seriously needed within four months after the war is at an end then.

The material and upkeep will check any proposed military action. The material facilities will enable much to be done; half-way facilities will not. We have Gallipoli and the Mesopotamia expeditions.

I will try to get the situation at earliest possible date and when I get over will try to get the details of the situation so that other wants may be provided. The probable demand for base facilities would also assist those who are making provision.

#### BASE PROPOSITION.

The requirements of 20 to 40 yachts, 20 destroyers, 40 or more submarines, a considerable number of submarine chasers. The work will be like that which was demanded of Cavite during the Philippine war. The number of vessels will probably be increased.

The base will have to supply everything for its vessels, except possible repairs. Too much rather than too limited facilities should be provided.

The vessels will be

such as are required for operation and repair.

A United States repair force familiar with United States machinery.

Such machine tools as can be found and supplied.

Hand tools in considerable quantity: drills, files, tap and dies, etc.; pipe cutting outfits, welding outfits, etc. These are also needed to replenish the vessels.

4. The quickest way to be started is to have some vessel assigned as base. Such vessel should have a naval crew, and should collect at Norfolk and yards such material, supplies, and personnel as can be made ready immediately for base purposes. This should include building material for base storehouse quarters for personnel.

5. As soon as a load of material is prepared send vessel across. Vessel with mechanical personnel till such times as facilities are prepared on shore, then and go back for such additional supplies, tools, facilities, etc., as may be needed in the meantime. This vessel could keep the base supplied with the things it will be used for and any available cargo space could be used for other freight. If needs become greater, more than one vessel might be assigned to the work.

6. Immediate authority is required—

(1) To have a suitable vessel assigned.

(2) To recruit a repair force, allowing navy-yard employees to volunteer at their rate of pay plus subsistence, and including naval reserves in Regatta having mechanical training, and such men as can be collected from available receiving stations and districts. About 100 should be taken to begin with, and to be added as needs indicate.

(3) Give base commander authority to spend money as needed in France, and matters as can be procured there.

(4) Bureau of Construction and Repair, Ordnance and Steam Engine, authorize Supplies and Accounts procure and prepare for shipment such materials and supplies as may be deemed required in the near future for such vessels to be based abroad outside of facilities to tenders.

(5) Vessel assigned as base supply vessel to be routed as required by base commander, subject to superior authority as necessary.

7. As soon as base commander reports prospective needs, all available material and facilities should be prepared for shipment from the several navy yards.

There is attached to that letter a paper mentioned in the letter plan. This paper contains a remarkably accurate forecast of what was found ultimately necessary at Brest and what was established in the course of our occupancy of that base, and I suggest that that be included along with the letter. This is added on August 10, from Bordeaux, France, to the headquarters in London. It is as follows:

BORDEAUX, FRANCE, August 10,

The situation in France is not quite clear to me. I suppose the trouble is that we have too few officers to attend to matters. It occurs to me to tell you of the situation at Bordeaux, so that you will know just where I need to be enlightened.

About June 1 Admiral Palmer gave me preliminary orders to go to Bordeaux in command of the American naval base. I asked him what the duties were, and he knew nothing about it. I asked the same question and got the same answer from all the other heads in the Navy Department. I knew there was no base at Bordeaux, not even a French naval base; and something would have to be done, and I applied for an Engineer officer and a paymaster and several yeomen, waiting about four weeks I got orders to proceed with the following party, but no instructions. Paymaster Colby, with two assistant paymasters, N. R.; Bernier, N. R., engineer officer; Asst. Surg. Stearns, N. R.; and three yeomen. All had orders to report to me at the naval base, Bordeaux. We arrived here July 1.

I have made contracts for the land and rented some buildings and contract the commercial wharf for handling of coal. We have 1,800 tons of coal left here on the steamship *Sioux*. I find it embarrassing to deal with the people here unless I have definite instructions about what we are going to do. If necessary Paymaster can go to London to close contracts for material ordered in England, but I would like to do it by mail if possible.

To this letter the following reply was sent, pointing out the difficulty which was being experienced in getting action from the

Extract from the letter is pertinent. The letter is dated 11/1/57. [Reading:]

the matter of the base at Bordeaux is not yet settled, owing to the department's sending to a cablegram sent a week ago setting forth the situation and stating to expend about \$100,000 for the purpose of establishing the base. Paymaster Colby was here at the time the cablegram was presented and has probably informed you of the contents before now. The cablegram of the 7th, and we are to-day sending a follow-up message asking for the money. A considerable delay the department disapproved the expenditure of

From this I will read you just a few paragraphs to which resulted from the action of the Navy and its failure to coordinate this action with other efforts to keep their representative in Europe, or the Government informed of what they were doing. [Reading:]

AMERICAN NAVAL BASE,  
Bordeaux, France, September 19, 1917.

1. Name: James, United States Navy.  
2. Report of conditions in Bordeaux.

About June 1 the Chief of the Bureau gave me preliminary orders to proceed to Bordeaux and assume command of the naval base. I asked for several assistants, which resulted in my being ordered to report to me at Bordeaux: One paymaster, two assistant surgeons, one lieutenant (engineer), and four

... inquiry in the department as to their plans for Bordeaux, but

... stated in a lengthy article in the New York Times in June, that ... two bases in France.

... Directory of June 1 mentioned the American naval bases at

... that the department would not establish any extensive naval

He was ordered to report to me as liaison of the French Navy. He was the French commission to Washington. He gave me to understand that the Navy Department expected that our Navy would install a station to furnish coal supplies and repairs for a few patrol boats, and that the French began building a new wharf for our yachts.

- 27 situation arose in connection with the first aviation  
 28 I learned from Commander Sayles, while in

that American naval personnel was to be sent to the department for training in French aviation schools. The naval attaché in Paris had received any official information regarding this. On May 14 the naval attaché in Paris reported to the department as follows:

Naval attaché Washington reported that Admiral Chocheprat has requested me to ask for detailed information on this subject. What grades, what previous experience in aviation.

SAYLES.

## SAY

Nothing further was heard from the department with relation to this detachment, except a brief message to the effect that the unit was sailing on the colliers *Neptune* and *Jupiter* for France. When the unit arrived in France they found that no definite arrangements had been made for their training, as the information concerning the number and composition had been insufficient in this possible. I will read you, from the report of the commanding officer of this detachment, the results of this situation:

It being necessary to confer with the French marine relative to disposition of men, I departed with Paymaster Conger for Paris on June 12. The morning of June 13 and that day made the following calls: On the ambassador; the naval attaché; the French minister of marine; Admiral chief of the general staff; Admiral de Von, the chief of the aeronautics; Capitaine de Frigate Cazenove; and the paymaster in chief of the French Marine.

A conference was immediately begun as to the disposition of our forces, representing the French marine in this conference being Capitaine de Laborde.

It developed that there was practically no understanding as to the arrangements made in the United States whereby this detachment had been sent to France. I explained that the French authorities in the United States had stated that we had no trained aviators, student aviators and mechanics would be a weakness and could be very quickly trained in France so as to be speedily available in the war against the Germans, in which they could be of the utmost use. The French expressed their gratitude and bade us welcome in an enthusiastic manner.

They explained that the detachment of 122 men, comprising 65 student aviators, 30 mechanics—the others being yeomen, hospital corps men, cooks, messengers and servants—was entirely unbalanced and that for each pilot aviator there are required at least 10 men; that in addition to the pilot aviators there are required, who are men specially trained to observe, drop bombs, operate machine guns, etc.; that there are schools in which such training is given; that in addition to pilot and observer aviators and mechanics there are required helpers, fabricators, joiners, chauffeurs, motor-boat coxswains and engineers.

It is to be noted that the commanding officer of this detachment had no orders to report to me, and that much embarrassment was occasioned when the unit arrived, as can be inferred from the report that I have read you.

These cases are typical of the obstacles which I found in the first few months, through lack of information concerning the department's plans and activities. As I have repeatedly stated, much of the information concerning the activities of the Navy Department at that time concerning the movements of our own naval forces I received only accidentally, by learning of them from allied navy departments who had been informed by their attachés in Washington. While in Paris, on May 6, I learned from the French minister of marine the following five items, of which I had no information from the Navy Department at that time:

First. That the second group of six destroyers, commanded by Commander Courtney, had sailed from Boston. I did not receive confirmation from the Navy Department until May 9, three days later.

Second. That a hundred cannon were being sent to France on the colliers *Jupiter* and *Neptune*. I had received no information at that time and, in fact, received none whatsoever until toward the middle of June, concerning the sailing of these two colliers for France.

Third. That an American aviation unit was to be sent abroad. This I have already referred to.

Two naval officers were to be sent to establish bases at Brest and Bordeaux. It was not until two days later I was informed that bases were to be established at these

as a vigorous campaign was being waged in the press in favor of more energetic warfare against submarines either by a complete barrage in the North Sea or by an attack upon the coast. The point I will deal with later in discussing the plans of the department.

I learned from the French naval attaché in London, on May 1, that the patrol vessels for the French coast would be coal-fired, their departure was being delayed "by the question of fuel," and that these 25 patrol vessels would probably leave some 15 on May 5 and 30, and 25 more the beginning of June, to operate off Brest and Bordeaux, and that these forces and bases were my command. Needless to say, I never did receive any of this information, and it was many months before I had as many as 50 patrol vessels on the coast of France. I learned at this time that the Navy Department was arranging to have the French, to be operated by the French Navy, from submarine chasers, the first of which would be ready in

I was constantly receiving information from the British concerning movements of our own forces, concerning everything, although of course the British assumed that I was in the Admiralty. Thus on a single day, May 29, I learned that the fifth destroyer division had sailed from St. Johns

and that four additional destroyers had been ordered to leave on May 23.

I learned the collier *Jupiter* had sailed from New York on May 15, and the *Neptune* would sail from Norfolk on May 21, and each would have a convoy of two destroyers that would meet them at Queenstown after arrival in France.

I pointed out to the department how necessary it was that I have full information of the department's action concerning forces abroad, and of knowing what their movements were. I have already read you my message of May 14 in which I gave you this information. In another message of May 16 I again pointed out how important it was that my activities, and those of the department, should be coordinated, and I urgently requested that the department give me the information desired, and "of the situation at home as it affects my duties of cooperation here." I pointed out that it was possible, and in a letter of the same date, how vitally important it was that the Navy Department should profit by the experience of the allied navies during the war; and how it was only possible to do so by sending over trained officers who could gather information and transmit it rapidly to the department, in order that the department might prepare our forces for any future contingency. No reply was received to any of these requests for

On May 31 I emphasized again the same point, calling attention to the difficulties of my position. Some idea of what this

really was can be gathered from my letter to the department of June 8. I will read you, for example, paragraph 10 of this letter.

[Letter to department, June 8, 1917.]

At times I have been in ignorance, or in doubt, as to the proposed movements of our forces, and also as to their actual movements, until information was received from the British Admiralty.

I wish to make it quite clear that there is no possible objection to timely and complete information being sent in this manner; but the point is that I have received my first knowledge of important information from a cable sent in a British cablegram upon another subject. The assumption of the department sent the cablegram (usually Admiral De Chair or Capt. Gaunt) has appeared that I had full information and had communicated the same to the British Admiralty. Such incidents are not only somewhat embarrassing, but necessarily create a favorable impression which is not removed by subsequent information.

Examples in point are as follows:

Department's notification of sailing of *Cushing* division received three days. The vessels had sailed from Halifax, information of their sailing from the United States having been learned in the Admiralty. Information was received from the Admiralty that sailing of the "fourth flotilla" had been postponed indefinitely, with no confirmation of this fact to date.

On May 29 received department's cable that *Patterson* division had sailed from Johns on May 26, having seen a previous Admiralty dispatch from British Admiralty of this sailing.

I was sent for by French chief of staff to arrange for escort of *Neptune* through danger zone. At that time I had no information of the movements of the ships. Informed later by Admiralty that destroyers were accompanying *Neptune* and *Jupiter*, and were to join Queenstown forces later, but have no confirmation of this fact to date.

I have received repeated inquiries concerning the number and character of the craft to be sent to France which I was unable to answer.

Another striking case of the failure of the department to furnish adequate and timely information concerning their activities is illustrated by the case of the *Dixie*.

I may say that the *Dixie* was one of the mother ships of the *Flotilla* that was coming over.

I had been notified early in May that the *Dixie* could be repaired, and had cabled back urgently requesting her service to be added to the repair facilities at the destroyer base. I received no further information concerning her sailing in spite of my request. On June 10 I received a dispatch for retransmittal to the department concerning pay accounts. A few hours after this dispatch arrived the *Dixie* herself appeared off Queenstown, and as it so happened, she came right through the middle of a mine field laid by submarine forces a few days before. I learned later that the department had cabled her on the day of her sailing, but the message, for some reason, was never explained, was addressed to me at Petrograd instead of London, and consequently did not reach me. This serves to illustrate the consequences of failing to give sufficient advance notice of such sailing.

Similar difficulty arose concerning the arrival of the oiler *K* at the end of June, and in the case of the destroyers which accompanied the first troop convoys abroad. I had had no information concerning the number of destroyers until they actually arrived at St. Nazaire, nor did I know, for over a month after the *Kanaw* sailed from New York, the orders under which she was operating. These illustrations should be sufficient to indicate what I mean in my letter of January 7, when I stated that the department frequently omitted to keep its naval representative abroad informed of its

sometimes, moreover, the movement of forces into the sea.

For the real need for such information I quote from my letter of July 14, 1917, to the Navy Department:

It is necessary that I should have advance information of movements of ships which they are operating. In the case of fuel ships, if they operate in European waters, I must arrange for their being sent to the port to discharge their cargoes. In fact, if the *Kanawha* arrives at Newport she will either have to be escorted to another port, or delayed in a different room in the Queenstown tanks to take her cargo, as it has been filled by British fuel ships.

It is necessary that I should have a general idea in advance of the movements of supply ships, such as the *Celtic*. Our parent ships obtain supplies as much as possible, reserving the cargoes in their cold storage, therefore that they make room in their cold storage for receipt of supplies in order that the supply ships may not be unduly delayed.

During this morning in Navy Secret Code concerning the *Celtic* will be too late to serve the purpose for which it was needed, but in the course of the next few days. I assume from certain reports received that the *Celtic* will have supplies for the yachts based at the *Mcville* and *Dirie*, and have taken steps to provide for the case.

#### DISPOSITION OF FORCES.

In the matters in which I found great embarrassment, the department failing to keep me informed of their disposition of the disposition of forces. It is unnecessary to read again from my early cables and letters, emphasizing the importance of keeping the American fleet operate as a combined unit against the submarines, and their greatest activity. I had also repeatedly pointed out to the department the fact that a general view of the whole of the fleet only abroad, where, through personal conferences of the allied navies, all needs could be considered, and made for the most effective use of such reinforcements the United States Navy could afford. I had thus from the beginning of our destroyers be concentrated in the most effective that south of Ireland, where shipping routes from the coast of those destroyers to be based on our own repair facilities in an Irish port. Later on I repeatedly asked the department the assignment of any new ships, to consider the situation I was making. All the Allies were making numerous requests of the Navy Department. I have already referred to the British, French, and Russian Governments, for assistance. Such requests were being made of me, and the department.

The department assured me, on more than one occasion, from their message of June 24:

It is the general principle abroad of forces the department requests, and will be given which should be given after consultation with the various commands as to the priority of requirements.

Recommendations, from the time of my first cable, had been made with these fundamental instructions from the

Let us see in what way the department was guided by me. I had repeatedly requested the immediate increase of our marine forces and the concentration of these forces in the Channel.

On June 29 I recommended the immediate sending of gunboats in addition to destroyers, tugs, and yachts.

I was not consulted by the department with regard to the number and character of the vessels sent to France in June, or later, and, similarly, the first indication that I had that the department intended to send forces to Gibraltar was in a message of July 1, in which they said:

Department is strongly impressed with the necessity for adequate anti-air patrol in and off entrance to Gibraltar. Ten vessels are available to send, considered that they can be of value.

The point to be emphasized here is the fact that such a lack of disposition of forces in European waters, was made by the department without reference to their representative abroad. I was in a position to thoroughly underrun all individual allies for assistance, and determine priority in accordance with the general mental instructions and the needs of the situation.

I replied to this, after consultation with the Admiralty, that the vessels of the gunboat class, named by the department, were very useful for antisubmarine work at Gibraltar. I realized that this was a digression from the policy which I had been insisting upon from the start, of concentrating all reinforcements in the critical areas. However, I felt that I could not possibly explain the matter more therefor any more fully or clearly, and it seemed now to me that I should grasp any opportunity of getting forces across the Channel. Their subsequent disposition could be determined later. It was quite true that forces were needed urgently in all areas. The communications to the armies in the near and far East were being hard hit at this time by submarine operations in the Mediterranean. It was simply a case of accepting the best that could be obtained.

I was accordingly informed by the department on July 1 that 11 vessels, which had been named in previous messages, included gunboats and light cruisers, had been directed to sail for distant service under the command of Admiral Wilson, and to sail for Gibraltar at the earliest possible date.

An even more striking illustration of the manner in which the department failed to carry out its policy announced in its cable of July 24, which I have read you, is to be found in the case of the vessels sent to the Azores.

The Germans had fitted out the big submarine *Deutschland* to assist in the submarine campaign, and this ship began her operations in the summer of 1917 in the vicinity of the Azores.

It was obviously a diversion on the part of the Germans of the character already described. It was therefore no surprise to learn on July 5 that this submarine had actually bombarded a port in the Azores. This, of course, could have no effect upon the progress of the campaign other than a moral one. No damage which could be inflicted in the Azores could appreciably affect the issue. After consultation with the Admiralty as to what action should be taken to meet such diversions it was decided, and I stated in a cable of July 13 to the Navy Department, that two submarines, with a

profitably be sent to the Azores for operations against submarines, as such craft had the best opportunity of attacking this class of submarine.

I might here that the object of sending them there was to prevent them from using the inlets and bays of the islands as a base. It had been discovered earlier in the war that submarines would put in to uninhabited islands and anchor there to make certain repairs and rest their crews.

As a fact, one of these submarines was torpedoed later on by a British submarine. I heard nothing from the Admiralty in this recommendation. The first information that the forces were being sent to the Azores was received on July 19. I learned through the Admiralty that four destroyers, which had arrived in Bermuda en route, apparently, for the Azores, received no information from the department, but as I had become thoroughly accustomed not to receive information, and therefore assumed that these forces were sent for some station in Europe. Accordingly I cabled London on July 21 and 22, again pointing out the necessity of action in the critical area and asking that these coal-burning destroyers, together with all other destroyers available. In my cable of July 21, for example, I said:

JULY 21, 1917.

Adm. Washington.

The Admiralty to-day results in recommendation that destroyers from the Atlantic while situation remains as at present. Also that *Panther* to move here on French coast, probably Brest, because of open harbor and superior facilities Brest, and less steaming necessary for escort duty for effect on French. *Panther* also urgently needed for yacht

Sms.

That the destroyers mentioned there as going from Manila to the Azores were too small and had too little radius of action for the destroyers for the North, off the coast of Ireland and the Azores were only 420 tons instead of 1,000 tons.

I received a message from Ponta del Gada, Azores, in Portuguese code, and on cabling for a repetition, or explanation, the following message:

AUGUST 1, 1917.

Ponta del Gada, Azores

U. S. S. *Lamson*, 08026 Ponta Delgada Azores, in accordance with the orders and have registered a cable address, Senaflot, Ponta Delgada, Azores. Information with regard to German submarine operations in the Azores, raised around all the islands, return Ponta Delgada. Thanks.

Signature to that. I do not know what "Thanks"

In the message it appeared that it was clearly the department's intention that these vessels should remain at the Azores, and operate there, as the vessels had reported to me in accordance with the orders. I had still heard nothing whatsoever from

the department. Accordingly, on August 2, I sent to the of the Navy the following message:

Cablegram sent August 2.

To: Secretary of the Navy, Washington.

108. *Smith* and *Lamson* have reported to me their arrival Azores. The information there regarding submarines since July 22, and have cruised islands and returned to Ponta Delgada, where they are now apparently away. Request authority to order this division and *Panther* to join destroyer temporarily, until they can be instructed in methods and means of communication in force. Will probably then wish to base them on Brest, particularly escort of troop ships.

To this message I received only a brief statement that the department, for special reasons, desired these forces to continue to in the Azores. But they did not state their request.

Nothing was stated with regard to their orders, nor was in my own mind as to whether they were actually under my command. I received nothing further from the department concerning them. On the 18th of August, I learned, again through the admiral, that eight United States destroyers had arrived at Bermuda, *North Carolina* and three further destroyers at St. Johns, the admiral being under the impression that they were all bound for the war zone, as in the case of the four which had proceeded to the Azores. As the situation was becoming increasingly confused, I sent the following message:

Cablegram sent August 18, 1917.

To: Opnav, Washington.

Simsadus 295.

Request information as to final destination of United States forces recently at Bermuda and St. Johns, and orders under which force based on Azores is operating. Two allied countries have forces operating in same area, and this information required in order to coordinate their activities. 18218.

I might say right there that the reason was, seriously, that I have previously explained how dangerous it is for submarine forces of different allies to be operating in the same neighborhood. I knew that allied forces had submarines operating in the vicinity of the Azores, and it was necessary that I should see them every day so that I could coordinate what they were doing and keep my forces under command so as to keep them from bombarding the other fellow's, and that they might come in contact if they were not under my orders.

This is perhaps a detail, but it is nevertheless a very significant one, as illustrating the extent to which, in so far as our own Department at least was concerned, we had at that time arrived at approaching to what might be called "unity of command." The department replied as follows on August 23:

From: Chief of Naval Operations.

For: Admiral Sims, London.

Received: August 24, 1917.

Opnav 221. 18218. Destroyers recently arrived at Bermuda Islands within this coast. Yachts sailing from St. Johns, Newfoundland, are attached to force duty coast of France, under Capt. Fletcher, United States Navy. The Islands force is at present operating under orders to patrol in vicinity of the 12023.

ADMIRAL BE

breakwater end. Following 20-fathom curve towards signal station, submarine tender should be attached to naval forces in European waters.

After arrival submarines, Azores destroyer division one proceed open sea, Brest, stopping Queenstown en route for instruction. *Panther* also proceed Brest, where can assist in yacht upkeep, provided another destroyer tender for upkeep destroyers home waters 15429.

In reply, the department cabled Admiral Mayo, on September 5, in their 298, that his recommendation would be carried out. It is rather significant to note that, here again, the recommendation referred to was the same one that I had made in July—the submarines should be sent to the Azores to operate against German submarines, and that our destroyers should be brought into the critical area. This message of the department to Admiral Mayo was confirmed in two dispatches sent to me four days later, September 5:

SEPTEMBER 5

Opnav 328. In about two weeks, and upon arrival of *Truxton* and *Azores Islands*, *Panther* and division one destroyer force will be directed to European waters to be disposed of as per cable 396 from Admiral Mayo.

From: Chief Naval Operations.  
To: Commander naval forces European waters.  
Cablegram received September 5, 1917.

Opnav 340. Our 328 by 2d of October Azores Islands force should consist of division of submarines, U. S. S. *Tonopah*, yacht *Atlantic*, U. S. S. *Whipple*, and *Truxton*. Radius of action will extend to Canary Islands. All forces will follow your general instructions, but we do not wish U. S. S. *Whipple*, U. S. S. *Atlantic* moved from this general area.

Issue instructions in keeping with above and you 396, so that U. S. S. *Truxton* division our destroyer force may sail shortly after arrival of U. S. S. *Whipple*. 10006.

ADMIRAL MAYO

It is to be noted in these messages that in the first message the department indicated its intention of sending two more destroyers to replace those at the Azores, and that in the second message, announcing the addition of a division of submarines, specifically stated that, while these forces were under my command, the ships should not be moved from this area. The situation with regard to these forces and their command was unsatisfactory that, on November 5, in my letter report, I reverted to the matter in the paragraph which I will quote you

Letter 7305 November 5, 1917. Azores forces:

The force at present at the Azores consists of the U. S. S. *Wheeling*, *Truxton*, and four submarines of the K class. These forces are apparently under the command of Commander H. W. Osterhaus, United States Navy, commanding the *Wheeling*, in his capacity of senior naval officer present.

I should consider it desirable, however, to bring to the attention of the department the somewhat unsatisfactory situation from the military point of view with respect to this force.

On August 29, Admiral Mayo cabled to the department concerning the Azores (cable No. 396), stating in part as follows:

"Submarine and tender should be attached to naval forces in European waters."

The department, on the 31st of August (cable No. 298), stated:

"The disposition recommended in your cable No. 396 approved."

It was understood by both Admiral Mayo and myself that the department intended to place the Azores force under my command.

the department (cable No. 340) stated the proposed composition of the force and stated:

"I am under your general instructions, but do not wish U. S. S. *Whipple*, to be moved from this general area."

The department sent cable No. 799 to me, and to the *Wheeling* for the purpose of marine force, giving certain information regarding conditions and stating as follows:

"The force will be based at Ponta Delgada and operated along such lines as a senior naval officer present there will be informed of any future operations force in case any are contemplated."

I am in great doubt as to the exact desires of the department in this command. I sent the following cable on October 23:

"The message relative to operations not clear. I assume all forces, will be under my orders; that Capt. Robison will remain as senior officer and operate all forces under my direction, subject to departmental orders."

The department replied as follows:

"Capt. Samuel S. Robison has planned for operation of his force in the Azores. The senior commander will naturally keep you informed, and will be kept informed. Azores force is within limit of your command, and all operations will be under your general directions. Very probably, in the near future, the force assigned to troop convoy work may be based on the Azores. I am not sure of any intended additions to Azores force as soon as additions are made. I am not sure to keep Capt. Robison permanently at Azores, but later on, a senior officer of suitable rank will be ordered, probably a rear admiral, as base commander. I am not sure of the detail when it is made."

In the light of the foregoing correspondence, that the force is within the limits of my command; that it is under my general direction; that the senior commander will keep me informed regarding the plans which are made by Capt. S. S. Robison; that he will be guided by my orders; that a senior officer of suitable rank, probably a rear admiral, will eventually be ordered as base commander.

From the department that the situation thus created is not a satisfactory one from the military point of view, and that it should be corrected by placing the force under my orders without reservation or restriction. The department presumes that I will not hamper the senior submarine officer by placing him under my orders and reduce his area of discretion.

Of course, that this is rather tedious work, but as it is one of the most complete examples that I have ever known of the even intimate details of a campaign from a distance of over 1,000 miles, it is necessary to go into it to prove the same better.

These and dispatches I again emphasized the embarrassment which had arisen as a result of sending this force to the Azores without having arranged ahead of time for their repair facilities without having undertaking the necessary diplomatic procedure cooperation on the part of the Portuguese Government. In my letters of September 7, 1917, November 15, 1917, and January 11, 1918. I will read short extracts from those letters.

#### G. AZORES DETACHMENT.

September 7, 1917.

The Azores detachment has reported to me a number of petty difficulties which have arisen with the Portuguese authorities, for example, that the fuel purchased by our forces and harbor dues are charged each month under way for patrol duty. I have taken up this matter with the Portuguese authorities and requested that the embassy in Lisbon be asked to take the necessary steps to remove these minor difficulties which, incidentally, are not applied to British naval forces operating in the Azores.

## 7. FORCES BASED ON AZORES.

Letter 2629, November 15, 1917:

Copy of a report dated October 10, submitted by the senior officer at the Azores direct to the department, has been received.

It is considered very necessary that the negotiations with the Portuguese Government should be prosecuted with a view to improving the cooperation between our forces and the local Portuguese authorities. It is noted, in the report from the Azores, that Portuguese authorities do not cooperate freely with our forces; and, in fact, withhold military information from them. Further, that great difficulty is experienced in arranging for stowage on shore for necessary supplies and an entirely unnecessary amount of red tape is involved in handling and actually obtaining the supplies for use. It is noted that before gasoline could be landed the local authorities considered it necessary to communicate with Lisbon. These are intolerable conditions. The question of military control should be definitely cleared up. It is also noted that our senior officer at the Azores has been informed by the local authorities that the Portuguese themselves are planning to protect the harbor with nets.

## 8. AZORES.

Letter 8749, February 11, 1918:

Referring to the inclosed report, from Commander Osterhaus, on the fortifications at Ponta Delgada, the question arose recently in one of the daily conferences of the admiralty staff, as to the extent to which the United States would contribute to the defenses which are obviously inefficient.

The force commander has been informed by the department of the dispatch of two 7-inch guns and a company of marines to Ponta Delgada, but was not advised as to the arrangements that had been made with the Portuguese Government regarding the manning of these guns. A cable inquiry addressed to Rear Admiral Dunn brought the reply that one gun was being mounted near the radio station, and one at Ponta Delgada, that the work was being pushed as rapidly as possible, and that the Portuguese had insisted on manning the guns. This, Admiral Dunn stated, had been promised them when they had been sufficiently instructed and had become proficient.

It is very earnestly recommended that our Government come to an understanding with the Portuguese Government, if it is at all possible to do so, by which the manning of these guns shall be entirely in our own hands.

I think this case well illustrates the manner in which the department acted upon various information, received by it in Washington, independently of my recommendations, and how my recommendations were put into effect only after they had been later reiterated by Admiral Mayo. It demonstrated how effective the German propaganda was, that the bombardment of an outlying port in the Azores could induce the department to divert forces of exactly the character which the Germans desired and intended by such a diversion. I remember following the German press at a later period, when Monrovia in Liberia was similarly bombarded, the general theme being to demonstrate how Germany was actually controlling the sea with her submarines, pointing out that they were proceeding where they pleased, bombarding ports, and that the Allies were powerless to prevent them.

To take an extreme case, for the sake of illustration, if every time the enemy detached a single submarine and sent it off into some remote locality to shoot up an undefended beach, we made a redistribution of our forces, or detached a comparatively large force to proceed there in reply thereto, the submarine campaign would have been still more threatening.

I am citing these cases merely to show the repeated violation of fundamental principles of warfare; for one of the most universally accepted principles of strategy is involved, namely, that of concentration. Many other cases could be brought in to show that,

## 8. AZORES.

Letter 8749, February 11, 1918:

Referring to the inclosed report, from Commander Osterhaus, on the fortification of Ponta Delgada, the question arose recently in one of the daily conference of the admiralty staff, as to the extent to which the United States would contribute to the defenses which are obviously inefficient.

The force commander has been informed by the department of the dispatch of 7-inch guns and a company of marines to Ponta Delgada, but was not advised of the arrangements that had been made with the Portuguese Government regarding the manning of these guns. A cable inquiry addressed to Rear Admiral Dunn, in the reply that one gun was being mounted near the radio station, and one at Ponta Delgada, that the work was being pushed as rapidly as possible, and that the Portuguese had insisted on manning the guns. This, Admiral Dunn stated, he had promised them when they had been sufficiently instructed and had become prepared.

It is very earnestly recommended that our Government come to an understanding with the Portuguese Government, if it is at all possible to do so, by which the manning of these guns shall be entirely in our own hands.

I think this case well illustrates the manner in which the department acted upon various information, received by it in Washington, independently of my recommendations, and how my recommendations were put into effect only after they had been later reiterated by Admiral Mayo. It demonstrated how effective the German propaganda was, that the bombardment of an outlying port in the Azores could induce the department to divert forces of exactly the character which the Germans desired and intended by such a diversion. I remember following the German press at a later period when Monrovia in Liberia was similarly bombarded, the German theme being to demonstrate how Germany was actually controlling the sea with her submarines, pointing out that they were proceeding where they pleased, bombarding ports, and that the Allies were powerless to prevent them.

To take an extreme case, for the sake of illustration, if every time the enemy detached a single submarine and sent it off into some remote locality to shoot up an undefended beach, we made a change in the position of our forces, or detached a comparatively large force to proceed there in reply thereto, the submarine campaign would become still more threatening.

I am citing these cases merely to show the repeated violation of fundamental principles of warfare; for one of the most universally accepted principles of strategy is involved, namely, that of concentration. Many other cases could be brought in to show

Department agreed in theory to the policy which I had suggested, especially that of the concentration of forces, I continued well into 1918, many similar proposals for the concentration of forces, to meet sporadic submarine activities, aimed at that is, to force us away from the principle of concentration. This was the point referred to in No. 5, of my summary in the letter which has led to this investigation.

The more instance of this attitude on the part of the Admiralty, on the 13th of February, 1918, I received from the Admiralty a despatch (their No. 2977) calling my attention to the fact that German submarines had recently been active in the waters about the Canary Islands, and suggesting that we send forces to establish a patrol of the waters about these islands. I discussed this matter with the representatives of the Allies, in accordance with my instructions, and on the 15th of February sent a message to the Navy Department:

VERY SECRET.

On my agreement with French Ministry, when our forces were sent to the Azores, we were to avoid waters south of 30° and east of 20°, since the waters about the Canary Islands. British submarines have recently been active in the vicinity of the Canaries, in consequence of enemy activities.

I have explained, it is extremely dangerous to put submarines of different nationalities in the same area without their being under orders. [Continuing reading:]

With the limited number of units at my disposal, any effective patrol in the vicinity of the Canaries can be established, and that to establish an ineffective patrol is a waste of effort. Furthermore, if forces are drawn from the Azores region, the enemy would doubtless transfer his activities to the Canaries, and therefore recommend no change from present disposition of forces in the vicinity of Canaries.

SIMS.

Admiral Benson, on February 18, I wrote:

FEBRUARY 18, 1918.

A telegram concerning the advisability of sending the Azores to suppress the activity of the cruiser submarines in that region. The subject was discussed at length at the usual morning council and it came to the unanimous conclusion which was embodied

in the following cable, not only was such a dispersion of forces inadvisable, from a military point of view, but it was inadvisable because Allied forces, already operating in that region, were previously established, were ample to meet the need to deny these islands to enemy submarines as havens for repairs, making minor repairs and so forth. In spite of this, I find that six weeks later the department suggested the establishment of bases, and the sending of forces to the Canary Islands, but to Madeira and to the Azores, further afield. Their message was as follows:

April 2, 1918.  
No. 4467.

On the basis of the estimate by your planning section, coupled with recent

requests to run sailing vessels to African coast, through the zone for lun department to look with favor upon the establishment minor bases Madeira islands and Cape Verde. As bases from which a few of our sub operate, assisted by heavily armed cruising craft of the P or Q type, the to present possibilities. Matter has been taken up with Portuguese through our State Department, but has not progressed to a decision. of Admiralty as regards feasibility of such a scheme, and, if considered pressure can Admiralty bring to bear to further it, provided United S furnish operating craft, and to make scheme merely an extension of Islands operations. 22001/4487.

(At this point, at 12 o'clock M., the subcommittee adjourned Monday, Mar. 15, 1920, at 10 o'clock a. m.)

# NAVAL INVESTIGATION.

MONDAY, MARCH 15, 1920.

UNITED STATES SENATE,  
OFFICE OF THE COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.  
Committee met, pursuant to adjournment, at 10 o'clock  
in the Senate Office Building, Senator Frederick Hale  
and Senator Hale (chairman) and Trammell.

## TEST OF ADMIRAL WILLIAM S. SIMS—Resumed.

Q. When the hearing ended Saturday I was discussing  
with the Navy Department in sending reinforcements to  
the Azores and Madeira, the Cape Verde Islands, and  
the Pacific, and there is a little more I have to say on  
that.  
A. I was so insistent upon instituting operations in  
that I further took up the question with the Allies and,  
in respect to the department's wishes, I sent a further mes-  
sage reporting that I was considering the plan outlined by  
you. And on April 10 I sent the following message, giving  
the substance of it:

VERY SECRET.

Q. Mr. Sims. Madeira appears to offer no facilities as a base for  
our submarines. Cape Verde Islands harbors are poor, but probably Porto Grande  
harbor is not regarded as feasible to base submarines in a locality  
of that kind. Harbor, as is the case at Madeira and Cape Verde Islands,  
the department consider basing submarines at Dakar, where excellent  
facilities for French already exist. I am not convinced that sub-  
marines at the three places mentioned would be better employed  
there where defensive operations may be required against cruising

SIMS.

Q. That I again expressed my doubt of the advisa-  
bility of use of our submarines, stating that they would be  
subject to the submarine raids on the American coast,  
and that it was considered would not be long delayed.  
A. I added that I always encountered a tendency on the  
part of the Navy Department to avoid disagreements with our Navy Department,  
and that they should show a desire to acquiesce in depart-  
ment's wishes as far as possible, or at least not to be found at  
all objection to them.

To show that I had tried to state fully the situation in this outlying area, I will quote the following from a letter of December 19, 1917:

#### 10. SITUATION AZORES.

The situation at the Azores remains unchanged. One large enemy submarine is operating in the general vicinity, and another is probably at sea en route. The submarines are believed to be the U-152 and U-157.

The large areas involved, and the large cruising radius of these submarines always render any patrol system entirely out of the question.

The danger in these waters is so slight, compared to that in the vicinity of British and French coasts, that it is urgently recommended that the force at the Azores be kept at a minimum, unless very marked changes in the enemy submarine campaign occur. It is considered that the Azores forces can not be expected to more than deny these islands as an enemy base, and to hold themselves in a constant state of readiness to proceed on independent operations whenever a submarine is known to be within close enough proximity.

It is desired to point out that the Azores can never be considered as an efficient base for antisubmarine craft without a dry dock.

Destroyers are constantly laid up, owing to bent propellers, and if we attempt to base destroyers at the Azores, the necessity would constantly arise of sending vessels to Gibraltar or Queenstown for docking.

If the department intends to prepare the Azores as a possible future base, immediate steps should be taken to provide a floating dry dock. So long as shipping is kept away from the Azores, it is most unlikely that submarines will appear in the area.

As a matter of fact, the department's action, in allowing anti-submarine craft to be wasted, for the periods above mentioned, in such areas as the Azores, is susceptible of being converted into terms of actual unnecessary loss of life and wealth.

While some of the incidents narrated occurred considerably more than six months after our entry into the war most of them occurred during the first six months—the period to which my letter of January 7, 1920, principally related.

On October 2, 1917, I received the following cablegram from the Chief of Naval Operations:

**SIMSADUS:**

571. You are authorized to redistribute the naval forces under your command to meet such changes as may arise in European waters. Every redistribution of your command shall be made with a view not only to meeting the military situation but also with a view to foster feelings of harmony among the Allies concerned. Evidence of dissatisfaction on the part of one or more of the Allies with a proposed redistribution shall operate to prevent such redistribution until you have adjusted the matter to the satisfaction of all concerned. In case not yielding to adjustment submit plan your views and the views of the Allies concerned to department and determine action. No redistribution of forces shall be directed against the forces of any other power than Germany. (1900).

That last proviso was on account of our not being at war with Turkey.

Of course, we all know that history is full to overflowing of explanations of failures in military operations, owing to exactly identical cases to those I have described, namely, violations of such fundamental principles as decentralization of command, which affords commanders in the field the wildest possible area of discretion, and above all the fundamental principle of concentration. As for the question of unity of command, I will leave that to the committee's own conclusions. The facts speak for themselves. I would merely add one point, and that is that it is quite possible to point out in extenuation or explanation of our own departmental errors, similar instances in the case of the Allied Governments.

To show that I had tried to state fully the situation in the operating area, I will quote the following from a letter of December

#### 10. SITUATION AZORES.

The situation at the Azores remains unchanged. One large enemy submarine operating in the general vicinity, and another is probably at sea on reconnaissance. Two submarines are believed to be the *U-152* and *U-157*.

The large areas involved, and the large cruising radius of these submarines, always render any patrol system entirely out of the question.

The danger in these waters is so slight, compared to that in the vicinity of the British and French coasts, that it is urgently recommended that the Azores be kept at a minimum, unless very marked changes in the enemy campaign occur. It is considered that the Azores forces can not be expected more than deny these islands as an enemy base, and to hold themselves in a state of readiness to proceed on independent operations whenever a submarine is known to be within close enough proximity.

It is desired to point out that the Azores can never be considered as a base for antisubmarine craft without a dry dock.

Destroyers are constantly laid up, owing to bent propellers, and if vessels to base destroyers at the Azores, the necessity would constantly arise for vessels to Gibraltar or Queenstown for docking.

If the department intends to prepare the Azores as a possible future base, immediate steps should be taken to provide a floating dry dock. So long as the Azores are kept away from the Azores, it is most unlikely that submarines will appear in the area.

As a matter of fact, the department's action, in allowing submarine craft to be wasted, for the periods above mentioned, in such areas as the Azores, is susceptible of being converted into terms of actual unnecessary loss of life and wealth.

While some of the incidents narrated occurred considerably more than six months after our entry into the war most of them occurred during the first six months—the period to which my letter of January 7, 1920, principally related.

On October 2, 1917, I received the following cablegram from the Chief of Naval Operations:

SIMSADUS:

571. You are authorized to redistribute the naval forces under your command to meet such changes as may arise in European waters. Every redistribution of command shall be made with a view not only to meeting the military situation but also with a view to foster feelings of harmony among the Allies concerned. If of dissatisfaction on the part of one or more of the Allies with a proposed redistribution shall operate to prevent such redistribution until you have adjusted the redistribution to the satisfaction of all concerned. In case not yielding to adjustment plan your views and the views of the Allies concerned to departmental action. No redistribution of forces shall be directed against the forces of a power than Germany. 19001.

That last proviso was on account of our not being at war with Turkey.

Of course, we all know that history is full to overflowing of examples of failures in military operations, owing to exactly the same causes to those I have described, namely, violations of such fundamental principles as decentralization of command, which commanders in the field the wildest possible area of discretion above all the fundamental principle of concentration. As to the question of unity of command, I will leave that to the common sense of our own conclusions. The facts speak for themselves. I would add one point, and that is that it is quite possible to point out extenuation or explanation of our own departmental errors, instances in the case of the Allied Governments.

now this is that allied operations are not here under discussion. My aim throughout the war to insure not only profit from allied successes and experience, but also important that we should profit from their errors. We are learning how not to do it as well as how to do it. We are in dealing with the question of cooperation with the regard to aviation, in a message which I sent to Berlin on the 21st of April, 1917:

After consultation with aircraft commission.  
 We are anxious to give us anything and help development in any way.  
 We are in the construction, as well as operation, has been bitter  
 and tears. We should profit by their mistakes and not repeat

of national defense are so well understood and their value fully appreciated abroad that a premium is placed upon open criticism, which can be found not only in the press but heard on the floor of their congresses day after day. An instance which I could cite, or which could be taken as the object of justifying our own errors, I could find in the press and find dozens of similar cases. I doubt that the navy departments have escaped free and open discussion phase or possible error of the war. As witnesses to the discussions of the Battle of Jutland, in which the Admiralty, as well as the commander in chief, have been subjected to a degree of violent criticism and condemnation which is not known to this committee.

#### REMARKS OF THE DEPARTMENT BASED ON INCOMPLETE INFORMATION.

After going back again to the summary of conclusions in my report of May 7, 1920, I would again invite attention to my point that

the decisions made and acted upon concerning operations in the North Atlantic, when the conditions were such that full information had been in its possession, thus violating an essential precept of naval operations necessarily depend upon complete information.

Two striking illustrations of this point, and a case in point of the department might have had the most disastrous results in the case of the first convoy of troops sent to Europe in 1917. Since the early part of May, 1917, I had been in receipt of information, in personal letters from officers of the department, from armed guard officers, from Army and Navy officers, to the effect that a convoy of American troops was to be sent to Europe. I of course requested that the department would give me full and complete information concerning any plans for troop convoy, and would, if possible, plans for the transport of these troops, utilize all the experience in the transport of troops overseas which I had acquired after nearly three years of such operations. I requested from the department for information as to the conditions and no request for recommendations as to how the convoy should be protected in the war zone, reached me until the convoy had been completely completed in Washington for the sailing

As an illustration of how completely I was in the dark as to the probable movement of these troops and the method to be followed in handling them, I may say that I received information from the British and French naval authorities concerning the convoys. I was officially informed of it by the department. Furthermore, the tentative regulations providing for all the details of the handling of troop convoys, including their protection in the war zone, were agreed upon by the War and Navy Departments on the 15th of May, 1917, signed by Gen. Bliss and Admiral Benson and approved by Secretaries Baker and Daniels, and further approved by the President on May 27, 1917, were not known to me, nor did I receive a copy from the department until the 30th of October, 1917, five months later. I submit a set of these regulations for the record, but consider it unnecessary to quote them here.

(The regulations submitted by Admiral Sims are here printed in full, as follows:)

[Received by Admiral Sims, Oct. 30, 1917.]

#### TENTATIVE REGULATIONS FOR THE TRANSPORTATION OF TROOPS TO EUROPE

1. The following rules supersede for the time being all previous regulations of the government of the naval convoy of military expeditions to Europe.

2. All matters relating to the purchase, charter, fitting out, equipping, maintenance of transports, engaging their officers and crews, and providing rules of government and their interior disciplinary administration shall be controlled by the Army, except that all regulations concerning the security and defense of the transports and the safety of all persons on board, both at sea and in port, shall be controlled by the Navy.

3. All matters relating to the loading of troops, animals, or stores upon transports and the quota of cargo to be assigned to each such vessel shall be under the control of the Army.

4. When an overseas expedition requiring naval convoy has been decided upon, a naval officer of suitable rank shall be appointed as convoy commander. He shall be furnished full information concerning the strength of the expedition and the proposed objective. The Army authorities shall afford him adequate facilities for inspecting the transports as they assemble for the purpose of ascertaining whether they are properly armed and equipped for defense, fitted with ground tackle, life rafts, life preservers, lines, and all equipment necessary for the proper management and control while in transit or while disembarking men and animals, under conditions which will be probably met. The convoy commander shall call the attention of the Army commander to defects or deficiencies with respect to such matters. The Army commander shall use every effort to remedy such defects or deficiencies in accordance with the judgment of the naval convoy commander. The naval commander shall render all possible assistance with the resources at his disposal. In the event that it be found impracticable to remedy the defects or to supply deficiencies, which, in the opinion of the naval convoy commander will, if continued, threaten the safety of the convoy or jeopardize the safety of the expedition, the matter shall be reported immediately to their respective departments. The Army commander and the Navy convoy commander.

5. The naval escort for each group of transports shall consist of not less than one cruiser throughout the entire voyage. The escort shall be augmented in species so that the naval force available shall render the maximum protection to the transports throughout the voyage.

6. Each transport shall be armed by the Navy with the minimum of four guns not less than 3-inch caliber, and shall be equipped with an efficient fire control lookout system, including suitable glasses for lookouts.

7. An officer not below the rank of lieutenant commander in the Navy, and other experienced officers together with a suitable number of quartermaster and radio operators, and a full gun's crew for each gun, shall be detailed to each transport by the Navy Department. The means for making flag, semaphore, and wig-wag signals by day and by night shall be provided by the Navy Department.

8. (a) The order as to destination of the convoy and time of sailing shall be given by the naval convoy commander after the Army commanding officer, under authority of the War Department, has stated that he is ready to sail. The orders of the

any change shall be immediately communicated to the Army commanding officer. In the event of circumstances arise after sailing, which render a change in plan or formation desirable, which change is not practicable to refer to higher authority, the Army commanding officer shall, after consultation with the naval commander, make such change.

The naval commander shall have control of all movements of the convoys, including orders of sailing and formation. He shall make provision for an attack by an enemy, or a dispersion of the convoy by any other cause.

The naval commander shall assure himself that his subordinates, placed on the convoys, are familiar with dispositions and plans.

Officers shall be separated from the convoying vessels by accident or otherwise, and on duty shall take charge of the convoy in accordance with the plans of the convoy commander. An officer attached to the transport shall at all times, both in and out of the command of the transport in all matters relating to navigation, anchorage, and the defense of the vessel. He shall act in accordance with instructions issued to him by the naval commander (convoy).

The commanding officer of troops for officers and men for any duty on the transport and defense of the vessel or her personnel. The commander shall detail officers and men in the numbers requested, and shall ensure that they shall perform the duties for which their services are required, under the direction of the senior naval officer on board.

All radio shall be under the complete control of the senior naval officer on board.

The senior naval officer on board shall be responsible for the exercise of the power to abandon ship at fire quarters and abandon ship.

Officers of the vessel shall perform their navigation duties affecting the vessel, under the direction of her senior naval officer on board, without opposition to or interference with his authority in any way. The commanding officer of troops on board, who shall then take such action as may be necessary to enforce the authority of the senior naval officer on board.

The senior naval officer on board shall be limited to those duties assigned to him.

The order of landing shall be determined by the naval commander, in consultation with the Army commanding officer. The order of landing shall be determined by the Army commanding officer, after consultation with the naval commander. After the order of landing has been known to him, the naval commander shall control the disembarkation of men and material.

It shall be the duty of the Army commanding officer if convenient, shall be to be near the transport of the naval convoy commander. If not convenient, the commanding officer of the transport shall be near the flag ship of the naval convoy. It shall be the duty of the senior naval officer assigned to transports should be to be near the transport as the Army commanding officer.

W. S. BENSON,  
Admiral, U. S. Navy,  
Chief of Naval Operations.

TASKER H. BLISS,  
Major General, U. S. Army,  
Acting Chief of Staff.

JOSEPHUS DANIELS,  
BAKER.

WOODROW WILSON.

The first information that I received from the Navy Department to these first troop convoys, was contained in a message sent but three days before they were

(Very confidential.)

U. S. Navy, Washington

The troops to France will sail about the 9th of this month. It is expected to dispatch four convoys, in groups of three or four transports,

under separate escort. The first three groups have troops, and sail at four hours interval. The first groups are of faster speed. The fourth group, with animals, will sail last, and may be delayed. All of the groups sail for the same place at sea, location of which you will be informed of later. The meeting place will be reached, by the first group, about one week after sailing. The fourth groups in about nine days. I will advise you later of the dates of sailing, and of arrival at the meeting place.

I hereby instruct you to furnish escorts, to consist of one division of transports for each convoy group, from the point of meeting to the port of debarkation. When this escort duty is finished those detailed to this service will be returned to their present service. Rear Admiral Gleaves will accompany the first group, and will have command of all operations of convoy.

DANIELS, *Secretary*

It would be impossible to find a more striking example of the department's insistence upon making decisions based upon incomplete information than is provided by this message. The scheme of troop convoy outlined in this message showed a complete ignorance and disregard of convoy methods and of war experience in the submarine danger zone. The action of the department in giving me definite and detailed orders from Washington as to how the convoy should be handled in the danger zone and as to the escort each group should have exhibits a disregard of the fundamental military principle of command which requires that subordinates shall be allowed to exercise their initiative in their own discretion in carrying out the mission assigned to them. The department only assigned me a mission, but, as will be noted in this cable, actually dictated the orders which I should issue to the vessels of my command. This I pointed out to the department in my message of June 8, 1917, in reply to the message I have just read you. My message was as follows:

[Cable Dispatch.]

Sent: June 8, 1917.

To: Secretary of the Navy (Operations).

Through: State Department.

11. Escort and convoy duty within danger zones is performed in accordance with experience, and each case is dependent upon disposition of allied forces at the time of latest information concerning enemy activities. Generally speaking, duty is carried out in relays, ships escorting only in their assigned areas and passing on to the ships of next area on the route of the convoy. As our destroyers generally operate farthest to westward, we participate in majority of escort duty. In view of this, I suggest that in future the number and nationality of ships to be detailed to escort duty be not specifically ordered by the department, but be determined hereafter upon the disposition of allied forces and circumstances at the time of an appointed rendezvous. Such a course will not only facilitate convoy duty, but will also facilitate other military operations of submarine campaign.

The department, in reply to my dispatch which I have just read you, cabled me as follows, on June 10, 1917:

Received: June 10, 1917.

To: Alusna, London.

Department considers it essential, on account of the present sensitive public opinion, that the escort orders for the first convoy, already issued, be executed by transports and destroyers. The soundness of your recommendations are recognized by the department. For subsequent convoys, not more than three transports in one group, with one escort of not less than one cruiser and three destroyers per group is the present policy of the department. Please write giving outline plan for handling the Euphrates of the escort duty for further convoys and mention the numbers and types of vessels likely to be assigned to escort each group of transports throughout each section of the danger zone. 21009.

DANIELS, *Secretary of*

stated in this message that the department, although in the soundness of my recommendations, still persists in its position in its previous cable. I was now asked for me to write the department outlining a plan for handling the escort duty for further convoys. That is, negotiations were sought with regard to this very essential duty as commander of our forces abroad only a week before the first convoy. On June 12, 1917, I replied to the department with the following:

(Cable dispatch.)

1. Navy.  
2. Next mail. Necessary for safety that, for future troop convoys, routes be designated and controlled from here based upon latest intelligence. Initial orders, on sailing, should be subject to change. Troop ships should zigzag together, two to four point changes, but should zigzag independently, avoiding regularity of position. In accordance with British experience, when escorting a troop transport through a submarine zone, she is of practically no protection to convoy, but is one of convoy. It is necessary in danger zone that radio be used for important messages. Evidence indicates that radio direction is not to locate large forces if radio work of distinctive nature. While this indicates that convoy commander should leave maximum initiative to senior destroyer commander, in view of his recent knowledge of methods. Enemy submarines do not have beam search. This word should probably have been "division"; recommended to be concentrated as much as consistent with zigzagging, this to reduce the number of destroyers required to facilitate offensive operations of destroyers. It is now practical to use one destroyer for single troop transport, three for two transports, and one destroyer per transport when four transports.

SIMS.

On the day, June 13, 1917, I sent to the department the cable, outlining for the department the war plan for troop transports, and making definite recommendations that troops should be transported and protected in this way. I think, be unnecessary to read you this copy of it before me, which with your permission I will record to show that the department, in this case as in the case in which it called upon me for recommendations; with all the information available; and the recommendations were drawn up only after a conference with the senior destroyers.

It should be as follows:

Letter No. 1:

OFFICE VICE ADMIRAL, COMMANDING,  
UNITED STATES DESTROYER FORCES,  
EUROPEAN WATERS,  
London, June 13, 1917.

1. To the S. Sims,  
2. To the Navy Operations,  
3. To the submarine danger zone,  
4. To the cable 21009,  
5. To the department's cablegram 21009, concerning methods of transporting troops or supplies for our Army and Navy forces while in the danger zone.  
6. To the department in the question of escorting through the submarine danger zone concerning enemy activity.

(2) The question of not entirely abandoning our own offensive campaign escorting duty, and

(3) The question of the number of craft available for such duty and their

If, for example, enemy activity is concentrated to the westward of Ireland, and convoys are coming in well to the southward of this area, it manifestly is impossible to concentrate our offensive campaign in the area in which the enemy can be most easily attacked.

In deciding as to the number of types of ships to be diverted from offensive duty, preference is always given, of course, to convoys carrying troops. Convoy material, whether it be munitions, animals or food supplies are escorted as necessary; but such escorting duty is not allowed materially to interfere with the offensive campaign in operation at the time in question.

3. In those areas which are constantly being covered by destroyers or submarine craft, such as sloops (specially built antisubmarine vessels), about the attempt is made to avoid taking such vessels out of their designated posts. The vessel, or vessels, which first picks up a valuable cargo escort it through the area, notifying the patrol vessel on the next square, inshore, and turning over to it as the meeting of the ships is effected. If by reason of thick weather, etc., the meeting is not made, the convoying vessel continues on the next square.

4. The routes which will be followed by our troops and supply ships bound for the coast are, generally speaking, outside of the main areas of submarine activity, outside of the areas continuously patrolled by destroyers and other antisubmarine craft, except for a short distance off the west coast of France.

5. For the purpose of handling such convoys, and also the merchant convoys which are now in operation from Hampton Roads to the Mediterranean, the Admiralty have established, for convenience to their own administration, a comparatively large number of rendezvous well out at sea, and encircling the British west coast of France. Also a comparatively large number of locations on the English, and French coasts have been given designating figures or symbols, therefore be the practice each time that one of their convoys sails from a port to designate a rendezvous which they are to pass through, and a point on the coast to which they should steer for after passing through the rendezvous.

This requires a notification well in advance giving as closely as possible the points where the convoys will pass through the rendezvous points designated. Escorting ships will then be able to intercept the convoys at some point on the route between the rendezvous and the point designated on the coast, the position of interception depending primarily upon enemy activities at the time. It manifestly must be possible to communicate in cipher with convoys at sea and divert them from one rendezvous to another, if occasion demands.

The above-mentioned lettering and numbering of rendezvous and points on the coast are, as stated, primarily for convenience of reference in administrative matters to the Admiralty itself.

The significance of such symbols if circulated even to our own allied forces must necessarily be limited to the maximum extent in order to preclude any possibility of the enemy becoming aware of them.

6. If the greatest possible degree of safety for convoys is to be insured, it is necessary that their movements should be under control of one source, and as all enemy activity is concentrated on this side of the Atlantic, and his movements must necessarily remain in its present zone, it follows that selection of routes and other directions in regard to movements of convoys should be controlled and directed from this side, that is, in the Admiralty itself. It is for this reason that the Admiralty has requested, and I strongly recommend, the immediate appointment of a competent and tactful officer whose duties in the Admiralty under my direction will be confined to those above indicated.

7. The following procedure in regard to convoys is therefore recommended:

(1) Early advance information regarding prospective sailing of convoys is of great importance.

(2) Immediate information as soon as definite hours of sailing can be forecast.

As soon as this information is received, and after consultation with the Admiralty, a rendezvous and route to be included in sailing orders will be selected. Definite information should then be given when convoys sail, as to its present speed and time of passing through rendezvous designated.

8. It is urgently requested that only British Admiralty codes be used in all communications, addressed to the Admiralty, the first word of the message being "Sims."

9. Under no circumstances, if convoys are divided into groups, should they use the same rendezvous and the same routes after reaching the danger zone. In such a case if the enemy should become aware of their movements he would be able to concentrate for successive attacks.

ships should zigzag together from two to four points irregularly. Zigzagging is one of the principal requirements in opposing submarine

attacks. They should be allowed the maximum independence of movement and initiative. They should not be held to strict formations in terms of distances from the convoy. This procedure is necessary inasmuch as advantage may be taken of their experience in operating against submarines. The enemy has the latest information in regard to enemy methods, which are constantly changing.

It is suggested that the wireless shall be used as little as possible. In fact, it should not be used at all, except for important directions which may have to be given in case of changes of routes. Evidence indicates that the enemy has the use of radio direction finders, particularly in locating large convoys of unusual or distinctive character.

It is suggested that once a convoy enters the danger zone an escorting cruiser should be used for protection against submarines, and virtually becomes one of the ships of the formation.

There is no evidence to indicate that any German submarine has ever attacked a formation from ahead—that is, approaching from ahead and attacking the formation. With bow tubes they would be forced to attack the formation, with considerable danger to themselves, and to their own crew. Hence the principal arc for destroyer protection is the rear of formations.

The principal requirements of formations of a considerable number of ships against submarines are:

1. Length of formation—that is, minimum length of formation in the rear. This in order to reduce the arcs on the bows and beams, which are the most dangerous.

2. Concentration of formation—as much as possible—to reduce the dimension of the formation at right angles to the direction of travel.

3. Reduction of the range of visibility of the force, but it also restricts the range of attack which the submarine desires to attain.

4. Reduction of that line of divisions formation is generally adopted, with divisions as small as consistent with zigzagging evolutions.

W. S. SIMS.

On June 14, 1917, I again called the attention of the Admiralty to the embarrassment caused by the plan, which was carried out, for the handling of this first convoy. Photographs of this message are the following.

Before I get through, that it was one of the most difficult operations we had to conduct during the war, and God bless that we did not lose any of those ships. [Reading:]

"I am sorry that the number of vessels available for escort duty to insure safety of our prospective movements of our troops and their supplies, and of our supplies will approach European coast outside of zones used for the convoys, it is mandatory that information be given immediately of the numbers and times of sailing of all Army shipping in next few days. This is the program of merchant ship convoys, which must be carried out. The approach of our first Army convoys will seriously affect the situation as it will require all destroyers based on Queenstown, and the suspension of patrol and escort duty in that area. I can not ignore the urgent necessity of increasing the destroyer and cruiser force with utmost dispatch. \* \* \* Urgently request answer to the above as to prospective movements of all Army shipping in next few days. This information is of vital importance. Also request information as to the situation of antisubmarine forces these waters. The Admiralty's prospect is that if oil supplies are protected food supplies will be protected. I recommend that all destroyers that can be brought to the front be sent at once."

The same information was also conveyed to the department by my letters of June 15 and 20, which I have read in another connection and which it is hardly necessary to repeat here.

I wish here to make one point perfectly clear, as it will be to later. There is no question, in these messages, nor was the question at the time, as to whether troops should be given protection, should get the very best protection that was available. They always did throughout the war; and it may be interesting to the committee to know that throughout the war America received more protection than the Allies were able to give to their troops on the high seas. The point I was trying to make was that it was absolutely necessary that, in moving our troops, in mind, at all times, the great importance of the saving of time upon which the operations of these troops depended after they went abroad. I have fully covered this question of available tonnage in my previous testimony. To save time, I will state an extreme case merely for the purpose of illustrating the point at issue. If we had gone ahead and moved troops abroad as fast as ships could be found to carry them, and had done this with no regard to merchant tonnage, we might easily have found ourselves in the position of a large army marooned abroad, but helpless through lack of shipping. Or, on the other hand, as I hope I have clearly shown, we might easily have lost the war, in the meantime, on the score alone of the loss of our available allied merchant tonnage, in spite of the fact that we had more troops in the field. Another point, which should probably be stated at this time is that, contrary to impressions which have been given in the press, there was never any issue between me and the War Department as to the fact that the primary mission of American naval forces was the protection of the necessary army, and the supply movements.

Such a statement goes without question. It is very easy to confuse the issue in a case like this, in discussing it a long time after it happened; to disregard the time element and to confuse the issue merely omitting reference to them. The heavy movement of troops, in fact, what is now justly regarded as one of the wonders of the war, namely, the remarkable transport of American troops overseas, did not occur in the period we are here discussing. On the contrary, it was nearly a year later, as will be seen by reference to the Government statistics. The curve of the movement of troops was very low during these early months and did not commence to rise until April, 1918.

On June 17, 1917, I received a detailed message announcing the sailing from New York on June 15 of three troop convoys, and gave me detailed instructions as to their movements on the high seas. I will include this message in the record, but will not read it for the count of its technical nature.

(The message referred to is here printed as follows:)

Received: June 17, 1917.  
To: Vice Admiral Sims.  
No. 20.

The convoys are arranged in groups.

Three groups sailed June 15 from New York.

Group one will arrive at 6 a. m., June 23, at first rendezvous, latitude 48-51, longitude 24.20.

Group 2 will arrive at 4 p. m., June 23, at first rendezvous, latitude 48-10, longitude 25.

message at 6 a. m., June 25, at first rendezvous, latitude 46-46, longitude 10-10, will designate second rendezvous and forward same to escorts. The message was sent by you to first rendezvous.

Message of this message for Vice Admiral Sims. 12016.

DANIELS, *Secretary Navy.*

before that two convoys would pass designated rendezvous on June 24 and the third convoy on the 25th. It further stated the French Admiralty would designate the second rendezvous and would forward the same to the convoys, via the British station. I was to send to meet the convoys at the first rendezvous. It would be hard to imagine an arrangement more likely to create confusion, or to disseminate more widely information concerning the movements of these convoys, thereby exposing them to unnecessary dangers. It meant that information concerning the convoys had been cabled to me in London, in a code which repeatedly told the department was unsafe; and, furthermore, the same information had been cabled to Paris, apparently to a great number of hands in Washington; and that it was to be passed along to Queenstown, and given to the British station and carried by them to sea, for further transmission to the convoys. I will not tire the committee with a lengthy description of the possible this plan was.

It was that the safety of the convoys, once they got into the hands of the enemy, was dependent upon the latest information of the enemy. At the time in question, I was in Queenstown, in temporary charge of the British station at that point. I leave you to imagine the difficulties in trying to coordinate the plans for these convoys, and the messages over the cables to Paris, London, and the British station. It was difficult to know just who was in charge, and who was to be trusted. It was very easy to have a misunderstanding, and to get the time how many forces the French could send, and how many to send to sea to meet these first convoys; and, to know what information the French had concerning the convoys, the times of sailing, and number of destroyers to be sent from home waters. I was unaware of the forces sent from home with these convoys. I could, of course, have sat tight, carried out only the specific task assigned me, that is, of sending the destroyers which had been assigned to me. I think it will be recognized that nothing could be done but to try and straighten out the situation, and the movement of these convoys was involved.

There was no time to be lost. In fact, before I could get the department, the convoys had actually sailed and were on the sea. There was the possibility, in fact the probability, that the destroyers would not be able to find the convoys, and would not be able to reach the first rendezvous by the time the convoys arrived. This would leave the convoys in a quandary as to where to go next.

I therefore drove through a brief message as follows:

To: Secretary of the Navy.

Number 20 acknowledged. Please direct convoys to proceed from rendezvous on course east, in absence of other instructions and until escort joins. Use 600 meter wave length, and will receive instructions concerning enemy, from Queenstown via Valencia, call sign G C K, or via our despatch Sigcode Cypher.

The reason for directing them to proceed due east from rendezvous was simply to avoid their arriving there without instructions as to where to go, and in order to make sure of the finding them. Their subsequent movements, after they had joined, I hoped to be able to straighten out before they arrived.

I should also state, at this point, that war experience proved that it was impossible for forces, destroyers or other ships to meet on the high seas at specific points. The explanation is a long story. It is involved in the inevitable inaccuracies of navigation, particularly of the types of ships we were using, delays, due to casualties to machinery and weather conditions were always involved, etc.

On June 19, right in the midst of the trying hours we were through, I received the announcement of the sailing of the group in the following message:

Received: June 19, 1917.

To: Alusna.

For: Vice Admiral Sims. No. 21.

Convoy group No. 4, U. S. S. *Hancock* flagship, sailed June 17. Will rendezvous, with United States destroyers, latitude 47-40 north, longitude 6 a. m. June 28. Communicate this in most confidential manner to navy at Paris. 14018.

The last sentence of this message was confusing, because I was in doubt as to whether the French were depending solely on their information or were getting independent information from the department. I was further confused as to whether the department expected me to provide the destroyer escort for this last group or whether such escort was in the accompanying convoy. My previous messages had directed me to furnish escort. I therefore immediately cabled asking for this information.

In the meantime this convoy group was at sea, and it was halfway across the Atlantic before I received from the department information as to whether or not I should furnish destroyers for it. On June 22, 1917, I received the following message from the department:

June 22.

To: Alusna.

From: Secretary of Navy.

For: Vice Admiral Sims 28.

Your 120. You are to supply destroyer escort for Army convoy groups 1 and 2. Please inform the naval attaché at Paris 19021.

No point would be served in going further with the messages which were exchanged between London, Paris, Queenstown and Brest concerning the movements of these convoys but

It would be an impressive demonstration of how confusion really was.

From my official letter of July 6:

It is an incident illustrating the great danger of attempting to do more than one headquarters. Although every measure had been taken for safe passage of convoy group No. 1 to the submarine zone, no orders had been issued, with the full cognizance of the French and British, to watch in the French, Russian, English war merchant code between the *Seattle* and Brest. Not only was this dispatch sent in a very unreliable, but it was either coded very poorly or not at all, and for these reasons, and the nature of the dispatch itself, action was undoubtedly necessary. The dispatch asked that the group would join the first group. This was entirely unnecessary, and that could be made concerning the question had been made in the French torpedo boats failed to join before the group was very inadvisable to attempt to communicate with the French with an unsafe code. The convoy group was under escort of more than is usually assigned troop convoys of such size.

On July 17, I received the following report from St. Nazaire, of this first convoy group, and of a supposed attack

JUNE 29, 1917.

... Force \* \* \* arrived on June 26, at midnight at St. Nazaire and escorted by United States destroyers and two small ... *St. Nazaire* is with group 2. \* \* \* Group 1 was attacked ... 20 p. m. on June 22, 45 miles from the first rendezvous and ... passed close to *Harannah*, two passed close to *DeKalb*, ... under her stern as she turned away, one torpedo crossed ... were no hits.

But if one realizes that, at that time, the security in France ... was in the hands of M. Malvy, minister of the interior, since ... criminal neglect of duty, and that the then head of the secret ... assistant to the prefect of police, are both now serving jail sen-

tances for intercourse with the enemy, the necessity for more than one such a secret will be apparent. Due primarily to inexperience, and secondly the fact that three different general staffs were attempting to fix a rendezvous before the first convoy was due, there was still considerable confusion, in the Ministry of Marine, as to just what was to happen, and where it was to be. Our ships approach the coast.

The admiral in command of the troop convoy, had been told in Washington that he would be met by French destroyers, etc., and, as a matter of fact, they were not there. Like a great many other matters, it seemed impossible to make the Navy in Washington believe to what desperate straits the French naval force had been reduced. They had only five destroyers on the west coast, and on the night of 1917, I had personally seen four of them put out of action, for weeks or months, in a destroyer fight off Dunkirk.

Now that it is all over, and we have won, and so many big historical events have been opened since, we are prone to forget the importance and what was at stake in the successful outcome of this expedition. If even one transport had been sunk, it would have resulted in disaster to the Allied cause.

It is not yet understood generally what Admiral Gleaves and his officers accomplished; it will be years before what it meant psychologically to the allies will be fully appreciated.

To return to the general question of the unsound military plans for these first convoys, and to the danger and confusion which resulted, I exchanged numerous messages with the department in the next few days—that is, the first part of July, attempting to point out to them the principal errors which had been committed, with a view to preventing them in the future.

In referring to this subject, on July 7, 1917, in my letter to the department, I said:

I feel reasonably certain that, if information reached the enemy as to the movements of the troop convoys, which it appears to have done, it was due to the method of communication in what is undoubtedly a wholly unreliable code. There is no evidence here to support reports which I have made, to the effect that all codes of this character are dangerous, and that any code can not be considered safe unless it is frequently changed. It is for the above reasons that I have so urgently recommended the exclusive use of British Admiralty codes until such times as our own codes based on war experience are available.

I mentioned the other day that in using those codes we were using our own keys, which we changed frequently, so that they could not be read.

In other latter reports to the department, I pointed out the danger of inclination to trust their information and judgment alone as the cause of very grave danger to our forces. As a matter of fact, it was only a matter of luck that we did not lose a number of transports not only from the troop convoys, but also from the various convoys of destroyers which had arrived in May. In the case of the destroyers they were saved only by the thoroughness of the precautions taken by the commander in chief at Queenstown to meet them. It is hard to believe otherwise than that the enemy knew all about the movements of these forces, from the day cables began to be sent about them.

In fact, the announcement of the sailing of the first destroyer was published in the Berlin papers four days before they arrived at Queenstown. The suspicion that the Germans were aware of our troops' movements was therefore strengthened. As will be seen, I had recommended to the department, beginning early in May, that important and highly secret information should not be sent by cable to our own Navy codes, as I considered them unsafe. I had pointed out that the British codes had been tested and proved safe by war experience and were constantly being changed to prevent the

being them. I had, therefore, implored the department to send any messages concerning this troop convoy in the British Admiralty's war codes, and yet all the messages still continued to be sent in the Navy secret code, as which we had been using in peace times for years.

As to the technicality of this business of codes. When changing the code, that refers to changing the cipher. As codes are in keys which are changed, you can give the code book, and it does not do any harm, provided you change it pretty enough.

As to me, and something quite outside of my present duty, to see the extent to which the allies were breaking our codes. The problems of codes and their fallibility, if properly treated, would make a story in itself and would furnish material for the committee, as well as the general sufficient to say that one of the many measures taken by the Allies to have such complete information at all times of the submarine movement was their ability to break the code of the messages exchanged between submarines at sea and their base.

On these days to go into this question thoroughly; in the present emergency, it was sufficient to me to know the above and nothing to do but to assume that the enemy was breaking our codes. As a matter of fact, I later learned the enemy was not so clever, and that, fortunately for us, they were not aware of the extent to which the Allies were breaking their codes. It seems that they did not change their codes so often as the Allies did. They were, of course, aware of the fact that on the other hand, our Navy Department was using codes which had been in use in times of peace for years past. As a result, I can safely say, therefore, that if the Germans had decided to attack this first convoy, the action taken by the department and the method which it covered, provided the opportunity to obtain information as to the composition of the convoy. As I pointed out to the department in my correspondence, the fact that the convoy arrived safely was a measure to good luck.

The department itself realized the impracticability of carrying out further transport movements along the coast, and the method which it governed the first groups is best shown by the fact that after the convoy sailed the department had requested the War Department as to how troop convoys should be handled. I have already read the answer which I sent after the receipt of my reports concerning the confusion of the arrival of the first groups, the department's recommendations in the following message:

Department for Admiral Sims

Reference is made to your report concerning safe transportation of our troops to France by sea, and to the operations of nature. For this purpose every guarantee will be given that every effort will be made by the Navy Department to protect the troops in crossing. From the interned German ships, the transport will be commissioned, under complete naval control, and the troops. It is of the utmost importance these ships should be used for the passage in, and owing to the valuable nature of

ships and difficulty of obtaining others in their place if lost, it is desirable that they should be sent on passage in Atlantic. Will you therefore submit an outline of what you consider the best method of carrying out such operations after you have consulted the authorities, especially the French? About 4,000 troops will be dispatched by ship. Do you think that they should sail in company or singly?

I would not have believed it possible that that question should be asked at that stage of the game, how we should put the question and when we had put it in. [Continuing reading:]

During the voyage in, what protection can they expect from our despatch from the French? Also, on the voyage out, what protection can they expect (given) by French, or do you contemplate providing that from our forces? In connection with sending you all the information in advance possible, should we send you a rendezvous for each ship, or group of ships, leaving here and a course to follow there, or will you in advance set out a course, both of which will be unchangeable until you change the same? Should the Army supply ships, large or small, of which will be of moderate speeds, sail together in groups, or singly, so that security may be given them in that part of voyage when it is the most dangerous? Even if these points have been discussed by you, it is desirable to have them discussed again, so that greatest efficiency and cooperation may be obtained by combined efforts.

I do not think it would be possible for me to convey to you the discouragement of receiving at that date, after the miles of cables and letters I had sent in, there on the 9th of July exhibiting the crassest ignorance of the elements of the whole problem.

In view of the extensive communications which I had sent to the department concerning these convoys previous to this dispatch, I think it requires no explanation on my part to convince the committee of my feelings upon receiving such a message as this. It was a question after question asking about handling convoys which I had explained over and over again.

Some days before I had sent, by an armed guard officer, the information which they requested. I therefore replied to the committee as follows:

Sent: July 11, 1917.

To: Secretary of the Navy.

No. 95. Replying to your dispatch concerning troop convoys. I fully appreciate the importance of matters set forth therein. It is considered of vital importance to reduce cable communication on this subject to minimum. A comprehensive report was forwarded via Lieut. Herbst on *St. Louis*, and another will be sent by steamer.

As the plans contained in this letter were approved, and as they were adopted by the department in their entirety, without change, and continued thereafter to govern the movements of our transport operations throughout the rest of the war, I would now make a few brief comments before proceeding further. This report of July 6, 1917, is perhaps too technical to read to the committee. It is, however, a very important document and was included in the record.

Those letters are long and very technical, and I think it would be no good at all to read them to you, but they should be submitted to the record so that they can be examined.

(The documents referred to are here printed in the record as follows:)

[Letter No. 17.]

OFFICE VICE ADMIRAL COMMANDING  
UNITED STATES DESTROYER FORCES, EUROPEAN WATERS,  
*London, July 6, 1917.*

Mr. William S. Sims,

U. S. Navy Operations.

Re: Concerning protection of Army convoys in trans-Atlantic passage.

I am sure that the responsibility for the safe passage of troop convoys should be placed upon the commander of the escorting force. As I have latest information as to enemy movements, I herewith make suggestions as to the procedure which I consider necessary for their protection.

These suggestions are based upon actual experience with the four convoy groups already made passage and after a thorough consideration of all the experience in connection with such convoys.

The danger in connection with troop convoys lies in the possibility of interception by radio and wireless communications in connection therewith.

The suggested procedure is therefore based primarily on this consideration:—To prevent against any information reaching the enemy as to routes and movements of convoys in time to be of any use to him.

Convoys will therefore be against all wireless communication between ships of the force and the shore except in cases of extreme necessity.

It is based on the necessity of my having definite information as to the movements of the enemy.

It is also based on the necessity of my having definite information as to the movements of the enemy, as has been reported to the department, and is essential to the safety of vital merchant convoys. And in addition, it is necessary at all times to take advantage of any opportunity for operations against the enemy.

It is therefore necessary that I be enabled to plan in advance and to coordinate the movements of the destroyers in the submarine zone.

The suggested procedure, stated in the order of its occurrence, is therefore:

1. The British Admiralty codes as far in advance as possible of (a) the name of the convoy group, (b) the number of ships, and (c) anticipated departure time.

2. The order should contain no information as to routes to be followed or as to the time of departure.

3. The orders to the convoy group in the manner prescribed below, and the greatest possible secrecy should be maintained, not even the contents of the orders to be known generally to officers or clerical personnel, in fact, by the convoy group commander himself until the time of departure.

4. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

5. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

6. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

7. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

8. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

9. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

10. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

11. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

12. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

13. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

14. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

15. The orders will be known hereafter as the standard meridian. I will assume in the absence of contrary instructions that the standard meridian in referring to standard meridian will refer to the standard meridian.

"Convoy group No. 1 latitude 49 N. 10 a. m., August 21."

I will understand this message to mean that convoy group No. 1 (as reported) sailed on the date of this dispatch, and that it will cross the meridian (the thirtieth) in latitude 46 (49 minus 3) at 10 a. m., July 21.

On this information I will be enabled to prepare in adequate time detailed orders for the escorting destroyers and issue the necessary instructions to their readiness for the duty in question.

In the case here used for illustration I would understand that the convoy passing through latitude 46 N., longitude 30 W., on August 21, would proceed on its course at its average sea speed direct for its destination.

The escorting destroyers will receive orders to intercept the convoy group, and well to the westward of the dangerous submarine zone. And they will have orders as to any necessary diversion from the direct route on the way to their destination. They will also be kept informed of the latest news at all times from Queenstown as to enemy movements.

Fourth. The destroyers, after joining with the convoy group, will inform the special secret code of the approximate time and latitude in which they will cross the certain meridian—usually the tenth.

This information will reach me through Queenstown station, and will enable me to notify the French ministry of marine in order that any necessary measures may be done, and that French torpedo boats may be on hand off the port to give the necessary instructions as to the method of approaching the port.

5. To sum up, two dispatches only would be sent to me from the depot. The first would send nothing in return except acknowledgments.

The first of the two dispatches should be sent as far in advance of the time as possible to anticipate approximately the time. This dispatch is particularly important, because if I should find that the prospective arrival in the submarine zone of troop convoy should coincide with the arrival of a merchant convoy it would be necessary to request a delay of one or the other.

The second dispatch, which states only latitude, date, and time of crossing the standard meridian, gives no information of essential value to the enemy, because the standard meridian is not mentioned in any dispatch.

6. I would strongly recommend that no other cable or wireless communication be sent except in case of extreme necessity; and further that the convoy group be directed to carefully avoid wireless communication except such as may be necessary at very low power for communication with destroyers when they are in a relatively close position.

7. The convoy commander should be directed to accept the advice of the destroyer commander as to courses and speed and formation after escorting group have joined. They will have the latest information as regards enemy movements and it will also be possible, if necessity arises, to communicate with them from their headquarters at Queenstown, where the latest developments are always known.

8. I would strongly recommend that no communication be made with the shore. It is very unwise, as long as sufficient escorting destroyers are at Queenstown, for French men-of-war to attempt to meet and escort our convoys except when they arrive near their destination, to give them information by radio channels, etc. Such a course necessitates radio communication in a code now well known to be compromised. There is also great danger of misunderstanding on account of differences of language.

I have thanked the French ministry of marine for the courtesy extended to our convoys by the French vessels which were sent to meet our first two convoys. They were sent primarily as a courtesy in view of the historical significance of the occasion. I am in constant touch with the French ministry of marine and will be no misunderstanding. I think it very undesirable to send communications concerning the movements of the convoys to the French ministry of marine as to me. I will keep them fully informed to such extent as may be necessary for arranging for arrival of the convoys.

9. One of the first essentials in the movements of shipping in the war zone is that it should never stop or even slow down, but should proceed to destination at maximum speed, regardless of circumstances. If, for example, in heavy weather escorting destroyers should not be able to join, the convoy should disperse and proceed independently at maximum speed, and zigzagging. This is the practice in British service. There is little danger of submarine attack in such heavy weather.

Likewise, in case of fog or other unusual conditions, if the convoy should become separated, it is much the wiser course for each ship to proceed independently than to attempt to reassemble by changing course, slowing down, and sending out wireless communications.

and merchant codes are unreliable. There is good reason for this in the hands of the enemy. It is therefore entirely essential that communications, when necessary, be confined to the latest United States code with ciphers. Our destroyers are equipped at all times with the necessary communications while en route which can not be made preferably by destroyers, which have the code, to "Vice Admiral" who will take the necessary steps and keep me fully informed of the situation in Queenstown.

When the convoys have reached the submarine zone they should be under the escorting destroyers, subject to orders of the commander of the Queenstown (the command under which they are operating at all times) fully informed at all times as to all duty being performed by them and accept full responsibility for all orders which emanate from the escorting destroyers. They are thoroughly familiar with the policies of communication in use in Queenstown area, and it is highly desirable that they operate under the same policies and methods as those with which they are working in the war zone.

An incident illustrating the great danger of attempting to communicate with one headquarters. Although every measure had been taken to insure safe passage of convoy group No. 1 through the submarine zone, no orders had been issued with the full cognizance of French and British authorities in the "French, Russian, English" code was intercepted at Brest.

The dispatch sent in a code which is considered very unreliable, but was received very poorly or garbled in transmission, and for this reason, the content of the dispatch itself, further radio communication was undoubtedly necessary.

The dispatch asked where French men of war would join the first convoy. This was unnecessary, as all arrangements that could be made concerning the group had been made in advance. Even in case the French torpedo boats did not join the group reached the coast, it was very inadvisable to communicate with the French Admiralty, particularly with an unsafe group was under escort of six destroyers, which is more than is usually the case with convoys of such a size.

The department will see fit to adopt the recommendations contained in the report which will involve placing full responsibility on me for handling the convoys in these waters. I am convinced that the principal danger to be met is the enemy from intercepting cable dispatches as to the position of the high seas. Hence the necessity for a minimum amount of communication and the undesirability of selecting a series of rendezvous and referring to them in dispatches between the department and myself in France and between the various stations involved in England. The method suggested is "iron clad" in this respect, namely, that the messages indicated were intercepted and translated by the enemy and that they would enable them to intercept a convoy on the standard meridian is not mentioned and three is added.

The method involves the inconvenience of having the convoy reach the standard meridian at a prescribed time; but we can always be sure that it will be there at that time, and if it is somewhat late this means only that the enemy will wait for it. But even this inconvenience can be avoided, under exceptional circumstances, by allowing a sufficient margin between the time when the convoy is to reach the standard meridian and the time when it is necessary to reach the standard meridian at the prescribed time.

It is reported, a convoy of eight transports with an escort of more than two convoys of four transports, each escorted by four destroyers, on June 13, 1917.

The convoys follow each other at intervals of less than one week, because the convoys are so close together they will require the absence of a great many destroyers at the same time.

The convoys afford no protection against the attack of submarines, should the United States as soon as the destroyers join the convoy, proceed to do so. In the case of British convoys, the cruiser usually joins the destroyers join it, and proceeds to port (for coal, etc.)

It is essential that the convoy commander should always be on one of the transport or merchant vessels. This because both the cruiser and the transport should be free at all times to maneuver separately, the former to maneuver as a raider and the latter to maneuver to avoid the enemy.

In accordance with the plans proposed therein, all the our expeditionary Army overseas, which was transported on can ships, was safely carried eastward through the war zone out any loss whatever from any enemy action.

It is, of course, true that we had some losses of troops on allied transports, which were handled in accordance with the plan, but, in justice to the Allies, it should be pointed out that the transports landed in British ports, and were therefore carried through the same areas as the majority of merchant ships. It was in this area, as I have repeatedly pointed out, that the enemy very wisely, and of necessity, concentrated his submarine efforts.

In view of certain slurring remarks made before this Commission in its previous inquiry, concerning the officers of my staff, I wish to emphasize the importance of these plans, and also the tremendous strain under which they labored, assisted by but one resource at this time, in preparing them, not to mention all of the other demands made upon us.

I wish clearly to establish the fact that the responsibility for the loss of the war, for the safety of our troops in the war zone, rests primarily upon me. If there is any question as to this, the documents which I am submitting should clear it up. It is certain, and that is that there can be no question as to what would have come off if the plans had not worked out satisfactorily or even if our troopships had not been joined at the proper time by their destroyer escorts in the war zone. I would like to refer to two paragraphs only from this letter of July 6, 1917, which embodied the plans in question:

As it is apparent that the responsibility for the safe passage of troop convoys through the submarine area should be placed upon the commander of escorting forces in that area, who has the latest information as to enemy movements, I herewith make the following recommendations as to the procedure which I consider necessary for the future troop convoys. These recommendations are based upon actual experience with the four convoy groups which have already made passage, and after consideration of all British Admiralty war experience in connection with such convoys.

\* \* \* I trust that the department will see fit to adopt the recommendations contained in this letter, which will involve placing full responsibility on me for all convoys while in dangerous waters.

Upon the receipt of this letter in the department in Washington, I received the following message:

[Cablegram received July 22, 1917.]

Origin: Washington.

To: Admiral Sims. Secret 56.

Your letter No. 17. Rules for convoy therein accepted and will govern.

The subject of the assistance which was afforded me during the war period will be taken up later; but the committee can perhaps better understand the task which confronted me at this time, in handling all the subjects which you have heard about in previous testimony, if I dig out the same time digging out and digesting previous allied experience with troop convoys, in order to prepare this plan. From this experience, upon which we based the plan, we found out just as much about how not to do it as about how to do it. We went on to a detailed history of convoy after convoy, and studied all the difficulties which arose, both before the convoys sailed and while it

Throughout the war the routes followed by all troop ships, in fact, also by all United States Government vessels, were furnished from my headquarters in London, and detailed plans were prepared and issued to insure the getting up with the convoys on the high seas to escort through the dangerous areas.

With the establishment of the convoy system I referred to at the end of July and in August, 1917, by the adoption of the recommendations which I made at this time for Army and Navy supply ships. It will, therefore, be of some use to read again my cables of July 12, 14, 28, 31, and August 7, which I have already either read, or referred to, in regard to the convoy system, and in all of which I urged that it should be coordinated in such a way that ample protection be given, not only to troops but to Army and Navy supply and mercantile shipping as well. The department agreed to this, and it was followed throughout the war, with the exception of a few months, from London, to assign routes to all convoys and to provide the necessary escort for the danger zone. The effectiveness of the plans recommended is to be found in the fact that the convoy system thus established, and through which troops and Army supplies were transported with complete safety from submarine attack.

From these communications and the department's acceptance of them it developed that our troubles in handling troops were not too far off. It was about this time, that is, during July, as nearly as I can remember, that the authorities at home started in the practice of sending troops overseas in allied passenger liners and other such cases the allies were not consulted at all, and apparently all that was done was to go to the office of the shipping lines and order space, filling it up with troops. I distinctly remember the embarrassment which was caused to the allies by suddenly finding after the ships were on the high seas, that they were being used as troop ships. I remember that the question arose as to what a troop ship and what did not. As repeatedly stated, we were fully short of escorting and protecting craft.

It was a heartrending task to try to justify the allies who were justified in drawing the line. Various schemes were proposed, the attempt to divide shipping according to its value being the outcome of the war. In all such classifications, "valuable" always came first, and then followed such designations as "valuable," "valuable," and so forth. It was even suggested that passenger vessels with wholly inadequate or, in some cases, no escort at all. And then the question would arise as to whether a ship was a troop ship, whether she had only 10

troops on board, the method of communication completely confused. All experience during the war was lost. No caution could be too great to restrict the number of ships entrusted with essential information upon which the safety of the fleet at sea might depend. I learned during these days that concerning troop sailings continued to be rather confused among various allied officers.

I did everything I could to get all communication concerning movements on the high seas narrowed down to one line. For I sent the following cable on July 24:

To: Secnav.

One hundred and twenty-nine. In order to insure safety of troop consider it essential that no cables concerning movements, times of arrival, by Army or others, but all information should be sent through Navy Department, and I will notify all concerned, including French ministry of marine.

It should not be forgotten, however, that the substantial recommendation had been made many times before.

On July 25 the department cabled me that they had accepted my suggestion.

On July 28, 1917, I cabled the department again, concerning many sources from which information concerning these ships was reaching Europe. My cable was as follows:

JULY 28

To: Secretary of Navy.

One hundred and forty-five. Information concerning proposed and actual movements of troops and troop supplies reaches France in various direct and indirect ways. For example, from War Department to its various representatives abroad, French military and naval attachés, and from the various French missions. Information concerning troop movements has even been heard in social circles. The greatest danger of such information reaching the enemy lies in methods of collection and codes used, in multiplicity of official, or other communications. All experience of war, in handling valuable Government shipping, and all service experience, points to necessity for restricting communications to a few trusted and reducing personnel who are to be trusted with vital information. I therefore submit that the most important measure that can be taken to insure a high degree of safety for troop and troop supply shipping, and in fact to provide against disaster, is to require that all information concerning movements of such ships, proposed or actual, should be transmitted safely through the Navy Department, which is holding me responsible for informing all parties concerned on this side, in time. French ministry marine and Gen. Pershing are in full accord with these recommendations. The French Government is taking steps to stop future communications by their representatives in America. But it is necessary to also take effect to insure that no information concerning the above is sent out of War Department officials of any government, or our own, except through Navy Department, which alone can be responsible for safety at sea.

This message was accompanied by another message of the same date, sent by Gen. Lassiter, the War Department's representative in Great Britain, to the War Department, indorsing my recommendations, and urging that all such information should be sent through me. This message I will not read, but will merely mention for the record:

The message referred to is as follows:

[Cablegram sent July 28, 1917.]

To: Secretary of the Navy.

Serial No. 155.

No. 155.

For: War Department.

"With regard to the movement of United States troops to France via England, it is necessary to know two weeks before the arrival of the troops in England—

"First. The exact composition of the party, i. e., the number of officers, men, nurses, civilians.

"Second. The amount and character of baggage with party.

"Third. The purpose for which the party is coming, i. e., to serve with American, British, or French forces.

information should be furnished with regard to all parties coming, no matter how small their size. Thus, if staff officers are coming on a certain boat that fact should be given. Moreover, if any parties of a quasi military Red Cross or other organizations having a distinctive uniform, etc., should be given. On receipt of this information in London it will be transmitted at once to the war office and to Gen. Pershing in France. Lawler."

SIMS.

Message of July 28, 1917 (my No. 150), I again called on the department to the importance of keeping secret my letter No. 17, concerning the plans for handling our troop seas. This message was as follows:

JULY 28, 1917.

My letter No. 17, and my letter regarding troop convoys. Please note recommendations that procedure contained in my letter be restricted only to troop and troop-supply ships bound for France, and not individual convoys of small units and bound for England or other countries. It should be noted by British shipping officers, the same as for all British ships independently. The system I recommended should not be confined to the ports at various ports, but should be confined solely to one port. A message was received by Admiralty concerning the system referred to system recommended for troop convoys, but was not understood. If cables are to be exchanged with any other system, its primary object of secrecy will be destroyed.

SIMS.

The following reply from the department:

ADMIRALTY.

My letter No. 17, regarding troop convoys, known only to two officers. The recommendations therein have been used only for convoys bound for France, and not for you request in your 150. Commercial ships bound for England may be used. We have not misunderstood your wishes in this matter. The Admiralty message about naval vessel *Philadelphia*, and the fact that we are communicating directly with you. 18001.

BENSON.

On July 27, I was informed by the department that arrangements had been made for handling all communications with regard to troop convoys and Army supplies in the manner that I recommended. On July 28, I received a copy of a memorandum from the Chief of Staff at this time to The Adjutant General, recommending that the recommendations be put into effect. It would not be of interest to read this memorandum, and I recommended that it be inserted in the record. The memorandum submitted is here printed, as follows:

The recommendations of Admiral Sims the War and Navy Department concerning movements of troops should be sent to the War Office in London. The following memorandum covering this subject was received from the Chief of Staff of the Army on August 2:

AUGUST 2, 1917.

(Confidential.)

MEMORANDUM FOR THE ADJUTANT GENERAL.

The following are given under which the military attachés in Washington have been furnished with advance information of sailing of troops and organizations for service abroad are revoked. The instructions of the Adjutant General of the Army has been sending notice of sailing of Army personnel to Gen. Pershing are hereby revoked. The instructions actual or prospective, will be sent to The Adjutant General by confidential messenger from the ports of embarkation. When the instructions are furnished by confidential messenger a commissioned officer

of The Adjutant General's Office—to an authorized officer of the Bureau of the Navy. It is then the exclusive business of the Navy to convey the message to the senior naval commander abroad, who is charged with the further duty of conveying it to Gen. Pershing and our attaché in London of such sailings.

The chief of the embarkation service will govern the communications with the Navy by the same rule of confidential messenger service. The purpose of these rulings is to prohibit all bureaus and agencies of the War Department from transmitting information relative to the sailing of our personnel or our cargo ships for the purpose to confine the transmission of such information to one channel only, the Navy. This prohibition extends to the giving out of such information to any person in this country which either in the course of duty or by accident may come to the knowledge of any officer.

TASKER H. B.

Major General, Acting Chief

On August 10, 1917, I received a message from the department announcing that the methods I had proposed in my letter had been accepted and would begin with group 7. This letter was merely a further elucidation and confirmation of the original letter proposing the plans for handling our troops at sea.

The department's message was as follows:

SIMSADUS, London:

Opnav, 124. Reply your letter 31. Troop convoy system satisfactory with group 7. Acknowledge. 2009.

ADMIRAL

All the recommendations that I had made in regard to reducing communications to one channel, had been fully discussed and accepted during the naval conference there at the end of July, 1917, and the recommendations were made only after a full discussion with Gen. Pershing, and with the chief of staff of the French Navy, who had agreed with me absolutely, and the British authorities were in complete accord.

Gen. Pershing assured me that he would cable the War Department that all communications concerning troop movements should be handled only through the Navy, and the French and British chiefs of staff also assured me that they would instruct their officials in America to discontinue sending any information about troop movements. I might add that one cause of great concern about this matter was the fact that I was horrified to find during my trip to Paris, that information about these convoys coming over was known in official and social circles, even before Gen. Pershing had said about it himself. It appears that the various allied naval forces and missions in America had been picking up all kinds of information here and there, telegraphing it to their Governments. The same thing had been true of the War Department. After my recommendations were put into effect, the leakage of information stopped, and it became possible to handle the great volume of Army shipping with comparative secrecy.

While discussing this question of the protection of American troops while they were being transported across the eastern Atlantic, I should perhaps be emphasized again that I fully realized that the responsibility for their safety rested upon me, and upon me alone. I realized, too, from the first, that this, of course, was the primary mission which the American naval forces in Europe had to perform. However, during the period in which our troops were crossing in very limited numbers, and especially in the first months of the war when practically no troops were being sent over, I regarded

that our antisubmarine craft should be used to the advantage in defeating the campaign of the submarine war-shipping, and thereby saving the tonnage so vitally needed for our cause as a whole as well as for the support of our army. Gen. Pershing telling me at this time, that is, Jan. 1917, that an army of a million men on the western coast would require 50,000 tons of freight a day. In other words, it would require a total of five 10,000-ton cargo ships arriving every month. It would have required a total of 60,000 tons of shipping to have kept this army constantly supplied with necessary equipment, food, munitions, artillery, and so on. Very clear from the first, as I have already pointed out, that no shipping could be saved at this time, it would probably have been for America ever to support an army in France. This was completely in accord with the Secretary of the Navy's statement set forth in the following cablegram, which I received on July 28, 1917.

JULY 28, 1917.

Washington,  
Dear Sir:

The primary duty of the destroyers in European waters is principally to protect transports with American troops. Be certain to detail an adequate force, and in making the detail bear always in mind that it is to have a sufficient number to insure protection to American

JOSEPHUS DANIELS,  
*Secretary of the Navy.*

that in order properly to protect American troops it would be necessary to protect and to save enough of the shipping to keep this army in France. The Navy Department realized this but did not appear to give it due weight. It was required for all the messages that were sent between my headquarters and the Navy Department, that the whole question of the transport of troops abroad, and particularly profitable to go any further into the matter, that enough evidence has been introduced to show that in attempting to direct the whole voyage of the transports from America, committed a very dangerous tactical error, as they could not possibly possess the knowledge of Washington upon which the orders for the protection of the war zone should be based. I have also shown that the department themselves recognized this error, by calling for recommendations, based upon an examination of the experience of the Allies; that when these recommendations were sent to the department, they were adopted, and subsequently the whole of our Atlantic transport of troops and the responsibility for the safety of these troops and rests upon me, in so far as their passage through the zone is concerned, that their routing was done from my headquarters, that their escorts were arranged by the forces under my command, that the best proof of the effectiveness of this protection was the fact that no troop transport bound for France with American troops was sunk by a German submarine. The relations of how close and cordial were the relations between me and that of Gen. Pershing, and of how completely

we were in agreement, it may be interesting to refer to a cable I sent Gen. Pershing on January 4, 1918, in reply to a cable from him with regard to the routing and handling of army supplies. My message of January 4, 1918, was as follows:

[Cablegram sent Jan. 4, 1918.]

To: Gen. Pershing.  
Urgent. For Gen. Pershing.

All the forces under my command are disposed with the primary purpose in the safe and prompt dispatch of troops and supplies to France, and out of France.

Regardless of original destinations, I shall at any time, at your request, send cargo vessels, fuel ships, animal transports, or mechanical transports of any kind you desire. This diversion can be made at your convenience, at any time the vessels are en route, or after arrival on this side. Our plans provide for the movement of vessels from one port to another, at any time, to facilitate your operations.

You will appreciate that, with troop transports, the utmost safety must be combined with secrecy of movements. There are many considerations to be placed before you in a cable. For this reason I directed Commandant January 2, to proceed from London to your Paris headquarters, to present considerations. If the result of this conference was unsatisfactory, I request you to do me the honor of sending an officer to London to present your further views on this matter.

I fully appreciate the urgency of the situation, my dear General, and nothing undone to assist your operations in every way. 12004.

It will be noted that there never was any question of a lack of recognition that the primary mission of the forces under my command was the protection of American troops and supplies.

It would be possible to take up many other subjects and discuss them in detail, but how, in other cases, the department similarly insisted upon the need for information from Washington, upon the incomplete information which was available there, and how thereby mistakes were made, and impracticable plans proposed. I have already shown you how, in the case of convoys, for example, because of a wrong estimate of the situation, the department delayed putting into effect the system, and strove, as an alternative measure, to carry out schemes, such as the arming of merchantmen, which were certainly, but of minor importance, or such as the establishment of a completely new system of handling merchant shipping, because of the critical situation, was thoroughly impracticable.

I wish now to discuss only three or four other similar cases, for example, as the plan which the department insisted upon, of meeting a possible raid against convoys, by enemy battle ships in the Atlantic, and, finally, the plans proposed by the department with the object of finding a royal road to victory, by blockading German ports, or similar measures.

The question of a possible use by the Germans of raiders against convoys, and perhaps even of the employment of battle ships for this purpose, had, of course, been under consideration by the staffs of the Allies, practically from the time at which the use of a convoy system was begun. It had been fully recognized, and it was pointed out, that a heavily armed, fast ship could probably destroy a convoy with extreme ease, if such a raider ever got loose in the ocean on the convoy routes. I pointed this out repeatedly to the staffs of the Allies in the summer of 1917, as, for example, in my official report No. 864, of September 15, 1917. At that time I pointed out that it was important to have plans prepared, and kept up to date, at all times, in the event of such raider activity.

of course, be possible to abandon the convoy system and revert to a plan of dispersed shipping, but that this seems a sound one, and that greater protection could be afforded by keeping the shipping in convoys, and by providing convoys with escorts of sufficient gunpower to overcome and destroy an extract from this letter in the record. It is

[Letter 864.]

SEPTEMBER 15, 1917.

One move would be to use the relatively smaller number of long-range escorts, relatively close to the American shores for the sole purpose of tracking convoys passing the information along to raiders or to hold in reserve nearer to the European coast.

It is important to have plans prepared and kept constantly up to date in view of the necessity should arise of initiating an extensive scouting or actually individual escort of troop and other important convoys. It is probable at any time if a serious menace should be encountered from which to abandon the convoy system and revert to a plan of dispersed shipping. It is greatly believed, however, that such a course would not be a sound one. Protection will always be afforded by holding the shipping in the hands of sufficient power.

It is possible, if the occasion demanded, be dispersed at any time. That all ships of convoys are given orders as to routes to follow in case of emergency.

The system of independent sailing such as existed before the convoy system would again return us to a situation in which the available patrol craft operating as patrol craft would be wholly inadequate. The subject would be entirely out of the question.

The negotiations are now under way with the Japanese Government to send their battle cruisers and perhaps some of their light cruisers to a measure of preparedness against high-sea raiding during the

report of October 23, 1917, I referred again to the possible activity of enemy raiders, again emphasizing that it was one which required the most thorough and complete knowledge of the situation, which could not be made with any certainty at that time. As I will point out in a moment, I had to go to obtain from the department a sufficient staff to conduct a study of the war situation, and the formulation of a plan would be required to meet such a situation as this. The possibility of the operations of enemy raiders. In this letter of October 23, I discussed the cruises of raiders which had escaped, and the possibility of a plan of operations, pointing out again that the only effective solution was the assignment to each convoy of a force which could be expected of the raiders.

I record an extract from this letter. [Reading:]

[Letter Oct. 23, 1917.]

The possibility of enemy raiders, particularly during the coming winter months, with grave possibilities. The subject is one which requires a complete estimate of the situation, which can not be done with any certainty. Some of the general considerations involved in this subject are:

1. The possibility of British and allied fleets to prevent escape of raiders.

2. The possibility of raiders in the waters of Norway. The question of whether raiders have used, and will use, the waters of Norway for escape.

3. The possibility of the convoy system and provision for escorting all convoys with sufficient force to withstand the attack of raiders carrying at least 6-inch

4. The possibility of shipping in remote areas such as the Indian Ocean, South Atlantic, etc., whether escorted or not, in order that they may be easily

diverted the moment any news of a raider is obtained. As long as ships are in convoy, it is a most difficult, if not impossible, problem to attempt to control its routing, particularly shipping which is under way on the sea.

(e) The broad question of whether the enemy may consider it as well to jeopardise the chances of success in possible future fleet actions in favor of his entire light cruiser force, and possible battle cruisers, in addition to merchant raiders, in serious attempts at high-sea raiding.

Action against enemy raiders is to be considered from two points of view: first, operations to intercept them before they reach the open sea; second, arrangements to protect shipping if the first can not be made effective.

As long as Norway remains neutral, we must certainly expect that her neutral waters will be utilized by raiders, particularly on the long dark nights of winter, and it is permitted it is practically impossible in view of the large sea areas to the north and even around the north of Iceland, to prevent the escape of raiders.

In addition to the recent very successful attack by the new very fast ocean raiders on a Norwegian convoy in the North Sea (as reported by cable) we have ample evidence of what a few raiders even of the converted merchant type, may accomplish. Evidence indicates that the *Mowe* probably left Germany during the first half of November, 1916, and, after sinking 112,000 tons of British shipping alone, carried many valuable cargoes, she succeeded in returning to Germany in safety.

The *Wold* apparently left Germany during the first half of March, 1917, with a cargo of mines with which she succeeded in accounting for at least 90,000 tons of shipping alone in the Indian and Pacific Oceans.

The danger from mines in the track of shipping well outside of what might be considered the war areas, is illustrated by the sinking of the *Cumberland* off the coast of South Africa in over 75 fathoms of water. Also the sinking of two large ships in the vicinity of the Cape of Good Hope over six months after the first merchant ship had been mined in the same vicinity.

As no evidence of the *Wolf* has been obtained since about the 1st of May, 1917, it has either returned to a home port or come to grief elsewhere.

The *Seeadler* left Germany in the middle of December, 1916, and accounted for at least 10,000 tons of shipping in the South Atlantic before she was finally run aground on one of the South Sea Islands within the last few months.

The tonnage figures mentioned for the above vessels are minimum figures. There are definitely known concerning British vessels. In addition, the ships in the Atlantic undoubtedly accounted for considerable allied and neutral tonnage, and there are also other ships still long overdue which may have been sunk.

The fact that the amount of tonnage sunk by enemy submarines has not increased in spite of an increase in the number of submarines operating, and the fact of the *Seeadler* coming into the war with the effort that she is putting forward in the way of a submarine campaign alone to ultimately defeat the submarine campaign, would seem to be in itself a sufficient reason to expect very determined efforts by the enemy to add to the tonnage sunk by submarines the efforts of high-sea raiders.

From the general survey of the situation it is considered very impracticable to prevent the escape of raiders during winter months. During these months there is over 20 hours of darkness in northern waters which would be used for escape.

The only apparent effective solution would seem to be the consignment of a convoy of a force superior to that which may be expected on raiders.

I was so seriously impressed with this possibility that, even with the insufficient staff that I had, I made a special study of this question, in 1917, and submitted on November 2, 1917, a letter to the Secretary of the Navy regarding the protection of troop convoys, in which I specifically discussed the possibility of enemy raiders operating against them. This letter is too long to read, but as it covers the whole situation, it will perhaps be interesting to insert it in the record:

#### TROOP TRANSPORT SPECIAL LETTERS.

NOVEMBER 3, 1917

From: Force commander.

To: Secretary of the Navy (Operations).

Subject: Protection for troop convoys.

1. The three things that endanger our troop transports are:
  - (a) Submarines and mines encountered in the zone.
  - (b) Raiders on the high seas.
  - (c) Large submarines operating outside the zone.

There can be no question that the maximum danger is occasioned by the long winter nights. I think the next greatest danger is posed by the particularly if ships are sent without ocean cruiser escorts to some danger from a submarine.

Dealing with the danger from submarines and mines in the North Atlantic, to protect our transports, although it must always be recognized that the protection given, a chance shot from a submarine at a long distance may sink a vessel, a drifting mine torn up by a mine-sweeping vessel, or mines not encountered by the sweepers may be a serious danger.

It is to be noted a battle cruiser on the high seas would easily be sunk, and again our protection is only partial.

It is to be noted the new problem of large submarines operating outside the regular submarine area. Thus far there has been one or two large vessels operating outside the regular submarine area. One of these vessels has been to the southward of the West African coast.

The dangers occasioned by these submarines have been by gunfire, and difficult to maneuver under water, and never will be the smaller type. Like other vessels of small freeboard, they tend to areas where good weather prevails. It is not probable a submarine of large type to cross the North Atlantic or a large submarine during the approaching winter gales, the whole problem. There is always the question of strain on personnel and equipment, to remain at sea for several weeks. I consider it probable efforts of these submarines will be confined to areas where

they could operate in such areas as the islands off Africa, off the coast of the North Atlantic during the winter, but that there is more danger from them.

It is to be noted that a 20-knot ship, and a 17-knot ship, the 27-knot *Kaiser Wilhelm*, would fall an easy prey to a submarine. This is the reason that I do not recommend routing our large transports. It is true that the *Olympic* was routed independently for a period when only small, slow raiders were sent out by the enemy. A system has been established, resulting in a partial success, but it is unlikely that the enemy may meet this situation with a number of raiders of greater speed and power. This is a possibility to be considered.

It is to be noted that it is not impossible, for our destroyers to stand by our transports during the winter. There is no doubt that the destroyers can make little progress into them. Furthermore these destroyers can make little progress into the vessels and result in laying them up. I do not carry out a plan of giving to our transports destroyer escorts during the winter. In fact, there may be times when our destroyers, on this side, and may have to travel a considerable distance through the zone with destroyer escort. The British have had some difficulties in handling troop transports. Within the last year, some of our troop ships, the *Panama*, and this vessel, were sent to the zone without escort, as it was too rough for the destroyers. There are risks that may be expected.

It is to be noted that our transports to the southward in order to avoid the zone. Bad weather will be encountered to the southward where good weather prevails, this is precisely the danger that is most likely to be found. I should recommend that

our destroyers to escort our convoys all the way from the zone to the Azores. However, destroyers based in the Azores may be out of the capacity of a repair ship of the zone, and the scheme is hardly practicable during winter months.

It is to be noted that these

destroyers be retained in the United States for escorting our transports to protect them against any large submarine that may be encountered.

It is to be noted that it may be varied so as to deny the enemy information of

(c) That an ocean escort be provided sufficient to withstand any raider that comes to sea. This will mean a dreadnaught in the event that we get informed that the escape of enemy battle cruisers or else sailings will have to be temporarily suspended.

(d) That all escorting vessels should have guns superior to 6-inch.

(e) That all convoys be routed through the North Atlantic, as before.

(f) That any destroyers be released that can be spared for operations on the coast so that greater protection can be given in the area where the danger is greatest.

13. It is unfortunate that at the very time that our larger transports come to the attention the number of men that Field Marshal Haig wishes to send on leave has been increased. We have, as the department knows, a limit now of 600 arrivals per week, or 5,000 a week. If we can provide from the United States some fast draft transports of 18 knots or upward for cross-channel service, we can materially relieve the congestion.

14. The British war office are striving to comply with Sir Douglas Haig's wishes and to increase the number of men on leave. If the leave requirements cannot be met, it will mean that practically none of our troops can be handled into England unless we can provide some fast steamers for cross-channel service. I consider this a very urgent one. An inquiry has already been sent by cable indicating the types of ships needed. I think perhaps both the *Harvard* and the *Yale* could be used and perhaps some others of a similar type could be found.

15. Aside from the question of handling our large transports, there are a number of British liners crossing that can be utilized for carrying our troops. This is a saving in tonnage to us and a great convenience to land troops in England. French ports are very poorly developed, and all the assistance we get from the French ports is helpful. I have repeatedly pointed out, however, the desirability of no freight via England, only troops and kit; but despite my recommendation freight still rolls in, embarrassing the situation more than ever. I had hoped that for our first lot of large transports to come direct to England; but I find that in connection to troops and kit these vessels contain some 4,000 tons of freight for France. The department will understand that this additional amount of work thrown on the cross-channel service is most serious and can not be handled at present. As a result, some vessels could not be received in England. As a compromise I have suggested that the department the desirability of lending these ships with freight for England, to be carried to be determined by Mr. Guthrie, the allied shipping representative in London. It is possible that wheat or some nonexplosive freight could be carried on large ships and these vessels routed direct to Liverpool; but this is contingent on our help in furnishing steamers for cross-channel service.

16. I consider Liverpool the safest port of entry in the submarine area. At present, however, I think we shall have to send our large ships to Brest and then, when they are unloaded, escort them into England to be coaled.

17. I have previously reported against using the *Vaterland* for the present. We have a little more experience in handling the other large transports. The *Vaterland* is of course a much longer target, and injury to her would be a serious affair, assuming too that all of the troops that we have to transport for the next few months can be accommodated in other transports, assisted by British liners. When the situation becomes pressing I presume we shall have to use the *Vaterland* and take an additional risk.

18. British destroyers would escort all our troops sent in British liners. Queenstown destroyers (our own) escort all our troops in regular convoys and also escort to all supply ships in convoys sailing from Hampton Roads or Sydney. British destroyers escort to a position near Brest all our store ships in New York convoys.

19. Forces based on Brest escort into France to storeships in New York convoys that are carried by British destroyers to a rendezvous near Brest. The British also distribute our storeships to their destination along the French coast, and out of French convoys of empty vessels. It will be noted that the great bulk of the work is done by our Queenstown destroyers, and that the forces based on Brest are principally coasting work, and for escorting out our empty vessels.

20. At the present time, as we have things organized, we can handle on the coast convoy every eight days. If six or eight vessels are sent in a convoy averaging 100 troops per convoy, this would mean approximately 60,000 troops a month direct to France with the addition of some 15,000 or 20,000 troops a month through England in British liners under the present arrangement.

21. To bring the troops in at a faster rate will require more destroyers on the coast and any considerable increase in storeships will also require more destroyers.

22. With reference to the use of submarine versus submarines, this matter has been given more attention since the establishment of convoys. Formerly the system was patrol surface craft of sea routes. With this system it was rather difficult to patrol submarines except in limited areas. Now that a large part of the patrols have

to provide escort for convoys, there is considerable area open for our submarines versus submarines. I believe the system will never be such as the attacking submarine must rely on torpedoes, owing to the difficulty of getting into position to attack the enemy submarine. But a new class is now being built in England, of which Lieut. Pierce has been provided for the use of guns against enemy submarines. I am confident that attacking enemy submarines will give much better results. That the presence in waters of our submarines makes the problem difficult for the enemy, and already a number of German submarines have been destroyed. The presence of our submarines in the Azores will be of great value in keeping enemy submarines away from that immediate

#### POSSIBLE BATTLE CRUISER RAIDS.

There is no further doubt in any one's mind as to the extreme seriousness of the war plans from a distance of 3,000 miles, the case that I am now going to take up should clear it up. It should make clear that, in so far as a statement recently made by the committee by the Secretary of the Navy carried the effect that my position abroad was a purely local one, and that my plans and policies were not any of my business, the statement is incorrect.

In the case now to be considered, I am sure the committee will be impressed with the extent to which the execution of the war plans were required of me, whether I originated them or not. It is a matter of fact, as I have stated repeatedly in this connection, that the principal mission throughout the war was in connection with the execution of the war plans and policies. As you have seen, I was constantly being called upon for advice and directed specifically to take up with allied leaders this and that question of plans and

policy of 1918, as the losses of merchant tonnage in the submarine campaign were falling off month by month and it had become apparent that the submarine campaign against shipping was not doing the work. The allied naval staffs again became apprehensive of the submarine might, as a last venture, send out their battle cruisers in the hope of meeting and completely destroying the submarine convoys, or of compelling the abandonment of the convoy system. I might say that it was a surprise to the Allies that the submarine campaign had not been done this long before, if only for the confusion it caused the Allies and the disturbance in the convoy system that would inevitably have resulted.

My recommendation of my staff in London, which had been established by recommendation and after approval given by Admiral Jellicoe during his visit to London in November, 1917, had thoroughly considered the probable conditions of such a raid and had, in conjunction with the plans division of the British Admiralty, drawn up a plan. A copy of this plan was forwarded to the department in London in 1918.

In 1918, I received the following dispatch from the de-

As last hope. German battle cruisers may be sent out to attack our large troop convoys. We depend upon you to gain control of this point, and Grand Fleet to take necessary action until we are relieved. 11001. Simben 3.

BANSON.

I would like to explain right here—I think I have not an explanation before—that any message that is marked “Simben” was sent with an agreement which I understood to be that any message would be delivered directly to Admiral Benson and not to me and any messages coming to me on the other side that were marked to “Simben,” that meant that they had been sent by Admiral Benson and not necessarily anybody else.

I would like to add in further explanation about “Simben” messages that they were sent in a separate code. There was an officer in the Navy Department who had that code and could translate it, and there was only one officer in my quarters who could similarly translate messages coming the other way. That was to secure extra secrecy to the important messages sent in that code.

The CHAIRMAN. Was that code changed from time to time?

Admiral SIMS. Yes; that code was changed from time to time and only those two people knew it.

To this dispatch I replied as follows on July 2:

Simben 11. Referring to your Simben 3. All possible measures will be taken to gain information of prospective and actual movements of enemy vessels. The Fleet and other British vessels and United States vessels in these waters will be prepared to act within the limits of their capabilities. Notwithstanding all that can be done, it is impossible to guarantee that enemy battle cruisers will not appear in high seas, and it is therefore apparent that battle ship escorts for convoys are their only real safeguard. Attention invited to planning section memorandum No. 26, forwarded with letter No. 21969, June 20, 1902.

By this time the department was evidently becoming alarmed. This is indicated by the following message received about a month later, namely, July 28:

Simben.  
Simsadus.

No. 7. Department feels very apprehensive of at least one enemy battle cruiser getting out as forlorn hope and attacking United States naval vessel convoys. Proposed to send three oil-burning dreadnaughts to Berehaven or Queenstown in a position to protect convoys, depending upon British to give us information of the exit of cruisers from German waters. Comment and recommendation requested as to the better of the two places to send them and have adequate force against submarines. What do you think of our mine force extending at least one line of mines all the way across to Norway? 24027, No. 7.

By

I replied immediately by stating that Berehaven seemed the best base for the dreadnaughts which the department proposed to send.

Replying to this on July 30 the department outlined a complete plan of their own for the protection of shipping against a battle-cruiser raid. I insert the dispatch in full, but as it is long and technical I will not read it, but will refer to and explain certain of the defects of the plans proposed. The dispatch is as follows:

[Highly secret.]

Simsadus.

Simben 8. Reference planning section memorandum No. 26, battle-cruiser raid. The department is of opinion that raid by a battle cruiser against the supply lines to our ports, particularly against troop convoys, is a possibility, and that even if the chance is remote it should be guarded against. The department further notes that the decision arrived at as modified, by the action actually contemplated by the Admiralty, while safeguarding ships leaving port after notice of the escape of a battle cruiser has been promulgated, is in the nature of a negative decision and only partial relief to ships then in transit between United States and European ports. The department further proposes the following definite plan for consideration:

to be applicable to United States troop convoys, cargo convoys and convoys carrying United States troops, other convoys to be determined advisable by Admiralty. Plan drawn on line of battle northward of North Sea around north end Scotland, though with slight modification also to enemy battle cruiser escaping from Black Sea. Plans of escape of enemy should be given to all forces before enemy reaches Iceland lines or has gotten clear of Aegean Sea. Plan applicable to east and westbound ships. Specific details: The Navy Department to request of Japan that she detail a battle cruiser with the Atlantic Fleet at Hampton Roads. The North Atlantic to be divided into three areas: First, west Atlantic, longitude 45° west to United States Atlantic, longitude 20° west to longitude 45° west; east Atlantic, west to east Atlantic destination. The United States to station Division 1, U. S. S. *Tahiti*, U. S. S. *Nevada*, U. S. S. *Oklahoma* at Queenstown or at the former port or vicinity, to act as raider guard against battle cruiser Atlantic and east section. To hold the Fifth Division, consisting of U. S. S. *Mississippi*, U. S. S. *New Mexico*, U. S. S. *Pennsylvania*, in Atlantic section or to proceed where necessary. To use the Japanese battle cruiser are detailed to work with our forces, for the purpose of direct search of convoys. All convoys between longitude 45° and United States or United States or Canadian port, there to await adequate escort.

Utilize battle cruiser as escorts for each convoy carrying troops. To extend the same escort to cargo convoys, and where this is not practicable, battle cruisers for escort to cargo convoys, all convoys east of meridian longitude 45° west proceed to destination at top speed, convoys between longitude 45° west to west diverting immediately to Azores Islands and make for coast under Island San Miguel; convoys between longitude 30° and 45° west proceed to San Miguel or proceed to destination or nearest port as determined depending upon estimated position of enemy cruisers relative to speed of convoys. Westbound shipping: Ships between longitude 45° west to European ports return to port to await adequate escort or divert to Azores Islands, depending upon submarine situation; ships between longitude 45° west and longitude 45° west divert to Azores Islands or to nearest Canadian port, depending upon their proximity to those points. Convoys between longitude 45° west route to destination or to nearest port. Utilize U. S. S. *North Dakota* with Division 3, Division 4, Division 5 to escort troop convoys; utilize cruiser force to escort cargo convoys; maintain a division with one destroyer division instantly ready to proceed; maintain a division with two destroyer divisions in European waters to proceed at Azores Islands, San Miguel. Use Japanese battle cruisers as pursuit force detailed to cooperate with United States forces and if such plan fails, to proceed. Above plan to become effective immediately upon agreement of cooperation upon receipt of broadcast radio and cable stating that enemy battle cruiser had escaped from North Sea. The department to maintain a battle cruiser and oil in European waters and Azores Islands to meet the enemy battle cruiser Division 6. This above plan is suggested as a possible plan to intercept a battle cruiser or small force of enemy ships escaping from the North Sea, to raid our lanes of communication before internment in the North Sea to other seas.

Plan suggested for raiding force escaping from Adriatic Sea or Dardanelles to proceed between meridian longitude 20° and longitude 45° west and proceed to destination or the nearest port at top speed. 10030.

BENSON.

The department's plan provided that one division of battle cruiser was to be stationed at Queenstown, to cover the eastern Atlantic. Another division was to be held at home in the western Atlantic. A division of Japanese battle cruiser was to be requested to base on a United States port, and to search operations. Upon the warning being given, convoys in certain general sea areas, were to return to United States or Canadian port. All convoys in the middle of the Atlantic were to proceed to destination; while east-bound Atlantic were to be diverted immediately to the westbound shipping about the same procedure, re-

versed, was to apply. After the battle cruiser was out, in fact, the trouble was on, another division of battleships was to be sent to escort any troop convoys which were then to move. This plan was to become effective only after receipt of information from the battle cruiser had, in fact, escaped from the North Sea.

The plan was impracticable for numerous reasons, and was eventually abandoned with the full concurrence of the Navy Department and before any necessity for its application arose; it was substituted a plan substantially the same as that previously recommended by the planning section.

I will explain briefly some of the undesirable features of the department's plan:

(a) Most serious of all, it was not a joint plan—that is, it was for American troops and shipping only—a small portion of the whole—and could not be made applicable to all allied shipping. One can imagine the confusion in the Atlantic of attempting to coordinate allied convoys and shipping with conflicting wireless instructions other than a joint plan.

(b) It upset the whole delicate allied machinery for providing a destroyer escort through the submarine zone. That is, in attempting to guard against an enemy battle-cruiser raid it subjected allied shipping to added and unnecessary risk of destruction by submarines. It was quite impossible for the department to know of the extent of this delicately adjusted system in London for providing protection against submarines for all allied shipping. The system was constantly changing as new forces or additional convoys were added.

(c) It was based on an erroneous premise, namely, that we could be sure of counting on advance knowledge of the escape of a battle cruiser. I had repeatedly reported that the Allies could not count on any such information. While we could and did track the progress of submarines quite accurately, a battle cruiser of high speed could make its escape from the North Sea in one night, to the advantage of fog or heavy weather, with small chance of being detected.

(d) If a false alarm of the escape of a raider were given, and the case actually occurred after the latter plan had been adopted, the system of controlling shipping would be so deranged that it could not be put back into normal operation for some time. Consequently there would be increased opportunities for submarines to attack unescorted convoys and shipping as well as unnecessary delay in shipping.

I would like to invite attention at that point to one of the greatest dangers that can be inflicted upon the people who are doing the fighting, by the people at headquarters; that is, that they at headquarters should, in the pride of intellect, draw up a plan to be executed by the people at the front, and thereby incur the danger of drawing up that plan on a false premise. That was done twice during the war. In one case it is my conviction that it cost us at least a million tons of shipping. It was the premise which enabled them to draw up the perfectly erroneous estimate of the situation that the best thing to do was to depend upon arming merchant shipping; and it was that which caused the delay of the convoy for approximately three months. The false premise in this case, and it was exceedingly dangerous—was that we would be sure

when the battle cruiser went out of the North Sea. We never were sure, the premise was wholly false. The estimate of the situation was wholly false; and the department's plan was wholly impracticable. If we come out of all this trouble and expense we have gone through something that will be of value to the United States Government in the future.

The department's dispatch as follows:

[Simben.]

Your Simben 8. I believe it extremely dangerous to base our plan on information of enemy's escape will be obtained, other than that of attack. There is certainly a small chance that this information will be obtained, in long nights of winter, chances will be very much reduced. I believe safety requires plan should be based on the fact that more battle cruisers will be at large in Atlantic, with ample means of protection to attack convoys, before we have any knowledge of their location. Only possible protection against this danger is battle cruisers inaugurated before the danger arises. This would subject us to a relatively small risk of being torpedoed, as compared with the risk of convoys of many thousand troops being destroyed before we have time to protect them. I have consistently advocated this plan, and that no other can offer the same certainty of protection to troop convoys. The following comments are submitted on the department's plan to send a telegram.

A large number of merchant ships at Azores dangerous, because of the risk of attack and extraordinary marine risks due to assembly so many ships. The principle of action should be to keep all convoys moving. To turn back shipping, or to deflect it toward other than the Azores, make antisubmarine escort impossible in many cases, and create difficulties that would tie up many vessels until fuel was exhausted.

An Irish port, as proposed, would be available to escort to safe waters convoys as might be in danger area when alarm was given, and would be a plan than to have such convoys proceed to destination unescorted, then proceed to Azores. If department should decide to adhere to the plan of sending ships to the Azores to furnish escort to shipping assembled there, that the Tagus River would be a better base than an Irish port, or the Azores.

As I have decided on general principle of plan, I will take up whole matter with Admiralty. Final plan must be a joint plan, taking cognizance of all factors.

SIMS.

In explanation of the sending of a vast number of ships to the Azores, and the plan of sending a dozen destroyers to protect them, if there had been ten or one hundred destroyers sent to protect them, everybody would have known that no possible number of destroyers could protect a vessel that is standing still, at anchor.

The British vessel *Justicia* illustrated that perfectly. She was not sunk, and they had 5 tugs and 17 destroyers sent out of the channel from the North Sea when she was in the neighborhood circling around her, and they were firing depth charges, and so forth, and yet they could not save her from being torpedoed, because she was not moving a mile or a mile and a half an hour.

The department, however, replied with a long message upon their original plan. I insert the message in full, not read it:

Origin: Opnav, Washington. Ser. No. Simben 11.

Date: August 7, 1918.

[Highly secret.]

Simsadus.

Simben 11. Your 21. Our 8. The details of the plan drawn by the were laid down to accord in general with the decision of your planning revised by the Admiralty planning department. As to your first point safety requires plan should be based on assumption that one or more battleships will be at large in Atlantic with ample fuel supply and in position to attack before we have any knowledge of their exit from home port, this statement is in contradiction to statement in F. D. O. 80, paragraph 5, and opposed to information which you have from time to time furnished us. It is, however, an important point that a direct statement should be had from (?) the Admiralty as to their ability to provide the necessary information. You will notice in our plan it is department's intention to furnish old battleship escort to number of the important convoy when necessity arises, but there have been many reasons why we did not wish to do this in advance of the necessity, one being that we did not wish to give advance information to the enemy, as to one of the most important points of the plan, and thus give him the opportunity to plan an answer. In this regard you should get a direct statement from the Admiralty, as to the advisability of using our dreadnaughts for escort and when the operations in their opinion go into effect. With regard to the rest of our plan and your comment on it, when battleship escort is provided this in itself on account of its fixed character is only a partial answer and can be countered by the enemy by an increase in his raiding force. It therefore becomes necessary to provide for further contingencies and this the plan submitted attempts to do.

It differs only from the decision of your planning section in introducing the element of premeditated diversion. In general on account of the few dreadnaughts, their slower speed than that of battle cruisers, the number of convoys to be escorted and the great area over which (?) these convoys operated, it seemed first necessary to divert according to a plan which might at same time get our dreadnaughts with battle cruisers and afford greatest protection with minimum number of ships. Second, nothing in the above prevents department from immediately proceeding on the plan of evasion by warnings either before or after the premeditated diversion is operative; and, lastly, as a final resort, it is always in the province of the commander to scatter his convoy. Therefore the department still adheres to its original plan, introducing the element of evasion by warnings; and, lastly, proper movement to scatter be left in escort commander's hands, as last resort department prefers to base division 6 many points of view. U. S. S. *Oklahoma*, U. S. S. *Nevada* will sail in a few days. The plan above outlined will apply to troop convoys to France and to the direct cargo convoys to French bay ports. We desired that this plan be taken up immediately with Admiralty to get their opinion as to HJ and HC convoys carrying our troops, or for such modification as they suggest. 18006. Simben 11.

B

N. B.—The words evidently omitted in coding, as blank spaces indicate.

The gist of the reply was that it was apparently hard for them to believe the specific statement that the Allies could not guarantee advance information of the escape of a raider from the North Atlantic Sea. That, to us, was one of the most astonishing things during the war, the conclusions drawn in that way. Frequently we have encountered civilians who would say to me, "It does not seem to me that you would have much trouble in blocking up the North Atlantic Sea." I would say, "How wide do you suppose it is up there?" They would make a guess, anywhere from 15 to 50 miles. My mental picture of the thing was a little map in the geography book they studied in school, and when you told them that it was 1000 miles across and 900 feet deep, then they began to think about

message they asked me to confirm the statement about the advance information of the escape of the raider from the

fact that there were many reasons why they did not wish to send battle-ships with convoys, in advance of the necessity, and they did not desire to give advance information to the enemy of the most important elements in the plan. They recommended to put the battleships with the convoys, but this would be put a partial answer, and would be the simple expedient of increasing the power of his fleet. It may be well to state that the main thing we were concerned with was the escape of a single raider, which would be run down. If the enemy were foolish enough to send a battle-cruiser force, it would play directly into our hands at once warrant a corresponding heavy detachment of the British Grand Fleet, to say nothing of our own fleet. This was complicated, because the number of United States destroyers were very small indeed, compared to the number of British.

It is astounding to me that the department would consider the number of ships to the Azores, where there was no danger they would practically have to anchor in the harbor, to mention the complications which would be introduced by the necessity of sending many other ships to supply them with provisions before they could continue their voyage, and the destroyer escorts from the Azores, through the submarine

It is enough to send destroyers out from the coast of England, 200, 300, or 400 miles, to meet convoys and to return. To send destroyers from Queenstown all the time required refueling there before they could properly double the number of destroyers before they

The matter was summed up in a personal letter of the 10th to Admiral Benson, of which I will read you the substance.

AUGUST 10, 1918.

Dear Sir: I have just received your second cable about the measures to be taken when battle-cruisers come out. I will take this up at once with the staff and will of course telegraph the answers to the questions you

The only vital decision to make in solving this problem, whether or not it should be based upon the assumption we will get warning of the enemy coming out, or as to whether we will not get warning. The first information will be an attack on the convoys.

The planning section's estimate, to which you refer, will show that upon the assumption that we would probably not get the information it seems to me that any problem of this kind, should, in the worst case, be based upon the worst that the enemy can do.

It is very probable that the German battle-cruisers would come out, but I do not think it would pay them, as I have always believed, that they win or lose, they would want to be in possession of the Atlantic as possible when they come to the peace negotiations.

There is no doubt that all through Admiral Von Tirpitz's book on the subject, that the prime minister at that time

insisted upon having the fleet preserved, while he wanted [Continuing reading:]

This statement about preserving the fleet until the end of the war was made two weeks after the war was declared, in 1914. It may not have been authorized but it was made by the officials of the German Embassy, who were at Newport at the time, and was promptly reported in Newport by one of the retainers.

As to whether we would be likely to get warning of the exit of a battle cruiser, we have often talked over this with the officials of the Admiralty, and it was recently at one of the morning conferences. It was agreed then that the point is that a battle cruiser could get out without being detected; also that if detected she would not continue on the way out, though we would not be so sure, and of course the proposed plan would have to be carried out.

Considering the distance across the North Sea, the position of the German fleet on the western shores of the North Sea, the proportion of bad weather and fog, and limitations as to the use of oil, it does not seem to me at all likely that the exit of a battle cruiser would be discovered. It therefore seems to me that it would be only ordinary prudence to base any plan for the protection of our troops upon the assumption that we will not know of the exit of the cruiser until it has been made.

Some of the people in the Admiralty have expressed the opinion that a battle cruiser coming out for this purpose could not remain out long and would almost certainly be detected upon attempting to return. I have always dissented from this, and in our last discussion of the subject it was apparent that the Admiralty now think it more than likely that the battle cruisers would not go out without a certain amount of coal in vessels that had been dispatched for that purpose.

It has always seemed to me that by the expenditure of a sufficient amount of coal could be cleared from almost any country for perfectly innocent port arrangements made to divert the cargo and anchor it in many places where it is not used and where there would be very small chance of its detection. I should think a battle cruiser, once out, to have facilities for recoaling at least for a certain time. This would, of course, be a serious matter—so serious that it would make the plan would be based upon this assumption.

Of course, if a battle cruiser did go out and we had no warning of her, the chance of her finding a convoy out in the Atlantic would be small. It is assumed that the Admiralty would not search for a convoy close to the European coast, where convoys are sent toward their ports. This would be too dangerous a proceeding, as she could easily cruise in these waters without being detected, and in that case she would be in danger of being run down by British battle cruisers, particularly if one of our destroyers got contact with her and kept contact.

It is therefore assumed that she would take to mid-Atlantic or appear off some point where there are no battle cruisers. The chance of encountering a convoy in the Atlantic would, of course, be small. If we knew she had just left the North Sea we could take measures to protect the convoys, but if we did not get this warning we would probably lose some one or more convoys before the necessary measures could be taken.

It is for this reason that I have always advocated our battleships being used as ocean escorts of our troop convoys. While I have never been particularly apprehensive as to the battle cruisers coming out, I was always apprehensive that they might come out carrying one or more guns heavier than those of our cruisers.

The CHAIRMAN. Admiral Sims, I have certain matters that I want to attend to before the Senate meets, and the committee will therefore have to adjourn now until to-morrow morning.

Admiral SIMS. Yes, sir.

(Thereupon the subcommittee adjourned until to-morrow, Tuesday, March 16, 1920, at 10 o'clock a. m.)

# NAVAL INVESTIGATION.

TUESDAY, MARCH 16, 1920.

UNITED STATES SENATE,  
COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.

Committee met, pursuant to adjournment, at 10 o'clock  
in a.m. Senate Office Building, Senator Frederick Hale

and Senators Hale (chairman) and Trammell.

Admiral Sims. The committee will come to order. Admiral  
Sims proceed!

## REMARKS OF ADMIRAL WILLIAM S. SIMS—Resumed.

Admiral Sims. I was explaining yesterday that I had always  
been in favor of battleships being used for ocean escort of our troop  
ships. While I had never been particularly apprehensive as to  
the possibility of enemy raiders coming out, I was always apprehensive that a  
raider might come out carrying one or more guns heavier than those  
on our battleships.

On September 17, 1918, I sent the following dispatch to the depart-

[Simben.]

On September 13, 1918, matter was referred officially to Admiralty August  
13, 1918, yet received, but from discussion with Admiralty staff I can  
say that I believe that their information service is such as to make the  
provision of securing information of the exit of an enemy raider from the  
Atlantic. I can say that the Admiralty opinion is that battleship escort  
should be provided for convoys whenever there is thought to be possibility of the  
presence of a raider and that the provision of such escort should not be deferred until  
the raider is known to be out.

Sims.

The department continued to insist upon the plan which they  
had suggested.

The situation of the probability of a German battle cruiser  
coming out at the end of August, 1918, when information was  
received from a variety of sources that two heavily  
armed ships might soon attempt to enter the Atlantic to attack  
our convoys. In the face of this we had no plan, although  
we had been urged since September, 1917. The department's  
policy in this situation was to adopt my repeated recommen-  
dation of battleship escort to convoys, together with cer-  
tain of their own plan concerning convoy routes. They  
were putting their own complete plan into operation until more  
information was available.

This is indicated by their message to me of 31 of A follows:

[Highly Secret.]

824. Plan outlined our Simben 8 and 11 for protection against battle c and instructions one of Commander Force European waters, will become upon receipt of this cable so far as plan for diversion of routes is concerned. with September 9, battleship escort will be given to the HX, HC and U troop convoys, in order of importance named. Until system of battleship thoroughly in hand, it is probably that some convoys will sail without battleship escort. You will be informed when this happens. To put them into active operation if it is so desired, when information is gained of the raider, the following radio or cable will be sent by Sims and by Opanav, "Be raid plan operative." 14030. 724.

6.52 a. m., August 31, 1918.

The mixture of plans, the inevitable difficulties of coordination be expected from the department policy of divided control and responsibility, was immediately apparent.

I have before me and insert in the record a long message from the department, of September 4, pointing out the confusion which has resulted.

The message referred to is as follows:

Origin: Opanav, Washington.

Ser. No. 857.

Date, September 4.

31 ADR.

Simsadus.

[Secret.]

857. Your 3959, 3947 and 3937. The disinclination of the admiralty to give HX and HC convoys in accordance with our plan naturally weakens it. Protection must be afforded HX and HC convoys as they carry our troops you use division 6 for the protection of HX and HC convoys as indicated in 3947 but the United States troop convoys diverted to Azores Islands according to our plans must receive the protection of at least one of our dreadnaughts from the United States. Therefore until joint agreement is reached we will expect the United States to provide convoys and the HB to be diverted and the HX and HC to proceed. If we do not find according to this arrangement which scatters our force we will be unable to adequately protect all the troop convoys it may be necessary to urge upon the United States the advisability of discontinuing sending troops in the HC convoys. Until joint agreement has been reached convoys at sea are not familiar with our instructions. United States convoys must be given diverting instructions, but on receipt of our instructions to all transports.

United States men of war and escort ships in European waters make them familiar with necessary details. Also furnish all American merchant vessels with sealed order to be broken in case of receipt of operating signal as prescribed. Westbound ships may avail themselves of protection if desired. The operating signal will be sent in a United States code to American ships only. Beginning with September 9 it is department's plan to furnish pre-dreadnought escort to the HX and HC convoys whose captain will be familiar with our plan, but will not use the Admiralty so desired. Commander cruiser force will issue similar instructions to ships on this coast. Finally, this plan is only a temporary expedient and does not solve the problem of continued activity of an enemy battle cruiser in the Atlantic. Escort by battleships will protect troop convoys against the enemy raiders, but the cargo convoys will still be lightly protected. Our dreadnaughts are too slow for an efficient pursuit division, and no answer has been received from the United States on our request that they send four battle cruisers to base with our fleet. The department desires to know what will be the Admiralty policy as to the use of the United States cruisers for pursuit in case of the escape of an enemy battle cruiser 18503. 81

Ba

September 4, 1918, 12.06 p. m.

... example of the deplorable absence of unity of purpose, a measure which the Allies finally adopted on 10th June, made victory possible. The message is too long to quote in full, but the statements are the following: "As no joint agreement has been reached, convoys at sea are not familiar with our plans, and it is only a temporary expedient and does not solve the problem of the continued activity of an enemy battle cruiser in the North Atlantic. No answer has been received from the Japanese"; "The Allies do not know Admiralty policy as to use of their

... to be gained by examining this situation in order to determine who was right or who was responsible for the confusion. It is that it was wholly impossible even to attempt the coordination and execution of extensive and complicated Allied plans. The staff makers, the members of the team, separated by the Atlantic Ocean, and the discussions carried out over a telegraphic cable. It was attempting the impossible. Judging from the experiences in the war, a few hours of joint personal discussion of the parties concerned would have resulted in common action. But the issues at stake were so serious that something had to be done, no matter how impossible it seemed, to break the tangle.

... discussed the situation with the heads of the British Staff, and asked that my staff get together with the British Staff, and regardless of difficulties, produce, in the shortest time, the simplest possible joint plan, which they believed would be acceptable to our department. (These planning sections were organized since May.)

... plan before me and insert it in the record. It is as

... 1918

(Highly Secret.)

... to United States merchant vessels and to United States naval vessels as directed. Admiralty propose to use their battle ships to hunt enemy raiders, and do not propose to use them for pursuit of merchant ships.

... adoption of the following joint plan which has been prepared by the Admiralty Plans Division, and has the approval of the

... shall govern all vessels and convoys at sea after they have received

#### PLAN.

... shall not be sent out without mutual consent of Navy Department and Admiralty. Evidence is conclusive that raider is out.

... and supporting forces will be handled by radio from the Navy Department.

... continue all voyages and to provide all convoys that are in the North Atlantic by sending battleships from Halifax and Berehaven to escort convoys not already escorted by battleships; and by combining the efforts of both navies.

... will leave eastbound convoys and join westbound convoys in the North Atlantic, getting all their fuel in American ports.

... operations west of longitude 40 shall be controlled by the Navy Department, and operations east of longitude 40 shall be controlled by the Admiralty in conjunction with British C-in-C North Atlantic and West Indies.

... of longitude 40 shall be controlled by the admiralty in conjunction with the United States naval forces, Europe, with complete communication received and orders issued.

6. The ordinary machinery for routing shall continue in operation and orders to convoys and escorts at sea to avoid raiders shall be sent direct to the Navy Department and the admiralty to save time. Base commanders shall be informed of orders issued.

7. Special rendezvous routes to be used in the case of a raid in the absence of instructions will be given each convoy unescorted by battleships before departure and battleships will be sent out from Berehaven to join the convoys.

8. Commanders of battleships at Halifax and at Berehaven, and all commanders of convoys and commanders of escorts, shall be given the routes of convoys about to sail, together with the latest information on the submarine and raider situation.

9. Destroyer escorts will accompany Berehaven battleships when practicable.

#### CONVOY INSTRUCTIONS.

1. Raider warnings and all subsequent communications will be made in cipher. Reports of enemy position will be broadcasted by shore stations.

2. Convoys shall listen in for radio instructions, but in their absence of instructions the following shall govern:

(a) Notwithstanding these general instructions, special vessels and commanders shall be given full discretion as to action taken to evade the enemy, when danger is imminent.

(b) When practicable convoys should seek to escape in the general direction of the nearest destination.

(c) As a final resort convoy commanders when insufficiently protected may break up their convoys.

(d) Maintain radio silence except that senior officers' ships shall:

(1) Report position and movement of raiding force if sighted.

(2) Relay to shore stations such reports if deemed necessary.

(3) Communicate rendezvous signals unless safety of convoy is thereby endangered.

#### EASTBOUND CONVOYS.

(e) Convoys escorted by battleships will continue their route.

(f) Convoys unescorted by battleships in the absence of radio instructions shall follow the rendezvous routes and follow them.

(g) Battleships will be dispatched from Berehaven to join convoys unescorted by battleships.

(h) Convoys for which no battleships escorts are available may be ordered to join escorted convoys.

(i) A separate rendezvous route will be assigned for convoys bound to:

(1) French ports.

(2) English and St. Georges Channels.

(3) North Channel.

#### WESTBOUND CONVOYS.

(j) Convoys will, if practicable continue their voyage.

(k) Westbound battleships will give such protection as practicable.

#### SOUTHERN CONVOYS.

(l) Should proceed on their voyage unless ordered to port.

4523.

This plan was simple, and, in substance, was identical with previous recommendations.

Briefly stated it was, that the moment any possibility of a raid was developed, the battleships at both ends of the line would put to sea and pick up and escort the nearest convoys believed to be in danger. That, as far as possible, and in order to make up for the lack of ships, an attempt would be made to combine convoys. The Navy Department would control all shipping in the western Atlantic and the British Admiralty all in the eastern Atlantic, by direct communication with the convoys and battleships.

That the battleship escorts would not attempt the complete protection but those in the eastern area, after reaching a central point, would pick up an eastbound convoy and return. It contained many

methods of routing, control, and communication. Germany, however, all convoys were to keep going. The diversion to Azores was abandoned.

Germany finally recognized the impossibility of carrying out the plan. On September 21, 1918, I received a dispatch, to wit: that they had accepted the plan that I had proposed, as I have just explained. The dispatch was as follows:

[Secret.]

Washington Series No. 1869.

Plan for meeting raider menace approved, and will be carried out. For the present, our division 8 with duty station will base at Hampton Roads, though later some ships may move to Halifax. Issue necessary instructions to put this plan into effect immediately after. Though plan does not prevent shipping proceeding independently, department infers that the first sentence, your cable 4523, will hold, and that, if necessary, shipping will be guided by warning received, and by any subsequent instructions. Is this correct? 21020 1869.

BENSON.

Received at the office of 6974.

The enemy never attempted a battle cruiser raid. If all familiar with the case, it is, to put it mildly, disconcerting to contemplate the confusion of all Atlantic shipping, merchant, stoop carriers and all, which would have resulted had occurred during those long-drawn-out negotiations at Washington and London, in an attempt to reach a settlement as to joint action.

As early as September, 1917, the danger had been pointed out and plans stressed. Ten months later, although the danger was thought to be really serious, the department acknowledged that it had no approved plan, that it depended upon the European forces, and that the Grand Fleet, to stand off the danger until they had been relieved after the department had been aroused to the danger, and had put forward one which was not practical and was wholly impracticable, it took nearly two months to solve a problem which was easily susceptible of a few hours of personal conference.

The headquarters Planning Section had, in collaboration with the British, prepared a definite plan. This was submitted to the department in June. About September 1, a month after the department had submitted its impracticable plan (which was not agreed to by either the British or the American Planning Sections in London) it insisted on its plan, that it be put into effect, notwithstanding the fact that the majority of shipping involved was not United States shipping, and other forces than our own were required to put the plan into effect.

The department had only known. All he need have done during the month was to make a series of bluffs, involving little risk, and we would have done the rest. Shipping would have been paralyzed.

In conclusion I wish to reiterate the salient point in this presenting. It is not that Foreign Navy Departments have more able officers than ours, nor that the officers of my London Department violated sound military principles in attempting a joint campaign over a 3,000 mile cable. This, notwithstanding that the department had in London an organization established for the express purpose of preparing joint operations coordinating with the Allies, all of whom maintained similar organizations in London to facilitate unity of command.

I have necessarily condensed this case, as it would take to cover all of the details connected with it.

I feel that I have presented enough to give a true picture to the committee, and thereby to establish in this case alone the value of my letter under investigation.

#### DEPARTMENTAL PLANS.

Thus far in my testimony I have been considering only the recommendations made to the department, after consulting the Allies, and the action, or lack of action, of the department on those recommendations.

I now propose to take up for discussion certain plans proposed by the department at different stages of the war, to show how certain of these plans were impracticable of execution, and how it was compelled to recommend against their adoption.

In paragraph 69 of my letter of January 7, 1920, I stated as

69. \* \* \* The objection to radically new plans was that the situation and their preparation would delay striking quickly with all available force. It was assumed that the department, incompletely informed as it necessarily was and without previous experience in the war, was more competent to discuss impracticable plans than their own representative in continuous conference with the leaders of the allied navies who had had nearly three years experience. \*

The war, at the time of our entry into it, had been going on for nearly three years. The United States Navy had, during that time, a few, if any, representatives abroad other than the regular attachés, whose facilities for collecting information are much reduced in war time. Consequently the Navy Department was much better informed than the general public of actual conditions in the belligerent countries, and had but little trustworthy information in such matters as submarine losses, shipping losses, anti-submarine measures that had been tried and found effective, or the reasons on the other matters concerning which complete knowledge was essential to the development of effective plans for combating the submarine menace.

After my arrival in England, where I was given access to the department, it was wholly impossible, with the meager staff at my disposal, to place the department at once in possession of all the information that I acquired or was in position to acquire.

I shall take up in succession each of the following plans proposed by the department:

1. A protected land through the danger zone.
2. Blocking German ports.
3. Mine barriers of net and mines of standard types.
4. Mine barrier of mines of new type.

## PLAN FOR PROTECTED LANE.

I received the following message from the Navy Depart-

ment:

July 10.

From the Navy.

Subject: U. S. S. *Melville*.

Order to thoroughly patrol a single lane through the danger zone, direct number of ant submarine vessels constantly passing back and forth in constant stream of vessels through the lane. 22006.

It is unnecessary to comment on this message, other than to reply sent on July 11, which was as follows:

July 11.

To the Navy.

Subject:

Re message 22006 concerning patrolling a single lane through danger zone. *Melville* July 10. The plan has been fully considered in the Admiralty, but not adopted for primary reason that the number of vessels have been, and will continue to be, inadequate. Another matter is matter how much or how often the lane can be shifted, its position always be clearly defined. Submarines have operated to a maximum of 400 miles, and sinkings are frequent up to 200 miles. Submarines did not attempt to attack through the patrol lines themselves, but to the westward, and the patrol line would afford excellent target for attack. As experience shows that a vessel, when accompanied by a single zig-zagging destroyer close ahead, is not to attack, it is apparent that, unless such a proposed patrol line the submarine could undoubtedly attack successfully at any point. More than one lane would have to be established, and as at least one vessel would always be resting, refueling or repairing, it seems the number of ships required for such a plan would never be available.

Sims.

It is another of the very numerous recommendations that came from the Navy Department which exhibited a hardly understanding of the very elements of the submarine campaign.

## BLOCKING GERMAN PORTS.

It was German submarines in the early stages of the war, and the apparent inefficacy of the measures taken against them, led many of our naval officers to the idea of a measure that would prove really effective would be blocking their exit from home ports, either by blocking the entrance or by blocking them in.

It was not until the President himself gave voice to this idea, and his well-known statement that the best way to fight hornets is to surround them, not to chase them individually after they are out of their nest, that the idea was adopted. The strategic idea involved was unquestionably sound, and it is unquestionably sound that it should have been patent to all that there must have been compelling reasons, tactical or strategic, that had prevented its adoption by the Allies long before the war.

It was not until the early months of my mission abroad that I was insistent upon development of some such solar system which would immediately defeat the submarine. I am sure that officers in the department indicated clearly that the failure to realize the desperately critical nature of

situation, they were allowing themselves to be drawn into far speculation, in the effort to devise some such new and radical plan. In fact, this was clearly revealed to me, a few days after my arrival in London, when I received from the department the following dispatch, on the 17th of April:

Is it not practicable to blockade German coast efficiently and completely, making practically impossible the egress and ingress of submarines? Any attempt or accomplishment in this direction are to be reported at once. A dispatch at noon 14th April will be given earnest and immediate attention.

DANIEL  
Secretary of the Admiralty

After consultation with the allied naval authorities, I replied to this cable in a dispatch of April 18, as follows:

To absolutely blockade the German and Belgian coast against the entire departure of submarines has been found quite unfeasible. Attempts have been made with all possible means to stop egress and to prevent nets and mines being laid out. Many nets and mine fields have been, and continue to be, laid out against submarines, and other vessels have been used. Of course, for craft operating against enemy bases, the danger is great and the result has been that several have been captured and torpedoed. Even to keep up an effective patrol against submarines along the coast between Norway and Scotland has been found quite unfeasible; far too many vessels were attacked. On lines between Iceland and Scotland, and between Scotland and Greenland, ice floes as well as enemy craft must be guarded against on the coast. Patrol is now kept up. It is necessary to move these lines after each enemy vessel is sighted in order to maintain them and to prevent torpedoing, as there are no vessels available to protect the cruisers from attack by submarines. The destroyer has shown itself to be to a great degree the most efficacious enemy of the submarines at present. All possible means are taken by the enemy to force their being used on other duty, even to sinking ships on hospital service. With the exception of a minimum number required by the Grand fleet, for carrying troops and their supplies, all destroyers are now so used. These vessels are being constructed as expeditiously as possible, but their number is quite insufficient to meet the existing emergency, particularly as it affects merchantmen.

In my letter-report of April 19 I further discussed this problem, pointing out the impossibility of such operations as the one proposed by the department. The letter is as follows:

22. In the absence of adequate patrol craft, particularly destroyers, and if enemy submarine morale is broken, there is but one sure method of meeting the submarine issue, upon which there is also complete unanimity—increased number of merchant bottoms, preferably small.

More ships! More ships! More ships! is heard on every hand.

23. It is also significant that, until very recently, the Admiralty have been unable to completely convince some members of the Cabinet that the submarine issue is a deciding factor in the war. The civilian mind, here as at home, is loath to believe in unseen dangers, particularly until the pinch is felt in real physical ways.

24. The prime minister only two days ago expressed to me the opinion that it is not to be possible to find physical means of absolutely sealing up all escape of submarines from their own ports. The fact that all such methods (nets, mines, obstructions) inherently involve the added necessity of continuous protection and maintenance by our own naval forces, is seldom understood and appreciated. I finally convinced the prime minister of the fallacy of such propositions by describing the situation which we would be led, namely, that in order to maintain our obstructions we must have to match the forces the enemy brought against them, until finally the mass of our forces would be forced into dangerous areas, where they would be subject to continual torpedo and other attack, in fact, in a position most favorable to the enemy.

25. Entirely outside of the fact that the enemy does, and always can, force us and thereby nullify the close blockade, the weather is a serious added difficulty. The heaviest anchors obtainable have been used for nets, mines, and obstructions only to have the arduous work of weeks swept away in a few hours of heavy weather. Moorings will not hold. They chase through. In this respect we could be of no assistance, i. e. in supply of moorings and buoys.

these ports now, and never has been, completely sealed against submarines in the vast areas of escape to the north. Submarines have been able to do this, and have succeeded in unknown ways in evading and cutting through the blockade.

The idea of a close blockade of German ports was not entirely new to the department, is evidenced by the fact that when the German fleet came to Europe in September, 1917, this whole idea of a close blockade was taken up by him with the allied powers at the request of the Navy Department.

It is interesting to review, for a moment, what happened to show how impossible such a scheme was, and to see how difficult it was to convince the department why a scheme so simple had not long since been carried into effect. There was some other reason besides its mere impracticability that prevented the Allies from carrying out such an

As I will point out in a moment, I had received repeated reports from the department, between April and August, concerning future operations, desiring to know whether or not, and if not, the Allies were considering any new offensive

I had replied to these at the time, pointing out that offensive operations had been outlined in my messages to the department. The military issue at the time depended upon the submarine menace, and it was, therefore, a military matter. All plans for immediate operations should have as their basis the defeat of the submarine campaign, and the recommendations had been sent to the department since April, 1917, had been intended to meet this end.

When Mr. Mayo arrived in London in August, 1917, it was for the purpose of the naval conferences to be held in September. The first for discussion should be, at the request of the Navy Department, "the question of offensive operations against enemy submarines," second, "manner in which United States Navy can assist the Allies for successful prosecution of war," fifth, "plans against enemy submarines."

On the days of this session, plans for such a close offensive blockade in the Heligoland Bight were discussed. In his report to the Navy Department, reported on the examination of such operations, he was convinced that it was impossible, without the sacrifice of a very large number of ships. In his letter to the Secretary of the Navy, on September 10, 1917, he stated that the only scheme which might be practicable would require the sacrifice of 40 old battleships and 43 old cruisers, to be used as blockading ships by the allied powers, as merchant ships could not be used for the purpose. The primary object of this scheme was to block submarines in by blocking up the German North Sea. The old battleships and cruisers referred to had been filled with cement, and sunk in the entrance of the North Sea in the same way as was later done at Zeebrugge.

All details of the discussions at this conference were sent to the Navy Department, the magnitude and impracticability of a scheme of close blockade was at last recognized, and on October 21, 1917—that is, seven months after the first time the scheme was proposed, they cabled:

No. 775. Department considers close offensive involving sinking of old ships and cruisers to block German channels impracticable.

I might add there that it was also the opinion of the committee that even if the channels should be successfully blocked, a mine could be dug around the blockading ships in a very short time.

Even in the case of similar operations, undertaken by the British against Ostend and Zeebrugge in the spring of 1918, it should be remembered that even the partial closing of these two ports was accomplished by that splendid naval feat, required in the preparation which was going on for eight months before the operation was actually carried out. The gentlemen of the committee will, therefore, perhaps be able to imagine the length of time and the amount of material that would have been required to carry out a scheme such as that proposed by the department in April, 1917, but it is needless to discuss this further, for, as I have already told you, the department itself, after it had received Admiral Jellicoe's confirmation of my recommendations, announced that such a scheme was impracticable.

#### NET AND MINE BARRIERS.

The idea of blocking the German ports was only one phase of the idea which the department seems to have had in mind at the time, that is, in the early months of 1917, to do away with the submarine menace by some new and radical plan of offensive operations. The personal letters which I received from officers in the department at that time contained practically nothing else than long discussions of various projects which might be carried out to accomplish the same, all of these requiring a tremendous amount of material, and a great deal of time, which necessarily reduced them to subsidiary operations to be carried out when time and material might be available, but which were considered at all feasible, rather than as the main operation which the United States Navy should undertake.

Another proposal of this sort was made to me by the Navy Department on May 11, 1917. This was as follows:

[Cablegram.]

From: Secretary of the Navy.  
To: Rear Admiral Sims.  
Received May 11, 1917.

Much opinion here is in favor of concerted efforts by the Allies to establish a complete barrier across the North Sea, Norway, and Scotland, either direct, or through the Shetlands, to prevent the egress of German submarines. This plan would involve the use of various forms of mines, nets, patrols, and the release for this purpose of various American coast patrols, as well as many vessels of the Allies now employed elsewhere. The plan also involves regulations for the commerce of Holland and Scandinavian neutrals to pass barriers and defined control gates. It also includes the use of Norway's territorial waters. The difficulty and size of the problem is recognized, but, if it is possible of accomplishment, the situation would warrant the effort. If the plan is not feasible, could not the same plan be carried out between Denmark and Norway, across the Skaggerack. Make full report.

One or two comments should be made before I read you my report. It should be noted that the department specifically stated that the plan would involve the use of various forms of mines, nets, and patrols, and the diversion to this project of many vessels of the Allies now employed elsewhere. This feature at a time when, as I was informed by the department several times weekly, the war might be lost in a few months, made the scheme quite impracticable, unless we could

such a diminishing of tonnage losses that the war could be brought to a successful conclusion, and that the material required for this could be transported overseas.

This was with my dispatch of May 14, 1917, which was as follows:

(Cable dispatch.)

My dear Navy.

I enclose a cable of May 11, concerning net and other barrages for preventing submarines. The general situation is as follows, based upon the views of the British Admiralty. According to their experience, all barrages, whether of nets, or both, are not an absolute solution, for the following reasons. Nets do not stop submarines. Mine barriers can not be wholly maintained by patrol at all points. Few of the 30,000 mines can be watched, but, even if all could be patrolled, it would be ineffective because the necessarily locally weak dispersed line of patrols would be unable to meet concentrated attacks at any point, and as often as may be they would be dragged out, thus releasing submarines. A barrage that can be broken by a concentrated attack, is ineffective. This subject was fully discussed on May 11, now on the way. For special purposes of embarrassing the enemy, barrages of mines have always been, and now are being, laid in certain areas. Bitter and extensive experience has forced the British to make a serious attempt at blockading such passages as Scotland to Norway, the Skagerrack, Skagerrack. The one place that serious attempt at blockading is the Heligoland Bight. Over 30,000 mines are now being laid there, and there losses there are replaced as fast as possible, about 3,000 a

month, and probably never can, be absolutely effective, for reasons. Submarines can always find passages around, and through, and through island passages and gaps dragged in mine fields. Barrages of mines, however, the greater degree of embarrassment to the enemy, the more mines we can send the better, and there is no limit to numbers. Mines are much too extensive for all to be patrolled, hence the number of submarines destroyed or damaged by mines. The primary immediate necessity is in numbers of patrol craft. It is not possible to lay too much stress can not be laid upon the urgency of the situation. The forces to the extreme possible limit. Defensive measures, or in any other locality, and in fact, all defensive considerations are related to the offensive against the submarines where they are operating. Submarines appear on our own coast, their operations can be hampered, owing to the manifest limitations of distance from their bases. In fact if some of the submarine efforts could be hampered, the focus of all lines of communications, the critical situation would undoubtedly be diminished. It is the firm belief of the Admiralty that the most effective measure is in numbers of antisubmarine craft strategically disposed, intercepting the enemy submarine efforts from the critical areas and preventing them from operating over such widely separated areas that their successes would be almost below the critical point. Every effort is being made to increase the patrols. The measures we take must be carried out with utmost urgency, the critical degree of enemy submarine success and the general situation.

The need is for destroyers antisubmarine in the greatest possible numbers. The British Government appreciate the evidence of America's desire to assist in putting

SIMS.

It is noted at this point that the scheme here proposed, of a character, and designed to be carried out in the northern mine barrage which will be discussed under the same plan later carried into effect in laying The thing which made possible the northern barrage is a certain type of mine known as the antenna mine.

because of its technical features which had not been in the time this dispatch was sent to the department.

For a month I had been cabling full details as to the outlining the offensive plan against submarines, which use of all available antisubmarine craft, and the adoption of a convoy system, in order to insure the protection of sufficient tonnage to enable the war to be carried on. As I have pointed out, I had received few replies to my recommendations from the department.

In my letter of May 11 to the department, dealing with the subject, I said:

15. Numerous propositions are made to the British Admiralty that have for their object the closing of the North Sea, or the German ports, against the ingress of submarines. These are presented by all classes of people, including Members of Parliament.

They are, generally speaking, of two classes, namely, mines or nets, or both. I have gone over this whole matter with the first sea lord, and those members of the Admiralty board who are specially charged with the practical details of such matters.

16. As may well be imagined, this whole subject has been given the most careful consideration, as it is of course realized that if submarines could be kept from the North Sea, the whole problem would at once be solved.

17. As a result of this consideration many schemes have been tried. The following is a brief summary of those tried and the difficulties encountered:

18. It has been found that no net will stop a submarine if it is securely anchored at each end. The submarines are fitted with net cutters on the bow and sides, and strong steel guys from the bow to the tower.

19. But even those not so fitted can steam through a net, unless one end is attached to a trawler, fitted with a winch for slacking off the anchor line.

20. Nets have been fitted with numerous small mines which will blow a hole in a submarine's side, but as soon as the nature and location of such nets were known, the submarine made a practice of approaching with the periscope out until the nets were sighted, then rising to the surface, running over the buoys, and then diving again. An attempt is being made to so fit the buoys that when they are exploded the mines immediately below.

21. There has been great difficulty in maintaining nets and mines in place. They are frequently swept out both, and the enemy mine sweepers are constantly destroying them.

22. In some places neither mines nor nets are effective on account of the tides. This is particularly the case between the Orkney and Shetland Islands.

23. Mines and nets are very extensively used in the attempt to prevent the ingress and egress of submarines from German ports, and to embarrass their movements also in attempting to prevent their passage through the Channel. I have been looking at the working charts and have had the various efforts explained to me by Mr. Jellicoe.

24. Generally speaking, the area inclosed within a line running first north-north-east, then north, from Texel Island, thence in a curve to the eastward to a point off Horn Reef, contains numerous lines and fields of mines. Within this area there are at least 30,000 mines, and additional ones are being laid at the rate of 3,000 a day. The field is now being extended to the westward and northward from Texel Island to the Broken Bank. (See chart of the British Islands and North Sea.) Some mines are known to have been destroyed in the Channel; but the difficulty of this will be recognized from the fact that the comparatively narrow Dover Straits are now completely closed to the passage of submarines.

25. This latter illustrates the difficulty of closing such a wide gap as the entrance to the North Sea from Kinnard Head to Norway. On this line of 100 miles there is 30 to over 100 fathoms of water. The number of patrol boats required to watch these nets would be very great.

26. As for protecting such a long line, or any line of considerable length, it is course physically impossible to do so effectively, and this for the fundamental reason that the defense is stretched out in a long and locally weak line, while the enemy concentrates an attack at any point of it, destroy the patrol vessel, and drag out sections of the mines or net, thus permitting the passage of any number of submarines.

27. This can be done in as many places as desired and as often as may be necessary, whether the barrier is nets or mines, and it is because of this fundamental principle that a concentrated attack against a point of a necessarily dispersed force has

is sufficiently effective to prevent the passage of all the submarines sent out.

On the whole matter, the physical impossibility of a dispersed attack, necessitating a locally concentrated attack.

It is of considerable gun power can make a hole in any patrol of a

submarines must retire before such a force, thus permitting a section of the barrier to be broken out and thus defeating the object of the barrier.

It has been proposed to guard a barrier with heavy vessels. This is what Great Britain will do, thus exposing them to torpedo attack and subjecting them to attrition to be carried out. The British vessels would also be subject to attack, but the British can not successfully compete with German submarines, particularly near the bases of the latter.

It is strongly emphasized the fact that during nearly three years of warfare this whole question has been the most serious consideration by the British Admiralty, and that many of the nature of those in question have been thoroughly considered—those which do not violate fundamental principle—have been or are now being tried out; but the point is that no barrier can be completely effective; unfortunately, a barrier or system of barriers such as this needs only to be slightly ineffective to permit considerable loss of submarines.

One of the above and of the large amount of supporting evidence obtained, it is recommended that our primary military effort should be directed to getting the maximum number of antisubmarine craft of all descriptions in the main area of activity.

Such and similar methods can never be entirely effective relative. The submarines must always be opposed in action, and the most effective opposition discovered to date is by means of antisubmarine craft.

At present is the lack of such craft.

#### THE NORTHERN BARRAGE.

It is pointed out, in the discussion of the plans for net barriers, that the barrage proposed by the department involved the use of various kinds of mines, nets, and other devices which rendered any such plan impracticable of execution. With the invention in the United States of a new type of mine, the project was put in an entirely new light and received careful consideration. The Bureau of Ordnance and the department was quick to grasp the possibilities offered and to outline a plan for its use.

From my first arrival in Great Britain I had taken up the question of the improvement and development of our mines. In the other demands upon my time, the failure of the department to provide me a staff and the difficulties which I had to overcome for information myself, I yet considered this subject sufficient to make a special effort to keep the department advised of my experience.

On the evening of April 16, I informed the department:

1. The present design of the mine is unsatisfactory, and the necessary improvements, since war began, are essential to efficiency. Particular attention is given to the depth taking and pistol. Distance weight now not released is about 10 feet. New design pawl on mooring line.

2. The present design of the mine is unsatisfactory, and the necessary improvements, since war began, are essential to efficiency. Particular attention is given to the depth taking and pistol. Distance weight now not released is about 10 feet. New design pawl on mooring line.

and elimination shearing pins and modification firing pin sleeve release. Am sending drawings next day and British expert mine officer, as soon as possible. Admiralty now building mine similar Carbonnit, with changes (see Babcock intelligence reports, 1917). Please send me latest torpedo war nose and anticircular run device, both and sample. Advise sending McBride, also engineer and gunnery officer. Information now wide open.

I arranged as soon as possible with the Admiralty to have an expert sent to the department, with samples and designs of British mines, and at the end of April such an expert was sent to the department, with plans and samples of all British improved mines.

In my letter of April 27, I referred to certain of the experiences during the war, with regard to the use of mines. I reported that they were abandoning the type of mine that had been in use, in favor of one similar to the German type. In view of the fact that the British had found the type of mine, which they had been using previous to the war, sufficiently unsuitable for various purposes to induce them to change their own mining designs, it became apparent that our own existing types of mines, which were identical with the British mine were also antiquated and unsuitable for the type of work required and would not be of much material assistance. This I pointed out to the department in my letter of May 31, 1917. [Reading:]

Sent: May 31, 1917.

To: Secretary of Navy, Operations.

Through: State Department.

With reference my previous dispatches concerning our supplying the British Admiralty have concentrated on mine construction to such an extent that they now expect the output by August, will reach 10,000 a month. Their facilities for laying mines are about 7,000 a month. From their previous experience with mines, similar to those which we now have on hand, they consider it an attempt to utilize our present available supply. In view of above, and as our supply of a different type of mine would not be available in sufficient time, they consider we can more profitably concentrate on other work.

It is, of course, unnecessary to emphasize the fact that the mine that I was referring to here was our supply of prewar designs, the war had shown to be ineffective and not the mine which we had used and which at that time had not been perfected, or even, known, knowledge, invented.

On June 23, 1917, I received another cable from the department with regard to mines. This was as follows:

Received: June 23, 1917.

To: Alusna, London.

For: Vice Admiral Sims. No. 31.

The Bureau of Ordnance is now in a position to manufacture latest type of mine, or a superior type, at the rate of 4,000 per week beginning from now. It is the opinion of the Admiralty that possible future improvements make it desirable that we construct a surplus supply, for possible use in European waters; if so, how many do they suggest we ought to manufacture? Would the Admiralty like to have us manufacture nets for use over there? If so, send them at once. Has a mine, not effective against surface craft, but effective against submarines ever been under consideration? Are there any plans of future operations that we could be supplied with. 16022.

DAN

A point, which I should like to stress, is well illustrated by the above message. I still had but one aide, and yet the department was able to find out the Admiralty opinion as to possible use of various

how many they should supply, whether the department manufacture nets, and, if so, I was to send all details. I was at all about mine developments among the Allies. I pointed out that at the time I received this message, I was in command of the Irish station. Nobody was in London, with the exception of one man who was in the Navy in 1914, and had been assisting me without pay since April, 1917. During this same week I was from the department for recommendations as to destroyers that should be built, as to the allied aircraft and what the effort of the United States in naval aviation with the Allies, should be. It was therefore, for me to reply immediately, as the number of men is limited, and the physical endurance of men is limited, I informed the department at the time. I replied with the following message:

The Navy  
My naval attaché, Washington.

Letter No. 31, all assistance which Bureau of Ordnance can make of efficient type of mines and depth charges will be invaluable at present in excess of available ships to handle, but numbers cannot be furnished mine layers as well as mines. Admiralty is not necessary for abandoning entirely the Elia lever type, in favor of the type with horns on bottom as well as top. Also necessity for mine type. Latest type will have 500-pound buoyancy, for mining against submarines, they are now using fixed mines, both on shore, as one floating mine or mine near surface dis-  
Many designs of mines effective against submarines, but none of these craft, have been considered, but no satisfactory type has been considered. Admiralty would appreciate information if such a mine has been developed of latest British mine of horn type forwarded June 28. These mines are generally available, to the extent to which they are necessary to reduce demands on shipping. Brazil is a country we can meet her demands. Delay in answering this cable is keeping up the work here with present staff.

July 14 I plainly state my attitude with regard to the use of mines. The following are extracts

[Letter No. 29, July 14, 1917.]

There seems to have been a mis-understanding, probably owing to the lack of communication, concerning our cooperation as regards mines. If there has been such a mis-understanding, if it has occurred, should be due to lack of time on my part to follow all of the subjects and to clearly set them before the department.

The need for mines and, as I originally stated in a cable, the need for mines and, as I originally stated in a cable,

The British output of mines has been equal to or in excess of the need for them. The need for mines has been made to impress certain auxiliary vessels into service for

has been experienced, due to the stress of other important war work, a mine of satisfactory design to meet the unusual conditions

has been experienced from the beginning with the Vickers Elia type, and, as the manufacturing facilities were equipped to build the Elia mine, it has been the design, as experience from time to time indicated to be the method of manufacture which were thereby imposed. It was decided to abandon this type of mine entirely in favor of a mine of the Elia type, modified in accordance with British experience. The design of this type of mine which are now in the department do not developments, which have occurred since they were prepared.

The mine question is a very serious one, and our cooperation can only be directed by having an expert representative of the Bureau of Ordnance at times.

9. At the present moment the enemy is making determined efforts to open channels through the mine fields in Helgoland Bight. The extensive fields renders offensive operations against the enemy mine sweepers very particularly as they are aided by Zeppelin scouts.

In addition, mining activities are going on in other areas, particularly on the coast at the western end of the allied lines.

Recent evidence has indicated preparations on the part of the enemy for landing to the south of the allied lines, apparently with a view to opening as a result new mine fields are being laid by the British in that area.

Early in August, 1917, I received a number of letters from the Bureau of Ordnance referring to their plans for the production of mines and offering to provide the Admiralty with a supply of mines and depth charges.

In reply to these letters, I cabled on August 13, 1917, the following message:

To: Secretary of the Navy, Washington.

No. 246. Admiralty very appreciative of department's willingness to suggest program for manufacture mines and depth charges, and much interested with magnitude of program. At present no United States representative in London with bureau plans, and no British representative in Washington competent to represent Admiralty. Since program involves personnel and ships of both countries in view Admiralty's extensive war experience in these lines, recommend that, before undertaking manufacture in quantity, bureau send competent representative here with Admiral Mayo temporarily, for conference. Should be able to furnish data and samples if available.

In my letter report of the same date, August 13, 1917, I pointed out the confusion which was existing with regard to the subject, pointing out that this confusion and the misunderstanding which had arisen on both sides were undoubtedly due to the lack of coordination of effort which I had been recommending for several months—since April—and again urging that representative of the Bureau of Ordnance be sent to London. I had made this recommendation first on the 16th of April. I had repeated it throughout May, June, and July; and at this date was still without any technical assistants familiar with the plans of the Navy Department with regard to this very important question of mine production. My letter of August 13 was as follows:

It is considered very important that closer cooperation should be established between the Bureau of Ordnance and the Admiralty concerning the general subject of mines and depth charges, their design, manufacture, and supply.

It is apparent that considerable confusion has occurred to date on this subject owing to the various means of communication which have been used and, with the difficulty of insuring clear understanding with long-distance communication by letter and cable. For example, it is found that communications have been exchanged via this office, via the naval attaché's office, London, and office of Naval Intelligence, and also by direct cablegrams between the Admiralty and the attaché in Washington. Owing to the stress of duties in all the above offices, considerable misunderstanding has evidently developed.

The Admiralty are very appreciative of the efforts being put forward by the Bureau of Ordnance in connection with the mines and depth charges and for the great assistance which the Navy Department is in a position to render to the common cause in this direction. They have at no time wished to convey the impression that they were reluctant to accept assistance, or that they were not perfectly willing to accept new designs developed in the Bureau of Ordnance. Their experience in developing new designs and arranging and conducting manufacture under the pressure of actual war conditions has been very disheartening, and they are therefore considerably concerned over the prospect of our introducing new designs which the personnel here will not be wholly familiar.

connection that all the Allies discovered that a good deal more of their war material which they tests in time of peace, failed to stand the tests that had been developed in time of peace. Putting perhaps a couple of dozen on a ship, the mines having seen that they were all in apple-pie order in laying those mines at proper depths, they took them in numbers of 300 or 400 from one ship, and then made an examination of the results. It was not effective. [Continuing reading:]

developed during the war which appeared entirely new, and even after service test, but which developed when the finished weapon was used afloat, that it is the part forward now to adhere to any design which has been put forward in order that manufacturing can be facilitated, the cost of the boat obtained, and the success of future operations. Some of the various considerations which complicate the duties of depots, provision and supply of spare parts, the layers and mine transports, allocating the various stores and consumption, training of personnel, and many other matters, state that their representative should in no case be connected with the mining department of the Admiralty; his experience with the Vickers Elia type of mines, which is a new type, the Admiralty state that there is at present no one sufficiently familiar with British designs and British methods to properly represent the Admiralty.

...the Department in this field is of such importance, and the  
...strongly advising sending a thoroughly competent  
...Ambassador to London at the earliest possible moment  
...for the purpose of consulting with the Admiralty mine officials,  
...of the training situation, and then returning immediately  
...Ambassador should bring with him all drawings and specific  
...information and in case of new developments such  
...as may be available.

• All information, including drawings or even sketches, must be destroyed as fast as they are developed, in order that the war effort is not placed at the bureau's disposal before manufacturing can be effected.

... that I had from the department of the discovery  
... type of mine, such as would make possible  
... with material and tonnage became available,  
... from the department on the 18th of August,  
... after the department had proposed their first  
... across the North Sea. The message was as

1917 Vol. 18, 1917

...reference has developed mine which is hoped may have  
...against submarine. Utmost secrecy considered  
...presenting Admiralty, clothed with power to order  
...test mine. If found satisfactory arrange for  
...1917

mentioned in my dispatch 187 of August 22, stating we were sending a special officer to inspect and test the boat; that if it was found "suitable for operations in the lake" further arrangements for cooperation would be made.

... that is, just after the middle of August -  
arrived in London. He brought with him a me

random from the Bureau of Ordnance with regard to the mine and had been instructed by the department to discuss at the conference the possibility of offensive operations based upon employment of this new mine.

In the agenda for the conference prepared by Admiral Mayo item 2 was that of a mine or net barrage, either in German waters or further afield. In his report of the conference, addressed to the Secretary of the Navy on September 8, Admiral Mayo said in closing the discussion that took place:

The British Admiralty put forward as an alternative to a close offensive in German waters the suggestion that the activity of enemy submarines might be reduced by the laying of an effective mine field or mine net barrage. If such an operation were undertaken, it would appear that it would take the form of:

1. An efficient mine-field barrage, so as to completely shut in the North Sea. It was estimated to require about 100,000 mines, a number of which would not be available for some considerable time; or

2. A barrage of mine nets for the same purpose, which proposal was, from our experience to date, deemed impracticable. The conference after discussion concluded that the distinct mine barrage could not well be undertaken until an adequate number of mines of satisfactory type was assured and that until or unless such a number was secured the improvements and extension of the present system of mine nets was desirable, and further, that a barrage of mine nets was impracticable.

This was Admiral Mayo's report.

The same information was cabled to the department by the British Admiralty in cables of September 5 and September 6, 1917.

It is apparent from the results of this conference that the impracticability was clearly shown of any such scheme proposed by the department in its cable of May 11, which was based upon the assumption that a barrier of mine nets could be established and maintained.

The description of the new mine brought over by Admiral Mayo gave an entirely new direction to the discussion, and before Admiral Mayo left he was provided with a plan drawn up in a conference of allied officers for a barrage of mines of this new type to be put in the North Sea.

On September 13 Admiral Mayo received a message from Admiral Benson emphasizing the great possibilities of the new mine, and the British officers sent over to the United States to examine the mine found it most satisfactory and urging that immediate action be taken. The result was a proposal by the Admiralty of a mine scheme for the northern mine barrage.

On October 21, after Admiral Mayo had returned to Washington and conferred with the department, the department cabled the British Admiralty their No. 772 as follows:

Sixth. Contract has been let for 100,000 mines of American type. The United States has offered to commandeer for British Admiralty three vessels suitable for mine laying, and in addition can probably commandeer two or three more vessels suitable for mine laying, to be manned by United States for employment in connection with British mine-laying force, in joint plan which may be finally agreed upon.

Seventh. Question of proposed mine barrage, Scotland to Norway, as proposed by the Navy Department is not definitely concurred in, but careful consideration is given to this particular subject with a view to arrive at definite conclusion in regard to employment of the mine barrage, which measure is considered in principle to be of good results.

That is to say, the mine barrage of the North Sea, the plan of which was drawn up by the British Admiralty and which had been proposed by the British Admiralty and which was taken into

It was held up for discussion to see whether the American Department would agree to the laying of that barrage.

Under consideration of the plans, the department decided on the Admiralty's proposal for a joint mine barrage in the North Sea. In a cable of November 2, 1917, I was informed of the decision of the project by the department in the following cable:

The department concurs in project for mine barriers, Scotland to take steps to fit out eight mine planters, to sail February 1; to commission 12 mine-sweeping tugs. Expect begin shipment of mines. Command officers to confer and arrange details within a few days.

The losses of merchant tonnage through submarine action had reached one-half the April, 1917, figure, and this, combined with the increasing number of antisubmarine craft, the rising curve of submarine production, and the extended employment of the U-boat system, had made it apparent that the Allies would be unable to defeat the submarine, and to carry on the war unless provided no increase in tonnage losses was ex-

pected, and this situation alone, made it possible to divert our military and industrial efforts from those antisubmarine measures which were producing immediate results to others, such as the proposed mine barrage, from which it would take longer to produce results. Our primary mission continued of course to be the protection of troops and shipping in convoys; but any undertaking to carry out in addition, such as the northern mine barrage, on the promise of being of great value in helping to defeat submarines and in depressing the morale of submarine com-

manders, clearly pointed out, however, the plan of the mine barrage, as a supplementary measure against submarines, was a different matter from the plans proposed by the department in April and May, 1917. These implied a complete neglect of the U-boat, and a desire to undertake enormous projects which possibly have been carried out at the time, and in the face of any avail against the submarine campaign, unless, in the meantime, the measures which had been recommended to the Allies, after full conference with the Allies, had been accepted and carried out to full effect. Considering the resources of the Allies at the time, it was a condition impossible to fulfill.

This is an illustration of the way in which, to quote from my report of January 7, 1920, paragraph 78:

The judgment of those who had actual war experience in this campaign, the Navy Department, though lacking not only this experience, but also the information concerning it, insisted upon a number of plans that were impracticable.

To point out again that I am not asking this committee to say that the plans of the department, cabled to me in April and May, 1917, were impracticable because I said so at the time, and that because the department definitely stated later, as I told you, that upon receiving fuller information, they regarded the plans as impracticable or impossible of execution; and that before the department could be convinced that any plan to defeat the submarine was impracticable, they were delayed in making recommendations made by their representative at

after full consultation with the Allies, and thereby postpone so much the ultimate victory of the Allies.

To indicate to you further how impossible it would have been to undertake any such scheme as the northern barrage until it was certain that the submarine activity could be checked, could be given to the development of other schemes like the mine barrage, let me review for a moment what had to be accomplished in developing the new mine, and preparing for the laying of the mine before it could even begin to be effective. The following problems had to be solved before this barrage could be put in effect:

1. The successful testing of the new mine at sea in the water in which it was to be placed.
2. The placing of the production on an adequate basis, having a hundred thousand mines in time.
3. The commandeering of vessels and refitting them for mine layers.
4. The determination of the feasibility of fitting elevators to reduce the number required and thereby the amount of tonnage necessary.
5. The determination of the durability of the antennae of the mine in rough sea.
6. The determination of how successfully the normal firing device would operate under actual conditions in the North Sea.
7. The problem of quantity production of the mine existing in the necessity for assembling parts manufactured in many different parts throughout the country.
8. The commandeering of 24 mine cargo ships to carry the mines across the Atlantic at a time when all shipping was badly needed.
9. The necessity of establishing bases in Scotland for assembling the mines and loading them into the mine layers.

That question of bases alone, I may say incidentally, was a very large one; a tremendous installation with—I have forgotten how many—probably 3,000 men in all.

10. The necessity of arranging for adequate screening and protecting forces from the grand fleet for laying operations.

11. The planning of means of preventing sweeping operations by the enemy in a barrier 230 miles in length.

12. The solving of the problem of how Norwegian territory could be closed.

13. The difficulty of cooperating with the grand fleet and obtaining the consent of the commander of the fleet to laying mines with an untried electrical device in areas through which the grand fleet necessarily might operate.

I might say in that connection that the mine barrier of 100,000 mines got to the east of the anchorage of the grand fleet with the experience of all the Allies that many thousands of mines came adrift and drifted in shore, Admiral Beatty asked me for assurance I could give him that if our mines did drift—a considerable number of them did, drift—that they would be inoperative as soon as they got adrift; and it was only after I was able to satisfy him that there were three, and perhaps four—[I cannot remember exactly—separate devices in each mine which would make it ineffective after it became adrift, that he was satisfied that that mine barrage ought to be laid.

problem of insuring the absolute secrecy upon which the operation depended.

problem of getting the adequate number of mines abroad, assembled, and laid, within a time which was

exception of the first, fifth, sixth, and fourteenth, all of which would have been presented in case a barrier of nets and mines had been undertaken, and such a barrier presented these further problems:

requirement of about three times as many mines and with a corresponding increase in the times required for production and in the tonnage required for their transportation.

The barrier as finally laid took about 100,000 mines. Without going into details, I will say that was rendered possible by the use of a float projecting above the mine, which was so arranged that contact with any part of the mine or float would set off the mine. This enabled a barrage to be established with about 100,000 mines. Before the invention of that antennæ type, it would have taken about from three to four times as many mines; that is, about 300,000 to 400,000, to make a barrier extending down

the coast of Norway as a haven for submarines or the employment on the patrol of large vessels which would remain at sea a long time and in all weathers.

It was not until solutions of all these problems had been found that a barrage could not be definitely decided upon, and the laying of mines could not be begun until the problems had been solved.

When the project was decided upon, its execution became one of the duties of the United States naval forces in European waters. It therefore was incumbent upon me to give my concurrence before giving my concurrence, not only that it was a project but that it promised to be reasonably executed without serious detriment to the other antisubmarine measures which were already in progress.

The project was executed in a manner which reflects credit upon it: the bureaus of the Navy Department that produced and mined material and that fitted out the mines; the most suitable and efficient employed by any of the navies; the officers who trained the personnel in mine laying; the officers who controlled the actual operations; the officers who equipped the bases in Scotland; the officer who commanded the whole force engaged and was, in the first instance, responsible for the success of the whole operation; and the personnel, both officers and men, who worked out the project to a successful conclusion.

At the time at which the project was undertaken, it had my full approval as a subsidiary measure, designed to depress the morale of the enemy and to accomplish the destruction of a certain number of submarines.

It is perhaps unnecessary for me to make this statement of the position which has been made and widely circulated in the Navy Department had proposed and had from the first for

this project and that I was about the only officer of the Navy who had ever opposed it.

That statement was made before a large assembly in New York in a very responsible manner, before an audience which was largely of our friends, the Irish, and my name was cordially mentioned. I have gone into this subject here at some length to show that the statement there made was wholly false.

It should be fully understood, as I will explain in detail hereafter, that I never opposed the Northern Mine Barrage, as a supplementary antisubmarine measure, when once the material and tonnage were available to make such a barrage possible. I make a distinction with regard to the mine barrage which has been the subject of this report. As an achievement it stands as one of the wonders of the war. No such project in naval warfare had ever before been carried out more successfully. It is entirely beyond my power to give adequate expression to the admiration which I have for the action in the United States which produced the mines, mine laying material and sent them abroad, and for the brave and gallant officers and sailors who were instrumental in the laying of the mine barrage; but, as a matter of policy, there is a very great difference between a mine barrage carried out as a useful supplementary measure and the proposal to make such a barrage our principal activity in view of the fact that a year's preparation was necessary to carry out a gigantic project could be carried into effect. The war would have been lost before we could have assembled the material for the mine barrage or could have found the tonnage to carry this material to Europe.

As I have repeatedly pointed out, the time element is one of the deciding factors in warfare. At a time of great danger, such as existed in 1917, at the time of our entry into the war, any plan, however successful in its ultimate results might be, must be judged in the light of the situation existing at the time. It is not enough when we are at war to prepare magnificent schemes of operation to be carried out at some future date. When the enemy was striking the Allies in 1917, and dealing blows that were rapidly cutting all lines of communication by destroying the tonnage upon which the Allies depended, no plan which we could have adopted would have had any use which did not provide the immediate necessary assistance to the Allies in meeting the immediate issue; that is, the submarine campaign as it was being waged in 1917.

This is a point so simple that it needs only to be stated for it to be clear. Numerous illustrations can be drawn from the history of warfare to show how disastrous have been the consequences of failing to enter immediately into a war and meet a situation created by the enemy's activities in the hope that later a royal road to victory could be found. The idea of making a grand stroke which would in one fell swoop reduce the enemy to confusion and force him to surrender, has been throughout history one of those fascinating and elusive fallacies which have cost many a defeat.

As I am about to begin a new subject, and I understand the chairman wanted to stop a little early to-day, I might stop here.

The CHAIRMAN. Very well. The committee will stand adjourned until to-morrow morning.

(Thereupon, at 11.50 o'clock a. m., the subcommittee adjourned until to-morrow, Wednesday, March 17, 1920, at 10 o'clock a. m.)

# NAVAL INVESTIGATION.

WEDNESDAY, MARCH 17, 1920.

UNITED STATES SENATE,  
SUBCOMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.

Committee met, pursuant to adjournment, at 10 o'clock  
in room 235, Senate Office Building, Senator Frederick Hale  
and Messrs. Hale (chairman), Ball, and Pittman.

## TESTIMONY OF ADMIRAL WILLIAM S. SIMS—Resumed.

Before proceeding with the testimony to-day, I  
wish to state that I have had printed each day the testimony  
given before this committee, and I have in addition to giving  
to the press, given copies of each day's hearing to all officers  
in the Navy Department who wished them, so that they  
have a complete record of all the documentary evidence and  
would thus be able to bring out all the facts in the

I also like to say that if any errors have been made in the  
of the letters and cablegrams that have been submitted, I  
am very glad to have them corrected by a comparison with  
the record. There may be some mistakes of a typographical

Yesterday the consideration of the question of the North  
barrage. In that statement I tried to make it entirely clear that  
I had at any time, opposed the barrage as now understood by  
the committee, and probably by the American people. It was only  
the barrage that was proposed in the first place.

## DEPARTMENT'S REQUESTS FOR PLANS.

During the months of June, July, and August, 1917, I con-  
sidered from the department, cables in which they indi-  
cated a desire for some new and radical policy, thus showing  
the department could not have realized, at the time, the dan-  
ger of the submarine warfare, and did not appreciate  
the importance of the element of time.

A cable of June 23, 1917, with regard to the production of  
the department cabled:

Plans for future contemplated operations that we could be supplied

was on June 23, 1917. For over two months I had been  
in the department the plans for future operations

had been agreed upon by the heads of the allied navies required to meet the situation. This I continued to point out in other cables sent to the department.

In another cable of July 5, 1917, which I have already quoted, in connection with the disposition of forces, the department stated:

So far no information as to any definite plans for future operations of naval forces. In view of requests made, and our efforts to respond, must insist that any operations under consideration be submitted for our study.

Similarly, in its cable of July 10, 1917, with regard to the policy of the Navy Department, it was stated:

The department can not too strongly insist that, in its opinion, the offensive must always be the dominant note in any general plans of strategy prepared. The primary rôle in all offensive preparations must perforce belong to the allies. The Navy Department announces as its policy that, in general, it is willing to support any joint plan of action of the Allies deemed necessary to meet immediate needs. \* \* \* The Navy Department announces as its general plan of action that it is willing \* \* \* 3. Its willingness to discuss more fully plans for joint operations. JOSEPHUS DANFORTH

It is apparent from these dispatches, first, that the Navy Department still believed that it was being kept in ignorance with regard to essential plans; second, that its estimate of the situation was war zone was completely mistaken, as is clearly indicated by its refusal to recognize the plans for antisubmarine operations, and its refusal to recognize the convoy system as plans of operation against the enemy; third, that it still had in mind the royal road to victory.

As I pointed out in paragraph 20 of my letter of January 10, 1917:

Judging from the actions that were finally taken, after extensive cabled and personal communications, and consequent long delays, it is apparent that, if I had appeared daily in Washington to explain fully my recommendations, and to discuss before the conferences upon which they were based, they would undoubtedly have been carried out from two to six months earlier.

In paragraphs 28, 29, and 30 of this letter, I referred to the requests of the department for information concerning future operations, and pointed out:

In other words, while the department's first statement of policy was what was recommended since the beginning, it, nevertheless, withheld putting it into effect apparently because of the conviction that the Allies were not keeping it fully informed of their plans. The truth of the matter was that nothing was withheld, and no policies and plans which were in writing, which were actually of an official character, and which in any way affected United States naval cooperation, had been transmitted to the department as completely as long distance communication—coded messages—permitted.

The review that I have thus far made of the attempts of the department to propose plans, and make decisions in Washington has been, I think, a sufficient one to show you that, in the course of the war, have been mentioned, the department itself recognized in the end the impracticability of the plans they had themselves earlier proposed. As a corollary to this, in the case of all the essential recommendations made in consultation with the Allies, the best proof of the soundness is the fact that the department later admitted the soundness by adopting them and by carrying them out as the policy of the department throughout the rest of the war. Consequently there can now be no fundamental disagreement between myself and the department as to the policy and plans which were finally followed.

and that that policy was sound when it was adopted and executed. We are agreed also that the Navy in the war zone met its highest traditions, by the efficiency and devotion of the personnel carried out their mission, and made the American troops and reasonably safe for all allied troops on every effort of the German submarine. A point which I again stress, and can not stress too much, is that in the first six months of the war, the department failed to act; later, the soundness of the recommendations which were made in accordance with the department's instructions, and in proposing alternative schemes of its own, which the department, six months later, recognized were impracticable or too costly. The delay was tremendously costly, resulting in unnecessary shipping and therefore the unnecessary prolongation of the war and its sacrifices.

#### INADEQUATE PERSONNEL FOR STAFF.

Now to a question which I have touched on frequently in my report—that is, to the point No. 6, of paragraph 78, of my January 7, 1920, in which I said:

The department's representative with the allied admiralities was not supported during the crucial months of the war, either by the adequate personnel, or by the resources that could have been supplied.

In other paragraphs 27, 46, 47, 48, 49, 50, 51, 52, 53, 54, 57, I have pointed out the immense difficulty that I had in handling the enormous amount of detailed work, and in discharging the very great responsibilities which the department had intrusted to me, and in getting me the assistance of an adequate staff of trained officers. I should have assisted me from the beginning to make my work more effective for the department to the maximum extent, enabling me to maintain constant and intimate relations with the various allied admiralities, and with all the multifarious activities of the various branches of the allied admiralities, and with the various activities of the various allied fleets, throughout the war which they were engaged. In order to handle the situation pointed out in paragraph 50 of my letter:

I should have had a staff capable of:

1. Obtaining complete information of the various phases of the naval campaign, and of the cooperation for over two years.

2. Keeping abreast with the developments which were rapidly changing almost daily.

3. Administering, supplying, and operating the entire force.

4. Integrating my work with that of the Allies.

In testimony that I have thus far offered will, doubtless, have convinced you of the wide variety of subjects, and of the great responsibility of the decisions, which the responsibilities of my position necessitated. It will only be necessary to review the materials that I sent to the department on this subject, in April, 1917, and continuing throughout the ensuing year, to show you what difficulties I had to meet, because of the lack of a staff and properly equipped staff—a staff similar to that of any business organization would have been provided.

Before proceeding with the testimony to substantiate this in my letter, I wish clearly to define, beyond possibility of misunderstanding, the sole point at issue. That point, simply stated, is that during the critical period of the war, the first half of which the department left its representative abroad with wholly inadequate assistance to carry out the mission which they had assigned. As I stated in my letter of January 7, the necessity for such assistance was finally recognized by the department, and in the last months of the war I was provided with an adequate staff. I have made this sufficiently clear, and that we will not be left from that point, namely, that the period in question is the first half and not the last half of the war.

It should also be pointed out that one of the chief reasons for the assignment of an adequate number of officers for duty abroad was not only to assist me in carrying out my duties, but also to assist the department by making it possible to supply full reports upon all aspects of the naval activity in the war zone. One of the great dangers in the military service is apt to be the instinct of overconservatism which clings to old teachings and traditions, without realizing the full changes brought in the crucial test of actual warfare, especially when, as in our case, we had been mere spectators for years without receiving any very full or complete accounts of developments and war experience of the allied powers. The fact that we did not realize how many things we had to learn was the first, one of the grave dangers in making decisions and drawing up plans in Washington, and it was for this reason that I insisted that the department should send over officers in whom I had confidence, representing each of the technical bureaus, whose function should be to acquire from the various allied services the available kind of information which would be of help to our department, or, to put the case quite simply, that we might profit from the success and mistakes of our allies.

From the first week of my arrival in England I realized the necessity of this measure. The Admiralties of the allied Navies, from the time we declared war, offered us complete access to all information at their disposition and to all the experience they had acquired. It was, therefore, only a question of having a sufficient number of trained assistants to collect this information, to put it in proper form, and transmit it to Washington. It must be remembered that the responsibility for gathering this information rested mainly on me. I was aware of our own needs. Every man in the allied services was occupied with a real job. They had no time to worry about what we knew or didn't know. The naval attaché and his two assistants, one an officer of the Supply Corps, the other of the Medical Corps, had been fully occupied with the duties imposed on them by prewar conditions, and although they rendered such assistance as they could, they were not placed under any orders until the later period. The task of getting the information we required was a very difficult and tedious one. It meant digging through records and it meant following up sources of information, wherever they might lead, out into the fleet or elsewhere. From the present point of view it is almost impossible to conceive of the wall of secrecy that was necessarily maintained around allied war operations and the

I am sure every officer who had experience over when he stops to look back, that our ignorance of the war prior to our entry was indeed appalling. In order properly to coordinate our own activities of the Allies, it was essential that we have available, in a sufficient number of capable officers who understood to profit by their experiences and to keep our own in the best possible harmony with them. The importance is generally recognized. We find, for example, in the Secretary of the Navy of the year 1918:

The accomplishment of the Navy abroad in this war, outside of rigorous in the danger zone, has been the character and degree of cooperation and collaboration, for the time being, of our services with those services have been associated. The Navy, beginning with the arrival of the to be used out for unity of command, even this in some instances in- to help clearly something of our identity as an independent service. to be a safe statement that the degree of accomplishment of our service is without precedent in allied warfare.

establishes the thorough and complete approval of by the Navy Department. It remains to be the attitude taken by the department in 1917, in of the war, when I was requesting the assistance to make possible this accomplishment, and when I was all the insistence at my command, that the department.

briefly, a few of the outstanding facts regarding given me by the Navy Department in this period. I went abroad with one aid. When I arrived in the naval attaché's office one line officer, the one officer of the Supply Corps, and one officer of the . These officers had been for some time in London, was already fully occupied before I arrived with which precluded their giving me any great degree . They did everything in their power to assist me, as by the paramount demands of their regular duties. I found myself literally overwhelmed with the with every department of the British Admiralty and French Ministry of Marine, thrown open to us, and requests from many sections of the Navy Department of information of many descriptions. It was for me and my one aid merely to collect the , to say nothing of maintaining constant touch of the allied admiralties, and later directing the operations in Europe, looking out for their supplies, etc. matters still further, all communications had to be in code, which was a tremendous task in itself, of purely routine labor on the part of my aid, small staff of the naval attaché; and this purely mechanical was added to the task of collecting, digesting, and to be sent to the Navy Department. It that, in cabling the department on April 16, a arrival, I said:

My aid, also engineer and gunnery officer. All information

Again, in my letter of April 27, in referring to this same recommendation, I wrote the department as follows:

APRIL

All essential information has been covered by cable dispatch. Up to my time has been too fully occupied in ascertaining and confirming information concerning the military situation to give much attention to questions of maintenance.

I strongly recommend that expert representatives of the Bureau of Construction, Repair, Ordnance and Steam Engineering, be sent here as early as possible. Channels of information are now open. Such representatives should be of the highest quality as practicable.

On April 29 I received from the department the announcement of my appointment to command the destroyers then on the coast of Europe.

On April 30 I therefore sent the following cable:

Sent: April 30, 1917.

I acknowledge receipt of orders to command destroyer forces in these waters. Consultations with Admiralty will frequently be required, it is essential to have an experienced representative at base of our forces at all times. Therefore immediate detail of staff as follows: Pratt, chief of staff, and Taylor, Evans, or Coffey as aid; and Tobey. It is essential that Tobey be assigned in addition to present duties. Sims.

It will be noted that I pointed out the need for a staff, and specifically the appointment of Capt. Pratt to be my chief of staff, and asked for one aid out of three officers whom I named. I had every reason to believe that Capt. Pratt was available and was assigned. I was under the impression that he was on duty as a student at the Army War College in Washington. I believe some time after this that he was assigned to duty in Operations. It was considerably later that he was assigned as assistant to the Chief of Naval Operations, on the death of Capt. Chase. Not receiving an answer, about eight days later I cabled and asked information concerning the assignment of Capt. Pratt and an additional aid, stating that their services were urgently required.

Lieut. Commander J. P. Daniels was ordered on April 30, to proceed to Europe and report to me. He arrived Queenstown on May 17, 1917, and was assigned to Queenstown base in connection with the destroyers.

On May 11, in another cable to the department, I said:

Capt. Pratt's services urgently needed, specially owing to his previous service and his experience and knowledge of destroyer operations.

Similar requests for the services of Capt. Pratt were cabled to the Navy Department on May 21 and May 23.

On May 25 I received the following message from the department:

Capt. W. V. Pratt is not available for duty as chief of staff.

DANIEL

Secretary of the

When I received this message of May 25, stating that Capt. Pratt was not available, but with no information as to what his whereabouts were, or as to any other officers that might be available for this duty, I felt again the necessity of pointing out to the department the situation which led me to specifically request Capt. Pratt. This was in my cable of May 27, which I will read you. This was sent even before I received the message from Queenstown. [Reading:]

1897  
 U. S. Navy  
 War Department.

London to-morrow for conference with Chief of Staff, French  
 of particular importance that Capt. Pratt be sent at earliest moment as  
 of such nature that success of operations and spirit of  
 might be endangered by an officer of wrong temperament  
 from extended experience with Capt. Pratt, I know him to be pecu-  
 liarly adapted to requirements of this situation. In view of fact that strain of  
 and responsibility is heavy, I request that selection of staff  
 be made of my peculiar relations with officials of allied naval forces.  
 SIMS.

In answer to this cable, and throughout the remainder  
 of June I continued to be without any information as to  
 what assistance was to be sent me, or as to whether I was  
 to be of staff or not.

At the same time I had endeavored to secure the services of a  
 officer who had come to Europe on armed guard or other  
 for example, the steamship *New York* had been mined  
 at Liverpool, on my arrival at that port. It became neces-  
 sary for her to remain some time at Liverpool for repairs.  
 At the same time I learned that the *Minnesota* was tied up in London  
 for some time. At my request, the naval attaché,  
 advised the department, requesting that the armed guard  
 on these steamers be assigned to temporary duty to help out  
 at the department approved this on April 28.

At the same time the department that these officers should remain  
 on board only while their vessels were held for repairs in

May, however, I requested their services for duty in  
 the department disapproved by recommendation. Thus, on  
 a dispatch, I stated that there were petty officers on each of  
 competent to command the armed guard, and requested  
 from be assigned to duty with the destroyer force.

On May 14, I cabled as follows:

1897  
 U. S. Navy  
 War Department.

Information concerning my request to retain Lieuts. Emmet and Van de  
 urgently needed. Former's engineering knowledge proving of  
 and latter's knowledge of French renders him of great value. Both  
 are excellent petty officers capable of taking charge of their armed  
 and immediate reply on Emmet, as *Minnesota* sails in few days.

SIMS.

At the same time the armed guard officer of the *Philadelphia* ar-  
 rived, and I learned from him that the department de-  
 manded information along many different lines. I  
 repeated in my cable of May 16, in which I said:

1897  
 U. S. Navy  
 War Department.

At the same time officers arriving on armed liners that department desires a great  
 amount of military and material information. Urgently request  
 assistance in acquainting me with information desired, and also in in-  
 formation at home as affects forces and duties of cooperation here.  
 Many former destroyer officers, particularly those who served under  
 and are now on duty elsewhere, be sent over, either on vessels coming,  
 or on ships now here. Information urgently requested as to my

requests to retain Lieuts. Emmet and Van de Ver. Former sails in Lieut. King on *Philadelphia*, who speaks French and Italian fluently, great service as liaison officer in coordinating work here and on the *C* sails in three days. Services of such officers will greatly facilitate duty in obtaining all information desired. It is of vital importance that information should be obtained and transmitted rapidly, in order to prepare for any future emergency. Services of Capt. Pratt as chief of staff are urged.

The cable stating that Capt. Pratt was not available received until nine days after that dispatch was sent. I want to invite attention here to that particular cable I have just sent, the necessity of being able to send in all possible information, and all possible details concerning the operations abroad.

In repeated cables I have assured the department that I sent them all essential military information. That only covered broad outlines of the situation. I wanted to be able to send in information on all the specialties on the other side, so that I would be as well informed as possible of the conditions under which the submarine campaign was being carried out. I could not. It was physically impossible to do it with only two or three officers. The consequence was, as you have seen by the testimony I have been giving for the last half dozen days, that time and time again the department in its cables exhibited an astonishing ignorance of the very elements of the submarine campaign, and I wanted to correct that thing in the early months of the war, so that that thing should not happen. But I did not succeed because they did not have the necessary personnel.

No reply was received for over two weeks. Lieut. Emmet, an armed guard officer of the *Minnesota*, was obliged to leave when his ship sailed on May 16.

In a cable of May 31, I again referred to these armed guard officers and requested authority to retain them for duty under my command.

When the *New York* was finally about ready to sail on her trip, on June 12, I cabled again to the department, with renewed my request for the services of the armed guard officer, but was informed by a dispatch of June 14 that the return of this officer to the United States was desired.

In the meantime I continued to have only the services of one officer together with that of an American in London who had resigned the naval service in 1914, but who volunteered for duty with me. He was given a provisional appointment as lieutenant, by authority of the Secretary of the Navy, on April 16.

On May 21, I pointed out to the department that the station had been entirely inadequate to make possible the handling of the codes. I therefore, said:

In order that our staff officers here be available for important military duties urgently requested, as recommended in my previous dispatches, that the department's codes and staffs be utilized for all communications, except those of a secret nature.

On May 15 I learned that Commander Morton, who had command of the *Scorpion*, our station ship at Constantinople, succeeded in reaching Paris. As I had no information concerning the sending of officers from America, and as at this time the department had informed me of its intention to establish bases on the coast, I cabled on May 15, requesting that Morton be assigned to duty in France, in accordance with his own request.

As I received a message from the Secretary of the Navy, to return home on the first available steamer.

I cabled to the Secretary, pointing out that an urgent matter necessary to hold Morton for a few days, and requesting the department's orders be reconsidered.

The Secretary of the Navy replied that Morton could stay a few days, but should then carry out his previous orders.

After a conference with the French chief of staff, I pointed out that we have officers speaking French, and familiar with conditions, for this duty, that I cabled to the department requesting the reconsideration of Morton's orders, and stated: "My experience urgently needed. Speaks French fluently and is equipped to assume command of one of the prospective French bases."

That as Capt. Morton had but recently escaped from the department, undoubtedly, was anxious to have his release, therefore, stated in the cable that Morton was prepared to give all of the information which he had acquired in the department.

That I received was a statement that Commander Morton carry out his original orders.

About two months after my arrival, the only additions made by the department were Lieut. Commander and Surgeons were needed at Queenstown, and Surg. Assistant to the naval attaché, concerning whom the naval attaché the following dispatch on May 26:

Surgeon, Fleetwell, United States Navy, to report to Vice Admiral French Navy, for additional duty as medical aide.

DANIELS,  
*Secretary of the Navy.*

After conference with the French chief of naval staff, I pointed out that the French chief of naval staff had expressed the wish that a representative of the United States Navy be assigned to the French Navy Department, not below the rank of captain, be assigned to the French Navy Department.

Although I am in touch with the French department by cable, as a representative here, and also by telephone and telegraph, and in Paris in a short time, it is considered that the request should be granted for closer daily cooperation and coordination. It is also considered that a representative, preferably with knowledge of French, should be assigned to the French Navy Department.

Having heard unofficially that it was intended to assign the officer of the Supply Corps on duty as assistant to the naval attaché, the naval attaché and myself cabled the department requesting that his assignment be reconsidered.

His experience, both in an advisory capacity, as well as for his wide knowledge of the situation and methods pursued in the French Navy Department.

I remembered that I had requested on April 30 that Tobey be assigned to additional duty as aide to me. Up to this time, a month later, I received no reply from the department concerning this. I was in the situation with regard to personnel at the end of my assignment from Queenstown, and especially after my conference with the French naval staff, and learning of the plans which the French naval staff had expressed the wish that a representative of the United States Navy be assigned to the French Navy Department.

the department had for the establishment of bases and the of forces to France, I felt that the situation could not continue as it was, and I therefore sent the following message, at to point out to the Navy Department that the responsibility devolved upon me, and the necessity of getting for the department the benefit of allied war experience, made necessary the immediately of sufficient experienced representatives. My was as follows:

To: Secretary of Navy, Operations.

Through: State Department.

Sent: May 31.

In the belief that the future security of the United States, or at least the accomplishment of our purpose in entering this war, will in a considerable degree depend upon the efficiency of the organization on this side, both afloat and ashore, it becomes my duty to specify the requirements, based on the situation which are necessary to the discharge of my full responsibility. Distance and the communication render it impracticable to convey to the department fully the character of the various situations that arise and the developments thereof, which I have to make may be of such far-reaching effect that my duty imperiously appeals for the assistance and facilities which I believe the situation demands. I therefore urgently requested that the department approve a greatly enlarged organization, with a view to insuring that the department, fleet and the forces have to cooperate with the Allies to the maximum extent, and that they may be in the future, as well as the present, by all available war experience ashore, material and otherwise. The importance can not be overestimated of having and experienced representatives, of all branches of our shore and sea forces, in touch with the allied forces ashore and afloat, who are engaged in actual operations. These representatives should be in the grand fleet, in the submarines, the other services, gaining all possible experience and keeping in touch with the progress of all war activities. Experienced technical officers should be in London in touch with all departments of the Admiralty. The Admiralty have suggested the advisability of our having a representative in the secret-service, but no officers are available. It is necessary that I have an adviser of supply and accounting questions which have already arisen with the Admiralty. The supply officer of the *Melville* (which was at Queenstown) is already overworked with local work concerning the destroyers, and can not keep in touch with the necessary work in London.

The requirements of the situation set forth above had led to request details of Morton, Van de Veer, Emmet, Tobey, and authority to enroll any one of the Naval Reserve Force. The organization requires greatly increased clerical funds and authority to authorize expenditures under war conditions, as free from detailed accounting as pursued in peace time. In view of the uncertainties of this position the department's early action is earnestly requested.

That was May 31, about 2 months after we had entered the war.

In another message of June 1 I referred also to the desirability of cooperating with the allied secret service, and urged that an officer be sent from the United States to coordinate our secret-service with that of the British.

In my letter to the department of June 1, 1917, I again emphasized the points which I have read you in my cable of May 31.

The cable of May 31 seems to have been sufficiently urgent in tone to call forth a response, for on June 5 I received the following dispatch:

Received: June 5, 1917.

This cablegram is for Sims.

Quote reply to your cable of June 1. Department will afford you every facility which material and personnel conditions Navy permit. Technical officers and material bureaus have been ordered or will be order(ed). You are authorized to Tobey. Dixie coming with full complement of officers. Department disapproves

personnel (personnel). You have authority to employ necessary personnel. Arrangement has been made to keep United States Navy force(s) in good condition and spare parts existed repair. Authorize such personnel to maintain your forces in efficient condition and pay therefor therewith. No. 23004.

DANIELS,  
*Secretary of the Navy.*

See the literal translation of the word as verified by repetition.

It is noted that in this reply, the first information which I received concerning personnel, it was stated that the department had no very facility which the personnel conditions of the United States and that technical officers from material bureaus would be ordered. Up to this time I had received no information concerning these officers, and what is more the officers themselves had not yet put in an appearance, in the case that of Lieut. G. L. Schuyler, who had been sent to the Navy Department for the purpose of inspecting the equipment being purchased from British firms not at all. He had reported in London to the naval attaché on the 1st of orders to report to me as aid, and his time was used by the duties which the department had assigned to him during the first months.

When a letter to the department I again pointed out the importance of coordinating our service with that of the Allies through the European of an adequate number of experienced officers. This is as follows:

JUNE 8, 1917.

That the primary purpose of the United States naval organization is to serve as the coordinating link, on this side, between the department and French admiralties, or, in other words, between the United States and France in prosecution of the war. It is therefore a duty to coordinate all matters of any difficulties which may be encountered and to coordinate them as seen from the viewpoint here.

The difficulties so far involved have been due to the lack of an adequate staff, as mentioned in previous dispatches.

It is the efficiency of the organization that the department's policy, which should be known in a general way at all times. It is for this reason that I have requested a weekly information dispatch for the sole purpose of keeping matters of policy and prospective plans, in order that the department may be thoroughly coordinated with those of the department. It is important that our service may be at all times prepared for any emergency, and that its activities may be directed to an end which is the allied cause.

I received a cable from the Secretary of the Navy, to the effect that I was to inform Paymaster Tobey that he was to be assigned to additional duty as aid to my staff.

It is noted in passing that in spite of all the recommendations made I had up to July 7, three months after my arrival received only three additions to my staff. One of these had been detailed to duty at Queenstown; the other two assistants to the naval attaché, ordered to additional duty. In the meantime, after the convoy system was put into effect, our troops began to move on the high seas, and my staff were thereby greatly increased, almost daily it was necessary that I should have a competent officer for the

exclusive handling of these convoys. I therefore sent the department on June 11 the following message:

Sent: June 11, 1917.

To: Secretary of the Navy.

Through: State Department.

18. Admiralty has requested, and I recommend, that a United States officer be assigned to me for exclusive duty in admiralty in connection with the selection of rendezvous and similar important duties concerning movements of Government ships as affected by submarine campaign. Officer should be selected as head of that admiralty department is a captain. Very important to be selected with view of insuring desirable cooperation and relations. With our military and naval forces in European waters, and their attending maintenance, the question of a convoy and routes will become increasingly important.

This recommendation I repeated in my letter of June 2, and in dispatches of July 1, July 3, July 5, July 9, and July 14, but never receiving an answer, and, therefore, finally I was compelled to order the commander of one of the Queenstown destroyers to come in London, in order to take charge of this important work, in which the lives of our troops, as well as losses of valuable property, was dependent.

I only wish that I were capable of describing the conditions in my office at this time. We were established in two small rooms in the Embassy, which had been kindly given us by the British ambassador, only at the expense of additional crowding of British officials. Dispatches were pouring in on us every day. The period when we got a business man, a former American naval officer, to come in and help us, and also got the assistance of some stenographers from American business firms in London.

Incidentally, that business man paid the salaries of these stenographers for some time.

I will not even attempt to describe this remarkable situation further than to say that the reason I became so insistent, was that we had reached the limit of the physical endurance of the personnel available.

There were simply not enough minutes in the day to accomplish the work that had to be accomplished—and with such important questions as troops moving on the high seas, dependent upon direction and control, it was quite within the range of possibility that a mistake might be made which would have resulted in disaster.

I fully explained the situation to the department, in my letters of about this time, as, for example, in my letter of June 11 to the department. [Reading:]

18. I wish again to urge the necessity for greatly increasing the staff under my command. It is wholly impossible for me to keep myself fully acquainted with the situation without an increased staff. The lack for an experienced Chief of Staff, whom I am thoroughly acquainted, suited to the peculiar existent conditions, has been a great embarrassment. The need for at least one experienced representative in the Operations Department of the Admiralty, has been pressing, and more important daily. The time and attention of all officers of the Admiralty is fully taken up with pressing daily war duties. They can not keep me fully advised of the problems which may affect me, both owing to the lack of time and lack of knowledge of what I need; my information is therefore, chiefly confined to the most important questions which require my action, and to that which I deliberately

Pratt to point attention to the last sentence of that message. I was only able to send in information which was confined to the questions which required my action. I could not send in the information which the department should have had. I was thoroughly acquainted with conditions of the war, and the result of that thing was, as you have seen in my previous testimony, a most amazing ignorance of the situation at the latter period of the war, as to what the whole thing was.

As already stated, I received no answers to any of my questions. My personal sent at this time until the 7th of July. I had cabled again to the department on July 1

to the Navy.

and

and request the services of Capt. Pratt, and a commander, for duty in connection with convoys. If Capt. Pratt could come at once, my present view, his estimate of situation would undoubtedly be of use and remove any misunderstanding of the situation which may

Sms.

received a cable stating that Capt. Pratt was not available, and then what his duty was. I assumed that he was on duty, and shown him to be, in the Army War College.

I cabled to the Navy Department as follows:

to the Navy.

and request recommend that a carefully selected commander be sent to duty under me in British Admiralty in connection with convoys. I particularly desire this. If Capt. Pratt can not be sent as chief of staff, is Twining available?

and on July 3, of the death of Capt. Chase in Washington. Subsequently, of the necessity for retaining Capt. Pratt in Naval Operations, I cabled again on July 4, as follows:

to the Navy. (Operations.)

to the department.

and request services of Capt. Twining as chief of staff; also request services of Twining on my staff, or under my command.

Sms.

to the Navy, Washington.

to the department enclaire.

and request impossible to insure efficiency my duty, and safeguard the country's interests, without immediate increase of staff. My request immediate dispatch, by first steamer sailing, of chief of staff and two additional assistants, with war college experience. Request Commander McNamee, and Lieut. Coffey.

Sms.

and in this series of messages I received, on July 7, the dispatch from the department:

and Capt. Twining as your chief of staff has been ordered.

And on the following day I received another message from the department confirming this and stating that a lieutenant had also been ordered for duty as aide.

The personnel situation which I had to face, at that time, is summed up in my letter of July 7, 1917, of which the paragraphs were as follows:

It is impossible this week to submit a full report of operations of our department of interest and value to the department.

This is on account of the unusual strain which has been placed upon the staff here, and the total inadequacy of the staff available to handle it.

It has now become physically impossible to carry on the work with the staff available. With all British officials individually engaged in the active work of the war, it is wholly impossible for them to furnish me or my staff with the information which I should have, and it is necessarily incumbent upon me to enter into British official activities and ascertain the majority of the information which the department needs by actual contact and observation. Such a course is entirely dependent upon the size of my staff and the demands made upon it by myself and my staff.

As previously reported by letter and cable dispatch, the very minimum staff which is necessary is a chief of staff, an three subordinate aids, and a clerical work.

As reported by dispatch, it is physically impossible for the organization of the command to accomplish the mission for which it is assigned without a considerable increase of personnel.

In interviews with officers recently arrived from the department they have shown a probability of a more or less fundamental misunderstanding between them and myself. The misunderstanding is probably due to various causes among which are -

(a) Difference of point of view, each more or less unknown to the other.  
(b) Lack of full information on my part of the difficulties under which the department is working.

(c) The inadequacy of both written and cable communication; that is, the impossibility of fully explaining the phases of the situation or circumstances reported, and the danger of misinterpretation of statements actually made.

I will, therefore, urgently recommend that from time to time an officer be sent from the department who is thoroughly in touch with the department's policies and sent on temporary duty to confer with me with a view to bringing immediately to the department.

#### REQUEST FOR LIAISON OFFICERS.

As I have already pointed out, I had been also repeatedly pointing out to the department of the necessity for capable officers for Europe of a liaison character, in order that the war experience of the Allies might be made available for the department. I have referred to my cables in April and May on this subject. On May 15, 1917, I sent a letter to the Navy Department on this subject, pointing out how essential it was that competent American officers should be sent for duty in Europe with the various allied naval forces, in order that the department might be kept constantly informed of war experience and new developments. I had received no reply from the department or any indication that they had received or considered my recommendations up to this time—that is, three months after my arrival in London. In the meantime I learned that the armed guard officers, arriving in English ports on passenger ships, had orders to proceed directly to London, on arriving in the ports, to obtain information for the department on special assignments. Thus, for example, on May 15, 1917, a lieutenant arrived in London and informed me that he had verbal orders from the Chief of Operations "to get information as to the antisubmarine operations."

to ascertain if it would be practicable in any way to detect German submarines in the North Sea, and, in addition, to report on the points which might be of value in connection with new construction of the United States."

Q. To comment on that in this way: The Navy Department has an admiral abroad, who is there with certain assistants. He has been there three months. He has been in almost daily communication with the heads of the allied navies. He bears a tremendous responsibility for the safety of all those forces and the safety of our own, devoting all his energies to it. Still, the Department sends to a young, comparatively inexperienced lieutenant from the port of arrival in Great Britain to London, to get information he can, and go back and give it to the Department, with the avowed object of basing the action of the Department on the result. If anything could possibly be done in warfare than that, I do not know what it is.

Q. Instead of depending upon the London headquarters to get information, which could easily have been done, if I had the assistance, because of the close relations which existed between us and various officials of the allied navies, the Department expected to obtain this information by having an officer spend a week in London during the time before he returns on his return voyage to the United States. I have a letter to me by this lieutenant, covering the subject of the information at the Admiralty, and the information which

A. It is too long to read here, but it would be interesting to the record as showing the variety of subjects on which information was obtained for the department, and in pointing out the work done by this method, the department was necessarily obliged to do the work by sending a number of different officers, at different times, to the Admiralty to ask, from the same sections, for the same information. This happened so often in the summer of 1917 that at the beginning of August I received from the Admiralty a polite request asking whether it would not be possible to have all requests for information come through one channel, and I had found that a number of officers had at different times obtained exactly the same information.

Q. Are you placing this letter from the lieutenant in the record?

A. Yes; I will do so.

Q. It should be placed in the record, I think.

A. Yes; it is in the record, but it is too long and too detailed for the committee, I think. It is there.

Q. I referred to it as follows:)

AMERICAN EMBASSY,  
London, May 16, 1917.

Mr. H. C. Grady, United States Navy,

Mr. J. S. Sims, United States Navy,

Mr. J. C. F. Operations,

Mr. J. C. F. Operations, Navy Department, Washington, I will make a report in

Q. The only exception for the casualties to the *Cunningham's* circumstances, the condenser. The casualty to the condenser of the *Wainwright* is the necessity of having two condensers.

Q. In Queenstown and Fasnet there is an area of submarine important to point to safeguard shipping. There will be a

the report of the Queenstown area many minor bits of information, chiefly rather than instructive in character.

4. Before going to the Admiralty, I submitted an outline of my mission in a copy of which I will give to the Chief of Operations. This letter was presented to Admiral Jellicoe and sent by him to the division of antisubmarine affairs.

5. At the Admiralty in London an officer—Lieut. Commander Hitchens—signed to introduce me to various officers who could give me information. Mr. Hitchens also gave me information of a general character. I talked to Rear Admiral Alexander L. Duff, head of the division which deals with antisubmarine warfare, with Admiral Edward S. Fitzherbert, Director of Torpedoes and Mining, and Capt. Spear, head of the Mine Division.

6. Some of the details of the nets I made notes on but as I learned later the details and drawings of all nets and mines were to be furnished or else had been furnished to the Navy Department, I kept no further notes. I also obtained information as to the probable routes the submarines take in leaving their bases at Brügge, Emden, and Wilhelmshaven through and around the area mined by the British.

7. The British have in general found it impracticable to maintain an anti-submarine patrol in the North Sea which would seriously interfere with the passage of ships through the North Sea on account of the number of ships needed. Two net or barrages which were established in the vicinity of Dover to prevent submarines from passing through were finally partially carried away by the tide and although parts of them are still in place no one doubts that some of the submarines pass over to Ireland by this channel.

8. Most of the German submarines and particularly the large ones after leaving the mine field off the German coast head directly for Fair Island between the Orkney and the Shetland Islands and do not hesitate to pass through to the Atlantic. The British have found it wholly impracticable to net this passage. The submarines usually made a landfall at St. Kilda west of the Hebrides and thence down the west coast in the vicinity of Fastnet and the Scillies. They are usually out 20 days, eight of which are required for the passage to and fro. Submarines usually spend two-fifths of the time away from their base. As the Admiralty believe that the Germans have 60 submarines there are 60 submarines always out. The Germans are turning over two submarines a week.

9. In connection with a scheme for effectively closing the North Sea by mines and nets in conjunction with the patrols, the officers of the Admiralty found it to be impracticable. The same thing was suggested several times by the officers but after consideration was disapproved. The objections are given as lack of necessary patrols, impossibility to maintain nets, impracticability of operating in water over 50 fathoms with anchored mines, and the undesirability of mines on account of possible danger to their fleet.

10. Patrols have been withdrawn from the North Sea except near the coast and near the channel. At present the general line of defense is the mined area in the North Sea and the patrol of the areas of submarine operations.

11. The strategy regarding the Grand Fleet is still adhered to, with the view of meeting the German High Sea Fleet in the near future.

12. The patrols are no doubt as efficient as their numbers make it possible to be but on account of the need of certain flotillas being kept ready with the patrols the patrol is reduced so much in its effectiveness.

13. The Admiralty are somewhat reorganized and will no doubt result in improvements, as the heads are relieved of much routine and details.

14. I will state as my opinion that the present lines of effort are defective to some extent.

15. At present the policy of maintaining the fleet is of prime importance and coming the submarine menace is of secondary importance. This is wrong because it will be the submarine that will (if anything does) bring about the defeat of the British and not the German High Seas Fleet. As to secure control of the surface it is necessary to operate against the enemy on the surface, so to secure the control of the surface it will be necessary to operate against the enemy in subsurface areas. Surface ships could carry out submarine operations by dropping mines and depth charges but could not see the submarine. Not being able to see the submarine the only other way to gain control of the subsurface is to scatter mines everywhere in it so that a submarine can not operate in it. This, of course, can not be done over the entire ocean, but the North Sea presents an area which it is possible to control. Actual attempts to control there may prove it to be impossible, but it should at least be attempted. This will require the extensive use of mines and may interfere with the Grand Fleet even so, the movements of the Grand Fleet should be subordinated to the anti-submarine measure to whatever extent necessary.

are just maintaining their own, and the German submarine force is doubled, in a year it will be necessary to double the patrol force. It is my own opinion that every possible chart that can be of service to the anti-submarine campaign be immediately sent over. This for two reasons: that there should be no chance for a complaint that the campaign against the United States did not give adequate help in time; the second, that it be kept from getting stronger until more extensive mining operations are carried out. It will also recommend that the manufacture of mines be vigorously pursued in case of any failure of the patrols.

to the armed guard officer of whom I have just spoken, many others who came to London with similar instructions Navy Department. I would like to include in the record at a letter addressed by one of these armed guard officers, to Naval Operations, after his arrival in Washington. It is pointing out the realization which he, like every other came to London, obtained of the problems we were facing actually to see them for himself and to visualize the In his letter he emphasized the importance of having officers abroad to collect information for the department, in the administration of our forces overseas, and in the of our work with the Allies. I think that letter also for the record, as it is long and technical letter is as follows:

NAVY DEPARTMENT,  
Washington, D. C., June 19, 1917.

22 W. Emmet, United States Navy.

Admiral Sims re information service, dated from London and his dispatches re additional personnel from time to time.

and forces in European waters.

operation aimed and discussion with officers of British Navy, I am sure the department will have to face problem of finding additional bases for our forces operating in Europe.

They are a development of this war. They were inaugurated by the Germans and have recently been adopted by British. They are used in both army and navy and are considered indispensable.

1997

the demands on Admiral Sims's time, brain, and energy were increasing by leaps and bounds. There was ample work for efficient officers of an active turn of mind, had they been

...that both the importance of his mission and the widely scattered  
...together with the relatively weighty part it plays in the  
...demand that the admiral receive the most efficient assistance

Enclosed find copy of this letter.

2-1-1. I desire to bring to the attention of Operations my conviction  
of the existence of I, II, and III above.

fact, I became thoroughly imbued with the fact that this war is being fought in the waters washing the coasts of Great Britain and France; to a large Mediterranean, and nowhere else.

As I contact with the Navy Department I am fully alive to the de-  
 mands of trained officers.

Q: I am convinced that nothing should interfere with maintaining  
the waters at the maximum pitch of efficiency.

... that measure to consolidate the functions set forth in I, II, III  
... which under the circumstances seems desirable.

additional personnel and forces, European waters.

as these open to me, became keenly alive to the necessity of the destroyer force.

- (b) His dispatches indicate it.
- (c) I have heard him say time and again that we would find 50 per cent.
- (d) The irreducible minimum be considered to be one-fifth, which 30 boats would mean 6 captains and a proportionate number of junior enlisted ratings.
- (e) My personal conviction is that in the case of officers certainly, they will find it must provide nearer one-half than one-fifth.
- (f) The service is trying. It is work and no play, with a constant tension.
- (g) I am sure it is not the admiralty's intention to retain all our forces on their present service. It is drudgery. Undoubtedly, as time goes on our destroyers will be transferred to east coast immediately facing enemy are bound to occur.
- (h) Casualties are bound to occur on present stations. There the danger and wounds is not so imminent, but we will surely encounter cases which must be given a rest.
- (i) If reliefs are available, a few weeks' or months' change of duty most valuable man to his full efficiency, and in the interim he may perform well as a liaison officer or on admiral staff, temporarily in London.
- (j) If reliefs are not available the loss of efficiency of the force may prove due to increased strain on officers remaining.
- (k) There is also the danger that men will be overworked to the extent services may be lost to the country for long periods of time, for the rest of forever.
- (l) The British have met this time and again. The whole policy of the is to make life aboard seagoing ships as livable as possible, even to the extent of sacrificing in some degree military efficiency.
- (m) We were warned again and again it did not pay to strip ships to the they did to their cost at beginning of war.
- (n) I feel absolutely confident that unless this problem is met square will be very much more embarrassing in the future.

#### VI. Discussing liaison officer.

- (a) A number of officers have been sent abroad representing the various. They will undoubtedly render valuable service.
- (b) I think arrangements ought to be made to have part of them return from time to time and make their report personally. I believe if this was done of the information supplied department would be many times increased.
- (c) Business by cable has its drawbacks. I have heard Admiral Sims discussing submarine situation, that Admiral Jellicoe had told him that we furnish too many mines; that a million was not too many.
- (d) I have been informed since my return from abroad that the British did any mines from us. They must need them, and there must be a misunderstanding at long range.
- (e) Officers in reserve for our destroyers can gain invaluable experience British forces actually facing the enemy. They can be changed from time so that the whole force will be leavened with everything our Allies have in three years of war.
- (f) Officers temporarily incapacitated can render valuable service in London as opportunity offers, can be sent home to bring the actual seat of operations high command here in a way that can never be accomplished by correspondence cable or by letter.
- (g) I desire to invite attention to Admiral Sims's letter of May 14, 1917, on "Liaison information and liaison service." The subject of liaison officers discussed at length.

#### VII. Interchange of information with our allies.

- (a) Admiral Sims was informed by the Board of Admiralty that they had orders to all departments of Admiralty that there was nothing confidential as the two services; that they were willing and anxious to supply us with any information on any subject we might desire.
- (b) I know I reflect Admiral Sims when I recommend that a similar policy of complete frankness be given serious consideration by us.

#### VIII. Need for destroyers.

- (a) The Admiralty consider at the present time a destroyer to be literally weight in gold.
- (b) Too many can't be built.
- (c) In my association with the Office of the Engineer in Chief in the Admiralty with various engineering firms, I became keenly alive to the difficulties of suitable gearing for turbines of our new 35-knot destroyers.

as they can be cut abroad there is always danger of loss in transit to this

our destroyers is paramount.

that state if they had been able to force Germany's course of unrestricted

war they would have now 200 more than at present.

the accident that with 200 more they could surely control the submarines

that point—that is, prevent them sinking more merchant tonnage than

is said. They admit to lack of vision.

Our destroyers are splendid ships.

we talk about them.

experts in the country is supplied with plans and patterns.

as to my view of our past experience to turn out quickly many 33-

tonnage as the *Jouett* and *Beale*, which were unqualified successes.

like the *Beale*, with 4-inch guns instead of 3-inch, and, if you like, three

or four twin torpedo tubes would give a good account of herself against

any of the world.

as to anti-submarine warfare she would be fully as efficient as the

present. All such boats can be turned out quickly.

where I felt impelled to submit this letter, as I felt in my seven weeks

that had an exceptional opportunity to observe conditions affecting the

matter of the war on the sea.

R. R. EMMET.

a difficulty was in getting the department itself to realize

and it was many months before I received any indica-

tion had come to this realization.

for example, I sent the following dispatch:

(Cable dispatch.)

NAVY.

NAVY.

NAVY Department (on clair).

NAVY give priority.

NAVY keep the department informed of the information which it requires,

essential to efficiency of our cooperation in this war, I must have men of

every training, and ability. With my knowledge of situation here, I

am aware of at least three of following, in addition to chief of staff:

1. Mr. McNamee, Cotten, King, Pye, Coffey. Chief of staff must be

present; and continuous estimate of situation. In addition, I must have

another constantly on duty in admiralty in connection with convoy

movements and operations of our forces, and at least two additional

for more are required. Replies to department's cables are now being

postponed and other important military matters being postponed, owing to

my duty to keep up with current work. It therefore is my duty to urge

that be subordinated to the demands of the organization here, upon

our United States naval cooperation must necessarily primarily depend.

success of our ships, as well as efficiency of their operations, is dependent

upon the adequacy of staff.

Sims.

#### • TROOP CONVOYS ENDANGERED BY INADEQUATE STAFF.

In my dispatches of July 14, 17, and 23, I again pointed out

that the necessary and rapidly increasing work in con-

nection with the allies, with the operations of

the department and of the obtaining of information for the department

was overwhelming myself, my aid, and such members of

my office as were able to devote time to assist me.

When the department cabled me an announcement of

on July 10, I replied in a long letter, fully setting forth

the requirements of my position and of the

which seemed necessary to carry out this policy of the department so far as operations in European waters were concerned. It is interesting to read the paragraphs of this letter, dealing with the subjects. It will be noted that I fully stated to the department the necessity of having all plans for operations and the direction of actual military operations handled in the war zone, at a place where all information was available, and where cooperation and coordination with the allied military effort could be accomplished by personal conferences. I recommended this to avoid the inevitable misunderstandings, due to correspondence between men whose minds are running in different channels. My letter was as follows. I apologize for the length of this thing, but I think it is necessary to read it. [Reading:]

Letter No. 27, July 16, 1917:

14. The department's policy refers to willingness to extend hearty cooperation to the allies and to discuss plans for joint operations, and also to its readiness to discuss any plans which may be submitted by the joint allied admiralities.

15. I submit that it is impossible to carry out this cooperation, to discuss plans with the various admiralities, except in one way, and that is to establish what I have termed an advance headquarters in the war area, composed of department representatives, upon whose recommendations the department can depend.

I refer to exactly the same procedure as is now carried out in the Army; the general headquarters in the field being the advance headquarters of the War Department at home, and the advance headquarters must of necessity be left a certain discretion and freedom of action as concerns the details of the measures necessary by the military situations as they arise.

16. The time element is one of the most vital of all elements which can be affected in military warfare, and hence delays in communications by written reports, with the necessity for secrecy, render it very difficult to discuss plans at length. The enemy secret service has proved itself to be of extraordinary efficiency.

Moreover, I believe it to be very unsafe to depend upon discussion of matters by cable, as well as by letter. The necessary inadequacy of written or cable communications needs no discussion. The opportunities for misunderstandings are great. It is difficult to be sure that one has expressed clearly one's meaning in writing, hence phrases in a letter are very liable to misinterpretation. They can not be taken at their own value.

17. One of the greatest military difficulties of this war, and perhaps of all wars, has been the difficulty of coordination and cooperation in military effort. I have a great mass of information in this connection which it is practically impossible to impart except by personal discussion.

It is unquestionable that efficiency would be greatly improved if any one of the Allies—Italy, France, England, or the United States—were selected to coordinate operations, the others merely keeping the one selected fully informed of their resources available, and submitting to complete control and direction in regard to the utilization of these resources.

18. If the above considerations are granted, it then becomes necessary to select the best location in which to establish such advanced headquarters, or what may be called an advance branch war council at the front; that is, an advanced headquarters upon whose advice and decisions the War Council itself largely depends.

I fully realize the pressure, and the influences, which must have been borne upon the department from all of the Allies, and from various, and perhaps conflicting, sources.

I also realize that my position here in England renders me open to suspicion, and may be unduly influenced by the British viewpoint of the war. It should be necessary to state, however, that I have done everything within my ability to maintain a broad viewpoint, with the above-stated mission constantly in mind.

19. From the naval point of view, it would seem evident that London is the most central location in the war area for what I have termed above the naval branch of our Naval War Council.

The British Navy, on account of its size alone, is bearing the brunt of the naval war, and hence all naval information concerning the war reaches and centers in London.

It will be quite possible for all of our advanced headquarters' staff, or divisions thereof, to visit Paris and other allied admiralities at any time.

It is quite clear that, up to date, it has been wholly impossible for me to perform all of the functions of such an advanced branch of

the service. It has been evident for some time that I have been in a position in which it would be physically impossible to handle the work of the staff.

The nature of the work is such that it is quite within the range of possibility for a staff which may involve disaster to our ships, due to the physical impossibility of handling the administrative and other work with the thoroughness which is necessary.

A very minimum staff which would be required is approximately 100 men, who could be well employed with resulting increase of efficiency. The staff who should be free to carry on a continuous estimate of the situation, all necessary information. He would be given the freedom of movement of the British and French admiralities.

He should be of the rank of commander, for duties in connection with the handling of all the numerous communications in relation to the shipping, particularly military shipping, and also other matters connected with the troops.

He should be a lieutenant commander, for duties in connection with anti-air operations in order to insure perfect cooperation in that field of the service and other allied services.

He should have all-around ability and discretion, for duties in connection with intelligence. He should be in constant touch with the secret service of the admiralities, in order to insure that all military intelligence which reaches the Navy Department or our forces is properly and promptly

acted upon. He should be a lieutenant commander of the line, in my own office, to handle general administrative questions, in addition to the one now in charge. It is imperative for these additional officers.

The officer to take general charge of codes and communications, to be in touch with the department at home, the allied admiralities, and with the various forces in the war area (at present Queenstown, Brest, Bordeaux, St. Nazaire, and Paris).

There should be complete charge of all financial matters connected with the service. This officer should be in addition to Paymaster, who is now necessary and invaluable service on my staff in connection with the service.

I remember the preparation of that dispatch, and the struggle as to whether we should state what we ought to get, or what we thought we ought to get. Anyone who has been about military procedure knows that what I got was not what I should have had; but as this was then the situation, and we had not been able to get anything to speak of, I saw the utter impossibility of success in demanding an organization that I should have, and that I eventually

one of the authorities in Washington visited the other side of the world in the seventh month of the war, and saw the situation from the facts, and begin to give us the staff which was

in my letter-reports, written about the same time; that is, on July 18. I again pointed out that it had become impossible for me to keep up with the necessarily increasing number of letters of July 18 I said:

"I am unable to deal with the department's cables and adequate reports of operations. Although I have only asked for five additional staff officers, I am sure I have ample work for many more, and it would be in the interests of the department and our forces, if the staff were too large rather

At the end of July I also pointed out, in cables to the department, how essential it was, in order to insure quickness and certainty in our communications, that I should be sent capable officers, with cable communications, with code work, and with radio.

On July 23 I received a message from the department announcing the sailing of Capt. Twining as my chief of staff, with two lieutenant commanders as aides, and also two lieutenants for communication and radio duty, for which I had specifically requested assistance.

In my letter No. 52, of July 30, I made the following observations with regard to the action of the department:

In closing, I wish again to call attention to the necessity for an adequate staff abroad. I have received the department's notification of certain young officers who are being sent, apparently for staff duty. I have tried to make it clear that the department's interests can not be efficiently served without an adequate staff of experienced men of adequate training.

The young officers who are being sent will, of course, be of assistance in routine administrative matters, but the urgent need is for men of much more experience, who will be capable of collecting all information which is available, of the general situation, and from it preparing estimates of the situation and of broad questions of policy, and plans of operations upon which the United States efforts may be safely based.

I fully realize the demands being made on the naval personnel at home, and the naval staff organization abroad is the one coordinating link between the current war situation abroad, and the department, I submit that its demands take precedence over a large majority of other demands, made for training and other purposes at home. I feel and have tried to explain in my previous dispatches that if I could have here a council of perhaps four officers of experience of the type of Capts. Pratt, Schofield, or Commanders Knox, Stirling, Cotton, I could be more effectively accomplishing the mission which I am sure the department expects of me.

#### TECHNICAL OFFICERS NEEDED ON STAFF.

While I was assured by the department, four months after my arrival, that five officers would arrive for staff duty, I had yet received no reply to my repeated requests for the sending of technical officers to report to the different bureaus in the department, and to collect for them the technical information and data available in the various navy departments, which it was essential the Navy Department should have for carrying out its own plans for the preparation of American naval forces for war.

It will be remembered that in April I had requested that Naval Constructor McBride be sent abroad for such duty. He arrived five months later, in August, and was the first of such technical officers to be sent in accordance with my recommendations.

On August 9 I wrote the following to the department concerning his services:

Naval Constructor McBride has reported for duty. He will be of great value not only in obtaining general information of value to the department and the fleet, but also for staff duty concerning his bureau in connection with the forces he will generally keep in touch with any unusual or extended repairs under the Department of Construction and Repair, advising me where my action is necessary, and acting as a representative of his bureau.

In a cable of August 13 I pointed out how confused the mine and depth-charge situation was, because there was no American officer in London familiar with the Navy Department's plans and policy, and no British officer in Washington at that time fully acquainted with all the British experience and developments; but no such

by the department. Fortunately I was able to avail myself of the services of Lieut. Commander [redacted] who had been sent abroad by the Bureau of Ordnance to [redacted] being purchased by the bureau in Great Britain. In my report of September 7 I again pointed out the necessity of this liaison duty. I will read one paragraph of this

[redacted] I would again renew my recommendations that carefully selected [redacted] be detailed for duty with the various units of the allied forces. [redacted] extremely useful to me as well as to the department, for example, if [redacted] of general ability were assigned permanently to the main allied [redacted] forces which are not operating in direct conjunction with [redacted]—for example, the Harwich light cruiser and submarine force [redacted] in the North Sea. I consider that the assignment [redacted] French, Italian, and British main fleets would be productive of a [redacted] information to our service, as well as regards questions of policies [redacted] the department.

[redacted] of October, 1917, the only officers that I had received [redacted] for staff duty were the three previously mentioned [redacted] sent in July, to whom I have referred, and Naval [redacted] Mr. Bridge, who arrived in August. I had been obliged [redacted] a number of officers from vessels operating in Europe in [redacted] the constantly increasing burden of staff work. It [redacted] not have been possible to accomplish the work at [redacted] this time if I had not been authorized (as I shall point [redacted] by the Bureau of Navigation to enroll in London [redacted] Americans, many of whom had been Rhodes scholars or [redacted] of Mr. Hoover in the Belgian Relief Commission, who [redacted] their assistance and in some cases had been working [redacted] and without pay as civilians for a month or more [redacted] operation was received from the Bureau of Navigation to [redacted] naval reserve officers. All of our communications with [redacted] and with the forces, including the coding and de- [redacted] dispatches, were handled by six of these young men, [redacted] was thus relieved of mechanical routine work and per- [redacted] other duties of a more strictly military character. [redacted] reserve officers similarly took over the routine [redacted] administration, secretarial work, etc., and thus further [redacted] officers of routine duties.

[redacted] August 23 to the department I pointed out the situa- [redacted] and the necessity of increasing the number of [redacted]

[redacted] pointed out that on October 1, 1917, there were in Euro- [redacted] naval vessels and 15 shore stations, comprising 652 [redacted] men, and yet to administer these forces, to control [redacted] at the same time to keep in constant touch with the [redacted] and to acquire information for the department [redacted] war experience, I had available in London only six [redacted] sent abroad by the department for staff duty, and [redacted] I had ordered up from the forces afloat. In addi- [redacted] four officers in the naval attaché's office who were [redacted] duty on my staff. You may be able to under-

stand more completely this need for assistance if I read some from my letter of October 23, 1917. [Reading:]

OCTOBER

From: Force commander.

To: Secretary of the Navy (Operations).

Subject: Need for an increased staff for the force commander.

1. As the war progresses and the activities of our own forces, increased addition of new units to the forces operating in European waters, and as new are added, as, for example, the matter of aviation of French and English purely administrative work at the headquarters of these forces has increased, and may be expected to increase.

2. In addition to the administrative work, which must be disposed of every day, if the forces are to be kept in continuous and efficient operation, the urgent need for planning and deliberative work, if the operation of our forces be intelligently conducted, in full and efficient cooperation with those of our allies.

3. It is plain that the two classes of work can not be performed by one staff of officers, but should be entrusted to two separate staffs, one of which should be purely a deliberative and planning staff and the other purely an administrative staff.

4. I now have, aside from the naval attaché, 12 officers who are either attached to my staff in London or are assistants to the naval attaché and are duty in connection with the administration of our naval forces in Europe. Inclosed office memorandum shows the distribution of duties among them. One of these officers, Lieut. Gillmore, is a reserve officer (formerly in the United States Army), in addition to the 12, a number of recently enrolled reserve officers performing the routine office duties indicated in the memorandum.

5. All of these officers are working to the utmost limit in keeping the administrative work up to date, and the number is still insufficient for present needs, and still more inadequate as the activities increase.

6. The immediate needs for increase are as follows:

(a) An officer to relieve the chief of staff of the major portion of his administrative work and leave him free to fulfill his more important function of military staff officer, and act as the liaison officer between myself and the British Admiralty.

(b) An officer to take charge of all aviation matters that must be handled by the staff, and act as the liaison officer between myself and the British Admiralty.

(c) An additional assistant to the intelligence officer. A vast amount of information comes into the office, and much more could be secured, if my staff were large enough to permit of its being properly examined and digested.

(d) An officer to whom all personnel matters may be entrusted. Lieut. O. Ancrum has until the present time handled these matters, but owing to the necessity of furnishing an assistant to Commander Long (who was in charge of the convoys) he has been detailed for that duty, and personnel matters turn over to Lieut. Gillmore, who owing to having been out of the service for some years is somewhat out of touch with service matters, and in any case, should be in a position to devote his whole time to his secretarial duties which are not light.

7. For the planning staff, I believe that it will be necessary that not less than three officers be made available in addition to the chief of staff, who should be the head of this organization. Such a staff could, and would, work in close cooperation with the recently established planning staff of the British Admiralty. By this means the cooperation between the two services could be secured, and facilities for the exchange of views on the British Admiralty to a much greater extent than has been possible in the past.

10. I trust that the department will share my views as to the necessity and for increasing my staff in the manner, to the extent, and for the reasons, set forth, and I request that the necessary additional officers be ordered to this duty as soon as practicable, since every day's delay increases the burden thrown upon my existing staff, and makes more urgent the necessity for additional officers.

WM. S.

P. S.—With reference to paragraph 7, I wish to make it quite clear that the object in establishing a planning staff is to insure that I may be in a position to receive the best and most thoroughly considered advice to the department as to the operations of our naval forces abroad.

It is especially noted, that, in making requests for officers in previous letters and cables, I distinctly specified that, for mentioned officers by name, these names were given to the type of officers required, more than to indicate that that would be suitable. In many letters requesting personnel, I actually pointed out that, with the exception of Capt. Pratt, not especially desired because of our previous relations and understanding, the officers I had named were only to indicate the type of officer. It is, of course, true that I preferred the officers that I named, but there were many men in the service of similar qualities who would have been able for the work.

My lack of staff seriously embarrassed me and rendered me ineffective than it would otherwise have been, as I wrote one of the Navy, in a personal letter of July 31, 1917, in which:

LONDON, July 31, 1917.

My SECRETARY: You may be sure that I have been doing my best to do the department's wishes in the performance of this rather delicate and difficult task, but I have not been able to do so to anything like my own satisfaction and, I think, to the department. This has been due to the physical impossibility of doing this task due to the fact that I have with me only one aid in my office at the British base. I hope the department will see its way clear to get a really efficient officers of such size as to enable me to send in all of the information which became available immediately upon the outbreak of

the war.

WM. S. SIMS.

JOHN DANIELS,  
U. S. Navy,  
Department, Washington, D. C.

In my official letter report to the department, of November 1917, I stated the department of the continued necessity for additional staff. [Reading:]

November 15, 1917.

The necessity for an increased staff grows daily. As previously stated, the entire time of the present staff is now taken up with administrative work which can not be avoided and for which the staff is inadequate. The department depends to a considerable extent upon this organization for the complete information of the progress of the war upon which the department is based.

The department has been severely criticized for not having an efficient staff, and for not having plans projected sufficiently into the future to meet the needs of the future. Without going into the merits of these criticisms at all, and without taking our point of view alone, the question is a serious one as to how we can secure our efficient participation in combined naval plans for the future, the vital element of time, and the impossibility of efficiently projecting plans at long range, the most efficient course for us is believed to be to have a force of capable officers to actually participate with the department in the formulation of all plans.

In the part in regard to all plans must of necessity remain in the Navy, the ultimate responsibility rests and where all information bearing thereon is available.

It is desired to stress, however, is that, with the present staff here, the department is unable to keep the department informed fully of the progress of the war, and to assist it in the formulation of plans for the future.

In my letter to Admiral Benson, of October 9, 1917, I had stated the same condition. [Reading:]

In the reports to be made by Admiral Mayo, the amount of information was able to dig out in a comparatively short space of time. That

sort of work can be accomplished only by men who can devote their exclusive attention each to one specialty.

It was with the object of being able to do this that I was so insistent in asking for more assistance when I first came over here. I am glad to say that the officers who have been sent over eased up things very considerably, but I should know that conditions in this respect can not be satisfactory to the extent indicated above unless I have a sufficient personnel to be able to keep all the officers continually at work in departments of the Admiralty. It is only by the daily contact and association that we can keep thoroughly in touch with things going on. The people of the Admiralty are working to the limit, and we must expect them to think of and supply us with the things which would be necessary for us.

As an example of what I mean, I may say that I had hoped that when the others arrived here they would be able to spend at least a considerable part of their time working with the people in the Admiralty. It was my intention that they should do so, but unfortunately the amount of work to be done is continually increasing and has increased to such an extent that this is now impossible.

You will realize, I am sure, that I am speaking in this respect only of the type of officer. The officer who is the ordinary run of the mine could not do this in the same manner. It is as specialized and as important work as that which is being done by your able assistants. The type of men I refer to are as follows: Stirling, McNamee, Yarnell, Knox, Coffey, Cotton, etc. We should have five such officers if we are to carry on this work efficiently and be properly informed.

#### ARRIVAL OF ADMIRAL BENSON IN EUROPE.

When Admiral Benson finally arrived in England, in the middle of November, 1917, it took him only a few days to convince him of the necessity of establishing a real advanced headquarters in the Navy Department abroad, with an adequate staff to make full cooperation with the Admiralty, to prepare plans for operations, and adequately to cooperate with the Allies in conducting all activities. I had been recommending such action for several months, and specifically in my letters of May 16, July 16, and October 23, had pointed out the necessity for the establishment of an advanced headquarters abroad. Similar recommendation has been contained in many of the cables, as you may remember, which I have read you in the last few minutes.

Then on November 17, 1917, the department sent the following dispatch to Admiral Benson, then in London:

Simsadus.

1160. For Benson. After thinking carefully subject feels that it would be a great advantage if we have a permanent War Staff in England, as a part of the plans developed by the Admiralty. If this meets your approval, additional officers will be sent to augment those already in England who are fitted for this work. 19016.

As I have before explained "Benson" was a cable signature indicating that the message emanated from the office of Naval Operations, so there will be no confusion when you see a message sent from Washington and signed "Admiral Benson," although Admiral Benson is on the other side.

Admiral Benson replied as follows on the following day:

[Very secret.]

1530. Your 1160. Subject has been under discussion with Admiralty several times before receipt of your message. Definite plans submitted to Admiralty. Awaiting decision. (Signed) Benson. 15118.

and he sent a further cable, outlining fully his recommendations to carry out this plan. His cable was as follows:

[Very secret.]

Enclosed

is a copy of the Navy.

I have discussed the situation fully with British Admiralty, and outlined what I believe to be the best plan for future Naval Operations, but am convinced that British Admiralty will offer definite plans of their own for our consideration. From our past and after careful consideration, I believe that such plans, satisfactory as they may be, can not be developed until we virtually establish the strictly joint operations here, in order that the personnel thereof may be able to use latest British and other Allied information, and to urge, as joint operations estimate and policies may indicate. This action appears to be necessary considering the fact that any offensive operation which we may undertake must be in conjunction with British forces, and must be from bases located within British territorial waters.

It is my duty should come here fully imbued with our national spirit and ideas. Then, with the intimate knowledge they can obtain of the actual disposition of allies forces, reasons therefor, they will be able to put up British any plan that promises satisfactory results.

To carry out this policy, I recommend that Capt. Schofield and Commander Knox be reported to Vice Admiral Sims and Admiral Jellicoe, first sea lord, and that they be selected after my return.

It is my duty to recommend, and action should be taken at once.

I have also recommended for officers to fill vacancies created by the above.

Signed Benson.

SIMS.

Admiral Jellicoe replied immediately, on November 21, with the following:

[Very secret.]

Your 1550 acknowledged: reply thereto. Schofield and Knox

BENSON.

The recommendation which I had been making for six months prior to my visit to effect until Admiral Benson, during his short visit, was convinced it was justified, and recommended the establishment of such a planning section for my command.

It is necessary to repeat that this is merely another instance of the department during all of those first critical months of the war. My recommendation for months were allowed to pass. The efficiency of our cooperation with the Allies was hampered during this period by the failure to act on the recommendations made by their representative abroad, who, in accordance with departmental instructions, was fully cooperating with the Admiralty, and made these recommendations only in consultation with them.

The failure of the policy was again demonstrated by the fact that it was not adopted, and throughout the remainder of the war it was necessary to recognize, though sometimes grudgingly, the fact that what had been continually recommended and which was obvious from the very first.

For the months following Admiral Benson's visit I continued to work without an adequate number of assistants. This I

pointed out in my letter-report of the 19th of December which I said:

[Letter 4844, December 19, 1917.]

#### STAFF REQUIREMENTS.

The staff work required on shore, both in London and Paris, and at steadily increasing. In spite of the additional officers who have recently been added to this staff, the necessity for further increases is rapidly developing. This is due to the experience with allied Governments and armies. It has been impossible to learn of the requirements of staff work in allied admiralty field. It is, of course, manifest that all operations afloat or in the field are dependent upon their efficiency upon planning and administrative staff work. This is a task which can not be dispensed with, and must be provided for even at the cost of additional personnel.

The planning staff which will be created here on the arrival of Commander Knox will soon be in need of assistance which can not be supplied with available officers.

Similarly, in my letter of December 31, 1917, I said:

The demands upon the staff organization ashore upon which the efficient operations afloat are entirely dependent have grown steadily from the beginning and are still growing. In addition to the direction of the activities of the fleet afloat, and the administration work which is unavoidably involved, it is a task to attempt to keep fully informed of all developments and conditions of the allied campaign which may affect our plans.

This same report was made to the department in my letters, as, for example, in my letter of January 8, 1918, in paragraph 10.

In my letter of March 23, 1918, No. 1223, I said:

The peculiar requirements of all staff duty performed abroad, in cooperation with allied services, makes the duty of a nature for which there was no precedent. It has been necessary to depart from all precedents, and to be governed by the care in establishing and maintaining efficient relations between the services. For the above reasons that the force commander has so many times in the past laid stress upon particular types and personal characteristics and upon the necessity of permanence of assignment.

#### VALUE OF PERSONAL TOUCH.

I had from the first been impressed with the importance of maintaining the work abroad with the work of the Navy Department. Many misunderstandings inevitably arose as a result of the lack of personal touch, on both sides of the ocean. I was very glad to have Admiral Mayo and Admiral Benson come abroad, so that they could see the situation for themselves, and be in a position on their return to inform the department of some of the problems to be faced in Europe. In repeated letters to the department, in both personal letters as well as official letters, I had emphasized the importance of having officers frequently exchange between the department and Europe, in order that the Navy Department and the headquarters of the forces abroad could be brought into more intimate contact with each other, and thus obviate many of the difficulties which arose from inevitable misunderstandings.

These difficulties were increased by the tendency of the department to demand, and require, full and complete explanation of every request made to them, and of every detail of the operations of our forces before they would approve such requests or authorize such operations. I could mention many illustrations of the

and in this respect. Thus, for example, I have already mentioned a case of recommendations for an increase in the number of the adoption of the convoy system, for the sending of battleships to the grand fleet, for the sending of tugs as reinforcements, the department failed to act for me chiefly because they apparently did not consider the full information in Washington, although, as I pointed out, such full information could not be communicated under conditions existing because of the necessity of secrecy, my lack of assistants to forward the information desired, and the necessary delays and misunderstanding attendant upon better communications.

It will show the department's attitude. On May 18 I came from the department in which it was stated:

that the department be promptly and fully informed of all operations going on with the allied naval forces.

I assured them I had outlined the general operations of the grand fleet, had pointed out difficulties of communications, and that the department would be informed of all important prospective changes in general plans.

On July 5 the department stated:

requests made and our efforts to respond, must insist that any plans for consideration be submitted for our study.

On June 24, replying to various dispatches and letters from me, the department again insisted that while it was cooperative in any way, it would only consider "the question of additional naval forces \* \* \* whenever the adoption of doing is justified."

The department seemed disinclined to take any action or indorse recommendations, unless the fullest and most complete explanation could be made, and this was extremely difficult, if indeed possible. I was at that time working nearly alone, and the difficulties of communication made such full explanation impossible. In many cases it took weeks to get the department something which could have been dealt with, if I could have gone to the Navy Department and discussed the matter personally. As I have already pointed out, in the plans for protection of shipping against a battle it took nearly two months to obtain an agreement upon meeting these raids.

Probably have been settled in a few hours of conference. In complete accord and in constant consultation with the allies. No recommendation was made to the Navy Department until it had been fully discussed and agreed upon. I might say that in those first few months it was in the hands of the commander of the American forces in European waters, while cooperating with the allied naval forces, in spite of all the difficulties which inevitably exist between allies than from action from his own naval department.

On July 10, 1917, announcing its general policy the grand fleet, while announcing its willingness to cooperate with the Allies, yet insisted upon decisions being made by the grand fleet and insisted that the emergency warranting

action should be fully explained to the department. As already pointed out, and as the department later came to see it was possible to cooperate with the Allies only by giving command abroad and the department's representative in command the Allies authority to discuss matters with them and to make representative of the Navy Department and in that capacity decisions as to actual operations required by sound military.

Thus on October 13 I reported to the department that a squadron of yachts had been organized on the French coast. On October 16 the department cabled:

Inform department reason for and mission of special squadron under Commander Freeman.

I replied in my cable of October 17:

[Cablegram sent Oct. 17, 1917.]

To: Opnav, Washington.

Via: N. C. B. 18bR.

Copies to: C. on S., J. V. B., B. A. L.

923. Opnav 594. Special division under Commander Freeman will include *Aphrodite*, *Corsair*, *Alcedo*, *Wakiva*, *Noma*, and *Kanawha* and will be used for escort of convoys. Other yachts not suitable for this duty. Reserve yachts to divisions in accordance with speed, radius, and so forth will be sent to the department for approval at an early date. 62017.

That is exactly parallel to what would have been the case if the Secretary of War had telegraphed to Gen. Pershing and asked him to report immediately why he had moved a brigade over a hundred miles to the right.

Again in December, 1917, after the arrival of our battleships of the Grand Fleet, it was recommended, after a conference with Admiral Rodman and the commander in chief of the Grand Fleet, that a fifth American battleship be sent abroad in order that if one of the ships was under repair or docking, there would be a division of four ships ready to put to sea at any moment. This was essential, as the Grand Fleet was under four hours' notice to move, and it was imperative that the fighting effectiveness of the squadrons should be at all times unimpaired.

The department, not understanding in detail the reasons for the request, cabled as follows on January 5:

[Very secret.]

Simsadus.

If the reason for asking for the U. S. S. *Texas* to be assigned to group 9 is to make a division of five ships, this reason the department does not consider as valid as it breaks up and is counter to our battleship organization. If, however, a fifth ship exists for one more battleship, provision can be made to send one, though the department would prefer to send a division if the supply question will admit, rather than break its organization. 19005.

By

That is putting a paper organization against the necessities. I replied in my cable of January 8, which is as follows:

[Very secret.]

2781. Your 2010. My 2286 did not state reason for asking for *Texas* to be a division of five ships, but stated that in order to insure four ships continue in the battle line a fifth ship was necessary. A real need does exist for one more ship and this should be the *Texas* in order that there may always be one ship and two with 14-inch guns at our end of the battle line. Need for another division of battleships not sufficient at present to justify additional strain on supply line.

to remain there that our division was employed on one of the Grand Fleet, with a corresponding division of British for the other end, and it was very desirable to have the 14-inch

division of the department cabled me that the U. S. S. *Texas* was assigned to this duty and would sail immediately.

Thus illustrating the same hesitancy of the department to make decisions, until the whole matter was explained in detail by the plans proposed for establishing a docking rotation for battleships in European waters. In a letter of September 1, 1918, I had made full recommendations as to how our ships could be sent home and docked in rotation provided one battleship could be supplied by the department.

There was also the difficulty on the other side was in making facilities for our vessels in addition to those of the British. Also the desirability of giving our people from time to time shore leave. It was a frequent apprehension that the long stay of the Grand Fleet might eventually get on the men's nerves to a certain extent affect the morale; that was the opinion of the war in the British Navy; and everybody was of the opinion that that opinion was not a sound one. But I was not to suppose that men who stayed on board ship for long periods without ever being allowed to leave for more than a few hours, and during that period having twice to go to a shore leave, whether a telephone message had not called them back, would be liable to be affected. It would be liable to affect any man.

I cabled the department on September 6, 1918, asking early action. The next day the department replied that an additional battleship was available, but that the plan was approved, if it could be carried out without this additional battleship. It was, however, impracticable to carry out the plan unless the additional battleship could be supplied, as Admiral Rodman informed me on September 9, when he said:

"The plan cannot be carried out with only five ships, as it would not be possible to furnish me one battleship for docking, out of the five available, and to maintain the condition of four ships with the Grand Fleet."

This was explained as fully as possible to the department by cable. Then, on October 3, 1918, the department proposed a new plan of its own. This plan involved a rotation between divisions 6 and 9, which were in European waters, comprising two oil-burning and one coal-burning battleships; then recently arrived at Berehaven for duty in the United States. Due to various difficulties, however, a complete arrangement by cable, with the Admiralty and the Navy Department on the other, no definite decision had yet been made at the time of the armistice, four months after the plan had first been proposed by the department.

Thus the record without reading some of the cables and messages is subject to show the difficulties attaching to an example matter.

As a great many similar cases that could be cited,

[Cablegram sent Sept. 6, 1918.]

To: Opnav, Washington.

4232. My indorsement 29216, August 13. Early action by cable is required order that docking schedule on this side may be arranged. 4232.

939. Your 666. Cable just received from department approves procedure recommended in your letter of July 27, provided it can be carried out with five ships in the division. Department states *Delaware* not available. In this case it is impracticable to carry out the scheme. Request your opinion. 239.

[Secret.]

SEPTEMBER

Simsadus.

676. Your 939. My proposed plan can not be carried out with only five ships. I have arranged with commander in chief to adhere to original plan and keep five ships on this side. 17109. 676.

OCTOBER

Simsadus.

2489. In order to carry out the desires of commander Division 9 as approved by you of sending one ship of that division home at regular intervals for overhaul at same time keeping up the strength of Division 9 and Division 6 to their quota, department suggests following plan for consideration: At stated intervals replace one of the ships of Division 9 in rotation by one of the ships of Division 6 upon reporting of ship from Division 6 to commander Division 9 detach one ship of Division 9 to sail for home. One dreadnaught of battleship force 2 will sail to join Division 6. 1102. 2489.

[Secret.]

OCTOBER 15

From: Force commander.

To: Secretary of the Admiralty.

Subject: United States battleships in European waters.

1. In order to provide so far as possible for making repairs in the United States to United States battleships detailed for service in European waters and for the purpose of affording to officers and men opportunities for leave at home, the department has proposed the following plan for rotation of vessels composing Division 9 (sixth battle squadron, Grand Fleet) and battleship Division 6 stationed at Berehaven, Ireland, as a raider guard.

2. It is proposed that on a given date one ship of Division 6 sail for the United States to join Division 9 and upon her reporting one of the ships of Division 9 shall sail for the United States.

On the date upon which the vessel sails from Division 9 for the United States an additional battleship shall sail from the United States to join Division 6.

The department has not stated how frequently such a change would be made. It is probable that allowing 10 days for the voyage each way across the Atlantic month overhaul period, and 10 days for contingencies, the cycle would be two months.

has been pronounced satisfactory by the commanders of both battle-  
 ship Division 6 and the commander battleship Division 9 has stated that  
 the Grand Fleet, is in accord with the policy involved. The  
 premises are requested.  
 The particulars of the vessels involved are as follows:

| Name. | Fuel.     | Battery.    |
|-------|-----------|-------------|
| ..... | Coal..... | 10 14-inch. |
| ..... | do.....   | Do.         |
| ..... | do.....   | 12 12-inch. |

| ..... | do.....   | Do.         |
| ..... | do.....   | Do.         |

There is no objection to the proposal in principal, the details can  
 be arranged. It seems important that so long as a raider guard is main-  
 tained there should be at least two oil-burning vessels there, in order  
 that should the vessels return from a trip and be obliged to proceed  
 on another trip.

As to the endeavor always to replace a 14-inch gun ship in the Grand  
 Fleet, so as not to reduce the battery strength of the United States

arrangements have already been made for the vessels with the Grand  
 Fleet from October 21 to January 31, these arrangements would have  
 the policy herein set forth is inaugurated, but this can doubtless  
 without serious dislocation of plans for British vessels.

WM. S. SIMS.

[Secret.]

OCTOBER 27, 1918.

For Admiral Benson. Recommend battleship assignment to  
 be as follows:

- U. S. S. *Arizona*, 8 to 6.
- U. S. S. *Nebraska*, 6 to 9.
- U. S. S. *Wyoming*, 9 to 7, and U. S. S. *North Dakota*, 7 to 6.
- U. S. S. *Idaho*, 6 to 9.
- U. S. S. *Florida*, 9 to 8, and U. S. S. *Mississippi*, 8 to 6.
- U. S. S. *Delaware*, 6 to 9.
- U. S. S. *Georgia*, 9 to 8, and U. S. S. *New Mexico*, 8 to 6.
- U. S. S. *North Dakota*, 6 to 9.
- U. S. S. *Arkansas*, 9 to 7, and U. S. S. *Idaho*, 7 to 6.
- U. S. S. *Idaho* greatly benefit personnel and return to home ports vessels
- U. S. S. 13126 3923

BENSON.

OCTOBER 27, 1918.

With reference to Opnav. 3923 retransmitted to you from  
 the department made some time ago by the department for rotation of  
 battleship Division 6 and 9 is now under consideration by Admiralty  
 the Grand Fleet, as to its effect upon Grand Fleet and as to  
 the oil burning ships should be used in Division 9. Recommend  
 the matter be deferred until Admiralty's ideas have been made  
 clear.

The CHAIRMAN. Admiral Sims, it is almost 12 o'clock, and if it is a good place for you to stop, I think we had better suspend here.

Admiral SIMS. Very well.

Senator PITTMAN. Mr. Chairman, for the record, just before we adjourn: I have been necessarily absent from two or three hearings of this committee, and so that it may not appear that there was a discourtesy to the chairman, or neglect of my duty on this committee. I want to state that I have been attending hearings of the Foreign Relations Committee in a matter which was of considerable importance, and in view of the fact that we had agreed that the direct testimony here should be put in first without any interruptions, and in appearing that the direct testimony of Admiral Sims was all prepared in advance, I felt that I could be spared better from the subcommittee here than I could from the Foreign Relations Committee, at this time. I think that the various matters we have had under consideration in the Foreign Relations Committee are now terminated, and that is so, I expect to be in more active attendance at these hearings. I have been reading these hearings at night, and while I would have liked to have had an advance copy of this, because I could possibly have gone ahead faster, there are a great many questions that have suggested themselves to me which undoubtedly Admiral Sims can clear my mind on, and I assume that it will take to-morrow to complete the Admiral's testimony, at least.

Admiral SIMS. There will be only 10 or 15 pages more to-morrow, and I can finish them in about an hour or an hour and a quarter, or something like that.

Senator PITTMAN. I would like to ask, then, that when the direct testimony is through to-morrow, we adjourn until the next day, by reason of the probability that to-day and to-morrow the most important phases of this treaty matter will be disposed of.

The CHAIRMAN. That is, after the hearing to-morrow it is suggested that we adjourn until Friday?

Senator PITTMAN. Yes.

Admiral SIMS. That is only giving up half an hour, then?

Senator PITTMAN. Yes.

The CHAIRMAN. The committee will adjourn now until to-morrow morning.

(Thereupon, at 11.50 o'clock a. m., the subcommittee adjourned until to-morrow, Thursday, March 18, 1920, at 10 o'clock a. m.)

The CHAIRMAN. Admiral Sims, it is almost 12 o'clock, and if it is a good place for you to stop, I think we had better suspend here.

Admiral SIMS. Very well.

Senator PITTMAN. Mr. Chairman, for the record, just before we adjourn: I have been necessarily absent from two or three hearings of this committee, and so that it may not appear that there was a discourtesy to the chairman, or neglect of my duty on this committee. I want to state that I have been attending hearings of the Foreign Relations Committee in a matter which was of considerable importance, and in view of the fact that we had agreed that the direct testimony here should be put in first without any interruptions, and appearing that the direct testimony of Admiral Sims was all prepared in advance, I felt that I could be spared better from the subcommittee here than I could from the Foreign Relations Committee, at that time. I think that the various matters we have had under consideration in the Foreign Relations Committee are now terminated, and that is so, I expect to be in more active attendance at these hearings. I have been reading these hearings at night, and while I would have liked to have had an advance copy of this, because I could possibly have gone ahead faster, there are a great many questions that have suggested themselves to me which undoubtedly Admiral Sims can clear my mind on, and I assume that it will take to-morrow to complete the Admiral's testimony, at least.

Admiral SIMS. There will be only 10 or 15 pages more to-morrow, and I can finish them in about an hour or an hour and a quarter, or something like that.

Senator PITTMAN. I would like to ask, then, that when the direct testimony is through to-morrow, we adjourn until the next day, by reason of the probability that to-day and to-morrow the most important phases of this treaty matter will be disposed of.

The CHAIRMAN. That is, after the hearing to-morrow it is suggested that we adjourn until Friday?

Senator PITTMAN. Yes.

Admiral SIMS. That is only giving up half an hour, then?

Senator PITTMAN. Yes.

The CHAIRMAN. The committee will adjourn now until to-morrow morning.

(Thereupon, at 11.50 o'clock a. m., the subcommittee adjourned until to-morrow, Thursday, March 18, 1920, at 10 o'clock a. m.)

The CHAIRMAN. Admiral Sims, it is almost 12 o'clock, and is a good place for you to stop, I think we had better suspend. Admiral SIMS. Very well.

Senator PITTMAN. Mr. Chairman, for the record, just before adjourn: I have been necessarily absent from two or three of this committee, and so that it may not appear that there is discourtesy to the chairman, or neglect of my duty on this committee, I want to state that I have been attending hearings of the Foreign Relations Committee in a matter which was of considerable importance, and in view of the fact that we had agreed that the direct testimony here should be put in first without any interruptions, appearing that the direct testimony of Admiral Sims was all in advance, I felt that I could be spared better from the subcommittee here than I could from the Foreign Relations Committee, at this time. I think that the various matters we have had under consideration in the Foreign Relations Committee are now terminated, that is so, I expect to be in more active attendance at these hearings. I have been reading these hearings at night, and while I would have liked to have had an advance copy of this, because I could have gone ahead faster, there are a great many questions that suggested themselves to me which undoubtedly Admiral Sims will clear my mind on, and I assume that it will take to-morrow to complete the Admiral's testimony, at least.

Admiral SIMS. There will be only 10 or 15 pages more to read, and I can finish them in about an hour or an hour and a quarter, something like that.

Senator PITTMAN. I would like to ask, then, that when the testimony is through to-morrow, we adjourn until the next day, on reason of the probability that to-day and to-morrow the most important phases of this treaty matter will be disposed of.

The CHAIRMAN. That is, after the hearing to-morrow it is suggested that we adjourn until Friday?

Senator PITTMAN. Yes.

Admiral SIMS. That is only giving up half an hour, then?

Senator PITTMAN. Yes.

The CHAIRMAN. The committee will adjourn now until to-morrow morning.

(Thereupon, at 11.50 o'clock a. m., the subcommittee adjourns until to-morrow, Thursday, March 18, 1920, at 10 o'clock a. m.)

## NAVAL INVESTIGATION.

THURSDAY, MARCH 18, 1920.

UNITED STATES SENATE,  
COMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.

Committee met, pursuant to adjournment, at 10 o'clock  
in room 235, Senate Office Building, Senator Frederick Hale

Senators Hale (chairman), Ball, and Trammell.

### TESTIMONY OF ADMIRAL WILLIAM S. SIMS—Resumed.

Q. When I concluded my testimony yesterday we were  
on the subject of the negotiations that were being carried  
on by the Navy Department and the Admiralty and the head-  
quarted with reference to the rotation of battleships, so that  
they could come home for docking and recreation. Continuing  
on, I have cited these cases at this time in order to show  
the confusion caused by the department's failure to send  
assistance, and to maintain a sound military policy with  
the command and administration of the overseas forces.

Q. When the officers were sent over for a planning section,  
the early difficulties disappeared. This planning section  
was of great value to the allied cause. The allied naval  
staff was organized in December, 1917, and held its first  
meeting in January, 1918. I was detailed by the department by cable  
as its representative in this council, and in the great and  
various work which arose in connection with the con-  
sideration of many plans for fuller cooperation between the Allies,  
and in the new operations, the services of this planning  
section were of the utmost importance.

Q. As to the department how easily operation could  
be carried by the use of such a staff, in a letter of January 21,  
1918, to the department I said:

"In the activities of the planning section, all questions concerning the  
execution of the required prompt settlement have been taken up for discus-  
sion. The exceptions have been settled. \* \* \* In my dealings  
with this matter of the northern barrage, I found that Admiral  
[redacted] had having his subordinates handle all matters of details,  
and the completed solution of all problems presented, rather than to  
[redacted] solution. I believe that the entrance of our planning section  
will have a good effect in this respect.

Q. This planning section drew up a study of the  
naval problems of the war, which was transmitted to  
the allied council. As I stated in my letter of February 22  
1918, No. 9489, "this was one of the first prob-

I requested the planning section to take up after it was over as I am of the opinion that at no time in the past has so much thought been given by the several admiralities to the general situation and to the relations that must exist between the sea and land strategy of the war."

In a letter of August 15, 1917, I discussed the services rendered by this planning section in the following paragraph:

August 15, 1917.

The planning section which was formed in December, 1917, has been of great service to the force commander through its studies of important political and tactical questions, upon which it has submitted memoranda of great value not only as meeting existing situations but as forming matter of permanent connection with future operations.

Many of the suggestions and recommendations made by the planning section have been adopted, and much of the material prepared by it has been promulgated to the forces in Europe for their information and guidance.

The influence of the planning section upon the British Admiralty has been great, able as affecting the methods of work of the plans division of the Admiralty and the opinions of the Admiralty naval staff. Planning section memoranda, which contained some recommendations capable of being construed as criticisms of Admiralty methods and performances, was given by me unofficially to one of the members of the naval staff, who I felt sure would take it as it was meant, the study of the situation from the German point of view and in no sense a criticism of the Admiralty. Not only was this paper highly thought of by the officer in question but it has been most favorably commented upon by the first sea lord, who has had that a copy be sent to the commander in chief, grand fleet.

This is a good example of how constructive criticism should be received.

Great as has been the benefit to the force commander of the work of the planning section, I am disposed to believe that its chief value has been in its tendency to establish mutual understanding as to methods of thought on military questions between ourselves and the admiralty.

The number of problems that were studied, and the suggestions which were proposed, undoubtedly had a profound effect upon the general agreements and coordination of activities between the various allies. It should be borne in mind, however, that the planning section did not begin its work until the first week of January, 1918, nine months after we entered the war, although I had recommended such action in May, 1917, eight months previous. Consequently, effective as was its work after it was established, much valuable time was lost in those early critical months, and there was not available in London such a group of our experienced and highly efficient officers, familiar with the major lessons of the war, to assist in planning our activities and coordinating them fully with those of the various allies.

#### DEPARTMENT REFUSED TO PERMIT ENROLLMENT OF AMERICAN OFFICERS IN THE NAVAL RESERVE.

In my letter of January 7, 1920, which is the basis of the testimony that I am presenting, I also pointed out in paragraphs 70, 71, and 73, that during the first year of the war the department refused to permit me to enroll in the Naval Reserve capable Americans who had special knowledge and who offered their services; that the department refused to trust to my discretion any promotion of these officers, thereby doing a serious injustice to the men thereby passing up great opportunities; and also causing me great embarrassment.

and perform important services, and were frequently of experience much greater than their rank indicated, and with allied officers of much higher rank. Practically from my arrival abroad, I recommended to the department authorized to enroll in the Naval Reserve for work among suitable Americans who were at the time abroad. These Americans, because of years of residence in Europe, with European customs and languages and personal position to render the greatest service to our naval force, especially in positions on shore, which required no knowledge of naval duties but required exactly those which these men possessed preeminently, and which it was very difficult to find among the naval reserve officers in the United States.

Lieut. Gillmore, an ex-naval officer of wide European experience in dealing with European admiralities in connection with naval appliances, volunteered his services, and on April 14 the Navy authorized his provisional appointment as a member of the naval reserve. Lieut. Gillmore provided me with office force, and equipment, including typewriter and books, and himself paid the salaries of the stenographers on the early critical days of my activities, as the authority for expenditure had not been granted by the Navy Department. He was the only reserve officer whom the Navy Department authorized me to enroll during the first year of the war.

In 1917, the naval attaché requested authority to enroll a man to handle the confidential work in his office.

I cabled requesting "general authority to enroll similar candidates for naval reserve force as may be useful for confidential work in each case."

The naval attaché received a cable stating:

The Naval attaché,

states that the Navy Department and particularly that of the chief of Naval Service, of patriotic Americans abroad can be used to the best advantage, and it is considered that employing them is preferable to commissions in the Naval Service.

NAVINTEL.

In a cable to the department I requested information of the department's action on "my request for authority to enroll candidates in the naval reserve. The services of reserve officers are urgently needed both for staff work here and in the field for officers afloat."

The Secretary of the Navy informed me:

that he cannot authorize enrollment in the naval reserve at present.

On a cable received June 5, the Secretary stated:

He disapproves of all enrollment of commissioned personnel. You must employ necessary clerical assistance.

As these assistants were, by the nature of the situation, to handle most secret communications and matters, Navy regulations, can not pass out of the hands of commissioned officers, it was practically essential, if my work was to proceed without great embarrassment, that reserve officers should be authorized to handle this class of work.

The idea of having enrolled officers is that as soon as enrolled in the Navy he comes under naval regulations, and subject to disciplinary measures, can be court-martialed for and is therefore under more efficient control and distinct authority.

In July and August, as the work rapidly increased, a number of young Americans volunteered their services and came in to me. Five of them took up work immediately, handling and doing the necessary communication work. Another was put in charge of the secretarial work.

In a cable of August 12, 1917, I referred to this fact and requested authority to enroll six men in the naval reserve, stating:

Unless this is done, the services of most of these men will be lost to the Navy. They naturally do not wish to go through the war as civilian appointees, and many of them, so, as one or two of them already have opportunities for obtaining commissions in the American Army in Europe.

Two days later I received a dispatch in reply stating:

Necessary steps have been taken. Armed guard officer will inform you of their arrival.

There was no other information but that "necessary steps have been taken. Armed guard officer will inform you upon arrival."

At the time this cryptic message was not understood, but when the armed guard officer arrived 10 days later it was found that he had brought with him the necessary forms for the enrollment of 15 officers and the necessary authority from the Bureau of Naval Affairs. Immediately upon receiving this authority eight men were enrolled in the naval reserve in London, and later one additional man was enrolled in London and three in Paris, all being employed on duty at the Paris or London headquarters, and thereby making it possible to employ regular line officers so badly needed for other duties. Repeatedly throughout the following year I requested authority to enroll further officers in the reserve as the requirements grew, but received no such authority until March, 1918, and then only for a few officers.

#### PROMOTION OF OFFICERS.

Similarly with regard to the promotion of these reserve officers, the regular method of promoting officers in the naval reserve for duty in European waters was established until late in the war. In the meantime many of these officers, especially those now in the defense in class 4, for whom no promotion could be made except by special recommendations, were rendering most valuable services in positions normally held by officers of higher rank. For many of them I considered it in the interests of the services that they should be recognized and rewarded and that they be promoted. This was not only for the sake of the morale of the service, but also as an aid to me, because of the greater facility it would give them in their relations with Allied officers of higher rank with whom they were dealing. The situation was especially aggravated among the personnel on duty abroad as they began to discover that men with whom they had served in the United States and who had remained on duty in the United States in more or less routine duties were being regularly promoted, sometimes one grade, sometimes two, while for the arduous and important service in the war zone

persons at all were being made at this period among them. For example, many aviation officers who rendered distinguished service in actual flying were recommended by action and these recommendations disapproved, although they had remained at home, were promoted by the department when they came to Europe a few months later were rank to the pilots who had had many months' experience and rendered most distinguished service in the war zone. I put in a letter of April 28, 1918, but no action was

taken. I sent the following cable, concerning the Admiral Benson, but the action I recommended was not

[Dispatch to be sent. Simben.]

1918  
1918-19

On letter A 1, 15766 of April 21, 1918, recommended Ensigns J. R. Ives Reserve Force, for promotion to rank of lieutenant (junior grade) in recognition of conspicuous service rendered. Ensign MacNamara was offensively damaged enemy submarine on March 21, and he made a successful attack against enemy submarine, but his death was due to no fault of his own. On June 8 our cable No. 9234 recommended two ensigns for promotion together with 16 other deserving officers recommended the only one promoted was Lieut. (junior grade) Reserve Force, attached to my headquarters to the exclusion of MacNamara for gallant conduct in war zone.

On letter A 1, 15766 of August 29 again recommended Ensign J. J. Schieffelen, for promotion to lieutenant (junior grade) in recognition of his having destroyed enemy submarine off east coast of England August 9. I have expressed my spirit de corps and high standard of efficiency of U. S. Naval Reserve. I recently request that my recommendations for promotion be given in the face of the enemy be accorded prompt recognition. The promotion to the rank of lieutenant (junior grade), from the United States, will ultimately break down the excellent esprit de corps now existing. It is particularly true in the case of Ensigns Ives and MacNamara, who have been promoted in recognition of their conduct in the face of the enemy. (A 1, 15766-033730.)

Sims.

On letter of August 30, 1918, to the Secretary of the Navy, I pointed out to him also what injustices were being done by promoting those brave and efficient officers in the reserve and the following letters. [Reading:]

1918-19

August 30, 1918.

Dear Secretary: I should like to invite your personal attention to a matter which very intimately concerns the efficiency of one of the branches of the Navy, namely, the Naval Aviation Service. The young men of this service are performing their duties in a manner of which the Navy Department should be proud. They are risking their lives every time they make a flight. They are doing so at the rate of about one per day. They have received very high honors. Alas with whom they are serving.

They are the Allies' hope of the future in this service, as they come from the fresh enthusiasm of a country that has not been at war for a long time as these people over here have been. It seems to me that such conspicuous acts of gallantry they should be promptly rewarded. Some such reward is necessary to keep up the admirable spirit. I am afraid that the treatment they are now receiving

can not but affect their morale. For the most part, they are carrying on from isolated stations, and something is necessary to keep up their enthusiasm.

It is for this reason that I have recently recommended by cable certain officers the rank of ensign for promotion to the grade of junior lieutenant.

I understand that it is a regulation or a policy of the department that all promotions shall be made only upon the recommendation of a certain board in Washington. I may be misinformed upon this subject, but the point I wish to make is in the order that these rewards should have the effect that I believe to be necessary that upon the recommendations made from this side that these young men be promoted without the slightest delay.

It would not be unprecedented at all, to entrust me with this power in the case of young men who perform these gallant actions. It certainly would be unprecedented to trust my judgment in this matter and to immediately promote these officers upon my telegraphic recommendation. It seems to me that in the interests of getting along with the war, an exception might be made in the case of the commander of the forces over on this side.

I beg you to believe that I do not make this recommendation with any other view than to increase the efficiency of our naval aviation forces.

I like to believe that you would have sufficient confidence in my judgment and integrity to be sure that a privilege of this kind would not be abused.

In my cable of August 29, 1918, I recommended Ensigns MacNamara and Schieffelen for promotion to junior lieutenant, in recognition of the service they have rendered. Both of these officers were officially credited with having seriously damaged an enemy submarine. Subsequently I again recommended these officers for promotion together with a number of other deserving cases. Of these I recommended only one promoted to lieutenant (junior grade), namely, Ensign Schieffelen, who is attached to my headquarters. I also recommended Ensign Schieffelen for promotion in recognition of having seriously damaged an enemy submarine off the east coast of England.

It is more particularly to be regretted that these officers are not promoted. The fact that officers are arriving on this side holding the rank of lieutenant, of course can not fail to cause a great spirit of dissatisfaction and discontent. It can not fail to lower the enthusiasm and the morale of these splendid young men who are doing such excellent war service.

Similarly, with regard to reserve officers who were doing important work in London and Paris, I repeatedly recommended their promotion. In the case of a number of officers in London headquarters I recommended promotions on March 31 on their fitness reports. I cabled on July 15, requesting to know what action had been taken. Again, on July 17. I received no reply from the department. On August 1, I cabled again. On August 2, I received a reply which I will read. [Reading:]

N-32-R/CS. 871-172.

NAVY DEPARTMENT,  
BUREAU OF NAVIGATION,  
Washington, D. C., July 31, 1918.

To: Force commander, United States naval forces operating in European waters.  
Subject: Promotion of officers recommended in reference (a).

Reference: (a) Cablegram to Bureau of Navigation No. 9622. (b) Cablegram to Bureau of Navigation No. 1335.

1. Receipt of the cablegram, references (a) and (b) recommending certain officers for promotion is acknowledged. The board for the assignment of higher rank to officers in the United States Naval Reserve Force has not had an opportunity to act on these recommendations.

2. The importance of assigning higher rank to officers, deserving promotion, is realized by the bureau, but owing to the immense amount of extra work incident to the war which has had to be accomplished by an untrained force, it is impossible to act upon such recommendations with the dispatch that is desired.

3. As it is inevitable under present conditions that considerable time must elapse between the receipt of these recommendations and the day they can be acted upon, it is suggested that in the future such recommendations be made through the regular mail channels. It is also desirable that a separate letter be submitted on each recommendation.

If separate letters are submitted the individual cases  
 without loss of time and with much more convenience to the

commanding United States naval forces, operating in European

officers, reserve force, class 4.

in classes 1 and 2 of the Naval Reserve Force is provided  
 assigning to such officers running mates of the Regular Navy.  
 have as many officers of class 4 qualify for duties in class 2  
 transfer such officers to that class, whereupon they will be assigned  
 attain their promotion automatically.

with a certain promotion of class 4 officers, subject to the follow-  
 ing: Officers who have attained the age of 24 years, performing shore duty  
 in the rank of lieutenant (j. g.) after 12 months active duty as  
 Foreign doing duty afloat should be required to qualify for  
 transferred to that class. The length of service required for  
 only upon the officer's ability to attain the qualification,  
 months' duty afloat. No promotions will be made above  
 until officers have qualified for duties afloat and been

reserves to itself the right to promote or not to promote in any in-  
 depending upon the ability of the officer concerned, dependent upon his

L. C. PALMER,  
*Rear Admiral United States Navy,*  
*Chief of Bureau.*

as informed by the department that before any promo-  
 made complete fitness reports must be submitted, and  
 the bureau would have to be furnished evidence of  
 and of qualifications for promotion before such pro-  
 made. It was not until after the armistice that I  
 to make the promotions which I had been recom-  
 cases for nearly a year, and then only a certain  
 I recommended were authorized.

September, 1918, an officer who had recently been on  
 Bureau of Navigation was available for temporary duty  
 headquarters. This officer had been ordered to  
 in the forces, but with instructions to make a study  
 situation in the forces and to submit a report thereon  
 of Navigation before reporting to me for such duty as  
 In the course of his studies he visited all of the  
 by us in the British Isles and many of those in  
 acquired a very intimate knowledge of the situation  
 operations under which the forces were operating.

completed his study and submitted his report. I  
 to make a particular study of the subject of reserve  
 prepare for me, for submittal to the department, a letter  
 with regard to promotion of United States Naval Re-  
 "officer personnel serving in the war zone." His report  
 under date of September 11, 1918, and he handed it  
 the remark that before beginning his work, he had been of  
 that promotions should not be made by me, but should

be made in accordance with the policy set forth in the Bureau of Navigation's letter of August 2, 1918, which I have just received. The policy which the bureau stated that it reserved to itself "The right to promote or not to promote in any individual case, dependent upon the ability of the officer concerned, dependent upon his record," in the course of his investigations he had entirely changed, and was convinced that it was essential that the power to promote should be placed in my hands, and that he had therefore been preparing a letter recommending that policy.

This incident illustrates perfectly the fact that, generally speaking, sounder decisions can be reached by those living in the atmosphere of the war zone than those who are far removed therefrom. In other words, it is safest to entrust to the commander in the field all powers of discretion and all powers which can legally be so entrusted, and repose trust in him rather than to attempt to control his actions from a headquarters far removed from the scene of his activities.

This letter is entirely too long to read, but I will insert it in the record and will merely state, for the present information of the committee, that it recognized fully the difficulties with which the Bureau of Navigation and the Navy Department were confronted in administering the Naval Reserve Force, and that it concurred in nearly all of the rules and policies laid down by the Bureau of Navigation, governing the appointment and promotion of officers in the reserve force, pointing out, however, how particular these rules and policies operated to the disadvantage of officers serving abroad as compared with those serving at home. The letter includes certain specific recommendations regarding the placing in the hands of the commander of the European forces of the power of appointment, promotion, and demotion of reserve officers, the policy of the bureau being strictly followed. The letter referred to follows:

SEPTEMBER 1, 1918.

From: Force commander.

To: Secretary of the Navy (Bureau of Navigation).

Subject: Policies with regard to the promotion of U. S. N. R. F. officers serving in the war zone.

1. A careful study and analysis of all the letters, instructions, circulars, and orders issued since the inception of the Naval Reserve Force, with particular regard to appointment, classification, precedence, and promotion of officers, has been made by the force commander. It is noted that the bureau has repeatedly invited suggestions and recommendations; this letter contains certain comments, conclusions, and recommendations based on giving due regard in every case to the following considerations:

- (a) A vigorous prosecution of the war.
- (b) Fairness and justice to the personnel.
- (c) The present necessary policies with regard to naval personnel as a whole.
- (d) The naval personnel situation after the war.

2. The force commander has been greatly impressed by the magnitude of the bureau's task, the farsightedness that is in evidence throughout the painstaking efforts to achieve fairness to all, and the consistent effort to build up the reserve force with seagoing qualifications. The bureau's very obvious efforts are thoroughly appreciated.

3. While the force commander is concerned first of all with the vigorous prosecution of the war by the forces under his command, he desires to emphasize the fact that as far as the recommendations contained in this letter are concerned, he has given much thought in such case to the possibility that the policy which, at the moment, best serves military ends, may be detrimental to best serving them later in the future as well as the present is, therefore, carefully taken into account. The viewpoint as well as the European forces' viewpoint is considered. The relation to influence and authority entirely beyond its control is considered.

On 25th August, 1916, as established the reserve forces on the same general terms, so that all provisions admitted of great latitude in the instructions for the administration and organization of the reserve force, and in promulgating the establishment of the reserve force to the Bureau of Navigation in all matters. The organization of the reserve force was based on the practical requirements and the needs of the service, and on the conditions of the service, so that the various classes in effect to-day are the result of the passage of the act which created the reserve force, and of the necessity to carry out a continuous reconstruction of policies. The policies were widely different from the policies of January, 1916, because the bureau has had to meet changing conditions, and has had to be organized quickly, for the personnel was needed. The bureau has had to turn to the naval districts, and naturally turned to the naval districts, and gave it initial training; the bureau gave certain practical training, and gave, and are giving, further practical training to the trained personnel is taking place continuously in the various services. The success has been great, and has been the result of the cooperation between the Bureau of Navigation and the forces on

the coast, to change the policies to meet the changing conditions; and to turn to the naval districts and to vessels in home waters are operating against the forces operating against the enemy. The bureau has had to take into consideration, but it is the opinion of the bureau, that a variation from the general policy is necessary to fit the conditions. Decentralization has extended, generally speaking, only to the supervisors representing the bureau. Meanwhile, the bureau has reached a point where both in officers and men they are now turned to the entire Navy immediately prior to the war.

The figures of the forces operating in European waters approximately 1916. These figures include none of the trans-Atlantic forces. The personnel under the command of the United States Navy in European waters. Six months hence, the personnel of the forces operating in European waters, 50 per cent. Of the total number of officers, approximately 1,000. The remaining 1,000 are regulars and temporary

officers. The National Naval Volunteers into the newly created force, stating however, "That during the present war, the force of all officers of the Naval Reserve Force shall be as follows:—The force of the Navy." This authority may, of course, be delegated to the various forces. The bill further specifies that if any changes shall be effected, the force commander has received a memorandum of July 22, 1918 drawn up pursuant to

the preceding paragraph, and such parts of the bill which are still in effect are assumed to include all the policies of the Naval Reserve officer personnel.

The bill will relate to the various classes of reserve officer personnel in general.

The bill relates to the precedence and promotion of the forces operating in the conditions in the forces in Europe.

The bill relates to the precedence and promotion of the forces operating in the conditions in the forces in Europe. The National Naval Volunteers are considered to be the forces operating in the conditions in the forces in Europe.

The bill relates to the precedence and promotion of the forces operating in the conditions in the forces in Europe. The bill relates to the precedence and promotion of the forces operating in the conditions in the forces in Europe. The bill relates to the precedence and promotion of the forces operating in the conditions in the forces in Europe.

The bill relates to the precedence and promotion of the forces operating in the conditions in the forces in Europe.

The bill relates to the precedence and promotion of the forces operating in the conditions in the forces in Europe. The bill relates to the precedence and promotion of the forces operating in the conditions in the forces in Europe. The bill relates to the precedence and promotion of the forces operating in the conditions in the forces in Europe.

4 for-general-service officer who has been doing duty on shore in the w receive no credit for this service when finally designated as class 4 for 1, and to class 2, as the precedence and promotion rules do not take into account class 4 for general-service employment. This will be decidedly disadvantageous to a number of officers who have been performing excellent service in various stations, frequently in hazardous billets. It is considered that some distinction should be made between the employment on shore of class 4 for-general-service in the United States, and those on shore duty with the fighting forces. These are entirely different, and the duties differ widely. It is not maintaining service is more arduous or more important, but it is more trying in every way, and they feel that it is more intimately connected with fighting the enemy.

13. *Class 3 officers.*—The rules and policies regarding the promotion of this class are considered to fit the conditions in the forces in Europe except in one respect.

14. *Class 4 officers.*—The rules and policies for precedence of class 4 are considered entirely satisfactory. There is no necessity for their having authority outside of their own special assignment to duty, and the rules stated have none. Attention has been invited in paragraph 11 to the fact that for precedence and promotion for class 2 officers who have been transferred to class 4 for 1 are apparently at variance, and to the fact that no account is taken of service performed by the class 4 for 1 officer during the time that he was a staff officer. The class 4 officer takes precedence from the date of his previous assignment or rank.

Let it be assumed that an ensign, class 4 (general service) was given his rank May 1, 1917. (There are many ensigns on this station who were at approximately that time. His date of precedence is then May 1, 1917. On May 1, 1918, it has been found possible to release him from duty at Dunkirk and send him to sea for training to qualify for class 4 for 1. He immediately ranks below all ensigns in the Navy and all ensigns of class 1 and class 2. His precedence falls lower and lower during his period of training, so far as it concerns officers of the three classes just mentioned. By January 1, 1919, it is decided to recommend that he be designated as class 4 for 1. The recommendation is forwarded to the proper authorities, and, while he is awaiting action on this recommendation, his precedence continues to fall lower. After two months, he receives notice that he has been designated as class 4 for 1 and his transfer to class 2 follows. He now takes precedence from the date of his transfer to class 2. Thus after nearly two years' service in Europe he falls below all ensigns of the Navy and all class 1 and class 2 officers. His original precedence has fallen two years, because he has not had the good fortune to be at home where he could be trained and made an ensign (T), or to have been at sea for training. His duty on shore in Europe has been necessary to the conduct of active operations, and the force commander could not release him from duty without loss to the effectiveness of the prosecution of the war. The two years' service on shore duty before at last finding himself at the foot of the class 2 list of ensigns, and to all ensigns in the Navy have given him no official recognition whatsoever. The advantages are those of having added to his experience by doing work in naval activity that was, unfortunately for him, not at sea.

15. Not let it be assumed that an effort was made to promote this ensign while he was still ashore, and serving as a class 4 for-general-service ensign. For a long time the only rules that applied to such a case are those found on page 12 (4) (a) of the Regulations Governing the Organization and Administration of the Naval Reserve, 1917 (issued in May, 1918). Prior to receipt of these regulations there were no special circulars, etc. bearing on the subject. It should be noted that in none of the instructions has mention ever been made of the numerous bases in Europe from which the forces operate against the enemy. Naturally enough, the bureau's principle was of the naval districts and other shore establishments which were the sources of supply of new personnel to meet the ever-increasing demands for them. To date not a single letter from the bureau pertaining to policies regarding the United States Navy Reserve Forces has mentioned personnel doing duty on a numerous active basis on the front line. What then is the policy applying to a class 4 officer in Europe? In the absence of any mention of this particular problem it may be assumed that the rules relating to class 4 officers in naval districts apply, but no notice to that effect has ever been given. The conditions in the district and those in a base in Europe, from which operations are conducted against the enemy, are by no means analogous. All forces are told to make their recommendations in the fitness reports on the officers whom it is proposed to recommend for promotion of the class 4 officers were promoted, but the greater number recommended for promotion. The officers recommended expected to hear the results of their recommendation motion. Only those who were promoted, after considerable delay, received a

the cable, and was requested to recommend officers for promotion, by letter only, and that individual letters in each case are desired.

The force commander does not desire that the preceding paragraph be construed as an adverse criticism of the bureau. He feels that the bureau could have been done under all the circumstances, but that it has not been conducive to the betterment of the morale of the force commander as may well be imagined.

When the pamphlet of Regulations was received, the bureau's pamphlet of 1918 was received. The latter qualifies the former extensions which are announced in it.

Paragraph 5 of May 25, 1918, makes no mention of class 4 serving in Europe. The basis of all previous announcements, is based absolutely on the fact that the force commander is invited to paragraph 5, which reads:

"The general policy outlined above, recommendations and suggestions for improvement are, however, requested, in order that any future extensions may be made only in all districts."

Does this mean that class 4 officers in Europe are to be promoted as such according to paragraph 5, and the force commander has never been so informed?

Is this policy established in Europe? The bureau's policy, and right of the force commander organization. The bases in Europe are changing and shifting. State naval bases and stations in Europe after the close of the war. What are the stations and bases in Europe be assigned class 4 command? Is it done, and how will it be done? If it is not intended to do so, what is the policy with regard to class 4 officers in Europe?

Is it intended that class 4 officers in Europe be promoted to fill vacancies? Is it intended that such a plan to be absolutely impracticable. Shore command? Is it intended that there be definitely and permanently established any more shore command? Is it intended that there be a line of trenches or an ammunition depot behind the lines.

Is it intended that the force commander alone will be able to estimate the force commander's necessary and important to-day, may be unnecessary and impracticable to-day.

The force commander alone will be able to estimate the force commander's necessary and important to-day, may be unnecessary and impracticable to-day. The force commander alone will be able to estimate the force commander's necessary and important to-day, may be unnecessary and impracticable to-day.

Is it intended that there is no policy in effect that is applicable to class 4 officers in Europe, other than the bureau alone will be able to estimate the force commander's necessary and important to-day, may be unnecessary and impracticable to-day.

The bureau's pamphlet states (see p. 12, (5) (a)):

"The force commander alone will be able to estimate the force commander's necessary and important to-day, may be unnecessary and impracticable to-day. The force commander alone will be able to estimate the force commander's necessary and important to-day, may be unnecessary and impracticable to-day."

Paragraph 5 of May 25, 1918, states that, "as there is no Naval Reserve Force, class 5 reservist can not be assigned a running mate in this force."

The casualties will become greater and greater as the northern bombing gets full fighting strength, and as the seaplane stations get into full operation. The operating life of an officer pilot in Europe is three months.

24. Had the gallant work of the class 5 officers, who (unfortunately for publicity) have been compelled to fly foreign-made planes, received the publicity that it deserves, it is felt that the subject of their promotion would have received proportionately more prompt and serious consideration.

25. Page 12 (3) of the bureau's pamphlet states: "Officers in class 3 promoted in accordance with the position they held on a merchant ship auxiliary (table Art. 207)." This excellent rule, by which promotion is given to the position which the officer holds in the organization of which he is a part, can be applied as far as possible to class 5 officers—personnel in Europe, within reason, of course. A ship requires an organization. The bureau never assigns a captain with the rank of ensign, and nine other ensigns, to complement of a 10,000-ton transport. Yet there are fighting organizations in Europe of 5 personnel in Europe of which the head and all his officers are ensigns. Numerous anomalies in the naval flying forces in Europe are not conducive to morale, good organization, discipline or fighting efficiency. The splendid work of class 5 officers has been due to their universally high intelligence, keenness in their work, and their courage. Meanwhile, on account of their rank, the naval service, of which they are a part, is subjected to continuing embarrassment and humiliation. There are many ensigns who have been in the enemy in positions that are filled by captains and majors in the various air forces in conjunction with whom they are fighting. Flying organizations, both tactical and administrative—are instituted in precisely the same manner as military fighting organizations. The platoon, the company, and the squadron each has its counterpart in the flying services. A thoroughly established system of things exists in all the allied flying forces. They promote their officers in the same manner as the bureau promotes the class 3 officers "in accordance with the position they hold." They no more consider assigning a sublieutenant to a major's flying service than do they consider assigning a sublieutenant to a colonel's command of a battalion of infantry.

It would not be the part of wisdom to jump ensigns into the grades of lieutenant or commander, even though they satisfactorily fill a fighting position which entitles them to this rank. However, any system of promotion for class 5 officers in Europe that is not established along the same general lines as the class 3 system will be unsatisfactory and unsound. The bureau will apply the present rule 3 to the 20,000 class 3 officers; it must provide in meeting the gigantic demand involved in the Navy's operation of the various transports now being projected. A similar system should be applied, and immediately, to the promotion of class 5 officers in Europe.

26. From the present methods of promotion as applied to class 5 officers in Europe there have resulted many unreasonable and unfortunate situations. For example, there has been invariably long delay in receiving the bureau's action on recommendations. Some of the officers were, in the meanwhile killed, interned or captured. Among a number (18) of officers recommended in the past were Ives and McNamara, both of whom had received letters of recommendation from the Secretary of the Navy for gallantry in action with the enemy. Up to September 3 but one of the 18 officers had received the promotion recommended. Unfortunately, this one officer was stationed at the Naval Headquarters, London. It is a mere coincidence that this particular officer received his promotion. It is natural that many class 5 officers ascribe his good fortune to the fact that he was on duty at headquarters. On September 4, following receipt of the force command dispatch on the subject, Ensigns Ives and McNamara and one other officer were promoted by the bureau's cable. The remaining 14 officers are as yet unpromoted. The promotion of Lieut. Fallon, during his presence in the United States, has created false impressions among a number of class 5 officers. Lieut. Fallon was recommended following distinguished conduct in action, for promotion to lieutenant (junior grade). He not only received his promotion to which he was entitled, but an additional promotion while in the United States. Meanwhile, his fellow officers at the same station in England, who have been fighting the enemy, have remained ensigns.

27. The beneficial and stimulating effect of the prompt recognition of meritorious or gallant conduct is lost if the promotion proposed as the recognition of demerit, ability, courage, and fitness for higher rank, is delayed.

28. Numerous awkward situations have arisen due to the fact that newly promoted class 5 officers, with the rank of lieutenant (junior grade) must necessarily be assigned as second pilots with ensigns who have been in active service in Europe for six

The reserve officers in Europe have done little commensurate with the fact when it is considered that they are new to the service and are accustomed to the naval way of taking summary action on the spot. They have had much to discourage them, yet their sense of the mission of the force commander that it is incumbent upon them to be thought to the manner of dealing with reserve officers. After four years at the Naval Academy, and rightfully so, they are informing them of what can be done for them and the commander realizes the many difficulties in the bureau's attempt to do the square thing by the reserve officers, and to the naval service. A great number of them are prominent and it is incumbent upon all to insure a solid service loyalty on their part. One of the best ways to accomplish this is to make their welfare being intimately and carefully looked out for. They have not the inspiring example of patient, careful, and conscientious in their personal affairs by the regular establishment that the reserve officers that they should have.

...the existing conditions, to the minds of the reserve officers, ...involved in taking action on recommendations for their ...structions regarding their appointment, classification, and ...be imagined, been most mystifying to the majority of ...instructions have been necessary in order that the ...existing conditions. As a result instructions are always ...over up to the minute, and by the time many instructions ...later not applicable, or further instructions are announced ...ation to complete indefinite features, or to qualify other ...structions. are on the front. Conditions on the front change rapidly. must meet the conditions and must meet them promptly. that the details of policy can meet conditions on the front making the details of policy on the front, and carrying them based on the conditions of three months ago will not the front. Operation policies on the front must be up to the details of personnel policies. The Army has found it absolutely and demonstrate where the fighting is going on, and the authority

The Bureau of Navigation is just as desirous that the methods of the details pertaining to the promotion of reserve officers be left to the force commander. The following is an extract from

the higher rank to officers deserving promotion is fully owing to the immense amount of extra work in the bureau which has had to be accomplished by an untrained force, it is recommended with the dispatch that is desirable, that the conclusions that considerable time must elapse between recommendations and the day they can be acted upon, such recommendations be made through the regular

It is to be mentioned that while it is undoubtedly not feasible to give confirmation during the continuance of the war, it is discrimination of a number of class 1 officers was not deferred during the war in order that the other classes of reserves might feel alike. It is not fair to the other classes of reserves to assume that the two months' retainer pay that goes with confirmation, is undesirableness in too many ways to warrant that assumption. Conditions can not be altered now, it is important to note that the class 1 reservists are familiar and one that inevitably appears in discrimination although it is well known that discrimination is mentioned in order that the necessity for improving conditions of improvement may be emphasized.

After giving the entire subject mature consideration, and the relations of the personnel situation to *a*, *b*, *c*, and *d*, paragraph 1 of this letter, the following policies with regard to force officer-personnel in Europe are strongly recommended: It is urged that they be put into effect at the earliest

(a) Upon receipt of the new Bureau of Navigation's circular with reappointment of reserve officers, appointment authority will be established and appointments consummated in Europe, the instructions contained in being followed exactly.

(b) Designation of reserve officers, as of class 4 for 1, and class 4 for 3 (as from time to time) will be made in Europe, following the policies established by the Bureau of Navigation.

(c) The transfer of officers from class 4 to class 3, and from class 4 for 1 and from class 3 to class 2 (as necessary from time to time) will be effected following the policies established by the Bureau of Navigation.

(d) Appointment, promotion, and demotion of class 3 officers will be made in Europe, following the policies established by the Bureau of Navigation.

(e) Promotion and demotion of class 4 officers will be done in Europe, following the policies and the spirit of the Bureau of Navigation's instructions.

(f) The promotion and demotion of class 1 officers and of such class 2 officers formerly National Naval Volunteers will be done only by the Bureau of Navigation.

(g) The promotion and demotion of class 2 officers, except those who were transferred to this class from National Naval Volunteer status, will be done in Europe, following the policies established by the Bureau of Navigation.

(h) The promotion and demotion of class 5 officers will be done in Europe, following the spirit of the general policies with regard to reserve personnel, and upon the same basis, the complements to be established in Europe and varied from time to time as necessary, to meet the operating policies of the fighting forces.

(i) The promotion authority established in Europe will not extend beyond the rank of lieutenant commander, and promotion will always be made one rank at a time. In the staff corps, in which a grade may include more than one rank, promotion will be made so that one rank only will be the amount of the advance at any one time.

(j) Promotion will follow only in the cases in which all qualifications will be unquestionably established, and the promotion authority in Europe will be conservative.

(k) Every effort will be made in Europe gradually to replace class 4 officers serving afloat, by class 2 officers, and to send the class 4 officers—thus released—for training and ultimate transfer when qualified, to class 2.

(l) The administration of all personnel affairs of class 3 officers will be done in Europe.

(m) The Bureau of Navigation will be promptly notified of the appointment, promotion, demotion, and transfers between classes, of all officers.

(NOTE.—The foregoing policies relate only to United States Naval Reserve personnel under the command of the commander, United States naval forces, in Europe.)

34. There are no legal obstacles whatsoever in the way of the accomplishment of the foregoing proposed policies.

35. *Administrative machinery necessary to carrying out proposed policies.*—To carry out the foregoing proposed policies, the following would be necessary:

(a) Establish an appointment division in the personnel section of the United States naval headquarters in Europe.

The head of this division should be a lieutenant commander of either the Navy or Naval Reserve, class 1. He should have had some legal experience, be broad-minded, and should be tactful and patient in dealing with reserve officers. He should be satisfactory to the Bureau of Navigation.

NOTE.—The force commander nominates Lieut. Donald Craig, U. S. N. (class 1) for this duty. This officer is about to be advanced to the provision of lieutenant commander.

(b) The head of the appointment division should have enrollment and record authority, and should have authority to sign appointments, promotions, etc. The Bureau of Navigation over the phrase "By direction." The same applies to more assistants in the division.

(c) He should keep in close touch with the Bureau of Navigation (for the force commander), and should also keep in continuous touch with all conditions on this point.

(d) All appointments, changes in classes, designations, etc., should be of the same nature as those used in the bureau.

(e) It is suggested that the bureau send an officer who has had experience in the reserve division (officers) for temporary duty at naval headquarters to assist in the appointment section in smooth running order.

(f) The bureau should be furnished a copy of every appointment, oath, and discharge, designation, etc., accomplished by the office here, to insure that its record is complete.

the staff of the flag officer commanding base 29 (Cardiff, Wales) and shall be the supervision of the personnel of the class 3 reserve on sea water, his position and duties being analogous to those of a superintendent reserve.

The commander will establish a personnel board at his headquarters, and will be made except on the recommendation of this board, approved commander. The officers on the board (with the exception of the head of the reserve) will be of the Regular Navy.

On the bureau's approval of the policies and practice proposed in the plan will be initiated and put into effect without the bureau's approval in each case.

On the telegraphic approval of the policies proposed is requested in order that the commander may proceed to carry out this plan at the earliest possible

WM. S. SIMS.

to say in connection with that subject that there was a personal in my request to be allowed either to enroll a number of reserve officers over there or to be allowed to procure certain limitations.

to say on business with an admiralty abroad and with a number of business firms that we had to do business with, it was to have men who knew the ropes, who were accustomed to things, and the men referred to in my dispatches as business men who had been doing business on the coast for years, who had personal associations with the people in the port in contact with, and who could have been of the use to us; say men of 40 or 45 years of age; men with a salary from \$10,000 to \$20,000 and \$25,000 a year, who were willing to come into the office and give us the benefit of their experience and advice, and to work for us. The Navy Department would allow these men to be enrolled, saying that we ought to have them in a civil capacity. Well, a red-blooded American would not do that sort of thing, and he simply promptly goes to the American Army and gets enrolled there. He wants to be a soldier, and wants to it for his future, etc. That was all

the promotion of young reserves that we had over there doing more fighting than any other of the American forces on either side—naval forces—those were the aviation fellows. They were at an outlying station, 20 miles from the nearest village, and they were doing splendid stunts reported to us by the people with whom they were associated. All I wanted was to make that man immediately a lieutenant. But it could not be done. That is an authority that is very commonly given to a man in the field. It is called promotion on the field of battle. I refused permission to do it, but the people in Washington had not been to the front at all, had not risked their lives, and were promoted and came out there with superior equipment that I wanted to promote.

The reason why I wanted to employ those very experienced men in London in the naval service was to get them into a position that gives them a pass to all the activities of the navy—the admiralty, etc., that you could not expect to get a civilian clothes.

## TOTAL PERSONNEL IN EUROPE.

Before concluding these remarks on the question of the personnel provided me by the department for the administration of our war and for the representation of our Navy Department with the Allies, I should like to invite your attention a moment to the actual number of officers that were on duty at different periods throughout the war, at the naval headquarters in Europe and in the European waters, and also to the amount of work that had to be accomplished. I have before me a table, which I will include in the record, which shows the approximate number of officers and men on duty in Europe at different periods during the war, together with a statement of the number of vessels and shore stations which were under my command in European waters at these periods.

Table I shows the number of personnel at naval headquarters in Europe the first of each month during 1917 and at the beginning of each quarter during 1918. This table will show that, while late in the war the staff available became sufficient for handling the problems we had to face, the number was pitifully insufficient during the critical period in the first half of the war, when it was vitally necessary that our preparations should be pushed with the utmost care and that we should coordinate at once our activities with those of the Allies. This table will also show the long delays in making the weight of the United States Navy felt in the war because of the department's inaction in those early months so far as cooperating with the Allies was concerned.

Several tables produced by Admiral Sims are here printed in full as follows:

*Officer personnel on duty at United States Naval Headquarters, London, England, 1917-Nov. 11, 1918.*

|              | Duty on staff. |     |     |     | Communication office and administration. |     |     |     | Total officers |
|--------------|----------------|-----|-----|-----|--|-----|-----|-----|----------------|
|              | (1)            | (2) | (3) | (4) | (1)                                      | (2) | (3) | (4) |                |
| 1917.        |                |     |     |     |  |     |     |     |                |
| Apr. 1.....  |                |     | 13  |     |  |     |     |     |                |
| May 1.....   | 1              |     | 25  | 1   |  |     |     |     |                |
| June 1.....  | 1              |     | 24  | 1   |  |     |     |     |                |
| July 1.....  | 1              |     | 23  | 1   |  |     |     |     |                |
| Aug. 1.....  | 1              |     | 25  | 1   |  |     |     |     |                |

<sup>1</sup> Office of naval attaché: 1 line officer; 1 pay officer; 1 medical officer.

<sup>2</sup> Armed guard officers on brief temporary duty.

<sup>3</sup> Armed guard officer on temporary duty.

<sup>4</sup> Armed guard officer on temporary duty.

<sup>5</sup> Naval attaché's office increased by 1 naval constructor, and 1 officer on special ordnance inspection.

<sup>6</sup> Increase due chiefly to transfer of aviation headquarters from Paris.

NOTE.—Following is explanation of meaning of figures in above columns: (1) Regular officers of United States by department for this duty; (2) reserve officers sent from United States by department for this duty; (3) regular officers ordered by Admiral Sims to this duty; (4) reserve officers enrolled in or ordered by Admiral Sims from other forces for this duty.

Data not available for year 1918, but a small percentage of increases were ordered for specific at

VOLUME OF CORRESPONDENCE CARRIED ON BY UNITED STATES  
HEADQUARTERS IN EUROPE.

The rapid increase in the number of forces and in the administrative work thereby involved can well be imagined. I would submit for the record at this point a series of tables showing the growth in the volume of correspondence and cables handled monthly during 1917 and 1918. It will be noted from the tables that during the month of July, 1918, a total of 353 letters and cables were sent and received from my headquarters. These figures increased greatly in the succeeding months, and by the time of the armistice we were handling daily over a thousand individual pieces of correspondence. Thus in the month of September, 1918, alone, 1,000 cables passed through my headquarters. Nearly 8,000 letters were received and 7,000 letters sent, making over 30,000 communications that were handled during this one month.

GROWTH OF ADMINISTRATIVE WORK AT NAVAL HEADQUARTERS.

The following tables have been prepared in order to show the rate of growth of the number of correspondence and dispatches passing through Admiral Sims's headquarters.

The number of papers handled monthly has grown from an average of 700 per month in the second quarter of 1917 to an average of nearly 15,000 per month in the second quarter of 1918.

In July, 1917, an average of 22 letters and 24 dispatches were received or sent daily. Three months later these averages had increased to 60 in the case of letters and 65 in the case of dispatches, making a total of 125 papers handled daily. In January the daily average had grown to 151 letters and 131 cables, or a total of 283; in July the numbers were 224 letters and 203 cables handled daily, or a total of 427. In July 353 letters and 268 cables daily.

The accompanying graphs will illustrate the rate of growth of the work in months and quarters. In the first nine months that Admiral Sims worked in Europe a total of 25,160 papers passed through his headquarters. In July, 1918, alone 19,275 papers were received or sent, while on August 1 a total of approximately 125,000 papers in the form of letters and cables were handled.

MEMORANDUM ON THE WORK OF THE FILES.

The following statistical data has been prepared to illustrate the work done by the central registry.

The first table shows the number of letters and cables handled by Vice Admiral Sims and his staff, month by month, from April, 1917, to July, 1918.

The second table shows the average number of papers handled daily during each month.

The third table gives data concerning the methods used in the handling of papers.

*Number of papers handled monthly, 1917.*

#### ORGANIZATION OF EUROPEAN COMMAND.

As a further indication of the magnitude of the task imposed on these headquarters in Europe, I will present for the record showing the organization of the forces in European waters. The idea of the complexity and wide variety of questions involved in the command of these forces can be gathered merely by a glance at the chart.

#### ORGANIZATION OF UNITED STATES NAVAL HEADQUARTERS IN EUROPE.

For the information of the committee, I will also present for the record at this point a copy of a memorandum which was drafted in August, 1918, for the information of the Committee on Naval Affairs of the House of Representatives then making an inspection tour abroad, which explains the function of each section of the headquarters and covers the general operations of the forces under my command at that time.

medium referred to is as follows:)

**PLAN OF THE UNITED STATES NAVAL ACTIVITIES IN EUROPEAN WATERS,  
PLAN OF THE ORGANIZATION OF ADMIRAL SIMS' HEADQUARTERS.**

Subject: Action of Admiral Sims' staff, August 3, 1918. Prepared for Naval Committee of Congress on tour of inspection abroad.]

**ORGANIZATION OF THE UNITED STATES NAVAL FORCES IN EUROPEAN WATERS.**

The predominant naval effort in this war is British, due to the size and range of the British Navy, and since the British Navy is controlled from the Admiralty, Admiral Sims selected London as the location of his headquarters for directing the participation of the United States Navy in the European waters.

In an invaded country, it is but natural that the predominant national effort is centered in its armies; as a result the French Navy has undoubtedly not been able to expand to any considerable degree during the

war. The ministries of marine in France and Italy, and they keep him in touch with the naval situation in these countries. The Admiral makes occasional trips to Rome. Our naval attachés in Holland and other countries keep Admiral Sims constantly in touch with all informa-

tion. The telephonic communication between the British and French Admiralties, the French Admiralty keeps an Admiral with a staff on duty who cooperates with our staff.

The British Admiralty includes a highly efficient intelligence department in which all important naval information is made available to Admiral Sims. It is therefore unnecessary for Admiral Sims' organization to have a large staff for collecting information; it must and does include a small intelligence staff for collecting, digesting, and disseminating information.

The British Admiralty established Admiral Sims' headquarters in the British Admiralty, in the congested condition of the Admiralty offices it was necessary to establish the United States naval headquarters near the embassy.

The daily conferences of the naval staff at the Admiralty, and the fact that the Admiral's staff keeps in close touch with the corresponding staffs of the Admiralty.

The British Admiralty communications between the Admiralty and the United States Navy, to establish a liaison service a British naval officer assigned to the United States Navy, and a desk at Admiral Sims' headquarters at the Admiralty desiring any information from or consultation with the staff of Admiral Sims' staff are enabled to do this through this liaison officer.

The British Admiralty staff are enabled to quickly obtain information from the Admiralty.

The British Admiralty telegraph wires have been installed between the Admiralty and the United States naval headquarters.

The British Admiralty, consisting of the representatives of France, Great Britain, and the United States, meets frequently in London or Paris to discuss the progress of the naval campaign and particularly the disposition of the naval forces.

The British Admiralty, which is a team by itself, is, of course, to be expected to have a team. Admiral Sims believed from the beginning, however, that the way to throw the weight of the United States Navy into the war was to use its available units to strengthen the weak spots in the British Navy, and a more vigorous conduct of the war already so thoroughly

was much wasted effort and time if any attempt had been made to operate it entirely with United States Naval forces. Various naval forces have been rendered available by the disposition of the best location for them has been discussed with the other navies, and the disposition has been the result of

The British Admiralty may be considered the advanced headquarters of the United States Navy in the field. The Department deals only with Admiral Sims' headquarters in turn directs and coordinates the work of all of the other naval commands.

The British Admiralty may be considered the advanced headquarters of the United States Navy in the field. The Department deals only with Admiral Sims' headquarters in turn directs and coordinates the work of all of the other naval commands.

All groups, wherever located, report regularly to Admiral Sims concerning activities and operations, their condition as regards material, and supplies, and their plans, together with recommendations or suggestions for plans or policies. Admiral Sims in turn keeps the Department informed of reports of the activities of all the forces under his command. Daily matters of current interest are handled by telegraph or cable.

#### UNITED STATES NAVAL HEADQUARTERS—EUROPE.

In order to carry out the organization and meet the demands outlined above, the Sims' headquarters is divided into various sections. The following is a list of sections with very brief outlines of their functions.

1. *Chief of Staff.*—The Chief of Staff handles only important questions of plans and policies and disposition of forces, and renders decisions on questions referred to the various sections of the Staff.

2. *Planning Section.*—The Planning Section is composed of three Captain Lieutenants Colonel of the Marines, all of War College training, who have administrative duties. It is their mission to keep themselves informed of the situation, to carry on a constant study thereof, and to prepare and submit studies covering proposed future operations or changes in present operations and whenever in their opinion these are advisable.

Whenever new problems are encountered, the Planning Section is asked to make a comprehensive study of them before decisions are taken.

The Planning Section works in close cooperation with the corresponding Section of the Operations Division of the British Admiralty.

In addition to making studies of problems and preparing plans for future operations, the Planning Section also fulfills the function of a critic of the organization as it exists in effect in the forces.

3. *Operations Section.*—The Operations Section handles the convoying of United States Navy and United States Army shipping, keeps track of the location of United States Naval and merchant ships and, in close cooperation with the British Admiralty, acts upon all cablegrams dealing with the routing of convoys and the assignment of escorts. The Operations Section prepares all orders to forces which are to be employed.

The Operations Section also has charge of the antisubmarine work and the employment of submarine chasers.

4. *Material Section.*—The Material Section keeps itself informed of the requirements of all forces as regards supplies of all description, including money, fuel oil, food, and clothing, and repair materials.

It also supervises all financial dealings with foreign Governments in connection with expenditures for the Navy. Arrangements have been made with the allied Governments by which our ships can put in to any of their naval bases and obtain supplies just as if they belonged to the Navy of the country. Commanding officers of such vessels sign the necessary receipts covering the supplies they receive, which finally reach the Admiralty of the Ministry of Marine, as the case may be, and are referred to United States Naval Headquarters for auditing and reimbursement.

5. *Repair Section.*—The Repair Section keeps in touch with the needs of the forces in the matter of overhauling and repair, arranges with the different allied Governments for repair and docking facilities and keeps the department informed in regard to material which must be provided from the United States.

6. *Ordnance Section.*—The Ordnance Section keeps in close touch with the requirements of all forces as regards guns, ammunition, depth charges, and ordnance of all kinds. It also follows closely mining operations and cooperates with the British Admiralty and with the Mine Force in carrying them out.

7. *Medical Section.*—The Medical Section has general supervision over the medical services in the allied hospitals, keeps informed of the location of all sick and injured, and of the situation and arranges to have them cared for in allied hospitals wherever they may be treated in our own naval hospitals. There are at present three naval hospitals in Europe; one at Strathpeffer, Scotland, one at Queenstown, Ireland, and one at Brest, France. In these, and in certain Red Cross hospitals devoted entirely to naval use, there are more than 3,000 beds.

8. *Aviation Section.*—Before the Naval Aviation Service could begin operations it was necessary to establish aviation stations, to equip them, provide planes, and to provide the personnel. This work was placed under the direction of Capt. H. I. Cone. Capt. Cone established headquarters at Paris and the aviation section of the Administrative Staff has had as its chief function the work of assisting Capt. Cone in every way, and particularly by establishing the closest cooperation with the British Naval Aviation Service.

submarines that are being built and equipped are ready for operation under the commanders in the different areas, who direct their operations with surface naval craft. There are at present 27 United States submarines in England, Ireland, France, and Italy, with a total personnel of 1,000 men, including mechanics and other assistants.

Since the time of all officers of the various sections of the department is taken up by their immediate duties and the current business, it is necessary for the single purpose of obtaining and furnishing information to affect the work of the various sections. For example, the Intelligence Section, as the movement of all enemy submarines, studies their movements, keeps the Operations Section informed of the latest information that convoys may be safely routed and handled. The Intelligence staff call upon the Intelligence Section to collect and prepare information of subjects.

The subjects received are as follows:

1. The percentage of sinkings by submarines in the various areas.

2. The percentage of shipping passing into the English Channel to that

3. The percentage of engagements of United States naval submarines and the results of these actions?

4. The percentage of submarines constantly engaged in making summaries of information received and other data in convenient form for the information of the

5. The Intelligence Section also transmits all important information received and the results of investigations to the department, to Army Headquarters, and to the Navy Department. It works in close cooperation with the Intelligence Division of the Army, who is especially detailed, spends a great part of his time in the Intelligence Division. In this way it is possible to obtain information available concerning enemy submarines and the results of attacks and operations of the enemy, and information which is obtained by the admiralty from prisoners or other sources.

6. The Disbursing Section has general supervision over all the personnel, and those required for the administration of the Navy Department.

7. The Communication Section arranges all lines of radio, cable, and telegraph communication between the forces operating under Admiral Sims in the Navy Department. The cable and telegraph office established in the Navy Department is operated by United States naval personnel. There are also cable and telegraph lines of communication throughout Europe. The Navy Department and the forces in European waters during the month of June the average traffic in received and transmitted letter code groups each 24 hours.

8. The Signal Section handles in Navy codes and ciphers.

9. The Signal Section works in close cooperation with the Signal Division of the Army. It uses the use of codes, ciphers, and radio communications of the Navy. It looks after the distribution of codes and ciphers to the trans-Atlantic radio stations in France and the United States are used for the dispatches, and a system is being perfected for the use of the breakdown or cutting of the trans-Atlantic radio receiving station is installed at headquarters, which is used by the United States, France, Germany, and Italy.

10. The Signal Section is a member of the Inter-Allied Signal Conference and of the Inter-Allied Signal Commission, which meet quarterly for the purpose of administering the signal of all the allied forces.

11. The Signal Section is also in close touch with the admiralty and Royal Navy. It supervises and supervises all radio material for naval vessels and the Navy. Radio telephones and United States naval vessels are being established at convenient shipping points.

12. The Personnel Section. The Personnel Section, under the direction of the Navy Department, keeps a record of the location of all officers and men in Europe, and provides transportation for all officers and men.

13. The Personnel Section has 1,512 officers of the Navy serving in the Navy. There are now over 250 vessels in the Navy. Twenty-five other vessels are designated or en route.

This section also administers the handling of all correspondence and the mail service for the forces in European waters. A complete card index of men serving in European waters is maintained, and many thousands of letters are forwarded each week to the proper addresses. This section also supervises the clerical staff, at headquarters, and administers the barracks buildings.

13. *Administrative section.*—All correspondence and telegraphic communication pass through one office, whose function is the coordination of the work of the sections. This office, directed by the Assistant Chief of Staff, is thus make sure that the members of the staff do not work at cross purposes. If telegrams originating in one section affect other sections, they are referred before being sent out.

#### UNITED STATES NAVAL FORCES IN EUROPEAN WATERS.

United States naval forces operating in European waters may be briefly described as follows:

(a) The force based on Queenstown handles certain merchant convoys to France and to the United Kingdom and also fast British liners carrying United States troops. This force is composed of 24 destroyers, 2 tenders, and 3 tugs. Two destroyers of this force are temporarily assigned to duty at Plymouth with marine chasers, and one is in the United States for the renewal of her boiler.

(b) The force based on the French coast escorts troop ships into the French ports and out to sea, assists the French in escorting coastal convoys up and down the coast and across the channel to England, and aids the French in keeping the channel clear of mines. This force consists of 33 destroyers, 16 yachts, 9 minesweepers, 5 tugs, 4 repair ships, 1 barrack ship, 2 barges, and 1 tug which is temporarily assigned to duty in the Azores.

(c) The force based on Gibraltar works with the British in escorting allied convoys in and out of the Mediterranean. This force consists of 2 scout cruisers, 5 gunboats, 6 Coast Guard cutters, 5 gunboats, and 10 yachts. In addition 1 destroyer and 1 boat of this force are now in the United States for a general overhaul.

(d) At Plymouth, England, there are 41 submarine chasers with 2 destroyer tenders. These are engaged in hunting submarines in the entrance to the English Channel. There is also 1 submarine from Berehaven at Plymouth on temporary duty.

(e) At Berehaven are six submarines with a submarine tender engaged in hunting enemy submarines off the entrance to the Irish Sea and the English Channel.

(f) At Corfu are 36 submarine chasers with a tender, which are engaged in hunting submarines in the Adriatic Sea.

(g) With the Grand Fleet are five battleships operating as a battle squadron.

(h) The mine force, based on Inverness and Invergordon, is working with the British in the laying of mines in the North Sea. This force is composed of 10 minesweepers, 1 repair ship, and 2 tugs.

(i) The force based on the Azores is engaged in patrolling in the vicinity of the Azores to keep the route clear in order that our submarine chasers and other vessels may safely use the port for coaling and obtaining supplies while en route to Europe. This force is composed of four submarines, one gunboat, one monitor, two yachts, and a marine detachment on shore. There is also one tug from the Brest force on temporary duty at the Azores.

(j) There is a fleet of merchant ships engaged in carrying coal for the United States Army from England to France, which are under Admiral Sims's general command. Such ships have been commissioned or orders have been given for their commission.

(k) There are at Southampton four cross-channel transports engaged in carrying troops across the channel. These are commissioned ships under Admiral Sims's command.

(l) At Murmansk, Russia, there is one cruiser cooperating with the allied forces.

(m) At Genoa there are two tugs, which have been placed at the disposition of the Italian Government.

(n) At Liverpool there are two tankers.

While the United States Navy is doing its bit and doing it well, a sense of proportion must not be lost. Our effort is small compared with that of our Allies.

In this connection the following approximate percentages are of interest in a comparison between the naval effort of the allied powers. The percentage of various types of vessels engaged in the antisubmarine campaign in British and eastern Atlantic is about as follows:

|       | Great Britain.   | France.          | United States.   |
|-------|------------------|------------------|------------------|
|       | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> |
| ..... | 80               | 6                | 14               |
| ..... | 78               | 17               | 5                |
| ..... | 86               | 11               | 8                |

percentages give a similar comparison of the naval situation in the

|       | Great Britain.   | France.          | Italy.           | Japan.           | United States.   |
|-------|------------------|------------------|------------------|------------------|------------------|
|       | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> | <i>Per cent.</i> |
| ..... | 27               | 38               | 26               | 7                | 2                |
| ..... | 13               | 37               | 50               | .....            | .....            |
| ..... | 22               | 66               | 4                | .....            | 8                |

the Fleet Great Britain has about 91 per cent of the major fighting forces of France 9 per cent.

number of all patrol craft operating against enemy submarines in British waters, the American patrol forces constitute less than 5 per cent of the total. In the Mediterranean the United States supplies 5 per cent of the total.

comparison between the naval aviation effort of Great Britain and the United States is of interest:

Great Britain has about four and one-half times as large a naval aviation personnel as the United States, and about three times as many naval aviation stations. Great Britain has approximately fourteen times as many seaplanes as the United States, and makes patrol eight times as many miles during the week as the American Navy.

In 1918, it has been estimated that the British Navy has on active service more than three times as many officers and over four times as many personnel of the American forces operating in European waters. This must be assumed as low because it does not include the hundreds of thousands of men the British have in their so-called auxiliary patrol forces.

#### THE ATLANTIC CONVOY SYSTEM (AS REQUESTED BY THE HOUSE NAVAL COMMITTEE).

A brief illustration of the relative parts being played by the United States and the allied navies is given by a study of the Atlantic convoy system and escorting of American troop convoys to Europe.

In consideration of the whole Atlantic convoy system, that is, all shipping whether French, Italian, American, British, or neutral shipping in the Atlantic, the United States troop transports and troop convoys bound for the United States, the shipping is protected by the naval vessels of the Allies in the following manner:

1. Destroyers for 70 per cent of all convoys.

2. Cruisers for 27 per cent of all convoys.

3. Submarines for 3 per cent of all convoys.

4. The shipping in the Atlantic is protected by cruisers so as to guard against submarines. The cruisers necessary for protecting the allied shipping in the Atlantic way are provided as follows:

|       |                  |
|-------|------------------|
| ..... | <i>Per cent.</i> |
| ..... | 61               |
| ..... | 35               |
| ..... | 4                |

The United States has organized and arranged and provides the signal codes and instructions for the Atlantic convoy system; also commodores and signal men for the great convoys.

The system usually carries the shipping as far as the European coast, where it is transferred on a coastal route as to its destination. This necessitates

great amount of coastal escorting. Great Britain provides coastal escort in the Irish Sea, English Channel, and North Sea, and, in general, throughout the waters of the United Kingdom.

Great Britain also provides destroyers for all Allied shipping across the English Channel for practically all shipping across the English Channel between France, and also keeps all channels in British waters clear of mines.

There is very little coastal escort required on the French Channel coast. The United States follows the English coast. On the French Atlantic coast, the United States furnished three-eighths of the coastal escort and France furnishes the five-eighths. The United States also furnishes about one-third of the mine forces on the French Atlantic coast.

British destroyers are now rendering the following protection to United States shipping:

*United States troops.*—(a) British destroyers escort 52 per cent of the United States troops that come into England. (b) British destroyers escort all of our troops across the English Channel going to France. (c) British destroyers escort United States troop ships bound up or down the English Channel.

*Army store ships.*—(a) British destroyers bring into the English Channel the store ships that carry supplies for the United States Army. (b) British destroyers escort into Scottish ports all United States mine carriers bringing mine forces into the North Sea barrage.

*United States merchant shipping.*—(a) British destroyers provide the coastal escort for United States ships along the south and east coast of England. (b) United States trade with Scandinavia is escorted by British destroyers. (c) United States trade with Holland is escorted by British destroyers. (d) All United States ships bound out of the English Channel from either French or British ports are escorted to the westward by British destroyers.

(Intelligence Section, United States Naval Headquarters, London, August 1918.)

NAVY'S SPLENDID ACHIEVEMENTS IN THE WAR WERE IN THE PRESENCE OF DELAYS, INACTION, AND VIOLATION OF MILITARY PRINCIPLES BY THE HIGH COMMAND IN FIRST MONTHS OF WAR.

The statistical tables and the memorandums which I have referred to will give a sufficiently comprehensive idea of the extent and importance to the Navy Department of their advanced operations in Europe after they had once adopted the policy which they announced in July, 1917, of cooperating wholeheartedly with the Allies. Of course, when once the available naval forces were put into operations afloat and a sufficient number of capable officers to administer these forces, to control their operations and to coordinate our activities with those of the Allies were available, there was no longer any question of the effectiveness of our help. The Navy has by itself repeatedly assured us of the vital services rendered by our Navy to the allied cause, and we of the Navy can testify to the record that was achieved. Great as this record was, I have said enough to convince you that it would have been even more effective if the policies ultimately adopted by the Navy had been which can be found set forth in the Secretary of the Navy's Report of 1918 had been put into effect from the moment we entered the war instead of after dangerous delay of many months.

Furthermore, it seems to me that these achievements of the Navy should gain greater importance in the public mind when it is realized, as has not been generally realized, outside of the service, that these were accomplished not because of an equal amount of efficient command, the higher command which directed them, but rather in spite of long delays, inaction, and violations of fundamental military principles committed by the high command in the first months of the war. In other words, the personnel of our Navy afloat, in accom-

assigned them had to struggle with the enemy and also instead of an uncertain policy and of misdirection such as was pointed out in the cases which I have reviewed.

In connection with this and other tables that I submit are compiled from the records that we have available.

It is possible that you might find that instead of six ships at a certain time, there might have been seven or might be more. There may very probably be inaccuracies of that kind. These are presented as an illustration of the general principle to the other side, and the inaccuracies would not be the slightest with the impressions that they would

#### NAVAL FORCES IN EUROPE NOT ALLOWED TO SELECT PRINCIPAL SUBORDINATES.

In Nos. 74 and 75 of the letter which I addressed to the department on January 7, 1920, I called attention to the principle of the department of a fundamental principle of military command. In No. 7 of my summary of conclusions, I stated:

The commander in the critical area of hostilities was never allowed to select his subordinates and was not even consulted as to their assignment. This principle of the art of command is here involved.

I may say that without exception the commanders of the forces operating in European waters under my command were selected by the department without previous reference to me observing this principle of the art of command. Practically from the time of the sending of the first forces abroad, I endeavored to convince the department of the necessity of securing coordination and harmony in our forces abroad by the selection of commanders subordinate to me who would be in line with my policies and that I should be at least consulted in their selection. I am, of course, unaware as to the policy followed by the department in making these selections; but in every case the first intimation that I had of an officer assigned to a subordinate command was the information that he was to take up this command. Thus, the first official intimation I received concerning the officer to command on the coast was a dispatch I received from the department on August 1st that this officer would arrive on the coast of France. Similarly, with the commander of the first force sent to Gibraltar, the first intimation I had of the assignment of the commander was in the middle of July, two weeks before the department had informed me of their intention to send him to Gibraltar.

I requested officers for definite subordinate commands based on my knowledge of the requirements, of the position. I have these recommendations disapproved by the department. It will hardly be necessary to go into details in this connection to substantiate this point, because it is a principle so elementary that it needs to be stated to be proved, and if I were to discuss this particular point it would inevitably

involve the discussion of personalities, which I consider apart from the purposes of this investigation. I have at no time during this investigation made any reflections upon any man in our service, and I have no intention to do so. It would serve no useful purpose and would not contribute to the good of the service which is the one interest which actuates me.

In a personal letter addressed to Admiral Benson on July 1, 1919, I fully stated the reasons which had led me to request that he should be permitted to nominate for subordinate commands officers completely in sympathy with me and in whose ability and character I could have complete confidence. The paragraphs of this letter of interest are as follows:

(12) In case it should be your intention to send additional flag officers to the suggested places, or for others, I hope that you will give me a chance to suggest officers or at least to exercise choice within such limits as you may think fit to prescribe.

You know, of course, to what an extent personality counts for efficiency in the circumstances which now exist over here, and how highly important it is that we should have officers on duty in European waters in positions of responsibility who are not only willing to cooperate with our Allies here whole-heartedly, but who have the necessary tact and personality to render this cooperation effective.

Perhaps it is equally important that the officers indicated should be in sympathy with me and my methods. You know the difficulty that has arisen from the lack of sympathy of this kind. I feel that this particular point should be given special consideration, because not to do so might add very considerably to the difficulties which I necessarily have to bear.

In a cable sent on August 9 to Admiral Benson I nominated an officer for the command of the base at Cardiff, stating the reasons for making the request, but this officer was not chosen.

In later cables of the same month I made other suggestions for appointments abroad, with similar lack of result.

On September 30, in cabling to Admiral Benson, I there

Simben 37. Referring to my letters explaining the regrettable difficulties resulting from inefficiency caused by the assignment of officers to vitally important commands who have in the past been opposed to me in official matters and who are not in sympathy with my methods, I respectfully request that if none of the officers indicated in my cable number Simben 27 are available the department cable me the names of those who are available, so that I may recommend the officer who in my opinion is best qualified to successfully cooperate with me and the French and British in carrying out the increasingly complicated convoy system upon which the safe arrival of our troops and their supplies, and to enable me efficiently to discharge my responsibility to the department.

#### CONCLUDING STATEMENT.

I have now concluded my introduction of testimony and the documentary evidence in substantiation of the statements made in my letter to the Navy Department, of January 7, 1920, regarding military errors committed by the Navy Department in the conduct and management of the war. The official documentary evidence incorporated in the hearings establishes the following facts:

1. That, in spite of the fact that war had been going on for three years, and our entry into it had been imminent at least February 2, 1917, the vessels of the Navy were not ready for service when the United States entered.

2. That the first few months after America entered the war were extremely critical ones for the whole allied cause, due to the operations of enemy submarines.

his critical situation was made clear to the Navy Department after America entered the war, and repeatedly there-  
 his and letters, and supported by independent advices to  
 ment from the American ambassador in London and by  
 in person.

the Navy Department supplied me with no plans or policy  
 participation in the war for three months after our entry

having information as to the critical situation of the  
 Navy Department did not promptly assist them, and there-  
 the war by delaying the sending of antisubmarine ves-  
 sailing Europe for nearly a month after war was declared,  
 months elapsing before 30 vessels arrived.

the Navy Department failed to appreciate the military  
 in.

the Navy Department violated fundamental military  
 attempting to formulate war plans of operation without  
 want knowledge of the whole situation.

the department's representative with the allied admiralities  
 reported, during the most critical months of the war,  
 adequate personnel or by the adequate forces that could  
 applied.

the Navy Department violated fundamental military prin-  
 dispersing forces away from the critical area in order to  
 sons of the enemy.

the Navy Department, in the first months of the war,  
 the direction of details although 3,000 miles distant from  
 active operations, where the situation was changing from

the Navy Department, in not clearly defining the respon-  
 delegating authority to its representative in Europe  
 the sound principles common alike to the business and  
 sessions.

the Navy Department, by controlling the operations and  
 of certain forces within the war area, violated the funda-  
 mental principle of unity of command.

the Navy Department failed to keep its representative  
 solely informed as to its plans affecting dispatch and  
 of forces in the war zone, and frequently reached decisions  
 through information gained from sources other than  
 native in the war zone.

of my testimony have I charged the responsibility for  
 failures enumerated against any person, but I have tried  
 clear that the responsibility for these failures rests, in my  
 view, the Navy Department as an organization rather than  
 individual. If any individual was responsible, wholly or  
 the failures I have pointed out, the fact would necessarily  
 developed by persons who were in a position to know the  
 age of the department during the period in question.  
 knowledge extends only to the doors of the department  
 and them. The fact that numerous letters and cable  
 which I have submitted in evidence bear the signature of  
 person, is not to be taken as an indication that I believe

the signer personally responsible for the action indicated, merely indicate that the letter or dispatch was official and with the authority of the Navy Department as an organization.

To point out violations of well known and generally accepted principles of warfare such as have been shown by my testimony in itself to suggest the remedy which is obviously to avoid violations in the future. It not having been shown up to this time the investigation whether these violations of principle were due to faulty organization of the Navy Department or to faults of personnel. I am not, at present, able to submit well-founded recommendations looking to the adoption of measures to insure us against violations in the future.

My testimony has been devoted almost entirely to pointing out defects in the administration of the Navy in the first few months of the war. This does not mean that I have been insensible to the splendid work done by the Navy at large or by the bureaus and other offices of the Navy Department. I have, at different times, written letters to the chiefs of the bureaus of the Navy Department and to other officials, including the Chief of Naval Operations, expressing my personal satisfaction at the splendid way in which many requests had been met, particularly during the latter part of the war.

Taking the service as a whole, I have the most profound admiration for the manner in which the officers and men of the Navy, Naval Militia, and Reserve Force carried on their duties during this war, and have expressed this admiration in a series of reports now being published. Not only from the war zone, where I was constantly before me, but from home and remote areas, reports reached me which showed, beyond any doubt, what a magnificent body of officers and men we had in the Navy. You may be sure, gentlemen, that the Navy, if loyally and properly supported and directed, may be counted upon to maintain the finest traditions of the service.

It is a source of the greatest pleasure to testify to the profound gratitude I feel for the manner in which the Naval Militia and Reserves—in many instances at great personal sacrifices—of the aid and support of the regular Navy. Without their invaluable help much of the work done by the Navy in this war could not have been undertaken. It would require volumes to tell of the hundreds of ways in which their splendid services made success possible. One outstanding feature of their service was the cheerful and loyal support which they gave to the regular Navy at all times and under all conditions. I can not commend too highly their services to the nation.

It is furthermore a great pleasure and satisfaction to me to be able to testify to the magnificent way in which the many enterprises were undertaken and pushed to a successful completion by the united efforts of the bureaus of the Navy Department, and the naval personnel engaged in the operations. I can not pretend to enumerate complete operations of this nature which contributed to the winning of the war. I may mention, as typical examples, the northern barrage railway batteries, the transport of troops, and the training of officers and men in the ships of the Atlantic Fleet that remained in the waters.

to be expected in connection with an investigation particularly of a war which was won by great sacrifices and patriotic services of the entire Nation, that the first thought occurs to mind is that hindsight is better than foresight. It is always easy, in the light of hindsight, to point out errors committed in any undertaking. I submit, however, that the error here under investigation is one vitally affecting our national safety. We should not let such thoughts carry us back to dangers which the lessons of the past have warned against. Hindsight must not be blindsight.

I repeat and to emphasize at this time that no claim is made for my recommendations or advice should have been heeded because they were mine, but they should have been heeded because of my position in continuous consultation with the allied navies. There should be no question as to my merit in the confidence of my superiors. If I did commit an additional violation of a fundamental military and naval principle was committed in leaving me at my post. I should have been removed as soon as there was the slightest loss of confidence in me.

It is shown that there was a lack of conviction or clear understanding on the part of the Navy Department as to where its efforts should be directed. If I have shown that the Navy was hampered by ignorance, by lack of essential plans, and by being held back at the beginning; if I have demonstrated that victory was won in spite of these errors but in spite of them, and that such errors were caused by a combination of circumstances which we can only hope to count upon in the future—then I will have been fully justified in submitting my letter of resignation.

Thank you, Mr. Chairman.

As Senator Pittman has asked that the cross-examination be put over until to-morrow, we will now stand adjourned until to-morrow morning.

At 11 o'clock a. m., the subcommittee adjourned until Friday, March 19, 1920, at 10 o'clock a. m.)

## NAVAL INVESTIGATION.

MONDAY, MARCH 22, 1920.

UNITED STATES SENATE,  
COMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.

Committee met, pursuant to adjournment, at 10 o'clock  
in room 335, Senate Office building, Senator Frederick Hale

Senators Hale (chairman), Ball, Keyes, Pittman, and

CLERK. The committee will come to order. Senator  
Hale has been obliged to retire from the subcommittee, and  
he has appointed Senator Keyes in his stead.

**TESTIMONY OF ADMIRAL WILLIAM S. SIMS—Resumed.**

CLERK. At the meeting on March 9 it was decided that  
Admiral Sims be permitted to finish his direct testimony before any  
cross-examination takes place, or anything in the nature of cross-  
examination, and that thereafter any member of the committee be  
permitted to cross-examine, and that his cross-examination be  
not to be interrupted by any other member of the committee,  
in order to have an orderly process of examination. We shall  
follow that procedure unless it is found by the committee  
that it does not work satisfactorily.

Admiral Sims, in your letter to the Secretary of the Navy of  
March 10, stated:

"I have no statement of the Navy Department plans or policy  
at that time, though I received the following explicit admonition:  
'Don't pull the wool over your eyes. It is none of our business pull-  
ing the wool out of the fire. We would as soon fight the British as the Germans.'"

Now, I would like to know, Admiral Sims, who made that  
statement, who were present at the time, and what were the  
circumstances under which it was given.

Admiral Sims. If the committee will permit, before answering  
that, I should like to make a short correction in the state-  
ment at the last hearing. My attention has been invited to  
a statement of my statement in the hearings, that the routes  
of the United States convoys through the war zone were  
determined by my headquarters in London. I intended to convey  
that it was the European organization which did this routing  
of the Navy Department itself. While the general plans  
were of necessity formulated in London, in harmony  
with the allied convoy system, a great amount of detailed  
work was necessarily done, and very successfully done, by A-

Wilson, in command of all naval forces on the French coast; Admiral Niblack at Gibraltar, Admiral Dunn at the Azores, and other commanders.

This has been corrected in the hearings.

In reference to the question that you have asked me, I noticed that in all of my testimony I have avoided any references, and that I have not attempted in any case to assume personal responsibility. I have tried to make it clear that my criticisms referred to the organization known as the Navy Department and not to any individual; that my criticisms stopped at the doors of the department. I am not informed as to what took place completely, in the department during the war, and if the country wants to know that, it must be brought out by others.

I think that in answering the question I had better refer to the circumstances under which it was given to me. I was telegraphed to at Newport to come to Washington. Everything was kept secret. Secrecy is one of the things that Government departments love. I was told not even to come to the Navy Department by telephone to the department, as I remember to the Chief of the Bureau of Navigation, for instructions, probably to arrange a meeting. I tried to do so and could get no reply at all from the department, so I went there and reported to the Chief of the Bureau of Navigation, who was then Rear Admiral, now, Captain, L. C. He told me that I was to be sent abroad to confer with the other admiralties. He said that I was to go secretly, under an assumed name, and not even to take uniforms with me.

I was then taken in, or rather sent in, to see the Secretary of the Navy, as nobody went in with me and nobody was present at the interview. The interview was very brief. In substance the Secretary said that I was being sent abroad to confer with the admiralty on the other side, and to use the cable freely in advising them how best they could cooperate with the allied navies, in case they were unfortunately drawn into war. He also told me that the reason I was being sent over was because of a request from the then ambassador in London, Dr. Page; that an officer of high rank should be sent, as officers of the rank of rear admiral were representing other countries. I believe the Navy Department had taken the initiative in suggesting that an officer be sent over to confer with the other admiralties.

He gave me a copy of the telegram from Ambassador Page, and I submitted a copy of that if it is required. We have it.

In his testimony on the awards, the Secretary of the Navy said that he had reminded me of the indiscretion that I committed in the speech at the Guildhall. The Secretary's recollection of the point is thoroughly mistaken. No reference whatever was made in the Guildhall speech by anybody in the Navy Department on that occasion.

When I came out from the Secretary's room, or just before I did, in—I can not remember now which—in somebody else's office, it was the office of the Chief of the Bureau of Navigation, and my recollection is not clear on that, I think he was present at the events he told me that he was present; and it was there that the admonition in question was given to me by a certain official of the Navy Department. As I said before, I wanted to avoid all personal

do much prefer now to relate the incident and explain why in better, without referring to the name of the individual. I think the name of the individual should be Admiral Sims, and the committee would like to have you

say. The person who gave me the admonition was Admiral Chief of Naval Operations. I had no interview with him. The remark was preceded and followed by nothing. It was told to me in all and with bitterness, and I turned around and left the

room. Was anyone present in the room when he told it

me. That is where my recollection of that particular is clear, but Admiral Palmer has told me that he was in the time, and that he remembers a remark of that character, although he is not able to recall exactly what

was. There was no one else present excepting Admiral

me. As far as I can recollect; that was, as I remember in the afternoon of the day that I arrived in Washing-

ton. I had to go to the Navy Department to get papers, leaving, and I met Admiral Benson again, not in his office, and there, in the presence of a number of officers within their hearing or whether they heard or not, he repeated to me exactly the same remark, preceded and followed by nothing.

me. You do not remember who the other officers

were. I do not know who they were, but I could probably about six months later in my office in Paris he made a statement, at least, to the effect that I was not to allow the wool over my eyes or to pull their chestnuts out of something to that effect. I will admit that I had forgotten the incident. It was recalled to my mind by my staff who was present, and who heard it. I think that I did not remember that distinctly was because it was as a personal idiosyncrasy of the admiral. I had a general opinion that he was intensely anti-British, but it did not come particularly.

me. I think it should be made perfectly clear that in his second statement did not state to you that he fought the British as the Germans.

me. Not at all; no.

me. To be fair to Admiral Benson, that ought to be clear.

me. I want to make that very clear. He did not, of course. I have regarded this always as simply a personal remark, on the part of Admiral Benson.

me. I like to say that I have always had the best possible opinion of Admiral Benson. I regard him as an upstanding and who has exceedingly strong convictions, and who is

firm in adherence to these convictions. I believe everything done during the war has been done conscientiously, and to win with the war. I believe that it is due to Admiral Benson that I was given the opportunity to serve in this war as the commander of the forces abroad. In fact, he told me that his insistence on being put in command of those forces abroad had brought about the enmity of pretty much all the senior officers of the Navy, being due to the fact that when I was appointed I was the only one on the list of rear admirals in the Naval Register at that time. I state this in order to make it clear that there is nothing personal about this.

Now, my reason for putting it in the letter may not be so obvious to a civilian as it is to a military man, but the spiritual foundation of every war is the will to victory, and if any man, no matter how honest, has an invincible prejudice against the people that he is fighting alongside of, it is very probable that it has an undue influence upon him; and that is the reason that in submitting this letter for the consideration of the Navy Department, I put there, as one of the most important things in the letter, that when we go into a war again we want to make sure that the foundation of our organization, the will to victory, is sound.

Now, I would like to touch on one other thing.

Senator PITTMAN. Is this in answer to the chairman's question? Admiral SIMS. In answer to the chairman's question, it is related.

Senator PITTMAN. I think that I am at liberty to guard against any more letters coming in.

Admiral SIMS. Any more letters?

Senator PITTMAN. I think that I am at liberty now, in view of prior experience, to guard against any extraneous matter coming into the record.

Admiral SIMS. This is not extraneous. It relates to the subject, and it is this, that in his testimony before this committee on the awards, Secretary Daniels, in reference to me and in connection to this particular incident, said, "as a naval officer, he had no business to think who was the enemy." That, to me, is a most astounding statement. I received no instructions; I received no expression of policy. Manifestly, no plan can be based upon anything except the knowledge of who your enemy is going to be. I had every possible business to think who my enemy was. That is all I have to say on that particular subject.

The CHAIRMAN. Admiral Sims, you are still under direct examination. Have you any further matters that you wish to bring out?

Admiral SIMS. No; I think not.

The CHAIRMAN. Have you any questions to ask of Admiral Benson or Senator Ball?

Senator BALL. No.

The CHAIRMAN. Have you, Senator Keyes?

Senator KEYES. No.

The CHAIRMAN. Have you any questions to ask Admiral Benson or Senator Pittman?

Senator PITTMAN. Yes. Admiral Sims, this statement that Secretary Daniels attributed to you, that it was not your business

Q. whom you were going to war, or words to that effect made in his testimony here, was it not?

A. Yes, sir.

Q. That was not given you as a part of your instruction to go to Europe?

A. No, sir; it was not.

Q. You state that Admiral Benson told you that his insistence that you were sent over on this mission was not correct?

A. I am not quite sure whether it was on his initiative or not, but I wanted to convey the impression that it was his insistence that I remained over there as the officer in command of the forces. I was sent there first as a liaison officer, subsequently to that—we can give you the date if you want—we were put in command of the forces that were going over there.

Q. You have stated that Admiral Benson is pro-British; that he is prejudiced, you might say, against the British. I do not remember your exact language, but I think you said that. You do not think that Admiral Benson desired you to go over there, thinking that you held the same sentiments, that he did?

A. Yes; I do, sir.

Q. That he thought you were antagonistic to the British?

A. No, sir; he did not think I was antagonistic to the British; that I was pro-British.

Q. Yes.

Q. But he had reasons for retaining me over there in command?

A. Then, as a matter of fact, if that be true, and if he desired you to go over there, he wanted some one there who was pro-British, and with whom the British Government was in sympathy; is not that true?

A. I do not know, I am sure. He wanted somebody that he thought could hold down the job. There were a number of reasons, as I see it, why I should have been sent over there in the first place, and why I should have been retained in command. One of the reasons was as follows: That I knew a great many of the leading officers of the British Navy, as I had gone over there from 1900 to 1907 or 1908, in order to talk with the then leading officers of the British Navy about progress in gunnery. Admiral Scott, Admiral Jellicoe, who was then Chief of the Bureau of Ordnance, Admiral Fisher, and Admiral Madden, and men of that stamp; I knew them all more or less intimately, had corresponded with them, and neither of us knew much about shooting.

Q. You were naval attaché in Paris from about the beginning of 1900 to 1908, or nearly four years. I know those people. You were there in 1899 and spent a year in Paris for the object of obtaining facility in handling the language.

A. I was sent over there as a liaison officer, and for that reason. I assume, I was retained there in command, it being my opinion, that a man who had these relations and acquaintance with these people, and who knew their methods and

of the Navy. Had the admiral sent his report to the public press or to any one person entitled to receive it—the Secretary of the Navy—he committed a serious breach of discipline. Had he even made public such a paper existed he would have likewise been guilty of an impropriety, a man who took the reporters into his confidence, and is thus responsible for the publicity which has followed, was Secretary Daniels himself. The day the letter was received he informed the press that Admiral Sims had sent him a letter which was “critical” of the Navy Department in the World War.

Naturally public curiosity was vastly piqued. A few days afterwards Admiral Sims appeared before the Naval Committee of the United States Senate. The committee formally demanded that the admiral produce a copy of this letter. The Congress of the United States is a governmental body superior to Secretary Daniels and the Naval Committee of the Senate has the right to demand information on the conduct of the Navy Department. Neither could Admiral Sims have declined to furnish the report demanded. To have done so would have made him subject to contempt proceedings, but would have placed him in an unenviable position of insulting and defying the legislative powers of the United States. The letter, therefore, went upon the records and thus became public property. There is anything in the nature of a “scandal” —

The word “scandal” is in quotation marks—

or a “controversy” —

And the word “controversy” is in quotation marks—

or a “washing of dirty linen in public” —

And those words, “washing of dirty linen in public,” are in quotation marks—

Secretary Daniels is solely responsible; for, had he not made his public statement that the report existed, the Senate committee would not have demanded its presentation.

Do you agree with that statement?

Admiral SIMS. I do not agree with the statement, I do not want to agree with it one way or another; but I want to say this: I do not know anything about that until I saw it in the World. I did not know that it was projected, or anything about it, until it was published in other reviews and in newspapers, and so for that fact, the information there is simply a compilation of what is practically public property. I had nothing whatever to do with it at all, in any way.

Senator PITTMAN. Where do you suppose he got that expression—a “washing of dirty linen in public”?

Admiral SIMS. Out of the press. I have seen it a number of times.

Senator PITTMAN. Did you ever testify to that on the stand?

Admiral SIMS. Testify to what?

Senator PITTMAN. Use that expression in your testimony?

Admiral SIMS. I may have. I can not remember now.

Senator PITTMAN. I will tell you later.

Admiral SIMS. But I have seen it in the press hundreds and hundreds of times. In fact, there is a cartoon to that effect.

Senator PITTMAN. That was an expression used here by you, Admiral.

Admiral SIMS. Yes; but if it was used by the people in the press it can have no significance so far as I am concerned.

Senator PITTMAN. Yes. Let us go on a little further. This report there says that this letter was not shown to anyone else until it was presented to this committee—shown by you. Is that a fact?

SMS. No.

FITZMAN. To whom did you show this letter?

SMS. I showed it to perhaps half a dozen of my people who were on my staff on the other side.

FITZMAN. I would like to know who they are.

SMS. We can give you the names of those. Capt. Cone, Capt. Knox, and Commander Babcock, and Capt. and Lieut. Kittredge.

STRIDGE. No.

SMS. You never saw it?

STRIDGE. No.

SMS. They were Capt. Cone, Capt. Pringle, Capt. Knox, and Capt. Babcock, Capt. Chandler, and my aid, Lieut. Comstock. There is only one other person I showed that letter to; that was Mr. Davison, in New York. What are his

name and rank? Babcock. H. P. Davison.

SMS. H. P. Davison. I was a guest in his house on going to New York to attend a dinner given to Mrs. Whitelaw Reid, and I saw a copy of that letter on that occasion. To the best of my knowledge nobody else saw a copy of that letter at all. I did not put it in my own files, but I kept a file copy myself, and I kept it in my pocket. I did not put it on my own files in Newport.

FITZMAN. And yet you have testified that this letter was an official document solely for the Secretary of the Navy, is that not that true?

SMS. Yes, sir.

FITZMAN. Do you consider that it was proper, before sending it, to have submitted it to a civilian in New York City?

SMS. No. I do not think it. That was an indiscretion on my part. I should not have done so.

FITZMAN. That is the only indiscretion that you have

SMS. So far as I know.

FITZMAN. You stated in your testimony, presumably the War Department had published its existence, of a general

SMS. That is what I thought at the time, but I was

FITZMAN. Did that letter contain everything that is in the letter that you showed to Mr. Davison?

SMS. Did it contain everything that is now in it?

FITZMAN. Yes.

SMS. Yes; the identical letter.

FITZMAN. The identical letter?

SMS. It was not changed in any respect; no.

FITZMAN. Upon what date did you show that to Mr.

SMS. I can find the date by looking back and seeing what dinner took place in New York; but along about the middle of January it was.

FITZMAN. About the middle of January?

SMS. I should think so; about there.

Senator PITTMAN. It was prior to the time you mailed Secretary, was it?

Admiral SIMS. Prior to the time?

Senator PITTMAN. Yes.

Admiral SIMS. After the time.

Senator PITTMAN. After the time?

Admiral SIMS. After the time.

Senator PITTMAN. That you mailed it to the Secretary?

Admiral SIMS. I must have mailed it immediately after date, probably the 8th or 9th, or something like that.

Senator PITTMAN. At a dinner at Mr. Davison's house?

Admiral SIMS. No; in his private study. I was a guest house, and spent the night there.

Senator PITTMAN. Who else was there?

Admiral SIMS. There was another man in the house and his and his son, and so forth; but I can not remember anybody it was only shown to him.

Senator PITTMAN. You can fix that date, can you?

Admiral SIMS. I can fix the date, easily.

Senator PITTMAN. Will you fix the date before you leave?

Admiral SIMS. I will try to. I can find out about it. I mean to write to Newport and get the correspondence; but it was about middle of January.

Senator PITTMAN. About the middle of January?

Admiral SIMS. My aid thinks it was the 14th, but I cannot be sure. It is easily fixed because of the date of that dinner.

Senator PITTMAN. On the 14th of January an article appeared in the Washington Post under the signature, or the name, rather, of Albert W. Fox, entitled "Sims attacks Daniels's policies. A medal inquiry by the House. Admiral again writes frankly to the Secretary. Sees Navy's morale hurt. Fearless exposure of his believes blunders and mistakes. Expected to bare conditions."

Secretary Daniels has received another letter from Admiral William S. Sims which will prove of great interest to the service and the country if the Secretary succeeds in suppressing it. It is a frank and fearless exposé of the hopeless maladministration, mistakes, and blunders into which the American Navy has fallen as a result of Mr. Daniels's policies, and it tells the Secretary things that have been known to the admiral during the war, and are even more evident now.

It is, in effect, an attempt by the officer who was commander in chief of the United States naval forces in European waters during the war and is perhaps foremost among the ranking officers in the service to rescue the morale of the United States Navy from the policy of Mr. Daniels by appealing directly to the men responsible for it all.

Admiral Sims is now president of the Naval War College at Newport, R. I. The letter was sent to Mr. Daniels from there.

\* \* \* \* \*

If this officer, who is generally regarded here and abroad as one of the most competent naval authorities in the world, finds it necessary to expose Mr. Daniels's management of naval affairs and frankly and fearlessly undertakes the task, it is probable that senators will show lack of interest.

Every one admits that there is something vitally important to the Nation in naval efficiency or inefficiency and the big, broad question at issue is whether Daniels's policies are affecting the service.

That is on the 14th day of January. I will ask you if you saw any publication in regard to that testimony of yours prior to that date.

Admiral SIMS. I do not understand your question.

Senator PITTMAN. I ask you if you saw any publication intimating that there was such a letter as that, prior to the morning of the 14th day of January?

Ques. Prior to that time?

ANS. Yes.

Ques. Not that I recollect. I understand there was a paper; but I only found it out before I came down here.

ANS. I would be very glad if you would have some of them hunted up in regard to this matter.

Ques. In regard to what?

ANS. In regard to this matter. This is the first mentioned of this—have been able to find.

Ques. Probably that is the first. I think that is the first.

ANS. I would be very glad to have you pursue it in the case.

Ques. I did not follow that carefully.

ANS. Because it would indicate great carelessness on

January 15 has something else about this; not by

3. Daniels mum on Sims. Stopped reading letter just before critical."

Article goes on:

He admitted yesterday that he had received a "critical" or "condemnation" of Admiral Sims, but said he had not yet read all of it. He said that as it was becoming critical, he explained; and therefore could not charge against his management of naval affairs made by the

is something else down here in the same article:

#### NEW POINTS MAY BE DEVELOPED.

Admiral Sims's views on the actions of Secretary Daniels in the article, which the admiral has described as bringing condemnation on Mr. Daniels and the service and lowering the morale to the last point that the committee will develop points having an important bearing on the confusion and chaos in the Navy.

At some one was wise at that time.

There is an article from the New York World under date of 1920, sent from Washington. The heading reads:

Letter to Daniels criticizing Navy. Communication discusses Secretary has no comment.

Article says:

He has been called to appear before the subcommittee of the Senate on Naval Affairs Friday in connection with the committee's investigation of decorations to officers and men of the Navy.

#### MAY CRITICIZE MISTAKES.

Article states that Admiral Sims on that occasion may discuss the Navy in error made during the war, causes for the present low state of morale,

as indicated to-day that he may have nothing to say regarding communication until after the admiral has had an opportunity to lay before the committee, should he desire to do so.

The letter is "critical" of his policies and management of the Navy, and the portions he had read were rather critical.

As Sims has given it out as being critical, I suppose the letter is Daniels's.

• • • • •

Those portions of the letter which Mr. Daniels has read contain no mention of decorations which Admiral Sims criticized severely in a letter written by Mr. Daniels some time ago.

There is a similar statement in the New York Times.

So that the first intimation made public was in the article in the Washington Post on the morning of January 14.

Admiral SIMS. Are you asking a question?

Senator PITTMAN. No; I am just stating a fact first, and I wish to comment on it.

Admiral SIMS. Yes, sir.

Senator PITTMAN. The article purports to know the general tenor of that letter. It suggests that that may be made public. Secretary Daniels suppresses it.

These other articles written by Washington newspaper men indicate that the Secretary was suppressing, and would not even publish it. So much for the inference in this article, and also your testimony that the Secretary was responsible for you placing that letter before the public through the medium of this committee.

Now, as to the inference that you were forced to produce that letter by the committee——

Admiral SIMS. Yes; will you allow me to make some comment upon what you have just been reading? You did not ask a question about it.

Senator PITTMAN. No; because I want to connect it up with the hearings, and then let you answer it all at the same time, if you wish.

Admiral SIMS. Oh, that is all right.

Senator PITTMAN. It will be better, and it will be more intelligent.

Admiral SIMS. That is all right, sir.

Senator PITTMAN. Now, then, as to the reflection upon the committee, that this committee here forced the letter out into public view——

Admiral SIMS. Who made this reflection?

Senator PITTMAN. That reflection is carried in this article which you have read; and not only that, but I take it that it is carried in your testimony when you state here——

Admiral SIMS. I did not use any such expression as "forced," and I said that it was asked for by the committee.

Senator PITTMAN. Yes. Well, if you do not want to use that word, that you were compelled to present it, I am perfectly willing to use that you did not.

Admiral SIMS. Did I use it?

Senator PITTMAN. Well, were you compelled to present the letter by the committee?

Admiral SIMS. I was asked for it, and I presented it. I stand so.

The CHAIRMAN. Senator Pittman, in quoting Admiral Sims will stick to the record and quote him from the record and not what you think he said, you will have less trouble.

Senator PITTMAN. The Admiral is here, and he is just as good as the Chairman.

The CHAIRMAN. Nobody can remember what was said except you. You have the record before you to quote from.

Senator PITTMAN. Possibly no one but the Admiral can.

The CHAIRMAN. I do not think we need any discussion of this matter.

PITTMAN. No.

SEN. No. Nor will we have it.

PITTMAN. No; I do not intend to stand for it. I am conducting an examination.

SEN. And when it is not being properly conducted, stop right along.

PITTMAN. And I shall pay no attention to it.

SEN. We will not proceed.

PITTMAN. I realized this morning that you were going to break up this cross-examination.

SEN. There is no attempt in any way to break up the examination. Now, go on.

SEN. May I say now, in reference to this, that I welcome examination, because if you continue it through my testimony it will be the means of bringing out possibly information I did not bring out. Naturally, I want to bring out what I can.

PITTMAN. I will help you, Admiral.

SEN. I am trying to help the department. I want it that as I made this statement from day to day, I passed it to the other side, including the Secretary of the Navy, the whole thing to be brought out, and I am here.

PITTMAN. Now I want to know whether or not you were to produce that letter by the committee.

SEN. I understand that a request made by a committee for testimony compels you to give it.

PITTMAN. Admiral, if there were a matter within your knowledge any letter that you had written that you would consider the publication of the same would be injurious to our country, would you publish that, simply upon the request of the committee, did not know its contents, without suggesting that it might be prejudicial to our government?

SEN. Certainly not; I would submit it to the committee behind closed doors. But when it is something that I know will be beneficial to the Government, I do not think that proper at all.

PITTMAN. I see. That answers my question exactly. Have you submitted it behind closed doors if you had not known that it was very beneficial; and therefore you did not tell the committee that they consider it behind closed doors?

SEN. I did not. It was not any of my business to.

PITTMAN. You made no intimation to the committee that a statement in there that might be offensive to another.

SEN. No.

PITTMAN. Did any member of this committee know what the letter was?

SEN. Nobody except the people you have mentioned, to the best of my recollection, knew anything about the letter.

PITTMAN. Yes.

SEN. Or, certainly, not what was in it.

Senator PITTMAN. Yes. You had the letter in your pocket time, did you not?

Admiral SIMS. I had carried it in my pocket ever since it was submitted. It never was out of my possession.

Senator PITTMAN. At the time this letter was presented, testifying in a proceeding dealing with naval awards, and the man stated to you this, and I call your particular attention that you can determine whether he was referring to the letter in your pocket. I admit I did not know he was referring to the letter in your pocket. [Reading.]

The CHAIRMAN. Admiral Sims, I think in connection with this matter it does bear any further correspondence with the Secretary of the Navy about the effect of awards and their effect on the morale of the service, it would be well to give that correspondence to us at the present time.

Admiral SIMS. Will you read my reply?

Senator PITTMAN (reading).

Admiral SIMS. It does not bear particularly upon the question of the award, it does bear upon the question of the morale of the service.

The CHAIRMAN. Then I think it is decidedly germane to the issue.

Admiral SIMS. As I said before, the action of the Board in the awards was the last straw in this whole business.

Senator PITTMAN. May I finish this line of examination with regard to this particular subject?

The CHAIRMAN. If the admiral has expressed himself in regard to this, any letter that will throw light upon the subject, we should have it.

That subject was the subject of naval awards. [Continued reading.]

Senator McCORMICK. My sentiment is that we should give the admiral an opportunity to furnish us these letters before we get too far away from the subject which they refer.

Senator PITTMAN. It seems to me the admiral has had plenty of opportunity to put anything in this record he desired to insert. I am not making any objection, but I have started an inquiry right now with regard to the difference of opinion.

Then the chairman goes on again:

The CHAIRMAN. Now, Senator Pittman, with your permission we will continue with the question I put to the admiral, if the admiral cares to proceed.

That is the history of the way this matter became public. This is the history of the way the committee is alleged to have taken the letter from your possession.

One other question along this same line, and then I will answer it all, so as to connect it all up. Prior to January 1, 1900, you wrote a letter, and made it public, with regard to naval awards. Did you not?

Admiral SIMS. No, sir.

Senator PITTMAN. You did write a letter with regard to criticism of the naval awards?

Admiral SIMS. But I did not make it public.

Senator PITTMAN. What date did you write that letter?

Admiral SIMS. It was dated the 17th of December. The date is in the record. Have you a copy of the printed hearings on the awards? You will find it in the record there.

Senator PITTMAN. I think that is near enough—the 17th of December?

Admiral SIMS. Yes.

PITTMAN. That was written from Newport?

SMITH. Yes.

PITTMAN. Did you show that letter to anyone?

SMITH. Oh, yes; I consulted a good many people there because it concerned those officers there so intimately, because to a certain number of officers who were concerned, out to officers that I had recommended for a certain decoration who had only got another one. I wanted those officers that I had done about it.

PITTMAN. You had that letter mimeographed?

SMITH. I had the letter mimeographed in order to send it to those concerned.

PITTMAN. There were quite a number of the officers that were concerned, I suppose?

SMITH. I sent out, I suppose, a couple of dozen copies.

PITTMAN. Then it found its way into the press?

SMITH. I do not know how it found its way into the press.

PITTMAN. It is just as much a mystery as how Fox got the information.

SMITH. I know how Fox got his knowledge about it, but he asked me any questions about that.

PITTMAN. I will ask you how Mr. Fox got the knowledge about it.

SMITH. I considered those letters you have read there from a very distinct tribute to the enterprise of the press in the information.

PITTMAN. You said you knew who gave Mr. Fox the in-

SMITH. Do not be impatient, and I will tell you. I did know who gave Mr. Fox the information, but I said that about that—I could tell you how Mr. Fox got the information; I have not seen him at all since I have been here, but I have been told that Mr. Fox got the information that way from the Navy Department. Now, let me—

PITTMAN. You have been told that?

SMITH. Yes; I have been told that.

PITTMAN. I wish you would tell me who told you that.

SMITH. I could not tell you who told me, but some one came in where we had a number of people and said that was the case, and you can easily ask Fox, if you want to.

PITTMAN. I probably will.

SMITH. Let me tell you something. I went into the Navy Department on the 17th of January and I found copies of that letter lying about now, of January 7, in the Navy Department. It was signed, and it was there. You can not recopy a thing without copying it. I know there were a number of copies that passed around the Navy Department. One minute; I know that a letter that comes into the Navy Department by a good many people before it is ever placed before them have to consider it. The ordinary procedure is for it to come to the file room, and there it is read by a clerk who makes out a sufficient abstract so that you can recognize it, and gives it a number, etc., and puts it in the proper file and goes through. Anything that comes into the N—

Department is known to a number of people. If any one people wants to tell a newspaper man on the outside about it do it. He ought not to, but it is very frequently done, and stand that that is where this information came from—out of the Department, where a great deal of other information of a character does come out.

Senator PITTMAN. Now, you say—

Admiral SIMS. But let me make this statement first.

Senator PITTMAN. Certainly; go right ahead.

Admiral SIMS. But nothing that I did, nothing that any officers in my entourage in Newport did, had anything to do with the giving out of the fact that there was a letter, let alone giving out the contents of the letter itself.

Now, the game was played perfectly fairly and squarely. I no spring chicken in this business, and I am not putting myself into a noose unnecessarily. I saw that the letter was confidential of course, and I took particular pains to see that it did not go to any of our own people, and I even carried the only copy in my own pocket, so that I would be able to say that it was always with me and be sure that it was there; and I had it in my own pocket when I came down here.

Senator PITTMAN. When was it you say you were in the Department and saw a copy of that letter?

Admiral SIMS. The same day I read it to you.

Senator PITTMAN. Before or afterwards?

Admiral SIMS. Directly afterwards.

Senator PITTMAN. Yes; I thought so.

Admiral SIMS. Directly after that.

Senator PITTMAN. Yes; directly after that?

Admiral SIMS. Yes; but it was only about two hours after. The morning of Saturday that I read that letter here, the 14th of January, I received a telephone message while I was in the Department here that the Assistant Secretary of the Navy wanted to see me in the afternoon at half past 2, and I went down there, and I knew he told me, that the letter had been copied and circulated, and he showed me one on his desk.

Senator PITTMAN. Yes; he showed you one on his desk. To whom did you address that letter?

Admiral SIMS. To the Secretary of the Navy.

Senator PITTMAN. The Secretary of the Navy?

Admiral SIMS. That is, under the regulations, to address a letter to the Secretary of the Navy, and if it wants to go to a bureau, you put in parentheses "Bureau of Navigation," or "Bureau of Ordnance," or whatever bureau it may be.

Senator PITTMAN. And on the 14th Mr. Fox not only knows the existence of a letter of that kind, but he has given a very accurate description of the general subject matter.

Admiral SIMS. I noticed that; yes. Now, you are trying to put that on me, as to my giving it out. I tell you I had absolutely nothing to do with that.

Senator PITTMAN. I am not trying to fix it on you as to giving it out.

Admiral SIMS. What are you trying to do, then?

BETTMAN. No, no, no; far be it from me to try to fix any-

SMS. Well, cheer up; I am glad to know that. Go on.

BETTMAN. But you, you see, got a little confused in your mind you testified so rashly here a while back with regard to this letter, and it now develops that you let Mr. New York, who was a civilian, read that letter before you reported.

SMS. Yes; that is right.

BETTMAN. Before you made it public.

SMS. No; I did not make it public. I showed it to Mr. [redacted] all. He is an honorable man, and you can call him a committee and he will tell you that he did nothing with it as an indiscretion. I have said so. You do not need to say that. I acknowledge that thing.

BETTMAN. I am very glad you acknowledge that. Now [redacted] thing, you were complaining that we are trying to pin it on you.

SMS. Oh, I was not complaining at all.

BETTMAN (continuing). You stated in your testimony previously that the letter was called out because the department had published it of its existence and its general nature. Now, as a matter of fact, is there any evidence here that the department had published it of its existence and its general nature?

SMS. That is what I thought at the time; but I told you a moment ago that I was mistaken, and did not find that out until I read those articles. I do not take the Washington Post and never seen those articles you have read here, and I know nothing about it; that is all. What I was referring to at the time was that I supposed that in the interview that takes place between the press and Mr. Daniels somebody on the press asked him if there was any evidence here that the department had published it. I have since been told, but I have not verified it, that before that thing there was a little squib in the newspaper that the letter had been received; but I did not know anything about it. I did not know it until I came down here this morning somebody told me about it. [Reading:]

The letter was called for because the department had published the [redacted] and general nature.

That preliminary statement. There was a published interview with Secretary Daniels, in which they asked him about it and he said, "Yes; there was a letter of a critical

BETTMAN. When was that?

SMS. I do not remember when it was.

BETTMAN. I have read when it was. It was subsequent to [redacted]

SMS. That is an attack on the Secretary of the Navy. I have nothing to do with that.

BETTMAN. I say, the first notice of that was the Fox article. That is connected with the leak, all right.

SMS. That is something that concerns Mr. Fox and not [redacted] you said you were not trying to pin it on me and it does [redacted]

Senator PITTMAN. It certainly, though, affects the Secret Navy.

Admiral SIMS. Yes.

Senator PITTMAN. And by reason of the fact that you had given the testimony you did here, which is a direct reflection gave publicity to it.

Admiral SIMS. Why should they not give publicity to it?

Senator PITTMAN. For the simple reason that it contained that were offensive to a Government which we were at peace friendly terms; because it contained a communication that voluntary statement that was confided to a high admiral, confidence.

Admiral SIMS. It was not in strict confidence.

Senator PITTMAN. In such confidence that it was not even committed in writing.

Admiral SIMS. It was not in confidence. It was before officers.

Senator PITTMAN. Why Admiral, it was before the three have charge of matters of that kind.

Admiral SIMS. Excuse me, sir; it was in an office where there a number of people. The second day it was stated to me—

Senator PITTMAN. The second day it was before naval officers.

Admiral SIMS. It was.

Senator PITTMAN. Before naval officers, who are supposed respect the confidence that is reposed in them by superior and who would hold sacred a secret of the navy that was essential the protection of the Government.

Admiral SIMS. It was not told to me in that way, at all.

Senator PITTMAN. And you do not consider that the public of such statements as that would be improper?

Admiral SIMS. For who to make it public?

Senator PITTMAN. Anyone.

Admiral SIMS. No; I do not.

Senator PITTMAN. You do not?

Admiral SIMS. No, I do not, where the interests of our are at stake. We naval officers have made up our minds that thing, and that is this, that we will never go into a war in the situation in which we went into this. Do not make any mistake that?

Senator PITTMAN. That statement is all right, and I accept statement also with regard to what you consider the duty of naval officer. That is all I have to ask you on that subject.

Admiral SIMS. Are you asking a question?

Senator PITTMAN. No, sir, I am through now on that. That the end of that subject. There is another subject that I will take up.

Now, Admiral, part of your criticism involved in this matter been the lack of centralization of command in London.

Admiral SIMS. The lack of what, sir?

Senator PITTMAN. Of command.

Admiral SIMS. The lack of centralization, you said?

Senator PITTMAN. Yes, the lack of centralization of command in London. Is that not true?

Sims. No, I do not recall any such criticism. The command was centralized in London perfectly, with the initiative to subordinate commanders. I think we may misunderstand about the significance or drift of that question. Perhaps only a little.

PITTMAN. Yes; I probably will. Now in letter No. 27, of July 16, 1917, from Vice Admiral Sims to the Secretary of War, concerning policy of United States naval operations in war and allied subjects, I read from paragraph 3:

"The first question which naturally occurs to mind is that we should look upon the navy as part of the combined allied service, of which the British Grand Fleet and all other allied naval forces disposed throughout the world are a part."

On July 15, 1917, in a communication to the Secretary of War, and called a general report, I read the following in paragraph 11:

"From a practical point of view it appears necessary to accept as a fact that an American tonnage must be contributed to support the Allies in the demands of our military and naval forces. If this is accepted, the extent of our military participation is only dependent upon the rate of shipbuilding, and that our military participation must be viewed in relation to the rate of production of new tonnage commences to exceed the rate of shipbuilding. It has even been suggested that in view of the present situation a good use of our naval forces could perhaps be more efficiently utilized in proceeding by actually utilizing it as labor in American shipyards."

In a communication from Admiral Sims to Admiral Bailey, London, January 24, 1918.

Sims. To whom?

PITTMAN. Admiral Sir Lewis Bailey, of the British Navy.

Sims. Yes.

PITTMAN. I may state that this letter comes from your office at London.

"I am glad to know that the question I mentioned to you about the employment of our various groups of destroyers is now up for very serious consideration. It has evidently been presented on the other side with very great force. The chief of our war staff, who has recently passed through London as a member of the Allied War Council, is of the opinion that we should consider a power in the way indicated in our discussion when I was at Queenstown, that if we persist in the original scheme of organizing a large fleet of destroyers, with adequate means of transportation, and so forth, that it will be made effective until 1919. The whole matter will come before the Allied Council and be considered by the prime ministers of the countries concerned, and doubtless a decision will be forthcoming before long. I don't think it can be anything much different from what we believe it should be."

"If the decision is made as indicated above, it will change to a question of the employment of our various groups of destroyers. According to the original scheme it would be not to proceed with the development of the facilities at the west coast of France but to let them remain as they are and to let the supply of the troops already in there and for the supply of their equipment to divert the tonnage which is now carrying in all equipment for the handling of a big army to the bringing of troops in to the western front in order that they may be passed through the British camps at Calais."

"Therefore, it will mean that there will be few army convoys going into France, and consequently that these can be handled only by the navy on the coast of France with the possible addition of a certain number from the United States."

On the other hand, there would be more troop convoys coming in from the north or the south of Ireland, and provision would have to be made to handle additional convoys. However, this is a bridge that does not need to be crossed until we get to it.

Admiral SIMS. That is a dandy letter, all right. I am pleased.

Senator PITTMAN. Now, Admiral, I will ask you about the letter.

Admiral SIMS. I should like to explain that to you.

Senator PITTMAN. I will ask a few questions, and then you can explain all of it.

Admiral SIMS. Yes.

Senator PITTMAN. What was the question that you mentioned to him about the best way to utilize the man power of America on the western front?

Admiral SIMS. I was reporting to him what Gen. Bliss had said to me, and what he told me he was going to put up to our Government when he went back, that until we could get a large number of troops in there and until we could put them through a long series of training so that they would be capable of taking over a whole section of the western front themselves, what would help to win the war was to do at that time would be to do what the British were doing with their own raw troops that they were putting in there, and what he had done with his troops throughout his whole career. That was, when he got a new contingent of raw recruits, instead of making an attempt to train them of them and putting them through from 6 to 8 or 10 months to fit them to go into battle by themselves, he put them in small groups, in among the veterans on each side of them, so that they could be guided by the veterans among whom they were put, which would fit them for fighting inside of two months; and I was very glad to say that the ideas of Gen. Bliss on the subject were put into effect and that the American army did do that exact thing at the time he was talking about, and they put them on the western front alongside among the British, who spoke the same language, and they were brigaded alongside the British, brigaded with them, as the expression is, a group of Americans with a group of British on each side, and they did most excellent service, and you probably remember that when they were put in under Gen. Haig to fight alongside the Australians, when somebody asked the Australians how the American troops did, the reply was that they did first rate, but they were a little bit rough.

Now, that was what Gen. Bliss had recommended, and that was what I was talking about there, and that was a wise thing that Gen. Bliss saw, and when he got back he proposed to our Government to that effect, and that is exactly what they did. Later on, they had so many troops in there that they constituted an army, and after those fellows had gotten a good deal of experience, after they had fought under Gen. Haig, a certain number of them were withdrawn to form the nucleus of the army of the Argonne, and they went forth. It all went forward as projected there.

Senator PITTMAN. So, on November 15 you were in favor of putting our soldiers to work in the navy yards as laborers, and on January 1 you were in favor of brigading our soldiers with other troops?

Admiral SIMS. At a certain time I was in favor of putting a certain number of them in the ship yards, in the same way as the British were, in order to get the tonnage. We all realized, and Gen. Pershing

you are ready to hear about that I will tell you what he said on the subject, that the tonnage question was the very heart of the business, and if that was not solved the war could not be won with the assistance of the American Army. It was necessary, not to take all the men who were enlisted and put them in the shipyards, but to take what were needed to solve this tonnage situation. Great Britain did not and did do it. She withdrew men from her veteran shipwrights and put them in her shipyards. That was simply to accentuate the fact that instead of the Army men who were shipwrights, who understood ships, it was so essential at that time that we have ships for the Army over and to get the supplies over, that these men going into the Army, should have been employed in the shipyards. That is only ordinary American common sense.

PERMAN. Was Gen. Pershing, on January 24, favoring a separate unit over there, or was he favoring your proposing them under the British?

SEN. I do not know.

PERMAN. You really do not know that?

SEN. I do not know that. I do not know when he came out that he did come out and say, "I am willing to do it in any possible way." He said that at a certain time he had the original idea I do not know.

PERMAN. When did you come out openly for a separate unit over there?

SEN. I did not come out for it. It was none of my doing. I did not come out for it, officially or in any other way. I discussed it with Gen. Bliss when he came through there, I saw him on the Allied War Council at Paris, naturally it was discussed with him, and he agreed that he would do it. He went back, and he told me that when he came back he did so advise our Government at that time. It was a question of brigading our troops with foreign troops at all times to get over an emergency. We would have to go on the basis of testimony in order to establish all the facts in a court, but what I was advocating, or talking about in my speech at Pavly was what Gen. Bliss had told me was the decision of the Supreme War Council. That is to say, the Army people considered the whole matter thought that it was necessary to put the troops in, and did put them in, and it succeeded.

PERMAN. Now I read another paper from your historical

SEN. Will you allow me to say also that in no case I considered that I, a naval officer, attending to my own duties, recommending anything at all. I wanted to know what was going to do, because it might have a marked influence on the way the war should be handled. If they should decide, as they did, to send a large body of troops through Great Britain, it was the disposition of my forces, in order that those things might be properly transacted. In the later period of the war, when it was found that this advice about sending them to Great Britain was exceedingly important, and when the

rush came, after March 21, 1918, from that time on—I just rough guess that 50 per cent of the troops went into Greece and across the channel; so that all those things that I discussed with Gen. Bliss—not recommending them but trying to find them—were all done exactly as explained in that letter to Bayly; and we, as two sailormen, were discussing what the disposition of the forces that were escorting the troops that did come off. I am pleased to death with that letter. I am glad I wrote it.

Senator PITTMAN. Here is another statement, Admiral, by your historical section in London at the same time as the letter, to the archives here:

There was a small dinner last night at which were present Balfour, Reading and the host, a very important person.

Admiral SIMS. Balfour, Cecil, Reading, and who else?

Senator PITTMAN. Balfour, Cecil, Reading, and the host, an important person.

There was also present another man who holds somewhat radical views as to the most efficient way to employ America's man power on the western front, organizing a separate Army with its own lines of communication and supply.

The gentlemen above mentioned were greatly interested in the expression of views and highly approved of them and the discussion turned upon the way to be employed to realize them.

During the discussion the following facts were brought out:

First. This proposition was presented by the House mission upon its return.

Admiral SIMS. Gen. Bliss was with the House mission.

Senator PITTMAN. (reading):

Second. The President asked Pershing for his views as to the advisability of the scheme, and, in case he did not approve of it, to state why he did not approve it.

Third. Gen. Robertson went to France to discuss the matter with Pershing. He came back "much disappointed."

Manifestly, the pressure in favor of the scheme is increasing. It is apparent that the bulk of the tonnage assigned to transport the Army is being brought over the material to create the facilities for handling and supplying an army so large that it can probably never be landed in France—at least not to get into the game.

It is believed that the pressure is now, or soon will be, such as to end the positions of those who continue to oppose the scheme.

It is, of course, desirable to increase this pressure as soon and as much as possible.

The reasons in favor of the scheme are so plain and simple as to be readily understood by the man on the street.

The reasons opposed to it are purely sentimental—national and state pride and ambition for personal distinction. There is no sound military reason against it.

Therefore, it is of the first importance that this matter be clearly explained to the man on the street.

It is up to you and the men of your cloth.

Admiral SIMS. What is the date of that?

Senator PITTMAN. January 14, 1918.

Admiral SIMS. From whom?

Senator PITTMAN. It says, "Admiral Sims's personal file."

Admiral SIMS. Who wrote it?

Senator PITTMAN. I am asking you who wrote it.

Admiral SIMS. I am asking you who wrote it.

Senator PITTMAN. I have not the slightest idea. It is in your personal files.

Admiral SIMS. Then I have not anything to say about it. It may be a paper in my personal files, but if you want to question me about a paper that you read to me you must tell me who wrote it.

PERMAN. It came with the Bayly letter, which is dated 30 days after this memorandum.

SIMS. I can not comment on it. Is it a letter?

PERMAN. The Bayly letter is a letter. This is dated 10/1/18, and is marked "Admiral Sims's personal files."

SIMS. There were 50,000 papers in among those things, and I do not tell me what it is about I can not comment on it.

PERMAN. If you do not know what your historical section

SIMS. Of course I do not know. They sent over to me to send over all the stuff we got there, and it is up to them. I do not know what this is. That is not my Navy Department historical files.

PERMAN. Very well. I call your attention to the fact, Admiral —

SIMS. Evidently it is somebody writing to me his opinion.

PERMAN. No; Admiral —

SIMS. It is not mine, evidently.

PERMAN. It seems to be so in accord with your letter to me —

SIMS. Oh; most people were in accord with me. That goes along so well. I did not write that, and I do not

PERMAN. I enjoy affording you amusement. I am going to give you more amusement now. This letter of Bayly's —

SIMS. Let me state that —

PERMAN. Just a minute. I am asking you a question.

SIMS. I only want to say that the probability is that that memorandum sent me for my information by Dr. Page, the Englishman.

PERMAN. By Dr. Page?

SIMS. By Dr. Page, the American ambassador.

PERMAN. Did you discuss these matters with Dr. Page?

SIMS. No; I saw him very rarely about those things. I saw him when I wanted help from him.

PERMAN. Do you mean to say Dr. Page would send you letters of this kind in the nature of propaganda?

SIMS. Not in the nature of propaganda, but for my in-

PERMAN. Admiral, it is evident that this is intended as propaganda to be used against the effort of Gen. Pershing's separate army.

SIMS. Gen. Pershing at that time, or a little while after, was in favor of brigading those troops in England, and they were fixed up, and they did exactly what is recommended.

PERMAN. You say on January 14 —

SIMS. No; I do not say on January 14, and I did not say before I did not know what date it was, but I do know that when the crisis came he came out in the most splendid way and leading to brigade my troops in any way that will help our cause."

Senator PITTMAN. This memorandum says, "The reasons to it are purely sentimental—national and State pride, and for personal distinction. There is no sound military reason for it." This is a propaganda against the establishing of a American unit. Whether it was written by you—

Admiral SIMS. It was not written by me.

Senator PITTMAN. Or by Dr. Page to you, do you think Dr. Page would engage in such propaganda?

Admiral SIMS. I absolutely object to calling that propaganda is perfectly good, sound military sense that at the crisis those should be put in there. Of course, you had to put them in for personal ambition and all that sort of thing. It is exactly what was eventually done. It was a perfectly sound military reason, that was what Gen. Bliss recommended, and it is what Gen. Bliss eventually did when the crisis came. That is not propaganda. That is ordinary, plain, common military sense, that is all.

Senator PITTMAN. I am glad you view it in that light, but I will connect up your actions later on very admirably.

Admiral SIMS. I can tell you one thing. I do not know what that paper, do not know anything about it at all, so what is the use of my trying to discuss a paper I do not know anything about?

Senator PITTMAN. I am very pleased to know that you are not of it.

Admiral SIMS. I did not say that I approved of it at all.

Senator PITTMAN. It is practically your point of view.

Admiral SIMS. Then I absolutely deny that I approved of it. I have not anything to say about that paper at all, except that it dictates exactly what took place. It is not up to me as a sailor to approve of military procedure at all. All the expressions of opinion that I made on the subject were repetitions of what had been said by Gen. Bliss, who was a soldier, and who had just come from his consultation with Gen. Pershing and Foch, and so-and-so in the War Council, and I simply discussed this thing with Admiral Jellicoe, and so forth, to see what our disposition should be. That simply predicted what would have to take place in order to win the war, and it did take place, so what is the use fooling about it?

Senator PITTMAN. I am very glad to know you approve of the propaganda.

Admiral SIMS. You can keep on saying I approve of it, and I can keep on calling it propaganda, but that does not make it propaganda.

Senator PITTMAN. I simply accept your first testimony instead of your last, just as I have done several times.

Admiral SIMS. Oh, well—

Senator PITTMAN. Now, I want to insert in the record here what I am reading again—and my purpose in inserting it is this—

Admiral SIMS. Before you leave that subject, Senator, I note in reading from the letter of November 15 you quoted a paragraph in which it is said, "If this is accepted, it appears that the extent of our military participation is wholly dependent on the rate of American shipbuilding, etc." I simply refer to that to identify the paragraph. That is taken out of the letter after the following paragraph:

it is difficult to obtain accurate figures of current production of new ships in the United States and England, it appears in round numbers that the United States is at a rate not far from double the rate of production. This rate of production of loss continues the curve of available tonnage is on a dangerous angle, and the present estimate for future production in England indicates that, on the most optimistic basis, a rate of production will not be reached in less than a year and only then production can assist by supplying a portion of the necessary steel, etc. This indicates that until the United States production of new ships is brought to the rate of 300,000 to 400,000 tons a month the existing tonnage is to decrease.

The tonnage situation was the gist of the whole thing. As stated in my testimony, the hope of victory on the part of the Allies was that he could cut the lines of communication. One of the allied navies was to prevent that and to preserve the lines of communication, and Gen. Pershing understood perfectly. I would like to read this extract from Gen. Pershing to show how solicitous he was in that matter.

#### MILITARY SITUATION, 1915 (P. 7).

The British Fleet has established its superiority on the sea, yet the German U-boat had developed into a serious menace to allied shipping.

#### MILITARY SITUATION, SPRING OF 1917.

By the ending June 30 German submarines had accomplished the loss of more than three and a quarter million tons of allied shipping. \* \* \* The U-boat had been held on foreign soil and she had withstood every allied attack known. \* \* \* It can not be said that the German hopes of final victory were either as viewed at that time or as viewed in the light of the problems of the Allies were difficult, supplies were becoming scarce, the armies had suffered tremendous losses. Discouragement existed among the central populations but throughout the armies as well. \* \* \* It is not possible that, although their superiority on the western front was still maintained during 1917 amounted to 20 per cent, only local attacks were made and their effect proved wholly insufficient against the German armies. Their man power at home were low and there was little prospect of increasing their armed strength, even in the face of the probability of the military strength of the Central Powers against them in the spring

of 1918. The state of affairs that existed when we entered the war. While our people were much encouraged, yet this was temporary, and a review of the situation made it apparent that America must make a supreme material contribution. After duly considering the tonnage possibilities, I cabled the Admiralty on July 6, 1917:

"I am contemplating sending over at least 1,000,000 men by next May."

#### TONNAGE REQUIRED FOR UNITED STATES ARMY (P. 10).

The French life had enormously increased the tonnage of supplies required. Not only was it a question of providing food but enormous quantities of clothing and material were needed.

The American Expeditionary Forces were based on the Atlantic coast, three thousand miles of ocean to cross, with the growing submarine menace, the quantity of ship tonnage that would be available for the maintenance of a line of communications by land 400 miles long from French ports to the front presented difficulties that seemed almost insurmountable for the Allies.

The available tonnage was inadequate to meet all initial demands, so that a material for combat and instruction, as well as for supplies that could be obtained in Europe, must be established by those whose perspective included the whole who were familiar with general plans. (P. 12.)

## MILITARY SITUATION IN 1917.

At first the Allies could hardly hope for a large American Army. Mar during his visit to America had made special request that a combat division be sent to Europe as visual evidence of our purpose to participate actively in the war. \* \* \* (P. 18, Pershing's report.)

The arrival of the First Division and the parade of certain elements in Paris on July 4 caused great enthusiasm and for being French morale was stimulated. Still allied apprehensions for deep-seated and material assistance was imperative. The following extract is quoted from the cabled summary of an allied conference held on July 26 with the French and Italian commanders in chief and the British and French chiefs of staff.

That is referred to in my testimony at a conference that I attended.

General conclusions reached were necessity for adoption of purely defensive strategy on all secondary fronts and withdrawing surplus troops for duty on western front. By thus strengthening western front believed Allies could hold until Americans arrive in numbers sufficient to gain ascendancy.

The conference urged the immediate study of the tonnage situation with a view to accelerating the arrival of American troops. With the approach of winter and the division among the Allies over the Russian collapse and the Italian crisis was deepened by the conviction that the Germans would undertake a decisive offensive in the spring. \* \* \* In view of this, it was represented to the War Department that the utmost importance that the allied preparations be expedited.

On December 31, 1917, there were 176,665 American troops in France and no American division had appeared at the front.

That is, at the end of December, 1917, but one division had appeared at the front. [Continuing reading:]

Disappointment at the delay of the American effort soon began to be expressed. French and British authorities suggested the more rapid entry of our troops into the line. \* \* \*

That was the reason that they did put them into the line. [Continuing reading:]

## EXPEDITING SHIPMENT OF TROOPS (p. 23).

The War Department planned as early as July, 1917, to send to France by the end of 1918, 21 divisions of the then strength of 20,000 men each, together with replacement troops and those needed for the line of communications, amounting to over 200,000, making a total of some 650,000. \* \* \* While these numbers are short of my recommendation of July 6, 1917, which contemplated at least 800,000 men by May, 1918, it should be borne in mind that the main factor in the delay was the amount of shipping to become available for military purposes, in which case the tonnage required to supply the Allies with steel, coal, and food would be included.

On December 2, 1917, an estimate of the situation was cabled to the War Department with the following recommendation—

That is, the following recommendation from Gen. Pershing:

In view of these conditions it is of the utmost importance that we move forward. The minimum number of troops we should plan to have in France by the end of June is four Army corps of 24 divisions in addition to troops for service of the Gens. Robertson, Foch, and Bliss agree with me that this is the minimum number that should be aimed at. This figure is given as the lowest we should think of placing no higher because the limit of available transportation would not warrant it.

4. A study of transportation facilities shows sufficient American tonnage to transport over this number of troops, but to do so there must be a reduction in the tonnage allotted to other than Army needs. It is estimated that the shipping needed for the Army must have to be rapidly increased up to 2,000,000 tons by May in addition to the already allotted. The use of shipping for commercial purposes must be curtailed as much as possible. The Allies are very weak and we must come to their rescue.

Year after may be too late. It is very doubtful if they can hold out to give them a lot of support this year. It is therefore strongly recommended that a complete readjustment of transportation be made and that the transportation as set forth above be regarded as immediate.

December 20, 1917:

On December 20, 1917, and the First Corps is still incomplete by over 100,000 men and many corps troops. It cannot be too emphatically declared that we intend to take the field with at least four corps by June 30 (1918). At present, with tonnage heretofore available such a project is impossible, but only by most strenuous attempts to attain such a result will we be able to take a proper part in operations in 1918. In view of the fact that the number of troops here increases a correspondingly greater amount of tonnage is required for their supply, and also in view of the slow rate of shipbuilding now available, it is of the most urgent importance that more tonnage be obtained at once, as already recommended in my cables and by

1918 REQUIREMENTS OF ARMY (P. 67, PERSHING'S REPORT).

In order to study tonnage requirements, an officer was sent to Washington in February with a general statement of the shipping situation in France, as discussed at the Allied maritime transport council. In March, 1918, tonnage requirements for transport and maintenance of 900,000 men in France by June 30 were laid down which to calculate supply requisitions and the allocation

of tonnage. The Allied maritime transport council showed that requirements for 1918 were far in excess of the available tonnage. Further revisions of the schedule were made at the Versailles agreement in May, under which American Infantry and Cavalry were to be transported in British shipping, and by the Versailles Peace Treaty. The tonnage developed as the allotment for August made the American tonnage by the shipping control committee was only 575,000 dead weight tons, whereas 700,000 tons, whereas 803,000 tons (not including tonnage actually needed. It was strongly urged by me that more shipping tonnage be secured and that a larger percentage of new shipping be placed in British hands.

It is not in there to show that Gen. Pershing was, of course, conversant with the very serious situation as regards the western front with the very serious situation as regards the western front and the necessity of giving the Allies early support.

SEN. Senator Pittman, will you have some further statement from Admiral Sims?

PITTMAN. Yes.

SEN. The hour of 12 has arrived. Will you have some statement from Senator Trammell?

TRAMMELL. Yes; later on.

SEN. We will adjourn at this point, then, until tomorrow.

At 12 o'clock m., the subcommittee adjourned until Tuesday, Mar. 23, 1920, at 10 o'clock a. m.)

## NAVAL INVESTIGATION.

TUESDAY, MARCH 23, 1920.

UNITED STATES SENATE,  
COMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.

Subcommittee met, pursuant to adjournment, at 10 o'clock  
in Room 235, Senate Office Building, Senator Frederick Hale

Senators Hale (chairman), Keyes, Pittman, and Tramm

MAN. The committee will come to order. Senator Pitt-  
man had some further questions, I believe.

### TESTIMONY OF ADMIRAL WILLIAM S. SIMS—Resumed.

MR. PITTMAN. I have here what purports to be a letter  
from you, Admiral, to Senator Carter Glass, under date of  
March 15, 1920. [Reading:]

SENATOR CARTER GLASS. Referring to the testimony given by Representative  
Keyes before the subcommittee of the Senate investigating awards,  
I enclose with a copy of the letter I have just written to Senator Hale, with  
reference to Mr. Martin Egan, concerning my alleged criticisms of the Army,  
copies of certain letters from Gen. Pershing showing my cooperation with  
him in his relations with the Army and with the general.

I believe, show you how very unlikely it is that I could have held any  
opinion regarding the general's handling of the Army as was indicated by the  
letters mentioned.

Very truly yours,

WM. S. SIMS,  
Rear Admiral, United States Navy

MR. GLASS.

Mr. Boardman, Washington, D. C.

MR. SIMS. Will you read the inclosures?

MR. PITTMAN. I have not the inclosures. You placed them in  
front of the hearing, did you not?

MR. SIMS. I would like to have them read.

MR. PITTMAN. I would like to read them myself.

MR. SIMS. They are in the hearing, there.

MR. MAN. Do you want to have them read or just have them  
in the hearing?

MR. SIMS. I think they ought to be read in connection with

MR. MAN. Very well.

MR. PITTMAN. I have them, I believe. They are found at page  
25 of the hearings of the subcommittee on Naval Affairs, United

States Senate, second session, on Senate resolution 285, and the  
as follows [Reading]:

NAVAL WAR COLLEGE  
Newport, R. I., February 14, 1919.

MY DEAR SENATOR HALE: When I appeared before your committee on February 10, when an effort was made to convey the impression that my relations with the Army were strained, and that I was criticising the actions of the Army, I told you that my recollection was that I could produce evidence to show how cordial the relations in question were.

I find that on November 6, 1918, I wrote a letter to Mr. Martin Egan, who was in Paris, in which I referred to a story I had heard to the effect that I was not in complete sympathy with Gen. Pershing. I inclose you herewith a copy of this letter.

Subsequently, Mr. George Bar Baker, who is mentioned as Commander in Chief of the first paragraph of the above letter, communicated to me the following extract from a letter he had received from Martin Egan:

"I never did believe the several reports from the Admiral, brought over the ocean by a lot of busybodies, and neither did the general. But it was fine to have his assurances, and when I talked to the general he said he never did believe any of them, and that he knew all the time that the admiral was playing the game loyal to every American effort in Europe. We have the satisfaction of clearing up the matter anyhow."

As further showing the cordial relations which have always existed between Pershing and myself, and all of his forces, I inclose copies of letters received from me dated April 1, 1919, April 21, 1919, and May 4, 1919. These letters will show that nothing could possibly have been more cordial than were our personal relations and cooperation throughout the war.

Very sincerely, yours,

WILLIAM S. PERSHING

Senator FREDERICK HALE,  
Senate Office Building, Washington, D. C.

AMERICAN EXPEDITIONARY FORCES,  
OFFICE OF THE COMMANDER IN CHIEF,  
France, April 1, 1919.

Personal.

Admiral WILLIAM S. SIMS,  
United States Navy, 30 Grosvenor Gardens, London, S. W.

MY DEAR ADMIRAL: I received with a mixture of pleasure and regret your letter of March 21—pleasure at the kind words and cordial sentiments that you expressed, and regret that you were leaving England before I had an opportunity of seeing you and thanking you in person for the consistent and cordial cooperation that you have given to the American Expeditionary Forces. That there has been such good cooperation and such lack of friction between the land and the sea forces, I am well aware, due in the largest measure to your helpful attitude and big heart looking at things.

With heartiest congratulations for the splendid services that you have rendered the Government during this war, and with kindest personal wishes for your continued success, I remain,

Sincerely, yours,

JOHN J. PERSHING

AMERICAN EXPEDITIONARY FORCES,  
OFFICE OF THE COMMANDER IN CHIEF,  
France, April 21, 1919.

Personal.

Admiral WILLIAM S. SIMS,  
Care Navy Department, Washington, D. C.

MY DEAR ADMIRAL SIMS: I have just received a printed copy of the proceedings at the luncheon tendered you by the American Luncheon Club on the occasion of your leaving London. I have read your remarks with a great deal of interest, especially appreciate the very generous and kind things you said of the American Expeditionary Forces and of me personally.

to have the opportunity of again expressing to you my personal appreciation, and to have the feelings of the whole American Expeditionary Forces, of the most loyal cooperation of the American naval forces under your command in the war. We realize fully that, had it not been for the Navy, who kept us night and day over our transport fleet, the American effort in France would not have been successful. Had it not been for you but few troops would have been and these few could not have been supplied. The Navy's assistance was arduous, and was always given in a most generous spirit of co-operation. I am, very truly yours,

JOHN J. PERSHING.

AMERICAN EXPEDITIONARY FORCES,  
OFFICE OF THE COMMANDER IN CHIEF,  
France, May 4, 1919.

BRUCE S. SIMS,  
War Department, Washington, D. C.

GENERAL: I have just received a clipping from the New York Times of your speech on the Victory loan, in which you spoke very effectively and said some things with reference to me and the job that I had. I can not tell you just how much what you say touches me, coming after two years of most loyal cooperation and support. I have often told myself about what you did, but feel that I have never conveyed my thanks. Now, your speech arouses in me such a flood of sentiment that I cannot but to divine what I feel. You are enjoying a long-earned rest after your more than two years of service. Believe me, very truly,

JOHN J. PERSHING.

UNITED STATES NAVAL FORCES OPERATING IN EUROPEAN WATERS,  
U. S. S. "MELVILLE," FLAGSHIP,  
London, S. W. 1, November 6, 1918.

MR. FLANN: I have just had a chat with Commander Baker, and to my surprise he told me that you are under the impression that I am not in complete sympathy with Pershing. How such a rumor could possibly have arisen is hard to imagine.

But aside from the personal correspondence that I have had with the general, the official letters I have had concerning the Navy's relations with the Army in our mind would be completely disabused of any such idea.

I have repeatedly stated to the general that my understanding of the matter is that it is nothing to the world but the line of communications between the Army and the Navy. I believe I have explained that there is really no naval war going on. Our ships are not fighting our military vessels, but are attacking the German lines of communication and food. In other words, that the German Navy is at war against the armies of the Allies, and that our business as naval men is to insure this line of supply.

I have been in complete sympathy with Gen. Pershing but I have been puzzled over the way in which the biggest military stunt in all history has been handled. If I have not actually said it to the general, I have repeatedly said that I have little conception as to how such a problem could be handled. The thing is tangled up; that the stunt the Navy has to perform is, in communication itself, and I have always expressed my sincere sympathy with the Army has to encounter.

Now, as well as I do, that a war can not be conducted by a number of people. There being a certain amount of criticism in each country of all the things that are done, of course, not escaped such criticism. You will hear at times from both in London and in Paris, expressions of regret that things are not done as well as could be expected with the American Army, or the British Army, or the Army, as the case may be. Unfortunately, when such opinions are expressed, some people will try to bolster up their case by quoting the supposed words of people who are more or less in the public eye. It is possible that I have been quoted in this way, but I can assure you that it is wholly unjust.

Of course, I do not know what rumors and gossip you may have heard, but consider it a favor if you would write to me very frankly as one American to another and tell me what you know, so as to give me an opportunity to state my case.

Very sincerely, yours,

WILLIAM S.

M. EGAN, Esq., *Paris*.

Those were the letters, I assume, Admiral, that were inclosed with your letter to Senator Glass under date of February 15, 1918. I have just read.

Admiral SIMS. Inclosed to Senator Hale. I sent copies to Senator Glass.

Senator PITTMAN. Yes.

Admiral SIMS. I received a reply from Senator Carter Glass which he does not agree with the sentiments that I expressed.

Senator PITTMAN. This is the letter of Senator Carter Glass in reply to your letter in which you inclosed copies of the letters I have just read. [Reading:]

FEBRUARY 17,

MY DEAR ADMIRAL SIMS: I have yours of February 15, inclosing your letter of February 14 to Senator Hale with certain letters attached, written by you on November 6, 1918, to Mr. Martin Egan, at Paris, and written to you at London on April 21, and at Washington on May 4, by Gen. Pershing. I note your suggestion that the letters should convince me of the unlikelihood of your having "held such opinions concerning Gen. Pershing's handling of the army" as was indicated by your testimony before the subcommittee of the Senate Naval Affairs Committee on February 14.

I disagree no less with your method of stating the case than with your deductions. In the first place, I gave no testimony touching your "opinions concerning Gen. Pershing's handling of the army." Inspection of the record will clearly show you that I testified as a matter of fact and not as to any opinion of Gen. Pershing or expressed by you. Pointedly, I testified that, on October 30, 1918, in your presence at the Hotel Crillon, in Paris, in response to my statement that Gen. Pershing ten days theretofore, had signified his opposition to an armistice with Germany, you explicitly said to Congressmen Whaley and Byrnes and me that we were to grant an armistice because the communications of supply of the American army had broken down. Of that fact I have no more doubt than that I am writing at this moment, nor has either of my former colleagues any doubt of it. I might have added that, with a gesture, you precluded further talk on the subject by saying, "Oh, well, it will all come out in due course."

The fact that nearly seven months later you and Gen. Pershing exchanged personal letters can not alter the circumstances nor in any way affect my recollection of it. The further fact, as disclosed by your letter of November 6, that a week after our audience with you in Paris, and after your return to London, you found it necessary to write Mr. Egan to set him straight concerning your attitude toward Gen. Pershing and the American army, so far from altering my recollection, singularly accentuates the likelihood that, prior to the discovery of your letter, you had said to other persons substantially what you said to Congressmen Byrnes, Whaley and me on October 30, 1918, and which caused my two colleagues to travel 150 miles to Tours in an open automobile, in desperately chilly weather, for purposes of verification.

But, these things aside, I must decline to concede that anything could be said that would create one particle of doubt in my mind as to the absolute accuracy of my statement to the subcommittee of the Senate Naval Affairs Committee as to what you said in Paris to my colleagues and me.

In this connection I shall take leave here to say something which I could not say on the 10th instant without appearing to break in rudely on your testimony before the committee. In this testimony you were at pains to include me in the suggestion that, if we believed you had made at Paris the statement ascribed to you, subsequently had found out that it was not true, we had neglected our duty in "putting up a howl" to get you dismissed from the Navy. As it seems to me that your eagerness to make this superficial point, you failed utterly to realize the force of the only presumption upon which it rationally could be based. In short, to sustain this contention, you must assume that I was wrong in my inference that your statement to me at the Crillon in Paris was the recital, in good faith, of something

... as a fact and which you had repeated to my colleagues and ... Apparently you think I should have regarded your statement as ascertained to be untrue, as a malignant invention of your own, with deliberate intent to defame the American Army; and your excuse is that, without troubling to consider how you came by the ... for an instant attributing to you an evil motive, I regarded ... and your honorable record as a naval officer a sufficient defense ... a mean action. I distinctly testified, not once but twice, that ... from our conversation that you intended to be critical ... in any way to disparage its officers; but from your testimony I ... represent this equable state of mind on my part, since you ... regarded you as a slanderer and "put up a howl" for your ... to divine how you may derive any satisfaction from such

CARTER GLANS.

...  
...  
... War College, Newport, R. I.

... day of November, 1919, Admiral, you wrote a letter to ... Bayly, of the British Royal Navy. This was two ... the armistice. I quote from that letter. [Reading:]

... reason that it would be impossible to force the enemy back through ... not only on account of the great difficulty of the terrain but also ... operating in this area could be supplied only over one main-line ... thought possible that this road could carry supplies sufficient ... necessary. There is no doubt that the military opinion was ... that the attacking forces were not willing to make greater sacrifices ... called upon to bear. That these sacrifices were necessary is ... of course, I do not know much about details at present, but ... that they were very severe. It turned out, as was to be expected, ... sufficient to supply all the needs of the troops. Horses had to ... supply the troops, notwithstanding the scarcity of horses at this ... is nothing succeeds like success, and the cutting of the im- ... has been accomplished.

... that I have on this line on this topic, Mr. Chairman.

... TRAMMELL. Admiral, just what time in 1917 was it that ... Europe under orders of the Navy Department?

... SIMS. As I remember it, I left on the 31st of March, 1917.

... TRAMMELL. The conversation that took place between you ... Person, then, when he warned you against Great Brit- ... to that date?

... SIMS. Just a few days before.

... TRAMMELL. Just a few days before?

... SIMS. Just a few days before.

... TRAMMELL. In other words, it was before the declaration

... SIMS. Yes, before the declaration of war, which was April 6.

... TRAMMELL. And after the declaration of war I believe you ... did not state to you that he would as soon fight Great ... fight Germany?

... SIMS. No, on the occasion of his visit to England in Octo- ... like that, all he said on that occasion was to express ... that I should not let the British pull the wool over my ... expression similar to that. In my testimony yesterday ... to convey was that it was the expression that he ... that occasion that I did not remember. I saw in one ... this morning the statement that I had said I did not ... of those expressions having been used until somebo-

reminded me of it. Of course I remembered the one that was in Washington. I probably never will live long enough to see it. It was graven on my memory, I can assure you; but I do not remember what he had said to me in London until my attention was called to it by one of my staff who was present and heard it. That is what I meant yesterday. Of course he did not say then that we would as soon fight Great Britain as Germany.

Senator TRAMMELL. I just want to get those dates fixed.

Admiral SIMS. Yes.

Senator TRAMMELL. That is, I wanted to get those dates in the record. I do not think they were put in the record yesterday. In your direct testimony you made this statement on the question of the losses of tonnage and so on:

It can thus be said that the failure of the Navy Department to enter the war immediately and whole-heartedly cost the allied cause as a whole two and one-half millions of shipping sunk unnecessarily. While this is, of course, an estimate based upon actual results obtained when our help became effective, and the reason to doubt that it is a conservative estimate.

Here is a drawing that was transmitted with this letter of transmittal to the Navy Department from your headquarters.

Admiral SIMS. Shall I read this letter?

Senator TRAMMELL. No, you need not read it. I just exhibit it to you for the purpose of identification of the drawing.

Admiral SIMS. Yes.

Senator TRAMMELL. That drawing or schedule purports to be a statement as to the amount of available tonnage to the Allies, as compared with the amount of submarines available to the Germans, as I understand from the letter of transmittal and the explanatory notes. That schedule shows the tonnage available to the Allies to June 1 or June 30, I am not sure of which, 1918.

Admiral SIMS. Now perhaps it will clear up that situation. I am just as anxious to clear it up as you are—if I may give you the data on which the statement in my direct testimony was based. I made out a full statement of it, but decided not to include the account of the number of pages and that sort of thing, and I summarized it in the statement that is there. The difference is that the statement includes American tonnage and the other does not.

Senator TRAMMELL. This one here does not include American tonnage?

Admiral SIMS. Yes, this one does include American tonnage.

Senator TRAMMELL. This includes American tonnage?

Admiral SIMS. Yes.

Senator TRAMMELL. Does this chart show that there was more tonnage available during the spring of 1918 than during the spring and summer of 1917? Does it show more or less?

Admiral SIMS. Less. It shows less. It is coming downhill. Generally speaking, without looking up the actual details, the tonnage successively decreased with great rapidity in the spring of 1917, with less rapidity in the summer, and with still less rapidity in the fall. And it was only much later that the two curves crossed each other. We kept that in my headquarters, a chart going, which showed the decrease in losses and the increase in building, and we worked out a curve to show when they crossed. You can see by glancing at the chart where they cross. It was for that reason that when

as two curves approaching, we could make an estimate of three months ahead as to when they would cross, remember stating. I think it was to a party of American correspondents in London who came over there officially, that we estimated the two curves would cross each other in a certain month, I remember whether it was June or July or something else, I remember that attracted a great deal of attention in the press as to when they would cross, and the crossing was about that

time meant that the building on both sides, in America and England, was a little bit greater than the losses by submarines at that time and from that time on we were on the increase in tonnage.

But it was well along in 1918, about the middle of March, when the building of merchant ships in America and in England crossed the curve and became a little greater than the destruction at that time. The curve of the sinkings was going down and the building of ships was going up, so from that time on, and the Germans knew that they could not succeed in their submarine campaign. But the great period of danger was the summer and fall of 1917. As Mr. Hoover testified, the situation was excessive in April, May, June, and the summer of 1917, and continued to be very grave until the winter of 1917-18. Generally the situation of the tonnage.

Q. T. MCMILL. According to the chart that was transmitted from the War Department from your headquarters there was more tonnage available in 1917 than there was available up to June, 1918, was there?

A. YES. Yes, there was more tonnage available in 1917 than in 1918, because it was successively decreased during that year. That was what was the matter with the whole business. It was decreasing so rapidly, and that decrease had to be stopped, and that is how we won the war.

Q. T. MCMILL. In the spring of 1918, with less tonnage than in 1917, was not the movement of American troops over Europe increased?

A. YES. The movement of American troops was not largely increased. The crisis came in March; March 21 the great drive on the Western Front. Immediately after that the big movement came. In the first year of the war, we had from 250,000 to 300,000 troops taken over. The average per month was about 250,000. At that time on they saw the necessity of getting the shipping and they were enabled then to withdraw from a great part of their shipping which they would not have dared to withdraw had not been that our own shipping and the allied shipping increased and was greater than the destruction. Mr. Hoover brought out also, and it is a very important point. If we could have seen ahead a year, and could have known that we were going to arrive at a position where the building of tonnage surpassed the destruction, we could have taken the action in 1917 which we did take in March or April, and succeeding months, but which we would not have taken in 1918, and which would not have been prudent to take in 1918. I do not know whether that is very clear or not.

Senator TRAMMELL. I think I understand your point, A. Of course, if we could have seen that we were going to have an increased supply of ships and a decrease of the submarine menace we might have carried more troops in 1917.

Admiral SIMS. We would have dared to do it, but we did not to do it until we were sure of that.

Senator TRAMMELL. Really, that is just about what I thought. If that is true, was not that one of the elements that caused the delay in the progress that was made in the war, instead of it being dependent upon the question of the Navy not entering the war whole-heartedly as you charge?

Admiral SIMS. The tonnage situation, of course, is what influenced it, but the trouble is that by our tardiness in entering the war we lost two and one-half million tons of shipping which we should not have lost. If we had butted in with all of our force in the very beginning instead of coming in whole-heartedly after six months or a year we would have saved that tonnage and that situation would not have arisen. I do not know whether you know it or not, but up to the first year of the war we did not have much more than 100,000 tons of all classes on the other side, and there was not a single ship that was not available or could have been available to be over the top in the first 15 days of the war. Now, there is the whole point of my statement and all of my criticism. I have not got anything to say about anything else particularly, except that the Navy Department and the Government did not go into the war after they had declared it.

Now, I made a little statement at the end of this long statement about the shipping, which I did not include in the other, and I probably the best way to clear that up, with your permission, is to read that statement. I think it will clear it. This is a review of the merchant ship tonnage situation. I did not include it in the statement on account of its length. I warn you that this is a tedious and had figures in it and will require close attention.

A few facts and figures about the merchant tonnage situation in 1917, may help to an understanding of why the losses in the marine campaign were so dangerous.

In August, 1914, the total tonnage of the world was, approximately 45,000,000 gross tons; of this about 5,000,000 tons was interposed between the ports of the Central Powers, leaving about 40,000,000 tons. Mr. Hoover stated before the committee. This 40,000,000 tons, however, included large numbers of ships used by the neutral powers, Japan and the United States, for their own purposes. The available figures of the allied shipping authorities show that in August, 1914, 31,500,000 tons of shipping was all that was available for the allied powers. This does not include the American shipping which was comparatively small.

The total imports of Europe (other than Russia and the Central Powers) were about 170,000,000 tons annually. It required the employment of about 25,000,000 tons of merchant shipping to transport these imports overseas to their European destination.

In the first 28 months of the war, or to January 1, 1917, the net loss of this tonnage amounted to 400,000 tons. The allies had, therefore, 31,000,000 at their disposition, American sea tonnage of 2,500,000 not being included.

10,000,000 tons of this shipping was being used by the allies for military or naval purposes, other than trans-Atlantic transport of munitions and supplies. Another million tons was constantly under repair. The net amount available for military munitions, raw materials, etc., was, therefore, only 10,000,000 tons. War restrictions had reduced imports enough so that the quantity was sufficient, and a margin of safety was in the margin as that at the outbreak of war. This fact was a comforting circle, and was constantly emphasized by the Germans to discount, in the minds of their people, the losses through the submarine campaign.

But this changed sharply for the worse, however, with the summer of 1917. In the first quarter the net losses rose to 1,300,000 tons. In the month of April alone the net loss mounted to 800,000 tons as much as in the whole period of the war, up to January, 1917. In four months the margin between the amount of shipping available and the absolute minimum required had been cut so that it had sunk from about 6,000,000 tons to about 3,500,000 tons. Being made for the increased amount under repairs, and the damage received in unsuccessful attacks by submarines, the rate of loss amounting to about 800,000 tons net per year, or 10,000,000 tons per year, this margin would have been wiped out within five months, or by October 1, 1917.

By Europe had already been reduced to 100,000,000 tons, a reduction of 40 per cent. That is by the decrease of luxuries, and that sort of thing. They could hardly go much further without starving the armies or the civil population of the allied countries. By starving the neutrals and cutting their shipping, enough tonnage might have been kept to keep things going until the end of the year. It is, practically a certainty that, if the rate of losses experienced had been continued, the Allies would have been compelled to give up by the end of 1917. They would have lost the war. The United States might have been ready to render later assistance, absolutely unavailing.

After the adoption of the convoy system, and also of the other measures recommended to the department from the beginning, resulted in a reduction of the losses to half the rate of the last half of 1917, and to one-third the April, 1917, losses of the first months of 1918.

The losses still were very heavy, and caused great privation in the allied countries. It has not been sufficiently realized that the efforts were made in order to overcome the shipping losses. Imports of the allied countries were cut in half, and the population on comparatively meager rations.

Europe alone would have failed to meet the issue. The tonnage would still have been greater than the tonnage permitted, if this tonnage had been kept on its normal level.

Through the war efforts of America, however, the United States became almost the sole supply source of the Allies. Shipping was sent from the longer South American, Pacific, and Oriental routes and concentrated on the trans-Atlantic route. The number of trips each ship could make per year was 6

just so much tonnage added to the allied mercantile resources. Mr. Hoover's appeal to the American people for food for the Allies was promptly responded to, and America was able to provide enough food to meet the Allies' needs, and the shipping hauls were thus eliminated.

Australian wheat, South American wheat, and so forth, but three and four million tons. It takes shipping a very long time to bring it. The food could be supplied from America by the shipping haul.

Despite all these efforts, the crisis was very grave in the months of 1918. Hence the importance of the time element was so repeatedly insisted upon to the Navy Department. The average monthly losses for the six months of the unrestricted marine warfare, before American naval aid became effective (February to July, inclusive), were 640,000 tons per month. The losses for the first six months of partial American intervention of the use of convoys (August 1, 1917–February 1, 1918) were 390,000 tons per month. The average losses for the remainder of the war, when American help was really effective (February 1, 1918–November 11, 1918), were 250,000 tons per month.

It is therefore possible to estimate what American help would have accomplished had it been rendered promptly instead of being delayed for some months. There is the point of all the criticism made—practically the basis of it. If the process of our getting into the fight, once we were at war, had been accelerated, as could have been done, by sending over immediately, in April, 1917, all available antisubmarine craft, and by accelerating and adopting the convoy system, there is no reason to doubt that, during May, June, and July, the losses would probably have averaged 250,000 tons per month less than they did, that is, the difference between the average for the first two periods just referred to. For the six months following the losses would probably have been 140,000 tons per month less than they actually were. For the remaining nine months of the war losses would probably have been reduced another 100,000 tons per month. While this is only an estimate, it is based on results obtained when our help became effective. The delay of the Navy Department in getting into the war in the critical zone, by not helping up the Allies whole-heartedly, and accelerating the production of antisubmarine craft, probably resulted in the unnecessary loss, on the allied cause, as a whole, of 2,500,000 tons of merchant shipping. The loss of this shipping in 1917 and the early months of 1918 delayed proportionately the transport of the American army to France. If a million additional tons of shipping had been available at the beginning of 1917, the rate of transport of American troops and supplies would have been doubled; the Allies could have been in a position to counter attack three months earlier, and the war might well have been ended by the time when, as a matter of fact, the allied attack only began, i. e., in July, 1918. If this had been possible, months of bloody fighting would have been avoided and probably half a million lives saved, to say nothing of some billions of dollars.

The shipping shortage was therefore acute from the middle of 1917 on to the time of the armistice. All plans for American assistance to the Allies was conditioned upon and limited by the tonnage available for consideration, as Mr. Hoover has testified. From the standpoint

There was a choice between receiving supplies to maintain the American troops, which would require more of the importation of which tonnage was not available. In this situation, America was not pressed to send troops, if they were needed, but the Allies decided to keep their own hands off with the available tonnage. Only the German submarines forced the Allies to appeal for American reinforcements on a large scale. In order to transport these to Europe the Allies abandoned practically the whole of their shipping routes to South America, and to turn over practically the whole of the tonnage for the transport of American troops. New England had to bear on the neutrals, and they were practically turned over to the Allies an additional half million tons of shipping. Only then was the transport and supply of the Allies in 1918 made possible.

If these facts, it is not a difficult matter to estimate with accuracy the losses suffered by the allied cause as a whole, by the failure of the Navy Department to cooperate whole-heartedly, and to the war zone all available antisubmarine craft in the latter part of the war. As has been already noted, there were no losses to the unrestricted submarine campaign, distinguished by the lack of American cooperation.

It was the period, February, 1917, to August 1, 1917, when the convoy system was ineffective, and when the bulk of the shipping was lost. Losses were on the average 640,000 tons per

month. This was the phase of moderate assistance from America, the employment of the convoy system, the period from August 1, 1917, to February 1, 1918. Losses were 390,000 tons per month on the average.

The third period was from February 1, 1918, to the armistice, averaging 250,000 tons per month; this was the period of full cooperation was given by America, and when full use was made of the convoy system.

It is a matter of course of our getting into the fight, once we had gone to the aid of the Allies, as it could have been by the immediate employment of all available antisubmarine craft, and by the adoption of the convoy system, as was urged upon the Allies in the first period referred to above would have been reduced. Losses during May, June, and July would have been reduced to the second period, or 250,000 tons a month less than was actually the case. Similarly, the second period would probably have been reduced to the first period, and losses for the next six months would have been reduced to 100,000 tons a month less than the actual figures. The campaign would have been so far defeated by February 1, 1918, that losses during the remaining period of the war would have been reduced by another 100,000 from those actually suffered. It can thus be said that the failure of the Navy Department to cooperate the war immediately and whole-heartedly cost the Allies a whole 2,500,000 tons of shipping, sunk unnecessarily. Of course, only an estimate, it is based on actual experience. It is what actually happened in the various phases of naval cooperation in the war.

The result of the loss of this shipping can also be translated as a prolongation of the war, and an unnecessary sacrifice of blood and treasure in accomplishing the victory.

If, in the fall of 1917, the Allies had had at their disposition an additional million tons of shipping, which, as has been pointed out, was unnecessarily lost to the allied cause, by the delay on the part of the Navy Department in getting into the war, and in adopting the convoy system, it would have been possible to double or triple the number of American troops that were being sent abroad. In April, 1918, without affecting the transport to the Allies of our military supplies or foodstuffs. America could have had a million men in France by March 1, 1918, instead of 250,000.

The earlier defeat of the submarine campaign would have had a great effect on the morale of the German army and the German population in 1917, as it actually did in 1918.

Now, there is the point I would like to make with all possible emphasis. If we could have put a million men in France in the fall of 1917, we actually did in 1918, we would have broken down the morale of the German population and the German army that much sooner. The information that we have at the present time shows us that the German army went to pieces because of the decrease of its morale and because of the decrease of the morale of the population behind it.

The German high command would have been forced to undertake a desperate military venture earlier than was actually the case. They would have been forced to endure, in the early spring, the victorious assault of the Allies. In either case, the presence of a million Americans on March 1, 1918, and of another million within the next few months following, would have forced the victory by July, if one judges by what actually happened when this American force became available. We know what did happen.

The unnecessary loss of shipping can therefore be stated as having caused a prolongation of the war a minimum of about four months, and thereby was responsible for the unnecessary killing of a million men, and of the expenditure of many billions of dollars.

Now I would like to put that in the form of a perfectly simple illustration which can be understood by anybody. It all hinges upon one question, Was our naval effort in the war effective? We all agree that it was. Those who oppose this argument have got to admit that it was not. If it was effective, it must have shortened the war. It therefore follows that if there was delay in making it effective, the delay prolonged the war. If three engines will put out a fire in a certain time, four engines will put it out in less time. If there is a delay in sending the fourth engine, there will be a corresponding prolongation of the time. I have shown by the official records that there was delay; delay in preparing for war, even after February 2, 1917, and delay in sending our forces and personnel after we declared war. Therefore those responsible for this delay are responsible for the appalling sacrifices of blood and treasure that resulted. That, I think, makes the situation entirely clear.

Senator TRAMMELL. According to a chart that you introduced in evidence here, if I understand it correctly, about the 1st of July, 1917, there was a very rapid decline in the submarine losses, beginning from the 1st of July. This is a chart that you introduced in testimony.

YES. Yes.

TEAMWELL. What do you attribute that very rapid accomplishment of the submarine to, beginning with July 1917?

YES. It was largely due to the introduction of the convoy. At that time a good proportion of the American shipping was lost, and it was due also to the augmentation of other defenses. They were using then the depth charge to a great extent than they had before. They were also using mines, etc.

On September 1 I wrote a letter to the Navy Department. I will quote a paragraph here. [Reading:]

"In the antisubmarine campaign, generally speaking, the losses have not increased but, on the contrary, appear to be on the decrease. The fact that the number of submarines operating has, if anything, increased is difficult to explain. There is considerable difference of opinion as to the cause. The most reasonable opinion as to decrease in submarine losses which there is the greatest degree of unanimity is as follows: extension of the convoy system together with increased experience of the shipping and escorting craft.

"The antisubmarine craft and constant increase of experience thereof, and the extensive use of the depth charge.

"The submarine morale from the above, and particularly, from the use of depth charges. It is wholly impossible to estimate the number of submarines lost by depth charges, but the fact that depth charges have been used against a submarine is encountered, unquestionably has a marked effect.

"The enemy must be experiencing in maintaining an adequate supply of submarines."

TEAMWELL. Was our navy rendering any effective assistance with the 1st of July, 1917, when there seemed to be a turn in the tide of submarine destruction?

YES. We may say that if we had sent over only one ship we could have been rendering effective assistance in proportion to the number of destroyers employed as a whole by the United States. On July 1, 1917, we had 20 destroyers and 2 tenders actually in the front. They were extremely useful, as useful as vessels of like character of the Allies. Our destroyers were of the same service as anybody else's. They helped out. The day of putting it in operation, was the turning point of the war. I do not know that it would be well to go into any detail about that thing now, because it is rather a technical question. You come to consider the fact that in the situation presented us in 1917 and 1918, the whole of the war hinges upon the preservation of sufficient tonnage to carry on the war, or to bring the war to a termination as soon as possible, there was no other way in which it would not have been advantageous to put in a convoy system. Without going into any explanation, I can just give you an idea of what I mean. Many men were interested in very large shipping companies, having from 100 to 200 ships, were opposed to the introduction of the convoy, and it was for this reason. One of those men said that by experience that one of my ships can make 100 voyages, on an average, without getting torpedoed. If he goes into convoy, where he has to wait for convoys to be sent where he has to conform to the speed of the slowest

ship, I can get only, say, 8 round turns instead of 12 of the same time. Freight rates are so high that I can afford my ship after 12 or 13 trips, rather than to cut down the number of trips by that much."

Applying the same principle to all the tonnage of the Allies follows that if you want to bring a war to a successful conclusion you can do the same thing with your tonnage; that is to say, to bring supplies in the fastest possible time, if you think it is worth doing so. There comes a period, however, when it is no longer worth doing so; and the adoption of the convoy system was the turning point of the whole thing, as has been fully explained in my testimony in the articles that I have written.

Senator TRAMMELL. When did our associates in the war adopt the convoy system?

Admiral SIMS. They adopted the convoy system on the 1st of May. They carried out experiments during the early part of May.

I recommended the convoy system about the 1st of May. It was then in discussion and had been for a long time. They carried out an experimental convoy which, if my recollection serves me, arrived in Great Britain about the 20th of May, and I think on the 21st of May I reported to the Navy Department that it had been adopted in principle and would be put in operation as soon as possible.

Senator TRAMMELL. These losses, then, which occurred from the submarine during April and probably part of May, if they had been put into full operation, if they are to be charged to anybody, should be charged to our associates probably more than to America, should they not, if there was a mistake and there was a neglect in adopting the system?

Admiral SIMS. It depends on when the convoy system could have been put in operation. That is something on which I do not care to express an opinion. When the whole thing came up there it was a question of animated discussion among the Admiralty and the navies as to when the convoy system should be put in operation. There were those who were in favor of it and those who were against it. As I have already explained, one of the principal opponents of the system were the merchant shippers themselves and the merchant shipping companies; but it was finally decided that they should be put in operation early in May, and they had an experimental convoy that came up from Gibraltar, and on the 21st of May, as I remember, on the 31st of May. Here is a cable that I sent to the Navy Department on the 31st of May. [Reading:]

With reference my two previous dispatches concerning convoy system of merchant shipping, Scandinavian and North Sea convoys in force now over the Atlantic have proved very successful. First ocean convoy from Gibraltar arrived on May 20. Second ocean convoy from Hampton Roads of 12 merchant ships escorted by British cruiser sailed May 24. They will be met outside and escorted to the submarine danger zone. The department's cooperation with the plan set forth in my dispatch of May 1 is urgently recommended. Early reply important in that Admiralty plans may be governed accordingly.

So that on the 1st of May I recommended that the Navy Department cooperate with the Allies on a convoy system, but I was unable to get them to do so, and I was constantly urging the same months before they would come into the convoy system. This was due to a false estimate which they made which was based

case, that concerned the Army, the merchant ships, and the submarines, etc. I can explain that further if it is necessary.

TEAMMELL. Now, it is apparent that our associates in the putting the convoy system into effect. Might we not say that they put the convoy system into effect six months earlier than it would have been ended six months sooner?

SAYS. You can perfectly well do that, provided that they were to do it. But all the testimony I have given shows, not by the testimony of the British Admiralty, Admiral Beatty, in the communications on this subject, that they were the ships that were necessary to do it. They were not increasing their submarine craft, they were building a destroyer program provided for six to eight destroyers. As they got enough destroyers to do so, they put the convoy system into operation. They could not put it into operation without the destroyers of America. They asked us for 14 destroyers. America did not accord them those cruisers without delay, and it then finally gave them. Up to that point they had been used on what is called the ten s o (?), and off the ice banks, to head off the raiders that had been the *Moore* and vessels of that type. They had to do so and put them on convoy.

TEAMMELL. When they first adopted the convoy system they were maintaining a great many ships on those long trade routes that the convoy system adopted after they had diverted them to the Canadian and American coast more, so as to protect them?

SAYS. I do not quite understand the first part of your question.

TEAMMELL. When they first adopted the convoy system they were sending ships to Australia, and having ships go on the long weeks for a voyage, instead of sending them to the coast where they could get them quicker, as they could get them in Canada?

SAYS. You would have to go into the history of the ship campaign when that was done. I would not be sure about that. The point you have not mentioned, and which bears on the matter particularly. You must remember that the unrestricted submarine campaign only began in February. If you will read Grand Admiral Tirpitz's book, which for anyone interested in naval history is one of the most interesting publications I have ever read, you will find there that the submarine campaign before February was a restricted one, and he constantly inveighed against the restrictions. They were not allowed to attack certain ships, and the submarine commanders constantly reported that that restricted them, because they could not always be sure whether a ship was a merchant or passenger ship, and they did not dare fire for fear of a commission, and all that sort of thing. The whole thing changed when the Germans determined that they must put in a new submarine campaign: that is, any ship at all big enough to waste their time they would fire at it. That brought about a new situation. That new situation began from that point; because, from that point on, up to the time of the introduction of the "wolf pack" submarine campaign the total losses of the Allies (

whole were only 400,000 tons, or half as much as they lost in 1917. So that what we are talking about is the force subject you see, to February, 1917.

Senator TRAMMELL. If anybody is to be blamed for the April, 1917, it is not the United States, is it?

Admiral SIMS. How is that?

Senator TRAMMELL. If anyone is to be blamed for the loss in 1917, which was the high water mark in losses, the United States not to be blamed for that, is it?

Admiral SIMS. The United States is not to be blamed for that, but the United States is to be blamed for the losses in the latter part of the month of April, and for the losses in the month of May proportion to the assistance they could have given.

Now, as to whether the convoy system was put in operation as it ought to have been or not, that, I say, is a matter of professional opinion. You will find that thing explained in the United States Service Institute by an officer there, who discusses this whole question. It is a question of naval controversy there at that time whether it ought to have been put in earlier, as to the errors by the Allies in reference to the convoys, if they were errors, in reference to the conduct of the war in general—heavens knows there are plenty of them, as you will find out by reading the criticisms since in books published. The severity of the criticisms there make the criticisms that I have made here look like 30 cents. Of course they made mistakes all during the war. It was a new proposition. Nobody had any experience of this kind of warfare at all, and nobody could be savage enough in his disposition to know what the Germans would do, and therefore to prepare for it; so that I would advise to be a little bit gentle in criticisms of the naval officers in general because they were not prepared for this war, because we are a more or less civilized people, and we could not possibly have imagined what the Germans would do what they did do. If we could have imagined it we would have prepared for it and built destroyers galore, and could have persuaded Congress to give us the money.

Senator TRAMMELL. I am not criticising, Admiral, at all, and I realize that hindsight is always a good deal better than foresight and that is so even more than in matters of everyday affairs, in fact I know it is true that hindsight is better than foresight, so that I do not criticise. I said "if anybody was to be blamed."

Admiral SIMS. Now, as to whether the Allies were to be blamed for it is not quite the question. We went over there and had the best results as fast as we could acquire the information, of knowing what errors and alleged errors they had made, and with that information, which the Allies did not have when they started the war, we should not have made the same errors that they did; but unfortunately we did. Great Britain was tardy in going into the submarine campaign—it makes no difference to our case whether she was or not—we are doubly to blame, if we believe that for being tardy ourselves and for going back for some months. That is the point about the whole business, and I tried to make the whole thing clear.

Senator TRAMMELL. The point I have in my mind is to fix the responsibility for this loss of 500,000 lives and the loss of 2,500,000 tons of shipping unnecessarily, and also the expenditure of \$15,000,000 unnecessarily. I want to find out if the blame for all of

rest upon the United States, or probably some of these countries at least to a minor degree responsible for it, if that

is so. They may have been responsible for certain errors, but about it is this —

MR. TACOMMELL. I want to find out what the facts are, and I want to know whether the United States has been guilty of practicing in 500,000 cases and the waste of this great treasure, and if the other nations should stand under that indictment; they are partially responsible for it.

MR. SAYS. Let me point out this fact. Anybody who takes the fact that the delay of the United States in going into the war is responsible for certain losses must assume that the naval intervention of the United States was not effective. And I do not say I assume that the United States intervention was not fully effective in proportion to the number of the war over. In order to make good the argument that our going in did not result in loss of life and property, you must assume that the United States naval intervention failed. Now, I assume that it was effective, and that it decreased these losses, and that it thereby lessened the length of the war. If it was not effective, or if there was delay in going in, it must have prolonged the war. Now, I take the attitude that the United States intervention was effective, and I think it is foolish to take the attitude that the United States intervention was not effective, and therefore it did not make any difference whether we got into operation or not.

MR. TACOMMELL. I did not say so.

MR. SAYS. No, but I think that conclusion is forced.

MR. TACOMMELL. I did not take your position, at all. I do not say, though, that if your statement is correct that the 100,000 people were lost unnecessarily and all these other things that the United States has not got that indictment on their head and that the facts do not sustain it.

MR. SAYS. I believe that the facts do sustain it.

MR. TACOMMELL. You might as well say that the other people might not do this, that and the other 6 or 12 months previous to which they might have won the war have been charged up to them.

MR. SAYS. Every one of them has got to have something to do with it, but that does not alter the fact that we have got to go to us. If our intervention in the war did decrease the length of the war, and if it was useful it did decrease the length of it; if it was not useful it did not, now I claim that it was effective, and in order to sustain your argument you must take the position that it was not effective.

MR. TACOMMELL. No, I claim that it was effective. I see by the fact that beginning in July the submarine campaign was diminished in its effectiveness, and the line began to move very little.

MR. SAYS. It did drop, and if we had put in that same effort it would have begun to go down that much sooner.

MR. TACOMMELL. Oh, yes; if we had declared war a year before we did the war would have been over that much sooner.

Admiral SIMS. Not a year before.

Senator TRAMMELL. Or six months. That involves the of the country going into the war.

Admiral SIMS. The country had already gone into the war 6th of April. If those vessels had sailed that night, and no God's reason why they should not have been ready to get into the thing by the end of April, the decrease in the you speak of in July would have begun then, and we would have saved 2,500,000 and we would have been able to put an arm in France by May 1, 1918, of a million men.

Senator TRAMMELL. Admiral, if our associates had put into the convoy system sooner, would it not have had the effect?

Admiral SIMS. Yes; but we were the ones that delayed the system. You see, we delayed it because we did not adopt it; we started in May, and it takes a long time to get ready and get it into operation, and we waited and waited and waited, after we recommended it; we waited seven weeks, and my recommendation to send over 14 cruisers was not put into operation, and in the time they kept these vessels over on this side, at a distance of miles from where the fighting was taking place. That is where the point comes in. That is what my criticism is about; and we are responsible for those heavy losses of life and property, and we get away from it.

Senator TRAMMELL. What was the percentage of destroyers we provided?

Admiral SIMS. For the convoy?

Senator TRAMMELL. What was the percentage of our armament in the way of protecting the situation?

Admiral SIMS. It was very great. I will give you the figures minute. There were, on the other side, a good many destroyers, but many of them were held with the Grand Fleet. They were in Harwich; they had to be held for a fight in case the German fleet should come out, and they were in various other necessary places. The existence of the German fleet and the possibility of its coming out compelled them to keep those destroyers in those places. They were obliged to keep with them 100 destroyers to take place in case if the German fleet came out. They could not use them for other work.

We escorted 62 per cent, or about 1,250,000 troops of the United States expeditionary forces to Europe, without loss from the action. The United States destroyers escorted 27 per cent of the United States, allied, and neutral shipping carrying cargoes to Great Britain and France and Italy, during the period from April 6, 1918, to November 9, 1918, or during the duration of the war. The reason we had such a small proportion of destroyers to the whole is that we never had more than about 70, and the Allies had about 100. The reason we were able to do so much in proportion was because many of these allied destroyers had to be used elsewhere. As before, 100 of those destroyers had to be in the Grand Fleet to protect the fleet. They were down particularly in Harwich, and on the Scandinavian coast, and so forth; so that on our advice from the other side we concentrated our destroyers as far west as possible so that they would be handy to their own bases. We put the

because the facilities for repairs and refuelling with oil were there. Brest was better strategically, and as fast as we increased the storage facilities there for oil we took them there. Finally we had 28,000 tons of oil there, and we sent them to the destroyers were almost exclusively used for that purpose. We did not get many submarines, because our business was not submarines but to protect the convoys and troops. If we had begun that thing in April, and we could have begun with our hand on our number and prepared those destroyers, even after war was declared they had to go into the water and stay there for days and days to get painted and fixed up. That is the point about the whole business—the coming into the war in those first few months.

There may be some little confusion on account of what I said sometimes to the newspaper men who came over to the States. I was exceedingly embarrassed over there with some of them. One can afford to be patient to a certain extent in his own country, because if a man is publishing a paper and wants to sell it, he has got to tell about his own people; but carried to such an extent that when these things were said the other side it placed me in an embarrassing position, of course, the French, Italians, and others are very sensitive. They knew that I knew all about it, and they knew that I was not telling them, and so forth; and the consequence is that in order to get these newspaper men to let up on the thing and to get the facts in the case, I showed them that at a certain distance at the end of the war, we had about 120 craft of submarines, and the Allies had about 5,000. I told them so; but any old thing, we had only 2 or 3 per cent, and we had 5 or 6 per cent. But that does not alter the fact of being able to release from the west coast of France allied troops on their own coast, and convoying troops and convoys of all the allied and neutral shipping that came to the convoys, we were able to do a very great service; and the conclusion is that we ought to have begun to do that thing, and we did not begin to do it whole-heartedly for six or eight months, and the official records show it, by their own and my telegrams. There is no getting away from it. **TEAMMELL.** I suppose that when you speak about the submarines, and so on, you probably make some reference— I have in mind—your statement on page 61 of the hearing—towards the end, that at one time you told a contingent of the American force constituted only 3 per cent of the total forces of the Allies, and our maximum force around Brest was what you call a "small number." You say it was 3 or 4 or 5 or 6 or 7 per cent.

**WELLS.** Well, I stated, the effective force. Of course, if you take all the subchasers, which we used because we had no other way, that was one of the mistakes of the war—but at the end of the war, taking all the subchasers and supply ships and everything else over there, there were about 370, to compare with 25 or 30 or 40 or 50 or 60 or 70 or 80 or 90 or 100 or 110 or 120 or 130 or 140 or 150 or 160 or 170 or 180 or 190 or 200 or 210 or 220 or 230 or 240 or 250 or 260 or 270 or 280 or 290 or 300 or 310 or 320 or 330 or 340 or 350 or 360 or 370 or 380 or 390 or 400 or 410 or 420 or 430 or 440 or 450 or 460 or 470 or 480 or 490 or 500 or 510 or 520 or 530 or 540 or 550 or 560 or 570 or 580 or 590 or 600 or 610 or 620 or 630 or 640 or 650 or 660 or 670 or 680 or 690 or 700 or 710 or 720 or 730 or 740 or 750 or 760 or 770 or 780 or 790 or 800 or 810 or 820 or 830 or 840 or 850 or 860 or 870 or 880 or 890 or 900 or 910 or 920 or 930 or 940 or 950 or 960 or 970 or 980 or 990 or 1,000 or 1,010 or 1,020 or 1,030 or 1,040 or 1,050 or 1,060 or 1,070 or 1,080 or 1,090 or 1,100 or 1,110 or 1,120 or 1,130 or 1,140 or 1,150 or 1,160 or 1,170 or 1,180 or 1,190 or 1,200 or 1,210 or 1,220 or 1,230 or 1,240 or 1,250 or 1,260 or 1,270 or 1,280 or 1,290 or 1,300 or 1,310 or 1,320 or 1,330 or 1,340 or 1,350 or 1,360 or 1,370 or 1,380 or 1,390 or 1,400 or 1,410 or 1,420 or 1,430 or 1,440 or 1,450 or 1,460 or 1,470 or 1,480 or 1,490 or 1,500 or 1,510 or 1,520 or 1,530 or 1,540 or 1,550 or 1,560 or 1,570 or 1,580 or 1,590 or 1,600 or 1,610 or 1,620 or 1,630 or 1,640 or 1,650 or 1,660 or 1,670 or 1,680 or 1,690 or 1,700 or 1,710 or 1,720 or 1,730 or 1,740 or 1,750 or 1,760 or 1,770 or 1,780 or 1,790 or 1,800 or 1,810 or 1,820 or 1,830 or 1,840 or 1,850 or 1,860 or 1,870 or 1,880 or 1,890 or 1,900 or 1,910 or 1,920 or 1,930 or 1,940 or 1,950 or 1,960 or 1,970 or 1,980 or 1,990 or 2,000 or 2,010 or 2,020 or 2,030 or 2,040 or 2,050 or 2,060 or 2,070 or 2,080 or 2,090 or 2,100 or 2,110 or 2,120 or 2,130 or 2,140 or 2,150 or 2,160 or 2,170 or 2,180 or 2,190 or 2,200 or 2,210 or 2,220 or 2,230 or 2,240 or 2,250 or 2,260 or 2,270 or 2,280 or 2,290 or 2,300 or 2,310 or 2,320 or 2,330 or 2,340 or 2,350 or 2,360 or 2,370 or 2,380 or 2,390 or 2,400 or 2,410 or 2,420 or 2,430 or 2,440 or 2,450 or 2,460 or 2,470 or 2,480 or 2,490 or 2,500 or 2,510 or 2,520 or 2,530 or 2,540 or 2,550 or 2,560 or 2,570 or 2,580 or 2,590 or 2,600 or 2,610 or 2,620 or 2,630 or 2,640 or 2,650 or 2,660 or 2,670 or 2,680 or 2,690 or 2,700 or 2,710 or 2,720 or 2,730 or 2,740 or 2,750 or 2,760 or 2,770 or 2,780 or 2,790 or 2,800 or 2,810 or 2,820 or 2,830 or 2,840 or 2,850 or 2,860 or 2,870 or 2,880 or 2,890 or 2,900 or 2,910 or 2,920 or 2,930 or 2,940 or 2,950 or 2,960 or 2,970 or 2,980 or 2,990 or 3,000 or 3,010 or 3,020 or 3,030 or 3,040 or 3,050 or 3,060 or 3,070 or 3,080 or 3,090 or 3,100 or 3,110 or 3,120 or 3,130 or 3,140 or 3,150 or 3,160 or 3,170 or 3,180 or 3,190 or 3,200 or 3,210 or 3,220 or 3,230 or 3,240 or 3,250 or 3,260 or 3,270 or 3,280 or 3,290 or 3,300 or 3,310 or 3,320 or 3,330 or 3,340 or 3,350 or 3,360 or 3,370 or 3,380 or 3,390 or 3,400 or 3,410 or 3,420 or 3,430 or 3,440 or 3,450 or 3,460 or 3,470 or 3,480 or 3,490 or 3,500 or 3,510 or 3,520 or 3,530 or 3,540 or 3,550 or 3,560 or 3,570 or 3,580 or 3,590 or 3,600 or 3,610 or 3,620 or 3,630 or 3,640 or 3,650 or 3,660 or 3,670 or 3,680 or 3,690 or 3,700 or 3,710 or 3,720 or 3,730 or 3,740 or 3,750 or 3,760 or 3,770 or 3,780 or 3,790 or 3,800 or 3,810 or 3,820 or 3,830 or 3,840 or 3,850 or 3,860 or 3,870 or 3,880 or 3,890 or 3,900 or 3,910 or 3,920 or 3,930 or 3,940 or 3,950 or 3,960 or 3,970 or 3,980 or 3,990 or 4,000 or 4,010 or 4,020 or 4,030 or 4,040 or 4,050 or 4,060 or 4,070 or 4,080 or 4,090 or 4,100 or 4,110 or 4,120 or 4,130 or 14,070 or 14,080 or 14,090 or 14,100 or 14,110 or 14,120 or 14,130 or 14,140 or 14,150 or 14,160 or 14,170 or 14,180 or 14,190 or 14,200 or 14,210 or 14,220 or 14,230 or 14,240 or 14,250 or 14,260 or 14,270 or 14,280 or 14,290 or 14,300 or 14,310 or 14,320 or 14,330 or 14,340 or 14,350 or 14,360 or 14,370 or 14,380 or 14,390 or 14,400 or 14,410 or 14,420 or 14,430 or 14,440 or 14,450 or 14,460 or 14,470 or 14,480 or 14,490 or 14,500 or 14,510 or 14,520 or 14,530 or 14,540 or 14,550 or 14,560 or 14,570 or 14,580 or 14,590 or 14,600 or 14,610 or 14,620 or 14,630 or 14,640 or 14,650 or 14,660 or 14,670 or 14,680 or 14,690 or 14,700 or 14,710 or 14,720 or 14,730 or 14,740 or 14,750 or 14,760 or 14,770 or 14,780 or 14,790 or 14,800 or 14,810 or 14,820 or 14,830 or 14,840 or 14,850 or 14,860 or 14,870 or 14,880 or 14,890 or 14,900 or 14,910 or 14,920 or 14,930 or 14,940 or 14,950 or 14,960 or 14,970 or 14,980 or 14,990 or 15,000 or 15,010 or 15,020 or 15,030 or 15,040 or 15,050 or 15,060 or 15,070 or 15,080 or 15,090 or 15,100 or 15,110 or 15,120 or 15,130 or 15,140 or 15,150 or 15,160 or 15,170 or 15,180 or 15,190 or 15,200 or 15,210 or 15,220 or 15,230 or 15,240 or 15,250 or 15,260 or 15,270 or 15,280 or 15,290 or 15,300 or 15,310 or 15,320 or 15,330 or 15,340 or 15,350 or 15,360 or 15,370 or 15,380 or 15,390 or 15,400 or 15,410 or 15,420 or 15,430 or 15,440 or 15,450 or 15,460 or 15,470 or 15,480 or 15,490 or 15,500 or 15,510 or 15,520 or 15,530 or 15,540 or 15,550 or 15,560 or 15,570 or 15,580 or 15,590 or 15,600 or 15,610 or 15,620 or 15,630 or 15,640 or 15,650 or 15,660 or 15,670 or 15,680 or 15,690 or 15,700 or 15,710 or 15,720 or 15,730 or 15,740 or 15,750 or 15,760 or 15,770 or 15,780 or 15,790 or 15,800 or 15,810 or 15,820 or 15,830 or 15,840 or 15,850 or 15,860 or 15,870 or 15,880 or 15,890 or 15,900 or 15,91

Senator TRAMMELL. Did you state in a speech in London, October 10, 1918, as follows:

Another idea was sometimes in the American mind, that the Americans had been doing the bulk of the business over here—at least a half. That was not true. There were about 5,000 antisubmarine craft operating day and night, and the British had about 160, or 3 per cent. The figures were about the same in the Mediterranean. Again, Americans seemed to regard it as a miracle of their own that they had got a million and a half troops here in a few months and had protected them on the way. "We didn't do that," said Admiral Sims. "Great Britain had brought over two-thirds of them and escorted one-half. We escorted only one-third of the merchant vessels that come here."

Do you remember that?

Admiral SIMS. Yes. All those statements are substantially correct, if you take the effective craft. I eliminated from that the submarines that were sent there, and all sorts of small craft, like ships like that, in ports, and so forth. That was the effective force. I gave a memorandum to the House Committee, rather a summary of the United States naval forces in European waters, including the organization at headquarters. They were asking questions about it, and I thought it was best to get up the whole thing. I have got it all down here, and you can include that in the hearing if you want to. In this connection, the following approximate percentages are of interest as giving a comparison between the naval forces of the Allied Powers.

Those were the figures, and the statement that I made in my speech was approximately like that, eliminating all the small craft. I gave you an example of what I objected to, somebody sent me a clipping consisting of a whole page from a Boston paper, and the impression conveyed was, without an actual statement there, that we were pretty nearly doing the whole business. There was a photograph taken of the destroyer flotilla when the governors of a number of states came out there, some time before the war. We had 20 destroyers there. The artist very carefully, on the end of this photograph, jotted them down clean over the horizon. There must have been hundreds of them. This was supposed to be an actual picture of the destroyers operating in European waters. Of course I put my picture up in the corner, and all that sort of thing and all of it. Those things were damaging and that was the reason I omitted those speeches.

The point about it is this, that after these headlines had been running on for a good while, the plain, ordinary, every day facts in the war were distasteful to a good many people, including some naval officers. They would rather have let the impression remain as it was in the headlines; but it was not possible for me and my people on this side to get along with the war in harmony with the Allies without stating the facts. It was a situation I was confronted with that had to be attended to, that was all.

Senator TRAMMELL. Do you recall the date of the draft?

Admiral SIMS. The date of the draft?

Senator TRAMMELL. The first draft.

Admiral SIMS. I do not recall the date of it, but I recall the impression it made on the other side. It changed the whole attitude towards us on the other side. It gave them over there their realization, I believe, of what they had to expect from us. I think the opinion was almost universal among those peoples over

very a heterogeneous mass and mixture of populations, and that there was hardly any occasion could arise that we would people together even in spirit, and I think that was one of their lives, when these ten million men registered, on the day when we passed the conscription act. I do not remember

Q It was pretty early in the war.

A FRANKMELL. I think the conscription act was passed some time in May, 1917.

Q Yes. It was pretty early.

A FRANKMELL. Do you know whether or not the soldiers had been and were ready for being transported at earlier dates than were actually transported?

Q Yes. I do not know very much about that.

A FRANKMELL. I mean, any great number of them?

Q Yes. I do not know anything about the actual figures except that I do know this, that one of the most energetic and eloquent statements that I ever heard was made to our representatives in France who was then the chief of staff of the French army. The burden of the whole thing was "Send over troops! Send over troops! Send over troops! Send us the men in France. Get for them to be trained; get them here. Here is the place where we can teach them what we have learned." Now how many troops we had to send, and I do not know the number of the training was, but I do know that the insistence was on the other side was to get the troops over and to train them where they could learn this new kind of warfare.

A FRANKMELL. You are telling us the policy of the people on the other side. I think that our people on this side felt that our troops were to be sent over there untrained, but that they ought to have training at home. Of course this is a matter of policy, and with the American policy, instead of the policy that they had adopted.

Q Yes. I have not anything to do with that, except to tell you what the Allies wanted. It does not seem to me that it has much to do with it.

A FRANKMELL. I think it has a good deal to do with it, because I am sure that if we had had a million soldiers there by the time 1918, instead of 300,000 only, it would have made all the difference. Now I would like to know the facts, as to whether they were trained and training, ready to get into the fighting, a year on the first of March, 1918?

Q Yes. That is a year after we entered the war.

A FRANKMELL. We had to take our boys and train them from the time we entered the war.

Q Yes. That is a year after we had entered the war.

A FRANKMELL. A great many of them had never done a day's work in their lives. They were not even seasoned physically. That is true.

Q Yes. About a year after we had entered the war.

A FRANKMELL. About a year; but it was not a year after we passed the conscription act. It was not a year after we had passed the draft; and of course, on this side we had to construct everything from the ground up, absolutely. We could

not assemble our boys as they did, because we had no camp constructed, nor any place to put them. In the first place, we have started our training a month or two sooner had we cantonments and the munitions and equipments and everything. Now, the question with me is whether we were recreant in not having more men over there on the first of March, not having 1,000,000 men there instead of 300,000 men. That is the important question in the controversy.

Admiral SIMS. Can we afford to take the position that in time, if the tonnage had been available, plenty of it, we could have recruited and hardened and partially trained 1,000,000 in view of the fact that all over Europe recruits were taken out of dry goods stores, out of the mines, out of all sorts of places, in the actual fighting line inside of two or three months, and were doing effective work? They had to do it. The last draft that came out of Great Britain was 400,000 men. Those were recruits; I know some of them; they were raw men. They were put through a period of intensive training and put right on the front.

Senator TRAMMELL. They might have done that in the early part of the case; but they did not do it in the early part of it. I have frequently talked with a colonel of the British Army who happened to be stopping at the same hotel here, and in the early stages of the war, as far as the time concerning which I was expressing your opinion, so far as he was concerned he told me that he thought our men ought to have 12 months' training; that it was almost suicidal to take men and put them right into the trenches four or five months after they had assembled in camps, and that he never had seen a machine gun before or a rifle or a gun before.

Admiral SIMS. Here is what Gen. Pershing said:

Recommendations were cabled to Washington emphasizing the importance of target practice and musketry training, and recommending that instruction in trench warfare be made the mission of troops in the United States, while the actual trench warfare so far as necessary be conducted in France.

Of course, Senator Trammell, you are asking nothing but a silly question, every day sailor about the Army. If you would get a few of these Army people up here they could tell you about that more accurately than I could.

Senator TRAMMELL. I just wanted to know whether you had taken that into consideration in your accusation against the War Department.

Admiral SIMS. Thoroughly so.

Senator TRAMMELL. It seems to me, in view of the fact that the Army had to be transported, and that the men who went to the front and went into the trenches and did the fighting and had some part to do with the victory, the question is as to our ability to get them to the front even if we had had the ships had some part to do with it.

Admiral SIMS. I think it would be best to ask the Army people who have had the experience over there, what they think about it. Of course, I did not make these accusations without having considerable knowledge of the matter by talking with Army people. Of course, it is my opinion that those troops should have been sent over and gotten to business as soon as possible. The effect on the morale of the Germans would have been immense. I think

ships had fired a shot at all, but 2,000,000 of them had been in France or 1,000,000 at an earlier period, the effect on the morale of the German armies, as described to us in various ways, was marked, because they had been publishing all the time, that they were not able to get their troops over. We will destroy the submarine." The clamor became so insistent that Admiral Tirpitz, who was then at the head of the German navy, Tirpitz was put out, made an explanation as to why he could not stop those troops. It is a technical explanation, of attacking, and how he would have to abandon the sinking of merchant ships if he had gone out into the sea, which transport troops were coming, etc.

Pershing's report [reading]:

June 1, 1918, an estimate of the situation was cabled to the War Department with the following recommendation:

"In view of these conditions, it is of the utmost importance to the fact that we move swiftly. The minimum number of troops we should plan to have by the end of June is four Army corps of 24 divisions in addition to troops of the rear. Have impressed the present urgency upon Gen. Bliss and the members of the conference. Gens. Robertson, Foch, and Bliss stated that this is the minimum that should be aimed at. This figure is given as we should think of and is placed no higher because the limit of available troops would not seem to warrant it."

TRAMMELL. By that time do you know about what number we had there?

SWAN. December, 1917? Yes; we did not have, up to

TRAMMELL. I mean at the time he estimated we should have that number.

SWAN. Yes, sir; it is given in this report. Even up to the time of the great drive we only had 300,000 troops altogether up to March, 1918; and the big transport of troops began then at the rate of 300,000 a month after that. Just how many were here in December, 1917, I do not know. There were about the same number, 250,000 to 300,000 only.

TRAMMELL. He said he would like to have a certain number, was it not, 1918?

SWAN. Planning to have in France by the end of June?

TRAMMELL. The end of June?

SWAN. His language is:

"The number of troops we should plan to have in France by the end of June is four corps of 24 divisions in addition to troops for service of the rear."

TRAMMELL. Did we not have approximately that many troops then?

SWAN. We had 250,000 to 300,000.

TRAMMELL. No, I am talking about the last of June, 1918. Have we approximately the troops that he had requested?

SWAN. June? We have the figures here. This was June 1, 1917. There were 176,665 American troops in France, and no troops had appeared at the front. I think I read that somewhere. That is December 31, 1917. This is from the report of Pershing. Here is a little extract from Gen. Pershing's report. He says on page 8 of his report [reading]:

"In considering the tonnage possibilities I cabled the following to Washington and contemplate sending over at least 1,000,000 men by next May."

I had forgotten where I got that statement. That was July 6, 1917, or only a few months after we entered the telegraphs that the plans should contemplate sending over 1,000,000 men by next May, which would be May, 1918.

Senator PITTMAN. What was that second report he made read from, Admiral? At a later date he said that he wanted there by the last of June, did he not?

Admiral SIMS. Here is an extract from a cable of Gen. to the War Department on December 20, 1917 [reading]:

The actual facts are that shipments are not even keeping up to that schedule now the middle of December and the First Corps is still incomplete by entire divisions and many corps troops. It can not be too emphatically demanded that we should be prepared to take the field with at least four corps by June 30, of past performances with tonnage heretofore available such a project is one of fulfillment, but only by most strenuous attempts to attain such a result in a position to take a proper part in operations in 1918. In view of fact that number of our troops here increases a correspondingly greater amount of tonnage be provided for their supply, and also in view of the slow rate of shipment which is now available, it is of the most urgent importance that more tonnage should be at once as already recommended in my cables and by Gen. Bliss.

That simply accentuates the point I have been endeavoring to make, that if we had gone into the war promptly with all our submarine forces we would have had that tonnage to carry our troops over which Gen. Pershing says we did not have at the time because if, after the intervention of our forces, the success and increases of tonnage were as shown, in the first place 640,000 tons in the next period 390,000 tons and in the next period 250,000 tons, it is as plain as a pikestaff that if we had begun that intervention four months earlier, we would have in those four months saved a half million tons of shipping which we saved in the subsequent four months, or after the first four months, and therefore Gen. Pershing would have had the shipping and he would have had his troops over there as he wanted to have them.

Senator PITTMAN. Admiral, if I understand you, the loss of time was caused by the failure of the arrival of our troops on the west front to terminate the war; that is what I understood.

Admiral SIMS. Would you mind repeating the first part of the question?

Senator PITTMAN. I understand your reasons for believing that the war was continued for four months longer, with the consequent loss of life, was due to the failure of a sufficient number of our troops to arrive on the western front.

Admiral SIMS. That is one of the elements; yes. When our troops did arrive on the west front, it had a very marked effect, partly upon the morale of the German Army and the German people who had been told all the time that they could not get through that the submarine campaign would turn us down, etc., and so on. The discouragement was intense, as we found out from prisoners so on. That is one of the elements of the thing.

Senator PITTMAN. Of course 300,000 men might have affected the morale of the British Army or the French Army; but the time we are getting at is the excuse you give for the loss of life. It was lack of man power on the west front, was it not?

Admiral SIMS. Partially.

MR. PITTMAN. Partially. Well, I can not comprehend yet how we have won this war without man power on the west front.

MR. SANS. I think you were not in the room here when I went through the tonnage situation with Senator Trammell. I think you had better.

MR. PITTMAN. I would like to invite your attention to this little summary.

MR. PITTMAN. I do not care anything about the tonnage. The tonnage I have in my mind is this; This war was on the west front. Of course I realize there were a great many questions involved in the course of that war; but as a matter of fact it was the soldiers who finally won out in this war. The getting of the men was essential, also. But the question is, Were the soldiers kept from getting on the west front by reason of the Navy?

MR. SANS. No.

MR. PITTMAN. By reason of our Navy?

MR. SANS. By reason of the lack of merchant tonnage; by the loss of merchant tonnage of two and a half million tons of our four or five months' delay in getting effectively to work.

MR. PITTMAN. Do you know how many men were obtained in the first drawing in August?

MR. SANS. I do not, but I know that Gen. Pershing wanted 100,000 men there on May 1, and could not get them.

MR. PITTMAN. Do you know when the next drawing took place and how many men there were?

MR. SANS. No, sir.

MR. PITTMAN. Or the next?

MR. SANS. No, sir.

MR. PITTMAN. Do you know why they did not draw them all?

MR. SANS. No, sir.

MR. PITTMAN. Do you know that soldiers were held here on this side so they could not get transportation?

MR. SANS. Yes, I do.

MR. PITTMAN. You do know that?

MR. SANS. Yes; so I understand.

MR. PITTMAN. You understand it? From what report do you get that?

MR. SANS. I know this, that when the crisis came and there was a great drive on the western front, the tonnage was not in operation and available to bring the people over, and they had to divert tonnage, in their extremity, to the other side of the world in order to get over 300,000 troops a month.

MR. PITTMAN. If, as a matter of fact, the soldiers found transportation wherever they were in preparation, according to the report, in order to go abroad, then your whole charge that the Navy is responsible for the loss of 500,000 lives has no foundation. Is that true?

MR. SANS. Will you repeat that again? If what?

MR. PITTMAN. If, as a matter of fact, the Navy was prepared to transport, or rather saw to the transportation of, troops wherever they were ready, then your whole foundation falls, no matter what the transportation was.

Admiral SIMS. If that is true, then Gen. Pershing was wrong about the whole business. I am only judging by what was wanted.

Senator PITTMAN. That is the sole answer? That decision, does it not?

Admiral SIMS. No; not at all, because they insisted on the one side and advised on the other side, with all their experience in trench warfare, that you send the troops right over, and Gen. Pershing said he pounded his fist on the table and said, "Marche, march. Send the men over here."

Senator PITTMAN. I am not talking about what Gen. Pershing or what Admiral Bayly said or any other foreigner. This country had established a policy of training. I ask you if, when the troops were ready according to the decision of the American Army to go abroad, the transportation was not ready for them as the troops were ready?

Admiral SIMS. If it was not ready for them?

Senator PITTMAN. Yes.

Admiral SIMS. What is the question?

Senator PITTMAN. It is a very simple question.

Admiral SIMS. I know, but——

Senator PITTMAN. As these American soldiers were ready according to the decision of the American Army officers and the Army staff, if transportation was not then ready for them, were they ready?

Admiral SIMS. If it was ready for them?

Senator PITTMAN. Yes.

Admiral SIMS. But it was not, though.

Senator PITTMAN. Where is your evidence of that?

Admiral SIMS. Because they had to bring in transportation all over the world to bring them there in time.

Senator PITTMAN. But they got there?

Admiral SIMS. They got there; but, great scott, if they had not gone there a year before, we would not have lost all those people.

Senator PITTMAN. Yes, I understand; but do you not know?

Admiral SIMS. You do not need to point your finger at me. I do not do the least bit of good.

Senator PITTMAN. I will use my own judgment about that. I am not now on the bridge of a ship.

Admiral SIMS. I would like to ask, as a special favor, that you not adopt those methods of the police court lawyer here.

Senator PITTMAN. It is the only method, apparently, that you use down to the proper courtesy due to the United States Senate.

Admiral SIMS. I do not think it is a good thing, do you, for me to point your finger at me? I do not think it is a good thing, for me now.

Senator PITTMAN. If it makes the Admiral uneasy——

Admiral SIMS. It does not make me uneasy.

Senator PITTMAN. But answer my question, now, Admiral.

Admiral SIMS. Certainly; I will be glad to.

Senator PITTMAN. If you please. The troops were being prepared much more rapidly in April, 1918, than they were in the fall of 1917. Is not that true?

Admiral SIMS. I do not know, at all.

MR. PITTMAN. You do not know?

MR. SIMS. I do not know whether they were prepared more in 1917 than in 1918.

MR. PITTMAN. Is it not natural that the rate of preparation of men in 1918 was far more rapid, with the greater facilities that were in 1918, than in 1917?

MR. SIMS. Oh, you have turned it around, now. I understand you mean. I think you inadvertently said 1917 when I have said 1918.

MR. PITTMAN. You said you did not know. I ask you again.

MR. SIMS. The facilities in 1918 would necessarily have been greater than in 1917.

MR. PITTMAN. They were, undoubtedly?

MR. SIMS. Yes.

MR. PITTMAN. They were turning out more prepared soldiers than were in 1917?

MR. SIMS. I suppose so. I do not know.

MR. PITTMAN. You would assume so? It was natural?

MR. SIMS. You can assume it. I do not know anything

MR. PITTMAN. If you do not know anything about it, I think it is a serious charge to make against the Navy of the United States that it is responsible for the loss of 500,000 men, when you are talking about the facts that is most material, and that is that the soldiers were as prepared to go in 1917 as they were in 1918.

MR. SIMS. Prepared to go?

MR. PITTMAN. Yes.

MR. SIMS. They were there. They were enlisted and they were in uniform and soldiers; and soldiers were sent over that had been in uniform, when the crisis came, less than 10 days; and they had been sent over in the early part of the war the way that they were not because they did not have the tonnage

MR. PITTMAN. Have you any evidence at all or any reports or statements that soldiers were prepared by the Army and transported anywhere along in September, October, or November, 1917, and that they did not find transportation for them?

MR. SIMS. September, October, and November?

MR. PITTMAN. 1917.

MR. SIMS. I have not any official documents here to that

MR. PITTMAN. You have not?

MR. SIMS. No. We were transporting about 25,000 men a month. In the official records it shows that they were telling us that 16 vessels that were available for that, only. This was in Pershing's report. [Reading:]

... tonnage to carry construction material and animals at the beginning of the war. Although an increasing amount of shipping became available as the war progressed, at no time was there sufficient for our requirements. The tonnage available reached about seven and one-half million tons to December 1917, but was a little less than one-half of the total amount obtained.

... would seem to answer the question, that there was not enough shipping.

MR. PITTMAN. Oh, there was not enough shipping.

Admiral SIMS. To transport the troops.

Senator PITTMAN. We all know that there was not enough shipping to give the Allies and their populations all the men and supplies they wanted to have.

Admiral SIMS. This does not say "the Allies" at all [Continuing reading]:

The lack of ocean tonnage to carry construction material and animals was serious.

That is, American construction material to build up the France and American animals. [Continuing reading:]

Although an increasing amount of shipping became available as the war went on, at no time was there sufficient for our requirements.

That answers your question, absolutely. "There was not enough shipping sufficient for our requirements." We lost two and a half million tons of shipping, and we did not have sufficient shipping to transport our troops over.

Senator PITTMAN. There no doubt never was sufficient shipping requirements, as Mr. Hoover has testified, and everyone knows that, but they did get enough food there to live on; and we come to the question whether or not the soldiers of this country could be transported or could not get transportation?

Admiral SIMS. According to Gen. Pershing they wanted the soldiers there by a certain date and could not get them because they did not have enough shipping.

Senator PITTMAN. When did we first draw soldiers? Was it in August, 1917?

Admiral SIMS. When did we first do what?

Senator PITTMAN. Have our draft of soldiers?

Admiral SIMS. I am not sure about that.

Senator PITTMAN. I think it was in August, 1917. I think it was just how long did it take them to assemble? I just want to call your attention to the fact that we did not have any army to transport.

Admiral SIMS. Then Gen. Pershing must have been mistaken in supposing that they did have an army and that they did not have enough shipping to transport them. Now, you can not get away from that thing. Gen. Pershing said that he wanted troops over there, so that they must have been here; but he says they did not have enough transportation to carry them.

Senator PITTMAN. How much of an army did we have when the war began?

Admiral SIMS. We did not have more than 25,000 or 30,000 effective troops.

Senator PITTMAN. It did not take very much tonnage to transport them. Now, the draft occurred in August. Under the plan established by our Army, which I assume the Navy has not done with, those men required an intensive training there.

Admiral SIMS. Gen. Pershing said that they were ready to go and he did not have the ships to bring them.

Senator PITTMAN. The fact remains, Admiral, that you have charged that the Navy is responsible for the loss of 500,000 men because of the failure to get our troops to the west front.

Admiral SIMS. I believe so.

MR. PITTMAN. You can not substantiate that statement, sir, we can prove that the Army was relying upon them for the tonnage to transport them, and they could not do it.

MR. SIMS. There you are. Gen. Pershing said that he wanted a number of men by a certain time, and they could not get tonnage to transport it, and if you want any more evidence——

MR. PITTMAN. You not only have not given that evidence, but, you could not, and those facts will be demonstrated here when the time comes—that there is no foundation for that statement.

MR. SIMS. Then you must refute Gen. Pershing's own report presented.

MR. PITTMAN. No; we do not have to.

MR. SIMS. Yes; you do, because he said that he wanted the tonnage and did not have the transportation to get them there.

MR. PITTMAN. Oh, no.

MR. SIMS. Well, yes; now, really.

MR. PITTMAN. You have read what is there.

MR. SIMS. Here is another quotation. Here is "Organization of the War Department" (Reading):

"The organization project, covering as far as possible the personnel of all staff and administrative units, was forwarded to Washington on July 11, 1918, prepared by the operations section of my staff and adopted in joint consultation with the War Department Committee then in France. It embodied my views on the military organization and effort required of America after a careful French and British experience. In forwarding this project I stated: 'That a force of about 1,000,000 is the smallest unit which in modern warfare is complete, well-balanced, and independent fighting organization. However, it is equally clear that the adoption of this size force as a basis of study is to be construed as representing the maximum force which should be sent to France as needed in France. It is taken as the force which may be expected to be in time for an offensive in 1918 and as a unit and basis of organization. Its future should be based, especially in reference to the manufacture of munitions and other material, on three times this force, i. e., at least 3,000,000.'"

"The fact remains that according to Gen. Pershing he wanted the tonnage to get them there and could not get them because there was not sufficient tonnage; and there was not sufficient tonnage because two million tons were clearly lost by the delay of the American forces getting into the war.

MR. PITTMAN. According to his report he wanted 1,000,000 for the campaign, 1,000,000 American soldiers for the campaign. He got the 1,000,000 soldiers there in the first week of the campaign. They participated in the fights, in the campaign of the campaign in the victory. I was in hopes that you had not of the military situation over here, as you apparently have not.

MR. SIMS. I thought that I could rely upon the accuracy of the report by Gen. Pershing to the President.

MR. PITTMAN. You have not discussed this matter with Gen. Pershing, have you?

MR. SIMS. What?

MR. PITTMAN. You have not discussed this matter with Gen. Pershing, have you?

Admiral SIMS. I have not seen him at all since we were in. Senator PITTMAN. No. But you must realize, Admiral, conditions that existed here at the beginning of the war; and you left before it commenced, as has been stated by Senator TRAMMELL. As you said, we practically had no army in the beginning of the war. I do not think that is the Navy's fault. We had no facilities for training at the beginning of the war. I do not think that is the Navy's fault. The policy decided by the War Department for this country was to train our soldiers on this side. I do not think that is the Navy's fault. And, as a matter of fact, until the beginning of 1918 it must be evident to you that we had very few soldiers anywhere; and then they commenced to come on all at once, when they came on all at once, the combined navies of the world got the food there to France, they got the amount of troops to France that Pershing said he would need to win the war in 1918. I do not think there is any blame attached to the Navy; I do not think there is any blame attached to the Army; and I think that you ought to take back the assertion that the Navy is guilty of the murder of 500,000 people, until you produce evidence stronger than you have produced.

Admiral SIMS. It seems to me that the evidence that I have produced shows very clearly that the Navy is responsible for the loss of those men and those billions of treasure. As I said to Senator TRAMMELL, it all depends upon whether you assume that the intervention of the Navy was effective, or whether it was not. If it was effective, it decreased the length of the war, and if it was not effective, making it effective, it prolonged the war. When the Navy intervened and the convoy system was put in operation, there was a decrease in loss of shipping. It began in a certain period.

If it had begun earlier, we would have saved just so much shipping, and if we had had that shipping we could have sent troops faster to France, and we would have done it, there is no doubt about that. All, because Gen. Bliss in his first visit over there and on coming back again said they had to get a million men over there as fast as possible, and they did not have the transportation to do it at that time.

Senator PITTMAN. Well, it was effective; and you do not have to take the position that it was either effective or not effective. It was not effective as it would have been if Congress had appropriated money for more ships years before; but it was sufficient to get over to France every soldier that we had trained to go to France.

Admiral SIMS. Congress did not appropriate as much money as the Navy would have liked to prepare for war, but that is not the point, at all. We are not criticizing Congress for that, at all. The fact that the antisubmarine forces we had were on this side, 3,000 miles from where the fighting was going on, and that they were not sent over, actually. We declared war on the 6th of April, and there was not a single force on the other side until the 4th of May. What do you know about that for preparation for war. And I can give you the dates that they arrived—another bunch of ships. I can show you that after two months there were only 30 destroyers there. I can show you that at the end of a whole year there were approximately 120 vessels of all classes, including supply ships.

ships was built since the war. There was no reason why they should have been all sent over immediately upon the declaration, and if they had been there, we would have put the submarines out of operation, and decreased the losses. I do not know why they did not send them over there. The good Lord knows why they did not send them over there, but they did not send them at all.

-PRITTMAN. There were only two things they sent over there, the submarines for the war.

-SIMPSON. Yes.

-PRITTMAN. All they wanted over there first was man power, just as you have stated. They had everything else but men. We got every soldier to France for the campaign of

-SIMPSON. That the tonnage would carry.

-PRITTMAN (continuing). That was ready for it; and that is borne out by the evidence.

-SIMPSON. The German offensive began on the 21st of March, and the great American Nation had 300,000 men only in France. They had to call in the shipping from all over the world, but they were enabled to do so at that time because the curves had been too dangerous to do it, because you would have been too dangerous to do it, because you would have been too dangerous to do it. At the end of March, within a year, we had 1,000,000 men in France.

-PRITTMAN. Yes; and in August we did not have any in the United States.

-SIMPSON. What is that?

-PRITTMAN. In August we had none in the United States. In October we had none in the United States. In October we had none in the United States. We had recruits that were being trained.

-SIMPSON. They had men in the Army. They must have had.

-PRITTMAN. We had no camps for them.

-SIMPSON. If you had had ships, they would have put them on and taken them over, like every other country that sends ships.

-PRITTMAN. But that is not involving the Navy Department. The Navy Department decided they would not send them until they were trained.

-SIMPSON. Was that the reason, because they were not trained? The Navy Department held their antisubmarine forces on until the fighting was not going on?

-PRITTMAN. That is another side-step of yours, Admiral.

-SIMPSON. Not at all. I asked if that was a part of that plan, to not send the antisubmarine forces over there.

-PRITTMAN. You have been trying to get away from the facts, and because you do not know the facts you have made assumptions without any knowledge of the facts.

-SIMPSON. Not without knowledge of the facts. I have based my report of Gen. Pershing to the President.

-PRITTMAN. But you do not know anything about the facts of the war, and it will be demonstrated before you get out of it. But you have assumed that we had a million sol-

Admiral SIMS. Not at all. I never said so.

Senator PITTMAN. You read it, shipment, by the time that there—

Admiral SIMS. Will you fix that thing now? I did not were there, on the other side. I said they wanted the men over there as soon as possible.

Senator PITTMAN. Well, your complaint is against the War Department and not the Navy.

Admiral SIMS. Not against the War Department.

Senator PITTMAN. For not shipping a lot of green men over to be slaughtered.

Admiral SIMS. Like everybody else did. You know as we do, Senator Pittman, that we put the greenest possible men on the western front. They put men there who had not been in the front more than two or three or four months. We had to do it. But we would not have done it, in the first place, if we had had the transports; but we did not have the transports and could not get them there, with any endeavor. We had 16 transports on the way there; straining every nerve to get them across.

Senator PITTMAN. As a matter of fact, on November 2, 1918, you not report to the Secretary of the Navy as follows?

Admiral SIMS. What is that, please?

Senator PITTMAN. This report of yours on November 2, 1918, I am asking you about. [Reading:]

16. I consider Liverpool the safest port of entry in the submarine area. At present, however, I think we shall have to send our large ships to Brest. Then, when they are unloaded, escort them to England to be coaled.

17. I have previously reported against using the *Vaterland* for the present. We have a little more experience in handling the other large transports. The *Vaterland* is, of course, a much longer target, and injury to her would be a serious affair. Assuming too that all of the troops that we have to transport for the next few months can be accommodated in other transports, assisted by British liners. When the situation becomes pressing I presume we shall have to use the *Vaterland* and take an additional risk.

Admiral SIMS. The nautical questions involved in that as to the *Vaterland* had no wharf to go alongside of in Brest, and she could not be coaled in Brest, because we would have to take her out to sea to coal to Brest, and then she would have to go into Southampton through the submarine area.

Senator PITTMAN. The matter that attracted my attention was this [reading]:

I am assuming that all the troops we have to transport in the next few months will be shipped in other transports, assisted by British liners. Whenever the situation becomes pressing, I assume we shall have to use the *Vaterland*, and take an additional risk.

So that it was not pressing on November 2?

Admiral SIMS. According to Gen. Pershing it was very pressing, and he had not the transports to get them over.

Senator PITTMAN. Then you gave a wrong report to the Secretary of the Navy?

Admiral SIMS. It is quite possible, through ignorance of the tactical situation, that I might. But we can not get away from Gen. Pershing's report, really.

Senator PITTMAN. But that was your duty over there, to find out the facts.

SEN. Not at all.

PITTMAN. You did not have anything to do with the movement of troops?

SEN. Of troops?

PITTMAN. Yes.

SEN. Nothing at all, except to escort them in.

PITTMAN. Then you do not know anything about the movement of troops?

SEN. Yes, I do, because I have read Gen. Pershing's

PITTMAN. Have you had any conversation with any of the officers who had anything to do with the transportation

SEN. Yes, I have seen lots of them.

PITTMAN. Have you based it on anything they said to you?

SEN. Based what?

PITTMAN. Your statement about this?

SEN. No; I based it on Gen. Pershing's report.

PITTMAN. What is the date of that report?

SEN. September, 1919.

PITTMAN. Was that the first time you knew there was a delay in the transportation of troops?

SEN. That there was pressure?

PITTMAN. Yes.

SEN. Oh, no; I had known it in a general way; but I had not officially.

PITTMAN. You did not know it on November 2, 1919?

SEN. I did not know it as well as I did later. That was part of the game, you know.

PITTMAN. That was the time you are complaining that we were transporting troops very little.

SEN. Yes; but the fact whether I knew or not has not anything to do with the case, as compared with Gen. Pershing's

PITTMAN. You are relying upon that report for your charge against the Navy?

SEN. For the official part of the information. Surely, I think that was pretty good evidence.

PITTMAN. It bears on the construction you put on it, as you say.

SEN. Nevertheless, you come back to the very same proposition that we have nothing excepting such conclusions as you can draw from the report of Gen. Pershing, to sustain your charges that we did not get to the front by reason of the failure of the

SEN. That is your statement, but that is not mine. I pointed out here of the tonnage situation, and showed very clearly, just what the tonnage was. That was my idea. I think that the evidence I produced there from the figures, etc., amply substantiates that fact, that the delay in the war cost us those lives and those billions of dollars.

PITTMAN. Do you not think, as a matter of fact, Admiral, that the shortage of tonnage that you have referred to resulted in

shortage of foodstuff, as testified to by Mr. Hoover, and sacrificed foodstuffs; but they did not sacrifice the transport troops?

Admiral SIMS. They had to do both. It was very, very difficult. I think. When Mr. Hoover told me that the actual food in England, what he called here in his testimony—I have forgotten the technical term of it, but it means the supply in stores, not the ones in the retail stores, was only three weeks, that was serious. Now, if the transportation of troops continues under the circumstances, without the possibility of supplying them as they got them there, there is where the danger of the thing comes. Gen. Pershing points out in his report. I will admit it was of astonishment to me that they would want 50,000 tons of food landed in the ports of France per week. If you put a mile in there, you have to give them that. They cut down on the supply in those countries, I think, as far as they dared. When you get down below a certain point, you know what happens, as compared from the conditions in Germany. They reduced those supplies considerably below that danger point. They reduced the supply of bread considerably, and cut out that of sugar almost entirely. They reduced all supplies all along the line, as far as they dared. The food-supply situation was extremely dangerous, and there was great anxiety, as Mr. Hoover has testified.

Senator PITTMAN. Mr. Chairman, in order to make the testimony complete in regard to the line I was taking this morning, I want to have the testimony of Mr. Byrnes and Senator Glass and Admiral Sims also in connection therewith, included in this report at this point this morning, where we leave off. I refer to the testimony of Admiral Sims in connection with that of those two witnesses with regard to the one subject, and that is those letters.

The CHAIRMAN. Very well. It is so ordered.

(The testimony is as follows:)

STATEMENT OF HON. JAMES F. BYRNES, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF SOUTH CAROLINA.

Senator PITTMAN. Mr. Byrnes, you are a Representative, are you not?

Representative BYRNES. I am.

Senator PITTMAN. How long have you occupied that office?

Representative BYRNES. Since the Sixty-second Congress; nine years, nearly ten. Senator PITTMAN. A statement made by you on the floor of the House of Representatives recently was introduced in evidence a few days ago by the Secretary of the Navy, when testifying before this committee. That statement has been compared to a certain extent, as the evidence will disclose, by Admiral Sims in his testimony this morning. The portion of the speech that I refer to is as follows [reading]:

"In October, 1918, with two of my colleagues, Representative Glass, of Ohio, and Representative Whaley, of South Carolina, I went to France, and among other places visited Tours, the headquarters of the Services of Supply of our Army, and was thrilled with pride at the marvels worked by this branch of the Army. On October 30, with my colleagues, I saw Admiral Sims, who was then in command of the American Expeditionary Force. I shall never forget that interview. The armistice had been requested by the British, and the Admiral told us of the magnificent progress made by the British on the English coast, and as we listened he proceeded to tell us that the armistice would have to be accepted because Pershing had been unable to break through the German lines, owing to the absolute breakdown of transportation behind the American lines. With pride in his voice he told us how unfortunate it was that this breakdown occurred at so critical a moment. In amazement we listened, and in the monologue he delivered he proceeded to tell us that while Americans believed their Navy was working hard, that as a matter of fact we had but 3 per cent of the antisubmarine craft in

During the naval headquarters to secure information as to the  
Admiral Sims. He courteously invited us to his  
lecture to us in Paris, he  
the small part our Navy played in the war, reciting  
and which I have proved to be false. Not satisfied with  
played upon the sea in time of war, he proceeded to  
we should seek to play no part at all. He expressed the  
astray by the agitation for a merchant marine. He  
of her geographical location, must necessarily control  
upon her at all times providing a merchant marine  
foreign markets. When I took issue with him, he stated  
the view that it would be desirable for the United States  
that it was impossible because we could not compete  
it would be necessary to pay subsidies, for which our people  
that it was the part of wisdom for us to develop the great West  
Britain. With that Government, he said, we would never  
Britain could be depended upon at all times to care

Q. What date, do you remember now?

A. January 27.

Representative Byrnes in the House. I am sorry to say that the statement very badly twisted. As I read it in the press, that Gen. Pershing's army practically went to pieces behind the lines as a result of that it was necessary to ask for an armistice.

1. I told this to Representative Byrnes, and I warned him to be  
2. careful everywhere, and that he must not believe it or repeat it,  
3. but I told it to every Congressman or Representative  
4. at that time and whom I saw. I told it to all of the promi-  
5. nent in contact with. Of course, you know that in a war  
6. is not only between armies of different nationalities, but  
7. between our own Army, and these stories if they are not checked;  
8. I told an American correspondent whose name is probably  
9. was an officer during the war, he was a liaison officer with some  
10. of whom our troops were serving. He spread his hand out and  
11. American Army corps. If you walked up into this Army  
12. I talk to them they will curse out the American Army corps  
13. I say that in the last offensive they were not properly sup-  
14. ported by an American Army corps with a British or French  
15. the American criticism are made.

"It was that I was trying to get these Americans to understand, and I to make that statement to all the prominent Americans who came through, is mistaken in supposing that I was the authority for this. I was simply what was going about, so that when he went down onto the Continent in contact with all classes of people in Paris, he was not to believe any such thing."

The CHAIRMAN. Senator Pittman, would it not be well to read all of this in regard to this matter, of this morning?

Mr. BYRNES. I wish you would.

Senator PITTMAN. It probably would be. Continuing where I left off, testimony of Admiral Sims [reading]:

"I remember hearing an officer in our service, who was a bit of a wag, and the younger officers, when they were discussing a matter of this kind, ever get surprised at sea in a fog, or anything, sing out 'Hard aport,' and then take your ship away from you; but if you do nothing they will."

"The CHAIRMAN. Admiral Mayo also said—perhaps I should correct what about his statement before. He said that he understood that that was the case."

"Admiral SIMS. Yes, sir."

"The CHAIRMAN. He did not say authoritatively that it was the policy."

"He also stated—I will look up his testimony so as to quote it exactly."

"Senator PITTMAN. While you are looking that up, may I ask a question?"

"The CHAIRMAN. Very well."

"Senator PITTMAN. Admiral, I do not presume you had the record before you regard to the charges made by Congressman Byrnes?"

"Admiral SIMS. I only had what was in the paper, Senator."

"Senator PITTMAN. I think you are entitled to have the exact language of the language was taken from a written speech made on the floor of the Congress, excerpt from it, which was placed in the record, is as follows."

Then the part of your speech which I have just read to you was read then continued with my question to Admiral Sims as follows [reading]:

"I think that is the end of the quotation from Mr. Byrnes. Now, his statement correctly before you and not having to depend upon a newspaper of it, I will ask you if that statement is true?"

"Admiral SIMS. It is not, and I can not understand how any such idea got gotten into his head, because I never entertained those views. I was very exercised about this rumor that was going about, about the operations by Argonne front. It came to me in a number of ways, through Paris, and so on, as I said before. I took advantage of having this information that came to me that way, because I had many sources of information, to explain to these people my opinion of the Army, I think, is perfectly well known. You can ask General Pershing what it is. But those criticisms are always there; and the only explanation can make of it is that these gentlemen in their trip through Europe, and with people they had talked to, and so forth and so on, with all this, you can call it propaganda if you want to, but I do not think it was that; I think it was just jealousy that arises between armies; they got the thing mixed up, that is all, never held any such opinions at all."

"As to the merchant marine, it is a surprise to me that anybody should tell me I have expressed any opinions about it, because I never had any. I may have said of course, that there may be some difficulty or competition, as everybody knows may be; but as to whether Great Britain, on account of 'her geographical position' remark which, to my mind, does not mean anything at all—should have all the shipping of the world, and we should depend upon it, I can not imagine how anybody should have arisen at all."

"As for the relative amount of the work that our Navy did on the other side of the things I tried to get into the minds of the people that came over the batch after another of newspaper people, etc., and also Congressmen that came over was to get some just idea in the minds of the American people as to what we had done over there. Now, anybody who has had the curiosity to read that that I have written since last September will see that I have done the best with my limited literary ability to express my very high appreciation of the great work that was done by our Navy on the other side. It is not depreciating the work of our Navy to make the simple statement that we had about 3 per cent of Navy antisubmarine forces. I do not remember the figures, now, but it was something like 175 vessels at that time that we were using in antisubmarine work, counting the small fry, and that the other people, including all the Allies, had 5,000. Surely it is not depreciating the magnificent work that I have done in these articles, of our forces, to state that they were not as big as the other. It is an absolute fact, that is all; and the contrary in the headlines of our papers."

the Japanese was hurting us on the other side, and was making difficulties for the Allies, and that is what I sought to correct. In two or three instances, etc., where these American correspondents were entering into the American people the truth of this matter so that you will understand it on this side by saying things which of course we know to be not true, and which the Allies know that we know, it is a very difficult for us; that is all."

Q. In talking over two-thirds of the troops, I said that they brought out the first year of the war, beginning in April, 1918, about 59 per cent. It is about that; 59 or 60 per cent, or something of that kind. That certainly does not depreciate the magnificent effort that we made with the rest of the troops.

Q. That portion of Mr. Byrnes's statement, then, is not incorrect? A. That portion is not incorrect. That is not incorrect.

Q. The first portion here where he says, 'Sims told us of the armistice by the British on the English front.' I take it is correct, is it not? A. I do not feel that I should tell us that the armistice would have to be granted because it was impossible to break through the German lines owing to the lack of transportation behind the American lines.

Q. That is exactly what I told him, yes, and warned him not to say what I did tell him. And it was, of course, absurd. I warned

him. A. I warned him that it was not true and not to believe it?

Q. I am perfectly positive that I warned him that it was not true, and I am not in telling him.

Q. I do not have notice anything else in the rest of Mr. Byrnes's statement that he could have so understood you?

Q. The only thing I can think of is that he had talked to a great many officers and a good many people in Paris, naval officers and Army officers, and the thing mixed up; that is all.

Q. Nothing else, because I never had any such idea at all, and I never came about. It seemed to indicate that it was set on after the war was over. Then was when they broke out. When the enemy asked for an armistice, there was a flood of these armistices to those who went through there, and told them to be careful. I will look up my correspondence with Gen. Pershing, and see whether I have not written to him on that

Q. I have any letters bearing on it, I suggest that you give them up and we will put them in the record.

Q. I will look and see. The relations between Gen. Pershing and Mr. Byrnes as you could possibly imagine them to be between two men, exchanging photographs and that sort of thing.

Q. Do you remember the visit of Mr. Byrnes, do you?

Q. I do not at all.

Q. James expressed at that. I thought you stated a while ago that you had said you told him, but in addition to that you told him that you understood, you do not remember the visit of Mr. Byrnes?

Q. I do not identify Mr. Byrnes and those other two, because every one of a number of Congress-men or newspaper representatives, etc., might recognize Mr. Byrnes if I saw him again.

Q. Do you remember meeting Mr. Carter Glass over there, who was in Paris?

Q. I do not remember it after I got back here and saw him.

Q. Do you remember meeting him?

Q. Yes, when he came through there. When I came back I took a trip out in the West, and I remembered it then. I might have seen him now, but I do not remember the occasion of his coming on the occasion of a dozen similar other visits.

Q. Then you do not remember what conversation you had with Mr. Byrnes and Mr. Whaley?

Q. Not particularly, no, but I do know I told everybody I could get them not to believe these things, and I could not have said I never had any such idea in my life, that the armistice had

Q. You know Mr. Carter Glass very well, do you not?

"Admiral SIMS. I know him from having met him on this tour for the loan, that is all. I never saw him before unless I saw him when he came there.

"Senator PITTMAN. And you feel that you might meet these gentlemen and then have a subsequent conversation with them again in London later? Do you not remember it?

"Admiral SIMS. No; it was not in Paris. I never was in Paris but once and I did not meet any of them there. I went there once, in October and November 1918.

"Senator PITTMAN. He states that he met you in October in Paris.

"Admiral SIMS. I was there just once, just before the armistice.

"Senator PITTMAN. Then they state that they called on you again just before your departure from England.

"Admiral SIMS. Yes.

"Senator PITTMAN. And again discussed this same matter?

"Admiral SIMS. Yes. There were a great many hundred people came to the office on similar missions. The way we came in contact with them was in a sense my headquarters took charge of all the distinguished Americans who came through. That is to say, we were notified that they were coming, and we went aboard the steamer when they arrived and told them that all they had to do as they were told, and that they would be perfectly well taken care of that their reservations were made on the trains, and reservations were made at hotels, and that an officer would meet them at the station, and they would be furnished with automobiles, and so forth. Naturally all these men came through my headquarters, and I saw them usually coming, and usually if they went away, because we facilitated their travel. If they said they wanted to go, all they had to do was to tell us about it, when they wanted to go, and everything would be taken care of for them, and they had nothing to do but go.

"Senator PITTMAN. Now, I understand from you that if you did have these stations which Mr. Byrnes has recited you did not criticize the service that was proposed to supply Pershing's forces?

"Admiral SIMS. By no means. I told them what the criticisms were. It would be proper for me to tell you the ways in which that information would be given to me, but it would not just now. I was immensely impressed by the way the information came to me, and of its danger, and that is the reason I told the people to look out for it: that this was what was being said.

"The CHAIRMAN. Did you ever talk over with Gen. Pershing the general idea of cautioning Americans who came over to the front about not making too boastful talk about what America was doing?

"Admiral SIMS. No; I never saw Gen. Pershing much over there. I never went to the front at all, because I forbade all my officers to go to the front. I saw him once when he came through there the first time. I saw him once when he came up to Paris for a conference. I saw him once or twice down in Paris, but I never was at a conference and I never had any extended conversation with him, although we had considerable correspondence about various affairs.

"Senator PITTMAN. As I understand it, then, if Congressman Byrnes and Congressman Whaley and Mr. Carter Glass got this impression from you, or rather if this impression in their minds, you can only account for it by the fact that they have gotten it mixed up with the impression they got from somebody else?

"Admiral SIMS. I do not know how they account for it, but I never heard of such opinions at all. I never held the absurd opinion that the armistice had to be broken because of the condition on the western front. I never thought that for a moment.

Mr. Byrnes, in the light of the statement made by Admiral Sims, which I have just read, do you still contend that your statement made in your speech, which I have just been read to you, is correct?

Representative BYRNES. I regret that Mr. Glass and Mr. Whaley and myself did not make more of an impression upon the admiral when we called upon him, but we could not remember us; though he did say, as I remember, at first, that he remembered very distinctly warning us to not repeat what he told us. But my recollection is very clear upon it. The admiral made a more lasting impression upon me than upon my two colleagues. I can recall with distinctness that we called upon him at his hotel between 9 and 10 in the morning, and while my recollection would not be clear upon this, I am almost certain it was as the result of a telephone message received by Mr. Glass from him. At any rate, we did call. I remember distinctly meeting a very prominent Frenchman, who at one time served in the English army, as we ascended the stairs to his room.

Admiral Sims very courteously asked us to his apartment, and there made the statement to Mr. Glass, to Mr. Whaley, and to me the statement which I made in my speech.

in mind and put into this record. That he told us, as he now says that was that this was propaganda, and that "I want you to contradict it because it might be possible if it was only one man who received such news as did from his statement, but when three men hear a statement together with the feeling of depression and of humiliation that we did,

COMMITTEE. Mr. Chairman, just a second.

MR. BYRNES. Yes.

COMMITTEE. I understood that these gentlemen were called here as wit-

MR. BYRNES. Yes.

COMMITTEE. To testify to what occurred.

MR. BYRNES. Yes.

COMMITTEE. Mr. Byrnes is now making an argument as to the matter.

MR. CHAIRMAN. Of course, if we are going to insist upon those technicalities, Mr.

BYRNES. I think Mr. Byrnes would better testify as to his own impressions.

MR. BYRNES. Mr. Chairman, as a lawyer, I submit that I can testify as to why I am emphatic in my recollection.

MR. CHAIRMAN. That is it.

MR. BYRNES. And only for that reason do I make that statement. I am an attorney that when we—

MR. CHAIRMAN. I submit that this morning Admiral Sims, in giving his reasons for not saying that, went into a rather argumentative statement. He said not say it because he did not entertain such views as that, and that he said that way. Now, I am sure that the witness at present is just explaining what he did not have gotten the other impression of the remarks of Admiral

MR. BYRNES. And I will promise the chairman and my friend, Senator, that I am not going any further.

MR. CHAIRMAN. We want the facts.

COMMITTEE. The only reason I object is because it opens up a whole

MR. BYRNES. I will promise the Senator that I am not going to speak

COMMITTEE. Yes.

MR. BYRNES. I state that the reason that I am emphatic as to my recollection is that we left the hotel and the three of us were going back to our own apartment. We discussed the grave consequences of the situation that we felt as the result of the information given to us by Admiral Sims, and with reference to ourselves we then determined to visit the headquarters of the American Army.

MR. CHAIRMAN. I am not sure that we should not have mentioned the fact that we were engaged which precluded his accompanying us, but he agreed that we were satisfied by reason of the statement made by Admiral Sims that the matter would become known in America in a short time and become public, and in order that we might know the facts, we decided within 5 minutes after leaving his apartment that we would go to Tours, and the

MR. CHAIRMAN. That statement to this extent, that whether it was the next day or the day following, I am in doubt; but certainly my recollection is that it was the next day. Mr. Whaley and myself drove 150 miles to Tours; we visited Gen. Harbord and Gen. Hagood, and we then told those gentlemen what Admiral Sims said in Paris.

MR. CHAIRMAN. According to his recollection now, as I understand it, that he was in London so that if we went to the Continent we would not be able to make the statement he made to us was not in London. It was in Paris, at the date October 31, 1918; and immediately after that we went to Tours, and we came back from London to go there. And, as the admiral forgets the date, the fact that it was that date.

MR. CHAIRMAN. That date, if I had any doubt about my recollection, my reason for it would be that when we went to Tours we learned from Gen. Harbord and Gen. Hagood that the statements made by Admiral Sims were not true. It was impressed upon our minds, and Gen. Harbord and Gen. Hagood were then Gen. Pershing congratulating them upon the service rendered. Then, a few days later, just preceding our visit there, and as Gen. Pershing again thanking the S. O. S. for their splendid service,

I can well remember that we did not return until about 11.30 in the evening. Our colleague, Mr. Glass, was so interested in awaiting our report, that he was up at midnight, waiting to learn the facts about this terrible disaster about which we had been informed, and we told him then the story.

Unfortunately, I had not a diary. I did not know that I was going to come before this committee until an hour or so ago. I looked for a very good diary—I never kept one in my life before, and only kept this in order to have the diary that my friend, Mr. Glass, was keeping on the trip. I found, however, a diary [indicating], which is very incomplete and which has not any record of the conversation we had with Admiral Sims. It starts only with the mention of our trip to the S. O. S. I was so impressed with the achievement of the trip that I wrote down my impressions of that trip, and I find in my shorthand a very statement that was made to us by Gen. Harbord and Gen. Hagood as to what I had put in my speech, which is now in the record, and the date, but it was the first time that we went down to Tours. I can add nothing else to my statement that my visit to Tours was not for the purpose of ascertaining about a propaganda of which we had been warned in London or any other place.

Senator PITTMAN. And the statement of Admiral Sims to the effect that you say that such a thing was not true and not to be believed, is not correct?

Representative BYRNES. Absolutely not correct. The fact is I was amazed that the admiral would say that. I thought of several things he might have said, but I did not think he would say that. And I might say, if emphasis is necessary as to the statement as to the merchant marine, that that conversation in my speech was not in Paris but was in London, where the admiral very cordially invited us into his office when we met him at the naval headquarters, and in the course of the conversation he made to me the exact statement that I have in this speech. I took issue with him because I have very strong views on the question. I did not go into very great detail, but I remember distinctly that in that conversation that while in years past the argument in favor of the merchant marine had come from the manufacturers of this country, that by reason of the war there had been a change of mind on the part of the farmers of this country. The farmers of the South found in 1914 that they could not ship their cotton because of the uncertain movement of ships, and that the wheat grower in the North found out that subsidies were necessary to establish a merchant marine; to-day the farmer was an enthusiastic advocate because he had learned the necessity of ships. I remember distinctly of going into an argument on the question. I was interested in it and have no doubt about it. And if he recollect seeing us at all, and I do recollect seeing him and what he said, my opinion is more apt to be correct.

With reference to the statement the admiral made I again wish to challenge him. He says the Navy did not transport but a certain per cent of our troops. That the statements made in my speech come from the official records of the Department, and I submit that the statement about the 3 per cent that the admiral makes is not correct according to the published report, Bulletin No. 5, from Admiral Sims's headquarters, which the committee can obtain, in which bulletin he gives the figures as to the escort and the number of troops transported. This will cause Americans to be more proud of the achievements of their Navy. The statements contained in the record there. I refer to the statement in the Times History of the War, volume 20, page 42, which is substantially the statement which the admiral made to Mr. Glass, Mr. Whaley and myself in Paris, and again in London as to what our Navy had done. This is the Times History of the World War. It says [reading]:

"While speaking in London on October 11, 1918, Admiral Sims said: 'At times sometimes in American minds that the American Navy had been doing the business over here; at least a half. That is not correct. There were about 70 antisubmarine craft operating day and night, and the American craft numbered 3 per cent.'"

According to the figures of the Navy Department, that is not correct. The figures according to the Navy Department on that date—he was speaking on October 11, 1918—show that there were 323 United States naval vessels in European waters. On November 11 there were 373 United States naval vessels in European waters, including 70 destroyers, 5 gunboats, 5 Coast Guard cutters, 127 marine chasers, 27 Army minesweepers, 13 mine sweepers, and 10 mine planters, making in all 262 vessels engaged in operation against the submarines, instead of 160.

Those were the discrepancies of statement to which I referred and which I got from my information of mine but from Admiral Sims's statement.

If the committee has any further questions to ask me, I shall be glad to answer them.

Q. Mr. Byrnes, after you had this interview there with Admiral Sims, what time, when you found that the admiral was making such statements?

A. Byrnes. What did I do?

Q. Yes. Did you make any report to the Navy Department or to the War Department?

A. Byrnes. Well, I did not to the Navy Department. Of course, not, though, I was so amazed at it that I did make a report.

Q. To whom did you make a report?

A. Byrnes. I made a report to the President of the United States, in a conversation with the President. Because of the impression made General Sims, I believed it my duty to advise the President, and did report of the substance of my conversations with Admiral Sims, as I am permitted.

Q. How did you advise the President? By a written report?

A. Byrnes. No; I stated that in the course of the conversation with him about it.

Q. When was that?

A. Byrnes. I can not give you the date, but I can tell you when it was. Saturday afternoon before Congress met in the fall of 1918. The first Monday in December, so it was the Saturday night previous. Thanksgiving Day, that was Thursday, or the day before Thanksgiving. On my return and prior to the President's departure to Europe I in-

Q. Did you talk with the Secretary of the Navy about it?

A. Byrnes. No, sir; I did not. The only other person I mentioned it to was I met Mr. Tumulty at the White House while waiting to see the President. I remember telling him, and I remember very distinctly that Mr. Tumulty told me to tell Daniels about it, if you feel that it is so important? And I did not want to, that hostilities were over. But I knew that the President and I believed that the President should know it because the President should have naval advisors, and I believed that if Admiral Sims advised us, he would be so incorrectly advised that in fairness to him we should know what had been said to us, and then he could determine for himself what to do with the information he received from Admiral Sims.

Q. Then, afterwards, when Secretary Daniels recommended Admiral Sims as an advisor of the Navy, the President was fairly cognizant of what you spoke of, and the attitude of Admiral Sims during the war, and so on in any way.

A. Byrnes. You are asking me to make an argument but you objected to argument in the beginning.

Q. And then I allowed you to go on.

A. Byrnes. If you are asking me about the President, I know nothing about his views on this subject, why he didn't. I am not authorized to say anything of no reason why he should have recommended Admiral Sims, but that if you ask him, he would advise you.

Q. Mr. Byrnes, what was this trip that you made abroad? Was it an official trip?

A. Byrnes. It was not.

Q. You and three Congressmen—Senator Glass was a Congressman at that time?

A. Byrnes. He was.

Q. You made this trip on your own initiative?

A. Byrnes. Yes.

Q. And went to the front, and went around over the war zone in France?

A. Byrnes. Yes.

Q. Not officially in any way?

A. Byrnes. Not officially, except as a Congressman to secure information abroad, but not by direction of the House of Representatives.

Q. But not by direction of the House of Representatives?

A. Byrnes. I say not by direction of the House of Representatives.

Q. You had nothing to do with the Naval Affairs Committee that went to Europe?

A. Byrnes. No. I am a member of the Appropriations Committee, and Mr. Glass, Mr. Whaley, and myself went not on that trip.

ports but on the French line at our own expense, and on our own initiative official capacity.

Senator POINDEXTER. Did you make any protest in the House of Representatives to the Naval Affairs Committee against the conferring of the rank of Admiral Sims, Mr. Byrnes?

Representative BYRNES. No. I am very glad to answer the question. When that bill came up in the House I was sick, absent from the House, therefore did not vote upon the question at all. In fact, I did not know the bill was presented, and did not see it for several days afterwards.

Senator POINDEXTER. You did not know that it was pending in the House at the time the vote was taken on it?

Representative BYRNES. No; not until two or three days afterwards, I did not see it in the newspaper.

Senator POINDEXTER. Do you recall when the armistice was agreed to?

Representative BYRNES. November 11.

Senator POINDEXTER. I understand that your conversation with Admiral Sims was October 31?

Representative BYRNES. Yes; October 31.

Senator POINDEXTER. You say in that conversation he was explaining why it was necessary to agree to an armistice?

Representative BYRNES. Yes; he said that.

Senator POINDEXTER. The armistice was agreed to, or at least the terms of the armistice, on the 11th of November?

Representative BYRNES. Yes.

Senator POINDEXTER. Some time after your conversation?

Representative BYRNES. Yes, sir; 11 days. At the time we saw Admiral Sims in Paris, Jellicoe and others from England were at our hotel, and a representative of the Italian Government had come. Col. House had arrived on this date—I do not remember the date—too from this country, and they were there for the purpose of preparing the terms of the armistice. According to the most general information I received in Paris, they were meeting for that purpose at that time on October 31. That is what we learned from them.

Senator POINDEXTER. That is all.

Senator TRAMMELL. Do you know, Mr. Byrnes, whether Congressman Glass was coming this afternoon?

Representative BYRNES. May I say that Mr. Whaley advised me that Congressman Glass was sick in bed for three weeks and came out yesterday for the first time, and telephoned me before I left the house and said that he would be unable to be present at the hearing that he was writing a letter which he asked me to present to the committee.

The CHAIRMAN. I hope you will read the letter.

Representative BYRNES (reading):

"FEBRUARY

"Hon. FREDERICK HALE,

"Chairman Subcommittee on Naval Affairs,

"United States Senate.

"MY DEAR SENATOR: I am informed that your committee at its hearing has decided to have Senator Glass and Representatives Byrnes and myself appear at a hearing this afternoon to make statements as to the conversation with Admiral Sims in Paris and London in October and November, 1918.

"I have been confined to my room for almost three weeks with influenza, and my physician advises me that it would be dangerous for me to comply with the wishes of the committee and attend this hearing. It is my hope that within a few days I will have sufficiently recovered to enable me to appear before the subcommittee. I shall then not only be willing but shall greatly desire the opportunity to appear. If the committee, however, desires to close this part of its hearing at this time, and determines not to await my presence, I ask that there be inserted in the letter containing my recollection of the conversations above referred to.

"My recollection is very clear about them. In October, either the 30th or 31st of 1918, Mr. Glass, Mr. Byrnes, and I called upon Admiral Sims at the Hotel de Ville in Paris, in response to an invitation extended to us over the telephone by him. Our conversation with the admiral the question came up about the making of an armistice. He was asked why it was necessary and his reply was that the transportation had broken down; that ammunition and supplies could not be shipped up to Gen. Pershing; and that the Americans could not advance any farther.

"This astounded us all, as we had been down to Tours some weeks before and had been informed by Gen. Harbord and Gen. Hagood, his chief of staff, of the work of the S. O. S. There was no intimation by Admiral Sims that this was

mostly but was a direct, concise statement of fact by the admiral and was for the purpose of giving us the inside information as to why the armistice was made.

At the admiral at the hotel we were so disturbed at his statement and because of the fact we felt the American Army was being unloaded on, we were decided to make another trip to Tours. Mr. Glass could not come because he had an engagement the following day, but urged us to go and settle the matter, as all three of us felt it was one which would come out to be a source of a great deal of political discussion, national and

so after noon Mr. Byrnes and myself got in communication with the headquarters of the American Army, in Paris, and endeavored to make arrangements for the next day. About 6.30 in the afternoon we received a telegram stating that arrangements had been made whereby Mr. Byrnes and myself went down in an open machine. We left the following day for Tours about 2 o'clock, and we spent that afternoon and evening and part of the day with Gen. Harbord and his staff, and informed them of this visit of Admiral Sims. The general advised us it was absolutely untrue, and quotations from Gen. Pershing containing the highest praise for the American Army. Gen. Harbord told me, with some heat, this was nothing but propaganda and that there was but one man in Paris yelling for an armistice. Gen. Pershing satisfied us that the statement made by Admiral Sims was absolutely untrue.

After we visited Admiral Sims again at his office in the American Embassy. During this interview he made the statement that America should get out of the merchant marine business and should get rid of its merchant marine and let England control the merchant marine. I did not take part in this to any extent except to listen with astonishment to his statements. However, I did ask him many questions on this line and my recollection is that he was very emphatic in his opinion that America should not go into the merchant marine business on any large scale.

That Admiral Sims has made the statement when he told us about the line of communication back of the American Army, that, at the time we were told us this was propaganda that was being circulated and he wanted us to know it was incorrect. I desire emphatically to say that this is absolutely untrue. I have told us any such story it would never have been misunderstood by us. We would have, at great inconvenience, traveled 150 miles in order to get details of this alleged disaster. Had Admiral Sims told us it was untrue we would never have reported it to Col. Harbord and Gen. Hagood, and I am sure in my memory of the conversation with Admiral Sims that it was incorrect and charge against the American Army and his explanation was to simply an afterthought in order to avoid his statement which was a charge on the American Army in France.

And my recollection of the matter succinctly and shortly, but I would express to you my desire to appear before the subcommittee so that any one will have the opportunity of cross-examining me.

That is yours.

"RICHARD S. WHALEY."

On the bill making Admiral Sims and Benson permanent admirals in the United States Navy, introduced in the House of Representatives, Representative Whaley having voted in favor of the bill.

SENATOR GLASS, will you proceed?

THOMAS HON. CARTER GLASS, MEMBER OF THE UNITED STATES SENATE.

SENATOR GLASS, you heard the statement read that was made by the morning, in regard to the question of the visit made by yourself, Mr. Byrnes, and Congressman Whaley, and you observed that statements were made that if he had told you anything in regard to this report that he had received of a warning, and that he had advised you that it was not true. Now, in your recollection of that, Senator?

SENATOR GLASS, I want to say in the first place, Mr. Chairman, that I am neither a partisan witness. It is rather distasteful to me to be drawn into a controversy because I entertain a very warm affection for my former colleague and I have entertained a great admiration for Admiral Sims, and as in the case of one might form for a man whom he has encountered in the

It is quite obvious to me that Admiral Sims has somewhat confounded the conversation held by him with some persons in London with his conversation with Representatives Byrnes, and Whaley and me in Paris. As I find from my diary, Monday, the 28th of October, Capt. Jackson, United States naval attaché, arranged for me to see Admiral Sims at the Hotel Crillon, and on October 31 I saw Admiral Sims.

Senator POINDEXTER. What date?

Senator GLASS. October 30. The notation here is "Admiral Sims at Hotel Crillon" so I take it that was the date upon which we saw him.

I had a letter of—

Senator POINDEXTER. Let me ask you there—not to interrupt you—Mr. Byrnes's statement that it was the 31st?

Senator GLASS. Yes. I am giving my statement now, not Mr. Byrnes's.

Senator POINDEXTER. Mr. Byrnes is evidently mistaken about it.

Senator GLASS. Either Mr. Byrnes is or I am. [Laughter.]

Senator POINDEXTER. Which do you think it is? Do you think it is Mr. Byrnes that is mistaken? I am trying to get information. It could not be both dates. You see, one or the other is mistaken.

Senator GLASS. It could have been both dates, because we might have seen him two times.

Representative BYRNES. If you will pardon me, I think in justice to me I will remember that I have stated that I fixed the date by this diary, which shows that we were at Tours on the 1st, and that it was my recollection that it was the 31st of the previous month. It might have been the day before that.

Senator GLASS. Certainly that is not material.

Representative BYRNES. I fixed it only by the date we went to Tours. I have a memorandum here from which I concluded that it was next day.

Senator POINDEXTER. I think you did say that.

Senator GLASS. I think it is totally immaterial whether it was the 30th or the 31st.

Senator POINDEXTER. It is material or immaterial as showing the liability of a man to forget things.

Senator GLASS. Yes; anybody on earth is liable to forget things, particularly when it comes to whether a thing happened on the 30th of the month or the 31st of the month or the year ago.

Senator POINDEXTER. I think that is true, and I just call attention to it to make it size it.

Senator GLASS. At all events, Mr. Chairman, we did go to the Hotel Crillon in Paris, and I sent up to the apartment of Admiral Sims a very cordial letter of introduction from the Secretary of the Navy, and Admiral Sims promptly came into the lobby of the hotel and sought me out. I presented to him my two cards and he invited us up to his apartment.

My recollection of the incident is a little different from that of my former colleague, Mr. Byrnes. As I recall, what Admiral Sims said was prompted or provoked by a statement that I made to him that we had been at general headquarters at Chaumont, and had gotten the distinct impression that Germany was opposed to an armistice, whereupon Admiral Sims responded, as I recall, that we were obliged to grant the armistice because of the breakdown of communications of supply. I was not impressed with the idea that Admiral Sims was in a critical state of mind but was simply stating his view of the situation. I did not say that I got the impression that he was undertaking to discredit me but was merely stating what he supposed to be a fact.

I am quite clear that Admiral Sims did not say to us that he did not believe our statement, and that he did not caution us not to believe the statement, because that was the first intimation that any of us had received on the subject, and it came as an unqualified statement. It is incredible—and this may be argued as improper—it is incredible that two sane men—and all Congressmen are sane—should have put themselves to the great inconvenience and indeed physical discomfort in the state of the weather over there, to have gotten into an automobile and traveled, as Mr. Byrnes says, 150 miles, from Paris to Tours, to undertake to prove or disprove a statement, when they had been in advance told that the statement was not true and not to believe it. As a matter of fact, Mr. Byrnes and Mr. Whaley, according to my diary, on October 31, go from Paris to Tours. My notation is "Thursday, October 31. Whaley and Byrnes went to Tours to see S. C. Sims. Sims did not go; and Byrnes will pardon the frank statement that I did not go because I wanted to get rid of him and Whaley the next day. I wanted one day in Paris for myself. [Laughter.] I wanted to see things that they did not want to see when they were in their absence. I find that they were perfectly harmless things."

Mr. Lee Jorby, the British ambassador, and I went to the Church of Notre Dame here that I "prayed in Notre Dame." At all events they did a sort of levity, teased them about having their South Carolina general, teased in that sort of trouble. I had no Virginia general there to look to for it—another reason.

Q. They were rather indignant over the statement made by Admiral Sims, especially indignant. I was a little regretful at the statement that was a breakdown of communications of supply, and that because of that the armistice.

A. It is my recollection that it was at that interview and in that conversation Admiral Sims spoke of the merchant marine, and spoke specifically of the work, in contrast, done by the British and American naval forces. I do not know, also, but undoubtedly, in London, Admiral Sims did make a statement, as Mr. Byrnes has said, though I did not enter into it to any great extent, except I recall, in response to the suggestion of what we would never have a merchant marine because of the policy of the Navy involved, having answered that I thought the American people, I think, would decline ever to be caught in the humiliating situation that they were at the beginning of this war.

Q. I am not sure of doubt in my mind that Admiral Sims made substantially the same impression on me as your colleagues. I had been, myself, regarded as decidedly pro-British before the war began, by some of my friends had been regarded as pro-British. I recall very distinctly laughing at my colleagues and telling them that Sims beat me at it, all to pieces. And I did feel some sense of what apparently our Navy had not done a great deal.

A. I am not sure of doubt in mind, however, that these statements were made because, not "because." There is no doubt.

Q. I am not sure perhaps two of the most prominent statesmen of Great Britain at the time, with letters of introduction, and it happened that both of these statesmen in a less mysterious way referred to this breakdown of the American communications of supply, and I remarked to my two colleagues that there must be some reason. Admiral Sims had told us in Paris, because these two prominent statesmen in conversation with me, had mentioned the same incident. The next month, when we went to the British front, Maj. Norie, of the staff of the chateau at which we were stopping, made reference to the same incident. I wrote my South Carolina colleagues with the fact that their communications had broken down and that there must be some truth in what that told us in Paris.

Q. When was this, Senator? Was it before the armistice?

A. Yes, this was all before the armistice.

Q. I am not sure that Admiral Sims has no recollection of receiving Whaley and me. He was a great man over there, and we were ordinary American officers, a great many of whom went over and went to headquarters.

A. I am not surprised nor indignant at his failure to remember me. I remember him very much because he gave us the rare opportunity of visiting the Grand Fleet on board a British battleship when the wireless news came of the armistice, and there by the courtesy of Admiral Sims. I believe that I can state as convincingly as I can do, stated my recollection of the matter.

Q. Did you make any entry in your diary of the principal conversation with Admiral Sims that you have referred to, on the 30th of October?

A. No, I did not; nor have I repeated the conversation since I have returned.

Q. I am referring to what you testified to here just now.

A. Well, I did not testify that I made any notation of my conversation.

Q. But you testified to a conversation.

A. I did, yes.

Q. And you made no note of that in your diary?

A. I said I had not.

Q. When were these conversations you had with the two prominent statesmen of Great Britain?

A. Why, immediately before or immediately after the armistice. I am not sure immediately before the armistice; sometime between the 4th and the 10th.

Q. Of course, then, that was after Mr. Byrnes and Mr. Whaley had returned and made their report to you?

Senator GLASS. Oh, yes. They made no report to me, however. They stated conversationally that Gens. Harbord and Hagood explicitly denied that there had been any breakdown of the communications of supply, and had told them—and indeed they had obtained copies of—recent orders from Gens. Harbord and Hagood highly commending the efficiency of their sources of supply.

Senator POINDEXTER. Do you remember what they said to you when they told them with the fact that it must be true, in view of what these British officers said?

Senator GLASS. Well, I would not like to repeat here in this presence what they said.

Senator POINDEXTER. It is quite interesting to know the substance of what they said, and could leave out any offensive part of it and tell what they said.

Senator GLASS. All of it was offensive.

Senator POINDEXTER. I guess that is all.

The CHAIRMAN. That is all.

Senator TRAMMELL. I do not know of any further questions, Mr. Chairman.

Senator PITTMAN. Mr. Chairman, I was not present when Congress was told that the letter was read. Does he ask to be heard before the committee?

The CHAIRMAN. He says that he will be very glad to appear, unless we decide to close the hearings immediately.

Representative BYRNES. Mr. Whaley says that he is not only willing to appear, but anxious to have an opportunity to come before the committee. His doctor told him that it would be very unsafe for him to come down town here to-day, as he has been sick for three weeks.

Senator TRAMMELL. I think we have covered the principal points involved.

Representative BYRNES. He said that he desired to appear before the committee if they wanted to cross-examine him in reference to it.

The CHAIRMAN. Yes.

Representative BYRNES. He hopes to be out in two or three days.

Senator TRAMMELL. So that, unless the committee decides later to call him, there is no necessity of it.

The CHAIRMAN. That is correct. Admiral Sims, have you anything further to say to the committee?

Senator TRAMMELL. I just want to ask one question.

The report of Gen. Pershing which you read from there, Admiral Sims, does it state that the soldiers were ready and available or not?

Admiral SIMS. I do not think that it says that the soldiers were ready and available; but when he asks to have them sent over by a certain time, of course he would not have asked unless they had been available. They would have been available or that would have been foolish. He must have known the situation thoroughly.

Senator TRAMMELL. I do not think that would have been sufficient. I think he knew they were preparing our soldiers, and he wanted to know them in advance the number they would need by a certain time, and of course it may be, making that request that a certain number of soldiers be furnished by that time, the War Department would go ahead and try to get that number ready for him.

Admiral SIMS. I think it is altogether probable that the time of the training of the troops was governed by what they knew of the limitations of the transports to carry them across. I assume that as being entirely reasonable.

Senator TRAMMELL. As far as you knew, the soldiers were ready and available at the time that he requested them to meet a certain quota requested in that communication?

Admiral SIMS. He made a request for a certain number of soldiers and he said he made it that size because he knew that they could not get them over. Here is what he says (reading):

Understood here that a shipping program based on tonnage in sight prepared by the War College Division in September contemplated that entire first corps with 10,000 troops and some 32,000 auxiliaries were to have been shipped by end of November and that an additional program for December, January, and February contemplated

ment of the second corps with its corps troops and other auxiliaries nearly completed by the end of February. Should such a program be per schedule and should shipments continue at corresponding rate, it would be placing even three complete corps, with proper proportion of auxiliaries, in France by the end of May.

coming of that dispatch, which is dated December 20,

Understood here that a shipping program based on what prepared in War College Division," etc.

basis, they were shipping troops over there conditioned own condition of tonnage, and probably their training way.

RANMELL. It remains as a matter of fact that they did not, and, according to the report of the Secretary, got 1,000,000 men there by the 30th of June, 1918?

Ans. I will give you the figures there, in a minute. There are about 880,000 troops by the end of June; that is the estimate of supply and auxiliaries, etc., as mentioned in

RANMELL. By the end of June?

Ans. By the end of June. That is the arrival in the United States. These are the Navy's figures of the total at the time they reported. They reported back to us. Here is a memorandum submitted to me by the officer who handled convoys, and passed directly through his office of the amount of troops on each transport, etc. [Reading:]

UNITED STATES NAVAL FORCES,  
OPERATING IN EUROPEAN WATERS,  
U. S. S. "MELVILLE" FLAGSHIP,  
July 12, 1918.

to the Admiral.

There have arrived in Europe 878,878 troops. These have been

| ..... | 878,878 |

more than 50 per cent total to date.

Since the British began to reorganize their shipping, placing combined convoys on the run between United States and England. The first was in England on May 7. During May an additional 114-knot troop transport and the first convoy arrived on May 24. The process of reorganizing. During the months of May and June 55 per cent of the troops were in British ships or in ships under British control. During the month of June in British was about 57 per cent.

There is also increasing its fleet of transports by adding Dutch ships. Also a contract has been made with the French to use a number of their ships to carry troops direct to Europe. Thus far French ships have contributed nothing to troop transport.

July, thus far would indicate that July will be the biggest month to date, upwards of 250,000 troops carried during this month. It looks as if we could carry about 55 per cent of the total for the month of July.

A periodical report that was sent in by the man handling the reports. He got all the figures as they came through.

MAN. When was the great troop shipment from the

Admiral SIMS. It began after the drive in March. It April. Just running down through the figures, without taking details of the entries, I find: January, 40,000; February, 72,000; March, 72,000; April, 104,000. Now we begin to get the numbers. May, 233,000; June, 230,000; July, 318,000; August, 311,000; September, 202,000; October, 202,000; November, 97,000. It began with May—say, the 1st of May or the latter part. In April there were 104,000 and in May 233,000. So that it latter part of April. The drive began on the 21st of May. I remember it.

Senator TRAMMELL. Was there more allied shipping in May than there was in October, 1917?

Admiral SIMS. Was there more allied shipping when?

Senator PITTMAN. In April, 1918?

Admiral SIMS. Than there was in November, 1917?

Senator PITTMAN. In November, 1917?

Admiral SIMS. No; it was still going down. No, it did not increase, the shipping, up until what was the month?

Senator PITTMAN. And yet in April, when you had less tonnage—

Admiral SIMS. What month?

Senator PITTMAN. April, 1918, when you had less allied than in November, 1917—

Admiral SIMS. Yes.

Senator PITTMAN. You transported 247,000 troops?

Admiral SIMS. Yes.

Senator PITTMAN. Two hundred and forty-seven thousand hundred and fourteen troops?

Admiral SIMS. Yes.

Senator PITTMAN. While in November, 1917, you transported 23,722 only.

Admiral SIMS. Yes.

Senator PITTMAN. In other words, when you had less tonnage, there were transported over ten times as many troops, month?

Admiral SIMS. Yes. I think you were out of the room. I explained why they were able to do that. I think you heard and Senator Trammell was talking to me about it. The reason we were able to do that was this: When we were in this point curve—and this is very important—where these things were diverging from each other, the future looked very black, as Mr. [unclear] explained. We did not see how we could escape defeat. We put the convoy system into operation the losses of shipping began to go down, and building of shipping began to go up. Just as we got up about here and here [indicating on chart], knowing we were approaching the point where they would cross, we then that the submarine campaign could not win for Germany then we were able to bring in ships from the outside that route, that we would not have dared to bring in before. I think the point I want to make very clear. As long as these lines diverging from each other, and the loss of shipping was very greater than the building, we did not dare haul those ships in all over the world, and concentrate the shipping all in on one line. When it began to come down this way [indicating on chart], we

measurable time these two lines would cross each other, ~~the~~ would be superior to losses; but until we could see ~~a~~ converging—and we kept this curve for that purpose; ~~acted~~ that they would cross there, and I predicted within ~~something~~ like that of the exact time—we did not dare ~~use~~ ships. This was all done in sight of the members of ~~council~~. They said where they were going to get this ~~was~~ and it was not that they had less tonnage to use for ~~but~~ it was that they could use tonnage that they did not ~~have~~.

PITTMAN. I am not interested in the reason. I just say ~~that~~ that it was within your power that with the tonnage ~~we~~ did transport 247,000 tons in April, 1918, when you ~~used~~ 23,000 with a greater tonnage in November, 1917. ~~Sims~~ Certainly it was within our power, but it was not ~~bits~~ of ordinary, mere common sense to have done it ~~at~~ those curves converging.

PITTMAN. I am saying it was possible.

Sims. The possibility has not anything to do with it at ~~made~~ as a combined military decision of all the military ~~there~~ in the supreme war council, with all the naval ~~and~~ stopping men with the fate of the country in their ~~therefore~~ it was not possible to do it at all as long as ~~it~~ remained the same as they are.

PITTMAN. In other words, there were British ships on ~~the~~ runs that could have been used?

Sims. No; the ships were British, French, Italian, Portuguese ~~all~~ sorts of ships. They were bringing supplies along ~~from~~ South America into the United States; many of those ~~absolutely~~ essential, many of them articles that the war ~~could~~ without. But as soon as we saw that we had the ~~campaign~~ a failure, then we could bring those ships in. ~~we~~ say that it was possible before. Of course, it is possible ~~any~~ thing in the world, but no reasonable man sitting ~~at~~ table could have done it before that.

PITTMAN. No; but if there had been a million troops in ~~States~~ in 1917, which there were not, and their immediate ~~France~~ was essential to win the war, they would have ~~been~~ there?

Sims. They could not have been gotten there at that time ~~in~~ our way clear, because there would have been no way ~~in~~ there. We would have had an Army there all dressed ~~place~~ to go. We did not dare to put too many troops

PITTMAN. I see. Then Gen. Pershing was not in such a ~~of~~ them there after all?

Sims. According to what he says, he was.

PITTMAN. But you say that you would have had them ~~lined~~ up and no place to go.

Sims. The thing has to be carefully worked out as to ~~is~~ going to do. You have got to have the tonnage. Our ~~was~~ was due to the fact that there were 2,500,000 tons ~~by~~ our not going into the war in the beginning. Now ~~that~~ that thing is a matter of military opinion, and t

no doubt in the world that about 2,500,000 tons were lost unnecessarily to the allied cause by our not going into the war until

Senator PITTMAN. You mean not declaring war sooner?

Admiral SIMS. No; I mean not putting forth our early action as we could have done in April, 1918, and resisting the convoy. That is what hurt us, not sending the antisubmarine forces to the other side, which would help convoy, because we convoyed ships with only five or six destroyers. That was a scandal. Our ships were bumming up and down our coast here, and they would not send them over. They would not give them cruisers to port them across the ocean, to protect them against raiders. It is the whole business about it.

Senator PITTMAN. That is a technical matter?

Admiral SIMS. No, it is not a technical matter. It is just common, ordinary common sense. There was a war going on there, and they did not send the ships over. It was months before any of them got there.

Senator PITTMAN. Undoubtedly there will be some other action come on here and explain every policy here, and I imagine they got some common sense.

Admiral SIMS. They are going to be up against it.

Senator PITTMAN. All the admirals in the Navy will be up against it.

Admiral SIMS. They surely will if they undertake to explain they could fight the war on this side. What we are trying to do is to get Senator Pittman—and you are a good American and you are with us in this—is this: God help us if this had been a real war. As far as the Navy was concerned, if we had declared war against a single power that was ready on the drop of the hat with a submarine, where would we have been? None of our ships, to speak of, would be ready. There was no plan made as to what we were going to do with the submarine campaign; and officers of the Navy are here over that as soon as they find it out; and we do not want it to happen any more, and that is the reason we are bringing this out, to have it discussed.

Senator PITTMAN. The question of having an efficient fleet is a matter, of course, that appeals to every naval officer, and I think it appeals to every member of the Naval Committee.

Admiral SIMS. Yes; it is the first line of defense.

Senator PITTMAN. And it has, for a long time; but there are no votes in Congress to whom it does not appeal very strongly. There is an appropriation bill prepared by the department and passed, but what it is cut all to pieces. When the three-year naval program came up, the House cut it all to pieces, and the Senate Naval Committee doubled it and extended the life of it. But that is a matter of policy, of course, that is established by representatives of the various sections of the country.

Admiral SIMS. Yes; I understand that.

Senator PITTMAN. You can not build ships or repair ships nor maintain personnel for ships without money. That policy we are not going to get into.

Admiral SIMS. No. What I am speaking about is that they did not use the ships they had.

Senator PITTMAN. Yes; and I am confining my objection to the line of testimony on that. The only thing I am questioning is

SEAS. I consider hasty statements on your part with regard to the safety of the Navy; and I have not any doubt that you saw the plans adopted by the board here with regard to the coast were absurd, and yet some of those are very wise who felt that the first consideration of the Navy was the safety of the ports of the United States.

SEAS. You can not protect the ports when they are not

SEAS. Yes; I understand that; but they thought they were attacked.

SEAS. Very well; but I told them, and it turned out to be true. I said "There will never be a submarine leave the coast without my telling you her name and number and when she is going to do." Listen to this: A submarine that comes from the other side to attack our ships would have no chance. It has got to come over at a speed of 4 or 5 knots and it takes nearly a month; and our submarines, as I said, come at double the speed, because they come right back and refuel; and the destroyers could be sent back. In the situation, with a war going on 3,000 miles from the coast, holding back the forces here for fear some of these submarines would come through and come over here and attack the coast. If they attacked the coast in any force at all they must have lost it. Like this: There are the ports of the submarines, separated by 1,000 miles. Everything that leaves out of those ports across the ocean has got to go back in that hole there. If they come in coming way over here looking for them, when they come right back there to go back in their hole. I considered it certain that the war would be lost to the submarines if we sent their submarines over here.

SEAS. They could not have sent them without my knowing it. They could not have sent them over here. I told them every time a submarine left where she would go and where she would lay her head. I told them all about it every time. If they were not satisfied that information was all right, for the Lord's sake, why did they send somebody else over there that they would believe

SEAS. I do not know whether you are right or wrong as a naval officer.

SEAS. I do. I know.

SEAS. I know you are indiscreet about some statements that you have had to take back, so far, during the

SEAS. Yes. Let me tell you one thing. I would like to say that in all the propositions that were made on the subject of putting down of the submarine campaign, all of them, with exception, the ones that are worth talking about, were sent to the Navy Department during a period of three or four months, and were then finally accepted and adopted. There was no question as to the right in the opinion of the Navy Department of the plan that was put up by the Navy Department on the subject of particular importance, was rejected by the Naval Board on the other side as not being practicable, and was finally, after a delay of two or three months, acknowledged by the

Navy Department here as not being practicable. That is what they are complaining about; the violation of every principle of strategy, that you send a man where the fighting is going on to catch the fighting, and then try to tell him, from a distance of 3,000 miles, a little thing that he is to do. We can not afford to put up with that sort of thing another time.

Senator PITTMAN. I know one thing, if they had accepted your advice and taken it, you would have escaped one unfortunate accident and that is this hearing.

Admiral SIMS. Let me interrupt, right there, please. It is a question of my advice in the case. You can go through the whole thing, my money, and you can find repeated expressions about "my advice," but it was not my advice. It was the advice of the ablest men of the allied navies, sitting around in a council chamber, men who had three years of experience in this war, and the whole thing was thrashed out with the army people on the other side; and the decisions were sent over here. That is what is called, popular advice. Every one of those decisions was reached after a long discussion of those able men, and was based on the discussion. You could send to any part of the admiralty in Paris, or wherever it was, and get all the information on anything and lay it on a table, and we would sit there for a week, if necessary, and discuss the things, and we would determine on the policy and then I would go it to Washington, and what happened? Nothing doing. They would not even discuss it; and then after two or three months of correspondence, finally they would say "The scheme of the council"—not my scheme—"is approved, and we will adopt it."

Senator PITTMAN. Did they ever follow your advice in recommending catching submarines with fish nets?

Admiral SIMS. With fish nets?

Senator PITTMAN. No; with nets?

Admiral SIMS. I do not understand.

Senator PITTMAN. Did they follow your advice about catching these submarines out of the ocean?

Admiral SIMS. They tried every possible scheme. They tried floating nets with glass balls on the top, not to catch the submarine but in order to trace him. During the years we were out of the country, certain information drifted over here in various ways. I was frequently by church societies and such organizations to tell what I knew about the submarine campaign. We did not know much about what they were doing on the other side then, and some of the attachés who were over on the other side, and those serving in Washington, had been on the other side, and they told us what they knew about it, and it was full of misinformation; the lectures delivered then there were a good many things given to us as actual information, which were not true, or they had been tried and were not successful. Among those were the floating nets, as they called them. They would suspect the presence of a submarine and they would put out a drift net with glass balls on top, and the idea is that the submarine comes along and puts his nose into the net and he can not get clear of it, and he is drawn along these glass balls on the top, and it shows you where he is. I never recommended anything after I got over on the other side.

the result of full conferences, naturally, with those leaders

**MITMAN.** I do not believe that I have time to finish now, have not much more.

**MAN.** I think that we had better adjourn now. It is

at 1 o'clock p. m., the subcommittee took a recess (back p. m.)

#### AFTERNOON SESSION.

Committee reconvened at 2.30 o'clock p. m., Senator (chairman) presiding.

#### LOY OF ADMIRAL WILLIAM S. SIMS—Resumed.

**MITMAN.** We will just turn to another question and go on after that I had in mind. The *Vaterland*, with regard to note on November 2, 1919, was afterwards known as the

**MAN.** The *Leviathan*.

**MITMAN.** Did you not, Admiral, on the 24th of October, as follows:

opinion is against using the ship *Leviathan* as a transport. Her length is greater than smaller vessels.

On October 28, 1917, you reported:

and using United States ship *Leviathan* already have been submitted.

Now when the *Leviathan* was put in service as a transport

**MAN.** I could not tell you about that; but I can tell you recommended that she should not be used, and that was on the lack of facilities in places to get her coal. As I remember now, she required about 8,000 tons of coal. She was a passenger steamer and required a great deal of coal; and it was not in France. It had to be taken there.

**MITMAN.** The *Leviathan* did carry over 100,000 American to France, did she not?

**MAN.** Yes; when we got the facilities for her, and when we got five different big anchors in the harbor so that she could hold there, then she was used as a transport. She was one of the things that although her anchor was of the very largest size could not hold her at all, even in a moderate breeze. When all these things cleared up we used her as a transport to bring

The reason we put that down, not to use her as a transport, first, had holding ground; second, lack of port facilities; third, too much delay in disembarking and coaling, owing to the position where she had to lie out, at Brest. We had not enough lighters and steam lighters, etc. When all those difficulties were overcome, as I say, she was used with great success as a

**MITMAN.** You know that in December they began to use her as a transport?

Admiral SIMS. I would have to look up the records. I know.

Senator PITTMAN. Here is a letter of February 9, 1918, which is as follows:

I have just had a conference with the Admiralty and the Ministry of Marine regarding the use of the *Leviathan*, *Olympic*, *Aquitania* and *Mauretania* as troop transports. The following points were discussed.

#### USE OF LARGE SHIPS.

There was complete accord in the opinion that the use of these ships for troop transports introduces a considerable element of danger, owing to the large size of these vessels. I pointed out, however, that this added danger would be accepted in order to carry out the programme of troop transport. The Admiralty officials wished to have it recorded that they considered the increase in risk in using these large vessels was marked, and that we might expect to lose one of these vessels at any time. All agreed, however, that the shipping situation required that these vessels be used for troop transports, assuming the necessity for evacuation of a large number of troops from America. Every effort will be made to give these vessels adequate protection.

#### SUITABLE PORTS FOR LARGE VESSELS.

A representative of the ministry of shipping desired that all of these vessels use Brest, but it was pointed out that Brest has no facilities for handling these vessels and can not provide the necessary coal. The Admiralty officials were opposed to the use of Southampton on account of the added danger of submarines.

That is, having to go all through the channel.

In this I agree under present conditions. There remain only the ports of Liverpool and Glasgow. Of these Glasgow can not provide docks, and there is difficulty in providing water and coal. Liverpool is the only port that can be satisfactorily used, and even this port has many limitations. Already it is congested. During the last few weeks a greater number of submarines than usual have passed north about the Dover Straits, and have entered the English Channel via the Dover Straits. This has greatly added to the dangers of the use of Liverpool; but at the same time this port is safer than that of Southampton under present conditions, and is the only port that can be used for these large vessels. In an emergency these vessels can be used in the Clyde below Glasgow; but troops would have to be transferred by tugboats, and tugs would also have to remain in attendance in the event of the vessels being attacked.

#### RÉSUMÉ.

I think it is clear to the department that there is some added risk in using these large vessels, and that there are many limitations to the employment of these vessels. We are restricted to use of British harbors, owing to the lack of suitable harbors in France and lack of coal in France. With the submarine situation as it is at present, and as it has been for some time, we are practically restricted to the use of Liverpool, and the congestion and lack of facilities in this port for large vessels restricts us to having not more than two of these large vessels in port at the same time. Liverpool has but two berths that can accommodate these large ships under all conditions.

It will be necessary to arrange westward sailings in advance of the arrival of the bound transports.

That was the difficulty. When those difficulties were removed we used her with great facility.

Senator PITTMAN. What was the date of that?

Admiral SIMS. February 9, 1918.

Senator PITTMAN. And your first reported objection to it was in October?

Admiral SIMS. Sir?

Senator PITTMAN. Your first reported objection to the use of the *Leviathan* was in October, 1917?

1 SENS. October.

1 PITTMAN. In which you said that the consensus of opinion was using the United States ship *Leviathan* as a troop transport, her length made her a better target than smaller

1 SENS. Yes.

1 PITTMAN. Now, Admiral, that is only a memorandum of what we have.

1 About this submarine menace, and about your plan for dealing with it, how soon after the war began—I mean the European

1 SENS. How soon after what?

1 PITTMAN. How soon after Germany and Great Britain entered in war, did they commence to use the submarine?

1 SENS. Very soon after the war there was torpedoing of ships. The whole of that situation is given in the best form. I should say, in Admiral von Tirpitz's book, where he states his attitude as to the use of the submarine, and the prime British attitude, and he explains in there the initiation of submarine attacks, and the limitations, and their suspension, up to the final decision to start the unrestricted submarine

I could not give you those dates now.

1 PITTMAN. It commenced in 1914?

1 SENS. Commencing in 1914.

1 PITTMAN. They did commence, I say, in 1914?

1 SENS. There were torpedoings in 1914.

1 PITTMAN. Yes.

1 SENS. Shortly after the war began.

1 PITTMAN. As a naval officer, I suppose you were interested in any of the problems created by those submarines in naval

1 SENS. Certainly; yes.

1 PITTMAN. And you were studying it from the time it commenced to the end of the war?

1 SENS. In ignorance, at first; as to the conditions, the same as officers were. That is a very singular thing. If you will look at thing in Von Tirpitz's book, and in the articles that I am recently publishing, you will see that the opinions of practically the naval officers in the world as to what the submarine could do, and its limitations, were almost grotesquely in error. I wrote one of these articles to make the statement that none of us at the beginning of the war, how much the submarine could do, did not want to make that statement without backing it up with necessary evidence, because there were a good many officers who did not know what that evidence was, and in looking it up I found that the principal officers of the British service, many years before the war, had expressed their opinion that they thought a submarine would be able to do, and I do not think that any of them, according to these statements, believed that a submarine could operate any considerable length of time away from its base, and consequently they believed that it could not go any considerable distance away from its base.

1 The *Audacious* was torpedoed, you will find in the British account, and also in Admiral von Tirpitz's book, the

British were so sure that that submarine which laid the mine blew up the *Audacious* could not have been operating from Wexhaven in the Heligoland Bight, but that it must have an base some place; that they searched the west coast of Germany minutely to see if they could find the base. The expressions of naval officers before the war were to the effect that submarines have to have parent ships with them; that the question of inhospitality alone would prevent them operating any length of time from their base. So strong was that opinion in the German Government itself that, although Admiral von Tirpitz, in his building program insisted upon submarines that were seagoing and not merely to operate around their own coast, so strong was that opinion that they had to have a very secret experiment carried out to demonstrate to his own people something of what a submarine could do. According to his statement in his book he sent a number of submarines, I think there were 11 of them, to go 300 miles north of the North Sea and see how long they could remain; and they remained for 11 days, which was a very astonishing thing at that time. It demonstrated that they could do that.

With further improvements as to inhospitality, as you know, they were able to operate much farther.

It is perfectly safe to say that it was a surprise to practical naval officers in the world to find that submarines operated to three hundred and 400 miles west of the west coast of Ireland, west of the west coast of France, and that they remained usually anywhere from two to four weeks, depending upon the luck they had, the limitation being the ammunition that they carried, the ammunition being torpedoes.

Before the unrestricted campaign they used to sink ships by surface fire. They would pop up out of the water close by a ship and would have to stop and surrender on pain of being torpedoed. They would send a boat to take off what they wanted from the ship, allow the crew to take to the boats, put an inexperienced bomb on board, blow a hole in her bottom, and watch her sink.

When the unrestricted campaign came on and when vessels were generally speaking, armed, they had to attack without warning from under the water by torpedo, and when their torpedoes were exhausted they had to return. That, generally speaking, was the information they had about submarines at the beginning of the war.

Senator PITTMAN. You mean at the beginning of the German war?

Admiral SIMS. At the beginning of the German war.

Senator PITTMAN. Not our war with Germany?

Admiral SIMS. No, no. By the time of our war with Germany we knew better what they could do. But they did some things after we joined it, also.

Senator PITTMAN. How long was it before it was discovered that submarines were out in the Atlantic?

Admiral SIMS. It was very early in the war when the *Audacious* was torpedoed. They knew then, directly afterwards, that they were operating out there, because she laid a mine that the *Audacious* ran into.

Senator PITTMAN. Very soon after the beginning of the war?

Admiral SIMS. I do not remember just the date.

PITTMAN. Now, Admiral, you have criticized the fact that we went into the war, in 1917, we were not sufficiently to meet this submarine destruction. You had been studying as a very high expert, and on December 19—

SEN. Studying the question with a very grave lack of as to what the conditions were over there.

PITTMAN. Yes.

SEN. We did not send over officers to any great extent to information, and we did not know much about it.

PITTMAN. The fact was that there were certain physical could be observed, that came to us, with regard to the of vessels on the Atlantic, such as the *Audacious*.

SEN. Yes.

PITTMAN. On December 19, 1916, about four months entered the war—in fact, less—the Naval Affairs Committee House of Representatives was dealing with the question of a Navy. I assume to be, when you gave this advice matter. I am reading from the hearings before the Committee on Naval Affairs of the House of Representatives on the committed by the Secretary of the Navy, 1917, at page 112.

With a reasonable number of submarines at the Canal an enemy fleet very close, could it?

I think I took that question up with the committee when I was here

in March. I think.

Understand that a submarine cuts no ice at all as long as your enemy has some of the area in which he wishes to operate. A fleet has line after line and as soon as a submarine comes along she has to go to the bottom.

But where you have a comparatively narrow territory to guard, would it be parallel to that along the German coast?

As far as you can reach out with your guns at the Canal entrance, or as far as the entrance as you are willing to build fortifications, you are safe from attack by a foreign fleet, because a fleet can not stand the fire of guns that will where they can not be reached by ship's guns; and they can not enter the area which you are disposed to protect by fortifications. But if a fleet strong enough to keep them from coming over here at all they can be at your mercy, and you are at their mercy. It is foolish to suppose a fleet strong enough to oppose the enemy's fleet and protect the canal from attack by submarines.

Look at the band of water across the English Channel, where hundreds of ships and hundreds of thousands of tons of supplies have been sent and transports are going back and forth all the time and nothing is done to see that water is thoroughly patrolled.

Whether you gentlemen know how dangerous a sufficient number of submarines are for submarines. I have explained that to perhaps 15 or 20 miles wide you have wanted to know about the Navy. To give you an idea of the danger let me say this: Suppose this table is the English Channel. Divide it into sectors, and each sector is in command of an officer, with a flotilla for the whole business. They protect the channel against submarines. The channel is regularly patrolled, and that patrol is kept at work all the time for a submarine to get through that patrol are very small. If a submarine was sighted here [illustrating]. As soon as the command the submarine she has got to go down. The commander of the flotilla immediately sends out a wireless saying the submarine was at such and such a time, say 6 o'clock in the morning. By 7 o'clock the submarine is in that area [illustrating], and by 8 o'clock it will be within this distance.

See the flotilla at this point [illustrating] will start out his flotilla from there, and deploy on a line from there to there [illustrating] by 2

o'clock, and if the submarine is there it will be seen. At the same time ~~see~~ out, and they begin to look for the submarine, and look for traces of the ~~on~~ on the surface of the water caused by that body going through underneath ~~for~~ for although the submarine may be down 100 or 150 feet, there will be a ~~on~~ on the surface. The waves are of a certain regularity on top, and that ~~reg~~ be disturbed by any vessel passing beneath the surface. As soon as the ~~aer~~ aeroplane sees the disturbance on the surface he will notify the destroyer, and the destroyer lowers a net in front of the submarine.

This net is about 300 yards long and about 100 feet deep. It is made of not much bigger around than a match, and the meshes are about 10 feet ~~a~~ when you bundle it up it makes a very small bundle, and you can put it ~~in~~ in a trough on the stern of a destroyer. The submarine comes along here ~~the~~ and this net is put out, and it forms a barrier in front of the submarine. The ~~sticks~~ sticks its nose through one of these meshes in the net and is caught. The ~~net~~ net remain on the surface, and the submarine can not get away from it. ~~down~~ down to the bottom, the patrol boats know where she is, and then the ~~com~~ the submarine is ordered to say whether he will come up or not.

That is what makes it dangerous for the submarines to operate in the English

If a fleet is coming along, it has a line of scouts out here [illustrating] and ~~there~~ there [illustrating], advancing toward the canal, and any submarine that ~~of~~ of scouts knows the fleet is behind, and if the submarine goes down the ~~com~~ knows that by the time he gets to where the fleet is his ability to steam under ~~will~~ will be about gone.

The submarine on the surface is like a powerful gasoline automobile; it ~~long~~ long as its fuel lasts, but can not use its oil engines when submerged. As ~~a~~ boat goes below the surface it becomes an "electric runabout," being propelled by electric motors, and when the batteries are exhausted he has to come to the ~~go~~ go to the bottom. After he gets to the surface he has to stay until he ~~charges~~ charges his batteries again. Submarines are no good at all in the face of an enemy who comes to the surface of the water.

Mr. CALLAWAY. What have you to say about the action of the submarines in the British fleet was at the Dardanelles?

Capt. SIMS. They attempted it several times. The submarine which torpedoed three British cruisers at the beginning of the war attempted to attack the British fleet and so far as we know that is the only one who has ever gotten at the British fleet. When he went down he went under the screens and came up in the middle of the fleet and was promptly rammed and sunk.

Mr. CALLAWAY. At the Dardanelles they went in there and began to do everything.

Capt. SIMS. They sank vessels in there. The trouble about the whole business is that there are not enough boats in the world to patrol all the areas you want to patrol. The British Navy has probably about 200 destroyers with the fleet, and they stay there for fear the German fleet will come out.

Mr. CALLAWAY. There were quite a number of ships at the Dardanelles, and they had complete control of the surface of the water, and one submarine went in there and it sank two battleships, and at the time it sank the last one the statement was that the smaller craft steaming to the aid of the sinking ship were so many that the smoke from the vessels almost obscured the sun, and they did not discover the submarine came from.

Capt. SIMS. They did not understand at the beginning of the war how to attack the submarine. That would never happen now. As to how the submarine would be opposed, that is a question of nets. If this fellow goes down to the bottom instead of electing to run, and they wait for him in that area and do not let him go, they conclude he must be on the bottom.

Did the Navy Department follow your advice with regard to these nets?

Admiral SIMS. I never gave any advice.

Senator PITTMAN. I assumed that that was advice.

Admiral SIMS. Not at all, sir. That was simply repeating a statement that I heard at the War College by an officer who had been over there during the greater part of the war. Just how much of it was true I do not know. I was informed since that they did in the latter part of the war use nets with some success until the German submarines *onto it and rigged their boats with appliances that would easily pass a net.*

used in the early part of the war with great success, soon found that with these net cutters they could stick any net of any size unless the net would give, as they say, and did not bring it up with a halt. All sorts of methods of just whether those are descriptions of actual things or not I am sure I do not know. I listened to this lecture with considerable interest at the War College by a man who had been on the other side, telling what he knew at that time. Of course, most of that thing was in connection with what I told them about the Panama Canal, etc. That is entirely true. If you control the surface of the water and have a sufficient number of patrol boats, you can go practically where you please in spite of submarines, as you have seen done all during the war by the

Grand Fleet is the perfect example of the convoy; that is to say, they are adequately protected that they can go practically where they please with immunity from the submarine. You will find in my book that during the first, probably, two weeks of the war the Grand Fleet used an anchorage at Scapa Flow, in the northern end of Scotland, in the islands, every day a submarine was reported outside in the neighborhood, the fleet would be in the harbor, and would go out, proceeded and surrounded by submarines, being the safest place it could be; because a fleet at anchor, or going slowly, is always in danger from submarines. In port it is practically helpless unless the harbor is protected by nets and mines, which was not the case at

Mr. PATTMAN. That is all.

Mr. PATTMAN. I find that the draft law was passed on the 18th of June, 1917, and registration took place on June 5, and the first call on July 20, and the men reported on September 5. But it is that aside from the men who were drafted, there was a considerable number of volunteers in the war, somewhere between 100,000 I think, and these volunteers included the National Guard. Now Admiral Sims, can you give me any idea how many men there were serving under the colors on the 1st day of January, 1918?

Mr. SIMS. You mean in our own country or in France?

Mr. PATTMAN. Can you tell us, altogether, at that time?

Mr. SIMS. Both in France and America?

Mr. PATTMAN. Yes.

Mr. SIMS. I could not give you the figures on that, but it was a considerable number.

Mr. PATTMAN. Can you give us the figures so that they can be put in the record?

Mr. SIMS. Yes; I can get those figures.

Mr. PATTMAN. Of how many men there were serving under our colors in this country and abroad, on the first day of each month of the war up to the 1st day of January, 1918?

Mr. SIMS. I will get that thing to insert in the record.

Mr. PATTMAN. How many men had we transported to Europe on the 1st of January, 1918?

Mr. SIMS. On December 31, 1918, there were 176,665 American troops in France, and but one division had appeared on the front. Gen. Pershing's report, page 18.

The CHAIRMAN. Therefore, if we had volunteers to the number 700,000 to 800,000, and there were only 176,000 in Europe, that is a large number of men before the draft took place, in this country.

Admiral SIMS. Yes, sir.

The CHAIRMAN. Who would have been available for service?

Admiral SIMS. Yes, sir; there must have been. And, as it seems to me that as we actually demonstrated, after the month of April, immediately after the month of April, 1918, that we could have had over 300,000 a month and keep it up until there were certainly a million there, it makes it perfectly certain that in the six months preceding we could have done pretty much the same thing if we had the tonnage; but we did not have the tonnage.

The CHAIRMAN. You have stated this morning, or Gen. Pershing's report as read by you has stated, that we ought to have had a total of 1,000,000 men in Europe by the 1st of May.

Admiral SIMS. The 1st of May, 1918.

The CHAIRMAN. And how many men were transported in May?

Admiral SIMS. Up to May?

The CHAIRMAN. No; in May; during May, 1918.

Admiral SIMS. It was a small number in May. No; in May there were about 233,000. I remember that now.

The CHAIRMAN. And in June, 1918, how many?

Admiral SIMS. I can not quite be sure; but I have the figures. In April it was 104,000 and in May it was 233,000.

The CHAIRMAN. I want the figures substantially. You can give them afterwards.

Admiral SIMS. There were 233,000 transported in May, and then it began to go up more rapidly and in July there were 317,000.

The CHAIRMAN. And on the 1st day of July there were about 317,000 men on the other side?

Admiral SIMS. Yes; in June there were 285,000.

The CHAIRMAN. The last of June?

Admiral SIMS. Yes.

The CHAIRMAN. Therefore, subtracting the troops that went in May and June, on the 1st day of May, when Gen. Pershing's report should have a million men there, there were very little over a million men there; is that true?

Admiral SIMS. Something like 600,000, I should say. I have the figures here now. In April there went over 104,000; in May 233,000; in June 230,000; in July 317,000. Now, we can give you any figures that you would like to have.

The CHAIRMAN. Will you give those figures to the reporter? I made the point that I had in mind.

Admiral SIMS. These figures show that in the first of May there were 420,000, and in reference to these figures, if you come to compare these with any others, remember this, that these are the figures from our own headquarters in London, representing the arrivals of troops at the port. The report I read to you a little while ago was made by a captain who had charge of the routing of all convoys, and when a convoy arrived with troopships, it was automatically reported how many ships we had and how many troops on board. We did not report that before us. That did not represent troops at the front or at the rear, *except arrivals at the western ports of France, and some in other ports.*

on March 21 there were about 300,000, and on May 31 600,000 from Gen. Pershing's report.

REMAN. You will get those figures and give them to us, and put them into the record?

SEAS. Putting them in the record at this point?

REMAN. The above referred to are here included in the record:)

*Strength of the Army in the United States and in the Expeditionary Forces on the first of each month.*

[From Report of the Secretary of War for 1918.]

| Date. | In United States and foreign possessions. | In the American Expeditionary Forces. | Total.    |

| ..... | 2,811,000               |

The CHAIRMAN. Yes. I want to ask you now a few about the convoy plan. The British put a convoy plan into effect on the 21st of May, 1918, did they not?

Admiral SIMS. The first convoy arrived in Great Britain 20th of May. They started to put it in about the 1st of May sent an officer down to Gibraltar to instruct them on each ship, and give them information, and it took some time to get signalmen, and it took some time to get ready, and then appointed a convoy commander; and the first convoy arrived in the channel on the 20th of May, and on the 31st of May I called the department that they had adopted the convoy in transport. The first place, on May 1 I cabled to the Navy Department as follows:

British Admiralty has decided to give trial to the convoy scheme described in last dispatch. Instead of present plan of naval forces operating independent of raiders, there will be a high sea convoy against raiders, such convoy to be organized as quickly as possible on all main trade routes, and on approach to dangerous waters this side will be met by destroyers and escorted into port. Hampton Roads and New York have been proposed as assembly ports for eastbound vessels on our Atlantic Gulf, with convoys sailing every fourth day. Plan decided on after long consultation by Admiralty and war council, and is considered absolutely necessary. It is a heavy strain on British resources of personnel and ships to the limit and we must assist by the same route, at least, if the plan is to be carried out. Admiralty desire to be assured whether we can provide escorts for convoys sailing from the rendezvous at New York. British estimate about 14 ships will be required for New York service, and a number of other routes, including Mediterranean and South America. American ships should have sustained sea speed of at least 12 knots and 6-inch guns. I very much recommend favorable action. Through British naval representative at Washington details of plan will be communicated from time to time as necessary.

That was May 1, 1917. On May 31 I cabled as follows:

With reference to my two previous dispatches concerning convoy system of merchant shipping. Scandinavian and North Sea convoys now in force over the Atlantic have proved very successful. First ocean convoy from Gibraltar arrived at New York May 20. Second ocean convoy from Hampton Roads of 12 merchant ships escorted by British cruiser sailed May 24. They will be met outside and escorted through the marine danger zone.

The CHAIRMAN. Was that the first American convoy?

Admiral SIMS. The first one from America.

The CHAIRMAN. That sailed on May 24?

Admiral SIMS. May 24. [Continuing reading:]

The department cooperation with the plan set forth in my dispatch of May 1 was urgently recommended. Early reply important in order that Admiralty plan might be governed accordingly.

The CHAIRMAN. And subsequent to that date the Navy Department sent all its merchant vessels over in convoys?

Admiral SIMS. They did not send them over in convoy, and did not get the thing in operation for some months after that.

The CHAIRMAN. What was the date of that?

Admiral SIMS. On July 5 was the first time that the Navy Department agreed to help out in the convoy, and they gave us 7 vessels on that occasion. They said they would provide 7 vessels instead of the 14.

The CHAIRMAN. Then on that date we had in all seven ships that were aiding in convoy?

SEN. Seven that they offered, yes, in the cablegram of 1917. I will read as follows from the department to August 10, 1917. [Reading:]

...the situation in regard to American shipping. A few vessels route direct to Europe.

...a few of their vessels. [Continuing reading:]

...Most ships confer with British shipping offices to get the latest information. An effort is being made to induce American ships to take advantage of the protection offered by convoy. It is not possible to compel this protection on vessels until the Government takes over all shipping. After studying your numerous cables on the subject, the conclusion that what you want now is for it to furnish, after departure, a sailing, etc., of the following class of American ships only; those sailing direct and not taking advantage of convoy. In the case of troops, and all Army and Navy cargo supply ships, you may route direct unless you instruct otherwise. All other reports of sailings, department reports through you, will cease.

ADMIRAL BENSON.

...convoy system was not in operation generally until certainly 1917.

SEN. At that time was the department doing everything possibly could to aid the convoy plan?

ADMIRAL. No, they were not, because they evidently did not stock in the convoy plan; and the reason of the thing was because of the false estimate of the situation that was made as to armed merchant ships. While I was at sea I have forgotten just the date now—I received a letter from the Secretary of the Navy which I have mentioned in my testimony, which reads:

...convoy, I consider that American vessels having armed guards are better off independently.

...long after that I received another cablegram from the department which was signed "Daniels," but, as I explained in my testimony, only the department in which it originates, which

...is strongly of the opinion, based on recent experiences, that the fitting of adequate guns and trained gun crews to merchant ships is one of the most effective defensive measures. Coupled with a rigid system of convoy, it is believed to constitute one of the most effective defensive measures.

...to cover, as its policy its willingness to cooperate in every way, and its intention of supplying additional naval forces of types other than destroyers, whenever the advisability of so doing is justified.

...is also considering the outline of a scheme which it is hoped will be a scheme of cooperation and ability to supply escort vessels through the United States without interfering with the destroyers' other duties as much as the present system of individual escort, and it will not displace the present system of merchant shipping from United States ports. Details when available.

DANIELS.

Secretary of the Navy.

...explained before, my discouragement on receiving those cables was very great, and I replied to the department giving evidence of the torpedoing within a period of five or six days of Queenstown of some thirty-odd vessels, none of which at the time were submarine or its periscope. Subsequently I received

what we call in the Navy an estimate of the situation, was drawn up in the Navy Department, and which was based on a particular measure of the arming of merchant ships, and the mate of the situation reasoned the whole business out very much based upon this premise, that if you have armed guard crews on the merchant vessels in charge of a competent officer, with a trained crew, that they will see the submarine in time to prevent a ship against the attack by the torpedo. Well, the difficulty of the whole business was that the premise was entirely wrong, as shown by the information I sent in from Queenstown, on the experience of the war, of the number of military vessels bristling with guns, and the well-trained mystery ships with guns on board, were out searching for submarines having been torpedoed without warning. And in this estimate of the situation it inveighed against the stupidity of the allied navies in not being able to see the submarines and thereby arming their vessels with competent crews and powerful navy guns. That I think must have been the reason why we resisted the convoy system.

But whether that was the reason or not, the convoy system was resisted until the date I stated, I think the 5th of July, when we offered us half the number of vessels that we wanted.

Now I do not want anybody to suppose that I ever expected the Navy Department to adopt any particular measure like that. I, Admiral Sims, said so. In all cases the recommendations sent in to the Navy Department were the recommendations that were based upon three years' experience of the war on the other side, the daily conferences with the admiralities concerned, with the knowledge before us of the position of every submarine on the seas, where the movements of those submarines had been, projecting the probable change in tactics of the submarines, and so forth, and based upon that, these recommendations went over. They were not my recommendations. They were the recommendations of the Allied navies, the armies at the front, and the attitude of the Navy Department was that they were not willing to base their action upon these recommendations until we could explain the whole matter fully to them, and it was up to me to do that over a very heavily overworked staff, and by correspondence, with the assistance of one aide, not to mention the fact that I was asked at the same time for information on a great number of technical subjects, that 20 competent officers could not supply. I can give you my word, gentlemen, it was a very hard earth.

The CHAIRMAN, Then, Admiral, it was not until the 1st of September, or six months after we had entered the war, that we began cooperating with the British effectively in the convoy plan?

Admiral SIMS. About that date, yes.

The CHAIRMAN. Do you recall when the convoy plan was suggested and talked over by the English?

Admiral SIMS. When I arrived in London the whole business was boiling down there in the admiralty. The convoy section, or, I may say the antisubmarine section, which was in charge of the naval operations, was the one that was particularly interested in it. It was up to them to devise means of protecting the shipping, and that was divided against itself. There was a captain and a number of commanders in that office with all their staff, and the thing was

the and studies on the thing had been drawn up, and it had at that time been decided.

There is an outline proposal for convoys by the Navy to ports including the St. Lawrence, and it is a very technical document. I do not think it is worth while to read it except to invite attention to the fact that the date is May 5. This was forwarded to the Admiralty on May 4, from the Admiralty to our Navy Department on May 4, from the Admiralty to our Navy Department as a proposal for a convoy system. So they had all the information there in Washington as to what the proposal was.

Q. What I want to know is whether the British Admiralty was considering the question of running convoys before we entered the war.

A. Yes; they had been considering it for some time.

Q. And one of the reasons that they could not do that was that the Navy could not take the destroyers and other ships out of the Grand Fleet?

A. They did not have enough to put it into operation, and the value of our coming into the war was that we supplied the British with destroyers to initiate that thing, and they were supplying the British with destroyers a month and it gradually built up from that. They did not have the cruisers to furnish the ocean escort.

Q. I call attention where they had to take the cruisers from. They were trying to prevent the exit of the German raiders from the North Sea by having a line of patrol vessels extend up to Iceland, and they had to head off some vessels and destroy some. The only way they could put the convoy system into operation naturally was to take the cruisers from this patrol system. If they did that, of course they would get no intimation of the raiders coming out. So they kept these cruisers there to keep back the raiders. They did not have enough cruisers to provide an escort of all the convoys. The reason why they were depending on the United States was that we could put out and furnish the cruisers, which we ultimately did and it was a long delay.

Q. Admiral, if our Navy had been thoroughly prepared at the time that we entered into the war, and could have provided the destroyers and cruisers for the use of the convoy system, is it your opinion that the British would have started the convoy system at that time if they had known that they could have availed themselves of it?

A. That is their proposal as you see in the telegrams of the 1st of May, and if we had been ready we could have taken the cruisers and the destroyers to put it in operation. It does not mean that you can put it in operation like that, but you have got to get information about the merchant steamers, you have got to be sent to the rendezvous, and you gradually build up the system according to their speeds, and so forth, but getting the system in complete operation would have taken place at least a month or two months earlier if we had been ready with our cruisers and submarine forces to jump right into it.

Q. And that in your opinion would have been one of the capital things that would have contributed toward ending the war?

A. According to figures that I gave this morning, of the first, second, and third periods, we would have

saved 2,500,000 tons of shipping if we had gone in to the war immediately.

The CHAIRMAN. Have you any comment to make on your November 9 to Admiral Bayly which Senator Pittman read this morning? The letter was read, but no questions were asked.

Admiral SIMS. The only thing I have got to say about that was simply stating to him what the conditions were on the western front. Recently there has been published a review of the conditions of the military critics on the other side, Gen. Maurice, who has been in this country lecturing, and he stated, in almost exactly the same words, what the condition was behind the British front and the French front in regard to the question of transports. I think anyone who has not looked at a military chart behind an army on the western front and seen the network of big and small railways, specially built automobile or motor roads can have very much a conception of what it means to suddenly move an army forward, or retreating enemy even 10 or 15 miles, when that all has to be done. He makes a distinct statement that none of the armies on the western front could have kept their transports going after the advance of the armies farther than they did. It takes too much time to build the roads. They have to depend on the motor roads. They cannot follow up quickly enough on the other roads. That same condition obtains behind all armies. It obtains behind any army for a long time afterwards.

The CHAIRMAN. In the testimony yesterday an unsigned memorandum was submitted by Senator Pittman referring to the most effective way to employ America's man power on the western front. Did you in your capacity as commander of the naval forces on the other side have anything to do with the question of brigading American troops?

Admiral SIMS. Nothing whatever, so far as concerned an official. I, of course, discussed it with Gen. Bliss, and I discussed it with a number of other people.

I should like to say in this connection with reference to papers that have been used that are marked "from Admiral Sims's personal file." Of course, in the position that I occupied on the other side there was a swarm of such arriving every day. Those letters were handled automatically. The only letters practically that I received were those that were always recognized by my secretary as being the handwriting of my wife. All other letters were opened up naturally a good many of them under general orders. They were letters from all kinds of cranks, and all kinds of inventors. They were opinions and advice given to me by everybody from Spain to Sinn Feiners. Those things were usually answered by some member of the staff, who would file the things in my personal files. The great bulk of those things I never saw at all. Now, when the Secretary of the Navy very late in the war, after giving up the idea of an established historical section in Washington to write up the history of this war, ordered me to establish one on the other side, I did it under the very able command of Capt. Knox, and I told Capt. Knox that he was at liberty not only to take out of the division files anything which he found had any bearing on the war, quite independent of his opinion as to whether it was correct or not, and that he should also go into my personal files and do the same thing, take out

of the personal files that he though might throw any light on a good many things in there that are exceedingly confidential they will be useful to a historian to show the atmosphere are letters there written to me by foreign officers of whom in which they have expressed opinions which would be embarrassing to those officers to have given out now, I mean would like to see those things as giving the general picture at the time. I only make this point to show that the document came out of my personal files, it does not mean I saw the document.

Q. Was. Or that you indorsed it in any way?

A. Yes. Or that I indorsed it in any way.

PITTMAN. Now, Admiral, on January 14, 1918, we have a memorandum —

Q. Was. Who is it from, sir?

PITTMAN. I will read it so as to identify it to you, or a moment I am referring to the one we are discussing.

Q. Was. The memorandum that you were talking about?

PITTMAN. The one that you have been talking about.

Q. Was. Yes.

PITTMAN (reading):

a small dinner last night at which were present Balfour, Cecil, and the host, a very important person. There was also present another somewhat radical views as to the most efficient way to employ American troops on the western front, instead of organizing a separate army with its own organization and supply. The above mentioned were greatly interested in the expression of these views approved of them and the discussion turned upon the means to realize them.

that that meant that Balfour and Cecil and Reading were pleased with the plan?

Q. Was. They were more pleased that Gen. Pershing did at a certain stage of the war.

PITTMAN. But this plan of January 14 was not to have anything with its own lines of communication and supply." as the memorandum says. Now, then, in the third paragraph of the memorandum it says. [Reading:]

we went to France to discuss the matter with Pershing, and came disappointed."

The memorandum evidently indicates that the writer of this memorandum considered that Pershing was very much opposed to the plan, and that he appealed to Balfour and Cecil and Reading?

Q. Was. That is the same plan he adopted, is it not?

PITTMAN. That is not the plan that Pershing was for on

January 24. I find your letter following 10 days after the memorandum was dated, in which it is said. [Reading:]

I am interested to know that the question I mentioned to you about the time the man power of America on the western front is now up for consideration.

On 30, 1918, we have the testimony of Mr. Byrnes to the effect that he had with you in Paris, which has already

been put in this record, and came out in the medals-awards [Reading:]

I shall never forget that interview. The armistice had been requested by the enemy. Sims told us of the magnificent progress made by the British on the British front, and as we listened he proceeded to tell us that the armistice was to be granted, because Pershing had been unable to break through the lines, owing to the absolute breakdown of transportation behind the American line.

That statement was substantiated not only by Senator Glass's testimony at that time and by a letter from Mr. Whaley, but also by a letter from Senator Glass in reply to your letter which was introduced in evidence this morning reaffirms it, analyzes it, and adds to it.

Admiral SIMS. Yes.

Senator PITTMAN. Now, then, still later we have this excerpt from another letter that you wrote to Admiral Bayly, of the British, on November 9, 1918, but two days before the armistice was signed. [Reading:]

It had been the opinion that it would be impossible to force the enemy back from the Argonne Forest, not only on account of the great difficulty of the terrain, but because the troops operating in this area could be supplied only over one road. It was hardly thought possible that this road could carry supplies for the number of troops necessary. There is no doubt that the military opinion was sound, assuming that the attacking forces were not willing to make greater sacrifices than troops are usually called upon to bear. That these sacrifices were not too apparent. Of course I do not know much about details at present, but I know that they were very severe. It turned out as was to be expected.

I want particularly to call attention to this as in line with the thought on this subject, and my opinion is evidenced by everything I have read.

Admiral SIMS. I do not understand.

Senator PITTMAN. I am calling your attention to this particular language as influencing me to believe that you not only had information on January 24, 1918, that there should not be a separate American Army, but that you had it on October 30, when you wrote to Senator Glass, Congressman Byrnes, and Congressman Whaley, but you still had it at the time you wrote this letter two days later. I am calling your attention to this language. [Continuing reading:]

It turned out as was to be expected—

Admiral SIMS. Behind the armies.

Senator PITTMAN (continuing reading):

That the road was not sufficient—

Admiral SIMS. It was not 20 miles long.

Senator PITTMAN (continuing reading):

To supply all the needs of the troops.

Admiral SIMS. That is right.

Senator PITTMAN. You told Senator Glass and Mr. Whaley that on October 30, according to their testimony, that you were of the opinion that the armistice was necessary because there was an absolute breakdown of transportation behind Pershing's line.

Admiral SIMS. Yes.

Senator PITTMAN. Here it is reiterated again on November 9, 1918. [Continuing reading:]

*Horses had to be slaughtered to supply the troops, notwithstanding the scarcity of horses at this time. However, there is nothing succeeds like success, and the crossing of the important railway line has been accomplished.*

Q. Everything that is stated in those letters I told Mr. Byrnes and Glass, and what they did not get and I have stated here, that I told a lot of other people about nothing, that it was being said, and Glass said that he went and was told the same thing there. It was those things being around the armies that I was trying to counteract, and not seize that point.

A. Making a statement that there was a single road there, that there was a single road that they had to use, 20 miles long, and a lot of trouble with it. As Gen. Maurice said, they were in trouble behind all armies. I never had any such idea, there had to be signed because we could not drive through. It had to be signed because the French people made a mistake the cost of carrying that on after the enemy had asked for it. The position that the Government of France was in. The enemy asked for an armistice, and when you means that you are willing to impose upon the army and an additional sacrifice. We naval men wanted the German to surrender instead of interned. Gen. Foch--I was not at that interview at all, but I was told that Gen. Foch had to say that we were all called down to Paris. The naval men that they thought should be the terms of the armistice, the army men on their side said what they thought should be the armistice. We had no joint meeting. But I was at when we Navy men wanted to insist upon the surrender of vessels instead of their being interned, Gen. Foch said:

Q. Did you wish the French people to submit to the sacrifice of from 50,000 men in order to change the word "interned" to "surrender"?

A. That I told many people at that time. We discussed it

Q. In that memorandum, I do not know anything about that. I do not know where it came from. It has been in my files, and many other things that I mentioned a little while ago. I did not at any time at any dinner where those men were Mr. Cecil and Reading.

A. Now, I call your attention to the similarity of your letter of January 24 to Admiral Bayly and the letters. The letters say [reading]:

Q. "The man power of America is on the western front."

A. [Reading]:

Q. "The way to employ America's man power is on the western front."

A. I did not say that in the memorandum. I do not know about it. That is what everybody was talking about, that was the conversation between military and naval people. Glass's idea, that he was going to make a recommendation. I came to him I asked him if he had done so and he said he had. I understood what the brigading of our troops meant in a period of the war. I did not understand it to mean a prohibition on the forming of a great American army. The only point about it was this: If you are going to form a new army, you can take charge of a whole section of the line where it is needed that the whole force of the German attack would

fall, you must train them month after month behind the line they understand it thoroughly. That makes delay. The one at issue was whether or not it was not advisable to bring them where they would have veterans on each side so that they would be more like veterans, and after they had got experience you could get their army out of them. That is what they did, and I believe is one of the things that Gen. Pershing is proudest of, that when the crisis came he did brigade them, and they did splendid work, that the Australians commended them very highly on the way they acted, but said that the Americans were a little bit rough.

Senator PITTMAN. In your letter of November 9 you state emphatically [reading]:

It has been the opinion that it would be impossible to force the enemy back from the Argonne Forest not only on account of the great difficulty of the terrain but because the troops operating in this area could be supplied only over one road.

Admiral SIMS. It was quite true that there was only one way they had to use it. That is all.

There is no recommendation that I ever made on this question. I simply discussed it like any other intelligent man would. I brought the question up before everybody, most interesting at that time, everybody, when the crisis was coming. I do not understand what the idea is. Do you want to try to imply that I was recommending that there should be no American Army? Now, I ask this question: Suppose it were true that I did recommend no American Army, what does it have to do with the convoy system and the handling of the Navy during the war?

Senator PITTMAN. I think you are entitled to an answer. I try to answer it. Admiral, in the first place, there are even before this committee that you relied very greatly upon the Admiralty for all of your opinions.

Admiral SIMS. There is no such evidence at all. It was the Naval Council, consisting of the heads of all those navies. I ask you, how can you conceive an American officer of my experience, I say record, either being so dumb intellectually or being so demoralized morally that he would recommend to his Government not what he believed but what the British Government wanted? For God's sake, how can you imagine an American doing that?

Senator PITTMAN. You have asked me a frank question.

Admiral SIMS. And I want an answer.

Senator PITTMAN. I am proceeding to answer. There is even here in your own letter that you favored the British policy and the French policy, certainly not the American policy, of sending troops over to the other country without training here. It is in your letter here that you recommend that some of these soldiers be sent to the navy yards to work as laborers.

Admiral SIMS. Not that they should be worked as laborers, but that an experienced shipwright should not be taken out of the navy yard and put into a camp when we needed ships.

Senator PITTMAN. There is nothing said in your letter as to

Admiral SIMS. That is what it says, to take a man of that kind out of the Navy would be asinine, taking him out of the navy and making a soldier of him.

PITTMAN. There are letters here also which indicate to me the reason I am going along with this examination—wanted the whole American Navy to be turned over to the British as far as the protection of the coast was concerned, or an policy that they had, that you cared nothing for that. Letters here indicating that your opinions were formulated in Bayly with regard to these matters.

SIMS. I was not with Admiral Bayly one one-hundredth I was over there. I was in London.

PITTMAN. Your letters were very confidential. There is also that in writing to Admiral Bayly you were opposed to the plan, and were in favor of the British plan with the disposition of our soldiers; that you were in January a separate army. There is evidence here that you discussed Pershing a separate army on October 30. There is also on November 9 you still thought—

SIMS. There is none of that there.

PITTMAN (continuing). That Pershing had broken down and never expected him to get through.

SIMS. No.

PITTMAN. That you expected he was broken down, by the line of railroad and not sufficient communication.

SIMS. It was not a railroad at all; a road.

PITTMAN. That communications with the rear were so that they had been compelled to slaughter horses for

SIMS. All the armies had to do the same thing. What I said—

PITTMAN. What I think about the proposition is, we are whether your advice on these matters was creditable.

SIMS. All right.

PITTMAN. We are considering as to whether your advice followed.

SIMS. That is the point.

PITTMAN. And I think that this evidence is material, in the advising from the standpoint of foreign countries and a policy of your own country.

SIMS. I see. Well, Senator Pittman, that is the veriest bit of rot, for this reason, as pointed out explicitly all the statement that this advice that was given to my Government not only based upon all of the discussions that we had over there, but that it was adopted by our own Government. If it were true that the advice I gave has proved to be the case of the convoy, and in the case of this, that, and the other would be something in what you say. But it proved not so, and was adopted only after those long delays that cost blood and treasure.

PITTMAN. We had a separate army?

SIMS. You take them and you brigade your troops in. I did not recommend a separate army at all. That is the way. It was simply discussions that were going on between the men about the military questions of the day. There is there that I wanted to recommend. All I wanted was coordination with the British Navy. That was

achievement of the Navy in the war. Here is what the Secretary of the Navy says about it. [Reading:]

Abroad, the Navy has given a demonstration that can only be characterized as wonderful, of its readiness to join with our associates in teamwork for the common end and the common good. \* \* \* (In all areas and with all allies) The United States Navy has cooperated without friction, looking always to be attained, and has won the warmest encomiums and appreciation from our associates. \* \* \*

Much of the above could not have been accomplished at all and none of it could have been accomplished so well, had not the American Navy, from top to bottom, fully appreciated the fact that in war teamwork is absolutely necessary and that prejudices and ambitions, if they exist, must be sacrificed and subordinated to the common end in a common cause.

We worked with those people in teamwork, with the Italian, and English officers, independent of nationality.

Senator PITTMAN. Separate entities can cooperate.

Admiral SIMS. They were separate entities, and they cooperated.

Senator PITTMAN. There is quite a difference between cooperating and being submerged.

Admiral SIMS. They were not submerged. They were separate entities, and they were based upon our own supply ships, and they were mobile forces. I have read telegrams to show that we were moved from one place to another. We were hard up again when we first went to Queenstown. The necessities were such that we had to cooperate. We did not have enough forces sent to take over the Queenstown station. Our forces were relatively small, containing destroyers, supply ships, and some sloops. We were mine sweepers operating there. All those things were necessary in order that those channels and ports be used. We did not have the material to take over the port of Queenstown and patrol the coast and escort in our troops. We worked together. If our destroyers were broken down, our sloops, and so forth, British ships were supplied. It was necessary that that be done. It was teamwork. The same way pertained in the Mediterranean. The same was maintained in France, where our forces were greater than those of the British. It is perfectly absurd to say that we subordinated ourselves to the British.

Senator PITTMAN. No; we did not—

Admiral SIMS. Excuse me. There was never a time at all when all the American forces on the other side were not absolutely under the command of men of the Navy Department. They could not have been moved any place.

Now, you may say that we could have been made into a part of the American Army. It would have been wholly impossible to do so. You must remember that the British had an advantage with their fleet, which they had been years in forming, that we did not have. We had to go on their bases, and there was no place in Ireland where all our force could have been based, the 5 battleships, 140 destroyers, etc. There was no possible place where those ships could have been put in a body and effectively used.

Senator PITTMAN. Now, you have read from the Secretary his suggestion as to cooperation. Permit me to read what you said to the Secretary of the Navy on July 16, 1917. [Reading:]

It is unquestionable that efficiency would be greatly improved if any of our Allies—Italy, France, England, or the United States—were selected to coordinate operations, the others merely keeping the one selected fully informed of resources available, and submitting to complete control and direction in regard to utilization of these resources.

SMS. Yes; that is not a recommendation. It is an illustration: would be desirable if the Allies could do that, would not and would not. Nobody would dispute that that if the Allies were so amiable with each other as to control, it would be more efficient. Naturally, they were to do that, and so we instituted—our Government did—Naval Council. And we got together and discussed the to do with the forces available, which were inadequate. Common sense men. We did not sit there drawing lots in of any French or British or any American or Italian, that council and advocating that his forces should be to that of another nation, to the detriment of the com- That does not appeal to common sense. That is all I about it.

BITTMAN. Then another question. When you spoke of the troops in this country by reason of the volunteer service, size that troops are not available when war is declared; capable by reason of the training not being sufficient?

SMS. I did not know anything about that at all.

BITTMAN. Do you know when the volunteer troops, those volunteered, were drawn?

SMS. I do not know those dates; no.

FRAMMELL. I want to ask one or two more questions. In the number of troops that were transported by May 1, was chairman, what you were asking about?

ARMON. Yes.

FRAMMELL. The chairman, I believe, asked you to give of troops that were transported by May 1.

SMS. I will get the figures.

FRAMMELL. Well, while you are getting that information, you also to get the information as to the number of troops transported by June 30, 1918.

SMS. June 30?

ARMON. I suggest that you get the figures down to July 1, the number transported every month.

SMS. All right. The figures will be the arrivals in ports. I have available.

FRAMMELL. I believe it has been suggested here that Gen. recommended a million troops by May, 1918, and pertinent subject I find this in Gen. Pershing's report. [Reading:]

...tent planned as early as July, 1917, to send to France by June 15, of the then strength of 20,000 men each, together with auxiliary and force, and those needed for the line of communications, amounting to making a total of some 650,000 men.

SMS. That is the extract I read this morning and also

FRAMMELL. Now, that seems to be the number that the tent planned for in July, 1917, to be sent over by June Gen. Pershing goes on to say. [Reading:]

...numbers fell short of my recommendation of July 6, 1917, which contained 1,000,000 men by May, 1918, it should be borne in mind that the the problem was the amount of shipping to become available for military such must be included tonnage required to supply the Allies with coal,

NAVAL INVESTIGATION.

this report that Gen. Pershing, in July 1917, had 100,000 men by May, 1918, but we find thereafter the department had decided on 60,000 men, evidently at that time decided on 60,000 on the 15th of June.

I understood that Gen. Pershing says 60,000 men, tonnage enough to carry any more.

He first recommended in July, 1917, 1,000,000 men, after the department had revised his figure. Nothing further contained in his report. Pershing's next recommendation on the 15th of June, that recommendation he recommended 60,000 men, in addition to troops for service by the end of June. On December 2, 1917, there be sent over by the end of June again, later on I find on December 20 he recommended that they should send 60,000 men in 1918. Now, of course, the figures are important, the question of whether they sent over 60,000 men for May, but also as to whether or not that he asked for by June 30, 1918. I want information, have you, Admiral?

The information that I have is what I reported, which were those two that you just stated, I understood to mean that Gen. Pershing asked for 60,000 men because there was not tonnage enough to carry the same time keep up the supplies to the troops. I understood that to mean.

Admiral, I believe you stated that you had 60,000 soldiers were trained and were ready to go, more ready than they were transported?

We have no official documents here outside of the report, but I think it is a very fair assumption that in 1918, and jump from 25,000 on an average, because they brought tonnage in from all over the world to do it, that if the tonnage had been available, it. The course of this map here [indicating] the movements of the troops, how it jumped.

In that connection, in view of the fact that it has been quoted from, I will read from the report entered into which was cabled June 5, 1917, that had been entered into by Foch, Milner, and the number of troops that should be sent over each year and in regard to priorities for shipping agreement. [Reading:]

The combatant troops to be dispatched in July may be insufficient training, but we consider the possibility of a temporary and exceptional departure by the troops of training, especially as a similar course is being followed in 1918.

This shows that it is indicative of the way they sent some of those troops to be shipped in without training. For some reason, those commandants thought that that was possible.

MR. SIMS. Of course it is not necessary to observe that of an the field—of the British Army I think there are about 4 that is fighting at the front, and in the French Army 1—I am not sure of those figures—but it is something of and the extreme value of untrained troops is that though a warfare they can relieve perfectly trained men at the multitude of jobs that have to do with transportation and bayonets at the front, when the great push came, they or any men they could pick up to release men that forward on the line. If these three distinguished military together and pointed out the necessity of sound training of I guess they knew what they were talking about all

MR. CLEMAN. Admiral Sims, a few minutes ago you began a summary which Senator Pittman attempted to bring out. After of January 7 you criticized the Navy Department for operation in carrying on the war. This is and will be of a main purpose of this investigation. It is unavoidable side issues will come in during the course of the hearings. But deflect us, however, from our main purpose, which is whether the charges made in your letter are or are not

MR. SIMS. I would amend that to say the lack of prompt Our Navy Department did cooperate with the Allies The great difficulty about the whole business is that not cooperate promptly. There were all the rest of those seven recommendations made as the result of the cooperation Allied Naval Council and the acknowledgment of the of that by the Navy and the putting of that into operation. The rest of the letter, and it would have been a very, very situation in case we had been up against a navy that was not or "contained," as they called it, so far as its battle concerned, and helpless to do anything against us in our except a submarine which had to come over with half

MR. CLEMAN. That is all.

At 4.10 p. m., the subcommittee adjourned until Wednesday, March 24, 1920, at 10 o'clock a. m.)

# NAVAL INVESTIGATION.

WEDNESDAY, MARCH 24, 1920.

UNITED STATES SENATE,  
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.

Subcommittee met, pursuant to adjournment, at 10 o'clock a. m. 235, Senate Office Building, Senator Frederick Hale

of Senators Hale (chairman), Keyes, Pittman, and Trammell.  
MR. PITTMAN. Mr. Chairman, before you proceed with another I observe in this morning's press that there are copies of a letter from Gen. Bliss, addressed to the Secretary of War, dated March 23, 1920, denying certain statements made by Sims in his testimony upon yesterday, and there is a letter to the Secretary of War transmitting the letter to the Secretary of War. I have also a copy of a letter of the Secretary of the Navy to the chairman of this subcommittee, transmitting these. I want that they be published in the hearing—the whole matter.  
MR. CHAIRMAN. I received the letter from the Secretary of the Navy. I replied to him this morning. I will read a copy of my [reading.]

MR. DANIELS.  
Secretary of the Navy, Washington, D. C.

MR. SECRETARY. I have your letter of March 23 inclosing copy of a letter from the Secretary of War with inclosed copy of a letter from Gen. Bliss to the Secretary of War and a copy of the original order under which Gen. Pershing proceeded to the effect that you wish to have these letters and the accompanying order be placed in the hearings of the subcommittee of the Committee on Naval Affairs. I agree with me that in the course of the hearings it is entirely improper to have in the record at the request of parties who are not before the subcommittee to be called before the subcommittee within a very short time and on that basis at that time you can of course present any testimony or papers in support of them and they will then be made part of the record. I wish to call attention to the fact that the papers submitted by you have nothing whatever to do with the definite criticism of lack of preparedness and prompt support on the part of the Navy Department made by Admiral Sims in his letter of January 7, 1919. The subcommittee is limited in its investigation entirely to matters connected with the

SENATE RECORDS.

FREDERICK HALE,  
Chairman Subcommittee of Senate Committee on Naval Affairs.

MR. SENATOR PITTMAN, if you as a member of the subcommittee wish to have these papers inserted in the record at the present time they will be so inserted. If not, the Secretary can bring them up and testify before the committee.

MR. PITTMAN. I realize, of course, Mr. Chairman, that a letter has the same force and effect as sworn testimony; but undoubtedly Gen. Bliss will be requested by some of the committee to testify and as only portions of his letter were published in the press I think it is only justice to Gen. Bliss that the whole matter be published.

The CHAIRMAN. I have no objection whatever.

Senator PITTMAN. I would just like to have it all put in the record at this time. I think it is only fair to Gen. Bliss.

The CHAIRMAN. I have no objection. It will be so ordered.  
(The correspondence referred to is here printed in full in the record as follows:)

The SECRETARY OF THE NAVY.

WASHINGTON, March 22, 1918.

MY DEAR SENATOR: In the hearings before the subcommittee on Monday, Rear Admiral Sims, in his testimony, is quoted in the press (I have not the report) as attributing to Gen. Bliss the recommendation of the policy advised by Admiral Sims of brigading the American forces with units of the British army. I am in receipt of a letter from the Secretary of War this afternoon inclosing a letter addressed to him by Gen. Bliss, saying that at no time did I make recommendation for the brigading of American forces with the British army, but the truth is the reverse.

In his letter Secretary Baker includes also the original orders under which Gen. Pershing proceeded to Europe. Secretary Baker says this order was drawn up by Gen. Bliss and approved by him. He also calls attention to the fact that this order was laid down in the orders to Gen. Pershing "had the direct approval of the President."

I am sending you copies of these letters and accompanying orders that should be incorporated in the hearings of the Subcommittee of the Committee on Naval Affairs.

Very truly, yours,

JOSEPHUS D. BAKER

WAR DEPARTMENT,  
Washington, March 22, 1918.

MY DEAR MR. SECRETARY: In to-day's edition of the Washington Post is a comment attributed to Admiral Sims with regard to the "brigading" of American forces with units of the British and French armies, in which certain views are attributed to Gen. Bliss. I beg leave to hand you herewith a full exposition of the facts of Gen. Bliss on this subject, prepared by him for my information.

In addition to what Gen. Bliss says in his own letter, I have the honor to enclose the original letter under which Gen. Pershing proceeded to Europe and under which the command of the American Expeditionary Forces was drawn by Gen. Bliss and approved by me for approval. I attach a copy of that order and ask attention to paragraph 1 thereof, in which the policy of maintaining the separate and distinct identities of the forces of the United States was laid down. This policy, comprising as it did the original orders to Gen. Pershing, had the direct approval of the President. It was never departed from by the War Department or by Gen. Pershing, except to the extent indicated in Gen. Bliss's letter, where, to meet a pressing emergency, a temporary association of lesser American units with British and French units was authorized.

I do not know whether this letter of mine, the orders to Gen. Pershing, or Gen. Bliss's letter can properly be tendered to the Senate Committee on Naval Affairs in connection with the admission to the record in the inquiry they are now making, but if it can, I would be glad to have the record thus made complete on this important subject.

Cordially, yours,

NEWTON D. BAKER

WAR DEPARTMENT,  
OFFICE OF THE CHIEF OF STAFF,  
Washington, March 22, 1918.

DEAR MR. SECRETARY: My attention has been called to a paragraph in the edition of the Washington Post with reference to yesterday's hearing of Admiral Sims before a Senate committee. This paragraph is as follows:

"Senator Pittman then read from an unsigned document taken from Admiral Sims's files, urging that American troops passing through Great Britain be brigaded with the British forces. The Senator said this was British propaganda, 'to be used against Pershing's effort to establish a separate American Army.'"

my own," said Admiral Sims, "and I object to your calling it the only sound military reasoning, and what Bliss recommended." "And, therefore, I do not know to what period of the war the question relates, but the following are the facts:

"I received a very communication, of whatsoever kind, written by me at whatever, from the time of our entry into the war and on any other day. Not only at no time did I make any recommendation for the use of American troops with the British Army but the truth is exactly the opposite—that I ever came in contact with Admiral Sims in Europe except in the American Mission (the so-called House Mission), in London from November 8 to November 22, 1917. During that entire time the idea of the use of American troops with foreign armies had not, so far as I know, entered the head of anyone. As my report to you dated December 18, 1917, and British military and political men were urging the sending of American troops for the purpose of having in Europe an American national mission to Europe the information that the United States hoped by about November 1917 to have in France 12 complete and equipped American divisions, which I had in London from November 8 to November 22, British military men agreed that this effort must be doubled and that by the end of the war we should have in France not less than 24 divisions. In fact, on December 6, 1917, the same demand was made. And all the while I was in Paris, while on the American mission, was directed to secure the equipment and the transportation for the larger number of the Allies were then demanding of us. In respect to the few American troops arriving in England on commercial liners, the record shows that the best was in seeing how we could most quickly get them to France across the channel to France. The idea of "brigading" American troops with other groups is an absurdity. During the battle our divisions were not an emergency in connection with either British or French divisions in any way. French divisions were used with our troops. At no time during the American Mission's visit to Europe did I hear even the suggestion of American troops being brigaded either in large or small bodies, with foreign troops. The only suggestion was a suggestion, much less a recommendation.

"I was not in the temporary use of any American troops with those of the British Army at the time when they apprehended the near approach of the German Army and during the continuance of that drive. On January 29, 1918, the British Commander in Chief agreed with the British in a signed document that they would provide six divisions in additional shipping which they would use for that purpose, these divisions to be trained behind the British lines by the American Army when their training was completed. This was not the ultimate formation of an American Army, because we had not secured this additional shipping in any other way. During the war council from January 30 to February 2, 1918, Field Marshal Haig stated that he would not want to use British troops in battle which would be away from home and five months in France prior to his return. He concluded by expressing the opinion that "the, consequently, the Allies could expect the American force, as a force, to be in the year." He thought that the best use to make of them was to assign them to sections of the line."

"I was completely with the conclusions arrived at by Sir Douglas Haig," said Admiral Sims, and that "in his opinion the entry of American troops into the war was not only for training, but for the greatest assistance that the United States could give to the Allies. It was a solution to the crisis with regard to objectives, and a contribution to the British and French armies." But he suggested amalgamation, of course, was only temporary. "The American troops took their units afterwards and became fully autonomous," he said. "On this subject at this session of the Supreme War Council, the question as to whether the United States Government should amalgamate which can be nothing else than what Admiral Sims called 'brigading.' I then made a statement leading to the conclusion that a permanent amalgamation of our units with British and French units was not desirable to American sentiment." The presiding officer, General Haig, declared that "this point was settled," and nothing was said on this subject.

On March 27, 1918, in the very crisis of the battle which began on March 21, 1918, military representatives recommended that in that crisis the American Government should send to Europe American Infantry and machine-gun units; that the principle of those units with Allied troops be permitted; that no American troops in Europe should be so used; and that the Infantry and machine-gun units should be so used temporarily and only during the crisis and to be eventually returned to the American Army. Before acting on it I took this recommendation to Gen. Pershing at the latter's house at 73 Rue de Varenne, where you discussed it. I secured from the President an approval of the recommendation, based upon "the present emergency," but making it perfectly clear that the training and use of these troops was to be at the discretion of the American commander in chief.

The joint note in which you took this action was not formally considered by the Supreme War Council until its fifth session at Abbeville May 1 and 2, 1918. At that session the American commander in chief was present. The object of this session was to learn to what extent the wishes of the Allies could be met without interfering with the timely formation of the American Army. After the discussion, the American commander in chief with Gen. Foch and Lord Milner withdrew in order to consider the details of the proposition. These details were embodied in a resolution of the Supreme War Council of May 2, 1918, the first paragraph of which reads:

"It is the opinion of the Supreme War Council that in order to carry out the successful conclusion an American Army should be formed as early as possible under its own commander and under its own flag."

This was the last time that the question of the use of American troops was brought up.

To my knowledge, the question of the "brigading" or the "amalgamation" of American units in foreign armies was not brought up or suggested prior to the session of the Supreme War Council January 30 to February 2, 1918; it was then only by Gen. Petain as a purely temporary measure. No attention was paid to it then, until Baron Sonnino, one of the Italian political representatives, in answer to his question as to whether the United States Government would permit the brigading or amalgamation. The answer having been made, the proposition was promptly vetoed. It was only during the crisis of the drive of March, 1918, to meet that crisis, that the military representatives proposed to recognize the possible temporary use of American Infantry and machine-gun units in the Allied armies. Before that crisis it was not dreamed of and with the speedy passing of the crisis it was not heard of again.

Sincerely, yours,

TASKER H.

The Hon. NEWTON D. BAKER,  
Secretary of War, Washington, D. C.

WAR DEPARTMENT, Washington, D. C.

From: The Secretary of War.

To: Maj. Gen. J. J. Pershing, United States Army.

Subject: Command, authority, and duties in Europe.

The President directs me to communicate to you the following:

1. The President designates you to command all the land forces of the United States operating in Continental Europe and in the United Kingdom of Great Britain and Ireland, including any part of the Marine Corps which may be detached to serve there with the Army. From your command are excepted the military attachés and other members of the Army who may be on duty directly with our several embassies.

2. You will proceed with your staff to Europe. Upon arrival in Great Britain, France, or any other of the countries at war with the Imperial German Government, you will at once place yourself in communication with the American embassy and through its agency with the authorities of any country to which forces of the United States may be sent.

3. You are invested with the authority and duties devolved by the laws, regulations, orders, and customs of the United States upon the commander of any army in the field in time of war and with the authority and duties in like manner devolved upon department commanders in peace and war, including the special authorities assigned to the commander of the Philippine Department so far as the same are applicable to the particular circumstances of your command.

4. You will establish, after consultation with the French War Office, all necessary bases, lines of communication, depots, etc., and make all the incidental arrangements essential to active participation at the front.

operations against the Imperial German Government you are directed to use the forces of the other countries employed against that enemy; but the underlying idea must be kept in view that the forces of the United States are a distinct component of the combined forces, the identity of which is essential. This fundamental rule is subject to such minor exceptions as your judgment may approve. The decisions as to when and in what parts, is ready for action is confided to you, and you will exercise discretion in determining the manner of cooperation. But, until the combined States are in your judgment sufficiently strong to warrant operation under a joint command, it is understood that you will cooperate as a commander of an army you may be assigned to by the French Government.

You are to keep the department fully advised of all that concerns your command, and to make your recommendations freely and directly to the department. You are vested with all necessary authority to carry on the operations in accordance with the spirit of these instructions and toward a victorious result.

### TESTIMONY OF CAPT. HARRIS LANING.

(This was sworn by the chairman.)

CHAIRMAN. Capt. Laning, can you give the committee any insight into the steps that were taken by the Navy Department in conducting the naval activities during the late war, and you please state what were your duties in the World War up to the present time, showing your own experience and observations for observation? Will you state the matter in brief?

LANING. A few days after the announcement in the newspapers that a Senate committee had been appointed to investigate the conduct of the war by the Navy Department, rumors came to me of my services in the Navy Department during the war that it was likely I would be called as a witness. It is anything but a pleasure to be a witness in an investigation of the department, but it is my pride and honor to serve, but when it comes to being called before the committee I naturally made up my mind that I could tell the facts as I know them. I made a review of my memory and studied the papers in my possession, and I prepared a statement of the facts. With the committee I will read that statement.

CHAIRMAN. Very well.

LANING. My sole object in presenting the facts as I will is to the committee what I believe to have been serious faults and misdirection of the Navy Department in connection with the war, so that the faults being made known their recurrence might be avoided. I therefore request the committee to ever bear in mind that my statement is utterly devoid of personal feeling and that it is made because it is my duty to do so.

From my knowledge of the Navy and from information gained from personal contact with the Navy Department, I am convinced that since the starting of the World War the department has neglected the Navy as it should have, and as a result the Navy was not properly ready for war when we entered the war, and that it could not carry on its part in the war in the early days as it should have and should have been carried on.

There are many things to bring about my convictions, among which are the following particulars:

That in the years immediately preceding our entry into the World War the Navy Department did not take an attitude on legislation

and policies that would enable the fleet to be made properly for war, and that the fleet was not properly ready when war was declared.

Second. That even when war was imminent, when it was known that war could not be avoided, the department even then did not do those things that ought to have been done to make the fleet ready to carry on the war in its full strength and along the proper lines.

Third. That at about the time war was declared, although a fully drawn up plan, outlining what direction the Navy's first operations should take, was prepared by the office of the Chief of Naval Operations for the department's approval, the plan was not approved as a result at the very time a plan was most needed the Navy did not have any general plan that was based on the peculiar conditions imposed by an enemy whose naval effort was restricted entirely to the use of submarines.

Fourth. That not having a definite plan to work to, the various parts of the Navy Department could make no coordinated effort to carry on the war, but, on the contrary, each part was obliged to do what that part thought might be best, with the result that not only was the effectiveness of the naval effort greatly reduced in the early stages of the war, but also the cost of the war was probably considerably and unnecessarily added to.

Fifth. That during the war it was always difficult and frequently impossible to obtain the department's approval of essential policies and policies; that this made it necessary for subordinate officers to go far beyond their authority to get things done, and that as a result the difficulties of carrying on the war were increased while the effectiveness was decreased.

It is not possible for me to produce documentary evidence for every detail of the above five particulars. In most cases where I can not produce documents I can give you the names of officers who can substantiate my statements and can refer you to Navy Department records and reports of congressional hearings where such information can be obtained.

That you may understand my competency to report the facts that follow I will give you a history of the duty I have been performing since the beginning of the World War. At the time of the declaration of war I was in command of the Reserve Destroyer Flotilla, Atlantic Fleet. On October 5, 1916, I was relieved from duty and the following day reported for duty in the office of the Chief of Naval Operations and was assigned to duty under the Aid to Material, Capt. J. S. McKean, and became his senior assistant. I remained in that position from October 6, 1916, until July 16, 1917, when at the request of then Rear Admiral L. C. Palmer, Chief of Bureau of Navigation, I was transferred to the Bureau of Navigation and placed in charge of the Officer Personnel Division, which position I held until September 21, 1918, when I was advanced to the position of Assistant Chief of Bureau of Navigation. I continued as Assistant Chief of Bureau until March 31, 1919, when I was detached and ordered to duty as Chief of Staff, Destroyer Squadrons, Atlantic Fleet, which is my present duty. Rear Admiral L. C. Palmer was detached from duty as Chief of Bureau of Navigation about November 1, 1918,

until the first part of January, 1919, when Rear Admiral James Chief of Bureau, I was the acting Chief of the Bureau of Navigation.

From the time I reported for duty in the Navy Department on January 1, 1919, until I left it on March 31, 1919, I was in very close contact with the Secretary of the Navy and the other members of the department. Not many days passed when I did not have a conference with the Secretary on important subjects. Before him matters and papers requiring his action came. I was an adviser on many matters in regard to material, Naval Operations and in regard to personnel while I was acting Chief of Bureau. During the time I was acting Chief of Bureau I was also an adviser to personnel matters. Officially I came to the department and its ways very intimately, and from my contact with the Secretary and my intimate knowledge of the naval affairs I feel I am more than usually competent to judge the department and its methods. My statements are, of course, usually made, but are based on my personal knowledge of the officials and to the affairs.

In the first particular, I will show how the department, in its attitude in regard to certain legislation, made it impossible to have the Navy ready for war either in regard to personnel or material. I do not intend to criticize the department's attitude on the building program for the Navy, for it has generally advocated a large building program. Whether or not the numbers and types of ships were correct is a point on which opinions differ, but the department advocated a large building program. The remark about the department's attitude was its apparent inaction in regard to the necessity for legislation that would provide adequate manning for the ships or that would provide for adequate material for the completed ships fully ready for war. You will find in the report the Secretary of the Navy has made that he has taken into consideration the total number of ships we have and that we must take into consideration their actual material condition for fighting manned for war. It must be apparent to any one that a ship that means nothing in readiness for war. To be of any use it must be in a material condition to fight, and it must be fully manned and ready to fight it but trained to fight it.

It is a feature to realize the necessity for the legislation that must be had in black and white, the evidence can be found in the recorded hearings before the Naval Committees of the House of Representatives of the General Board, Naval Operations, Bureau of Construction and Repair, Steam Engineering, and Ordnance, especially as to personnel from a letter written by Admiral William D. Leahy, Commander in Chief, United States Atlantic Reserve Fleet, in 1914, and from the remarks made by Admiral William D. Leahy, Commander in Chief, Atlantic Fleet, in the "Report of the Naval Operations of 1915." Officers who can testify as to the condition of the ships for work on ships to put them in the best possible condition during the years just before the war are the various officers in the material bureaus during that time.

Officers who were afloat at that time, if called upon, can testify as to the condition of the ships, the alterations essential to fighting efficiency and the cost of funds. Those same officers can testify as to the

personnel difficulties on even the best manned ships, and of the ships that should have been manned and ready that were immobile and therefore useless for war purposes for the officers and men. I personally know these things to be fact, the department itself did not make sufficient effort to have remedied and they were not remedied. On the contrary such accounts of the Navy and its splendid condition and efficiency given out by the department that few, if any, outside the department realized the true condition. The Secretary's reports, his statements before Congress, and his statements to the press at that time all had the effect that the Navy was all right and entirely ready.

When the World War started in 1914, to most of the people in this country it seemed advisable that our Navy at least should be as ready for war as it was possible to make it. We all hoped to get out of the war, but many realized that a mere failure to be ready for war would not keep us out of it. Most of us realized that on the contrary a failure to be ready might tend to drag us in. In August, 1914, until the spring of 1917 the press, the public, and Congress showed their willingness to have the Navy ready for war. With the plaudits of the country Congress authorized the greatest building programs ever known. It was generally understood in the Navy Department and throughout the service that the things necessary to make the Navy ready for war would be done by Congress if the needs were made known. But even then the Navy, as to personnel, and personnel will ever be the life blood of the Navy, were not truly presented to Congress. When Congress seemed to be anxious to put the personnel on a sound footing, the ships might be manned for war, the service was astounded to learn that the department had recorded itself against any increase of personnel, and this at a time when only about half the ships were manned with even peace complements. To prove this you have only to read over the congressional records of the years on personnel in the years just before the war.

The result of the failure to supply an adequate personnel for the Navy was fully stated by me to the House Naval Committee hearings before it on December 17 and 18, 1918, at which time I was acting chief of Bureau of Navigation. The statement is found in House Document No. 11, pages 674-680, which statement I will insert in the record. In order to emphasize the position at the time war was declared and the first few months after I will read one or two paragraphs from that statement:

At that time, on the west coast of the United States, of our armored cruisers all but two of them were manned with partial crews so small that the ships could not run. At League Island and other navy yards we had a number of battleships up in reserve because we did not have enough people to operate them. About 25 destroyers half manned and a number of other ships that ought to have been in operation all the time and weren't even partly manned because we didn't have men and officers even to half man them. Those ships began to set up a cry for men and officers as soon as the war started, for the ships were needed and needed badly. It wasn't only there we had our trouble. We began to enlist men by the thousands to man our unmanned and undermanned ships and these men had to be trained. Our regular training stations were filled with them and new training stations were set up in many places. Each one of these stations began to call for more men to train their recruits and there were no officers. We were in the predicament of *having personnel to man our ships and also of not having it to even train recruits to man them. A more difficult or serious situation at the beginning of a great war hardly be imagined.*

What was that?

That was in 1917, at the beginning of the war, with Germany. Right at the beginning of the war, the Chief of Naval Operations needed officers in his office to handle the war, but they were not to be had. The Bureau of Ordnance was in a fix. That Bureau began to turn out guns and ammunition and needed men to look after the guns and ammunition to look after the production, but they were not to be had. Everywhere there was a cry for officers. We did send green recruits to fill the places of the men who were not to be had, but for officers we had none to send. That was the situation about three months after the war started when I was called to the Chief of Naval Operations and put in charge of the Officer Division of the Navy. We had 2,394 commissioned officers in the line of the Navy and we actually needed right then and there between six and eight thousand officers. Officers trained in time of peace that they might be ready to go to sea. The vast Navy of the United States the only ships we had any of were about half our battleships and destroyers, and even they were short in personnel, while the shore end, which is essential to the Navy, was actually had nothing at all.

That was put up to me at that time was to make 2,394 officers do the work of 7,000 should have been ready to do. The enlisted men were not better, for we could get the raw material, and though the men were not trained, we could absorb them in the ships and train them very much quicker than officers. The situation with regard to men was mighty bad, but the situation was desperate.

Admiral Palmer and I put in some sleepless nights about that

statement from House Document No. 11, above referred to, is given in full as follows:

When we take up the details of our present and future needs I will make a statement to the committee as to the personnel situation both before and during the war, and to tell you something of what we have done to meet it. I don't think anyone knows except the Bureau of Navigation, but I will give you will make some points clear that would otherwise need

Then you go ahead and we won't interrupt you. You can make your statement and then we can take the other up in the analysis I have indicated. I will say that. For the past 20 years we have been building up the Navy. We have had several building programs. Right now we are in the middle of a building program of any and there is some talk of this session of a larger building program. In all this increase of the Navy there was done to increase the personnel to man those new ships that were built. There was some increase in personnel but it didn't compare with the increase in ships and the result has been that though each year we actually had in operation more ships than ever before, at the same time we had more ships to operate because of lack of personnel, more ships than ever before. The result of those that were not operating was constantly growing and that was all due to the fact that we did not have enough personnel to operate all the ships we built or needed to perform either the peace or the war work of the Navy.

In two or three instances of the effect on the Navy of that failure to build up the personnel to back to 1914, just before the World War started, when we had

In a situation like the one we had in Mexico, we should have sent our submarines down there to handle it. We didn't have sufficient of them to handle the situation, and so we had to send the battleships of the North Atlantic Fleet to do the work. They were taken off their training and preparation for the kind of work they were built for, the cruiser work in Mexican waters. They did the work all right, but they were not trained and readiness for a real naval war. We had ships of the Atlantic Fleet for the task and ought to have had the men to man those ships. We had handled that situation without calling on our main fighting force. The personnel those ships were not ready and could not be sent, and the battleships and destroyers to do their work.

At the war began. For lack of personnel we were still unable to do anything except the battleships and destroyers. I remember in 1916 the command of the reserve destroyer flotilla and the revolution in the

Dominican Republic started. I had my little flotilla at Key West at that time we were holding our target practice. I had only half crews, men and officers on the destroyers, and on the *Panther*, which was flagship. The Navy Department wanted somebody down there to handle that Dominican Republic situation. We went from torpedo practice about noon one day and on the way in I received a message if I could go down there with my little bunch of ships to meet that ship. I promptly telegraphed back that if we could forego gun practice, which we were doing in a few days, I could get away. At 4 o'clock that afternoon I received a message. We have eight destroyers. At 7 o'clock that night five of the oil-burners were on their way half manned with only 2 officers and about 45 men. The next morning I succeeded in getting off two more coal-burning destroyers. There was not enough men in the outfit for both the *Panther* and the other destroyer. Either the *Panther* could take the men and go and leave the *Preston* behind, or the *Preston* could go and leave the *Panther*. I telegraphed the department asking for enough men to send either the *Panther* or the *Preston*, but that as it was only 4 o'clock, and that before the other could go we had to have some engine-room men. The department sent word to put the men on the *Preston* and that men would be sent for the *Panther*. So I took men off the *Panther* and put them on the *Preston*. Before she could get away I got word for the *Panther* to go. I then took them off the *Preston*, put them back on the *Panther*, and away she went. The *Panther* was there several days getting the men she needed to enable her to move.

Well, we went down to the Dominican Republic and we did our part in the situation. Those half-manned destroyers were running around that island night after night without sufficient officers or men to properly handle or take care of them, because the proper ships for that kind of work could not be supplied with crews, and therefore laid up and unable to operate.

I stayed there about six weeks and came back, and just about four hours after I got into Key West I got a telegram to send three of those destroyers to patrol work. They were still manned with only the 2 officers and 45 men on each destroyer, but they went and did the work.

I cite those instances to show you that even for minor naval operations that the Navy in times of peace we, with all of our vast expenditures for that, could not send ships suitable to the task because we did not have men enough on that class of ships. We not only did not have the cruisers and gunboats to meet emergencies like these, but also we didn't have enough to "show the flag" to other countries where there wasn't emergency.

As bad as was the situation for the ordinary naval operations we are called upon to perform in time of peace, it was a good deal worse when we came to getting ready for war. We only had about one-half of our battleships fully manned before the war. We had about 30 of our destroyers fully manned and about half crews. Those were about all the ships the Navy did have fully manned. We wanted to get our fleet ready for business when war came, and naturally we engaged in maneuvers. In order to get sufficient ships for those maneuvers to use all sorts of subterfuges. We would send a collier out and let her represent battleships in a big war game, the battleships themselves being unmanned. That wasn't much of a way to train for war, but without men it was the best we could do. As far as being ready for war was concerned, the readiness and the efficiency of those four battleships was truly represented by the collier, and that was a very good illustration of the Navy's readiness at that time. The Navy was not ready to fight with its full strength when war begins. It is the one service that can't wait. If we do not have our ships manned and ready to fight, it will probably be too late to get them ready after war begins.

When the war actually started for us, the next year after 1916, when we were in San Domingo, we had manned every ship our scanty personnel would let us have, but even then only about half our ships were capable of operating. The Atlantic Fleet was in Cuban waters. It had in it practically all of the ships that we had, manned and consisted almost entirely of battleships and destroyers, because no men with which to man our other ships, and even these ships were manned at that time with what we called peace complements, which is less than the war complement. We have since learned that a peace complement is something we can't deal with, since it takes fewer men than are required to fight a ship in battle. You can't train a team properly unless you have all the members, and we were the ships in our main fleet about like you would train a football team with 11 men up to the day of the big game, and then on that day put 11 men in. They were better off in men than in officers. The men had been increased a little *rapidly than officers*, and when the war started those ships down in Cuban waters had approximately 27 officers and about 85 per cent of what we now know to

of a battleship. Those 27 officers should have been either 37 or 39 if they had been properly manned. The ships clamored for men and they wanted them right away and badly, and while we were getting them green and untrained men to fill their vacancies, we could not get the officers, which, of course, were not to be had so easily.

Along the west coast of the United States, of our armored cruisers I think there were manned with partial crews so small that the ships couldn't operate and other navy yards we had a number of battleships laid up because we did not have enough people to operate them. We had about 100 ships manned and a number of other ships that ought to have been in the fleet and weren't even partly manned because we didn't have the men to man half man them. Those ships began to set up a cry for men as soon as the war started, for the ships were needed and needed at once. We had our trouble. We began to enlist men by the tens of thousands on un manned and undermanned ships, and these men had to be sent to training stations were filled with them and new training camps were set up all over the place. Each one of these stations began to call for officers to run them, but there were no officers. We were in the predicament of not having men for our ships, and also of not having it to even train recruits to fill the difficult or serious situation at the beginning of a great war.

Q. What was that?

A. That was in 1917, at the beginning of the war with Germany. Right at the beginning of the war the Chief of Naval Operations needed officers in his office to handle the war, but they were not to be had. The Bureau of Ordnance needed officers. That bureau began to turn out guns and ammunition and needed officers to look after the production, but they were not to be had. We had officers to send to them.

Q. There was a cry for officers and men that we did not have. We did not have the places of the men we should have had ready and trained, and we had to send. That was the situation in July, 1917, about three months after the war started when I was called from the office of the Chief of Naval Operations to the charge of the Officer Division of the Bureau of Navigation. I found that we had officers in the line of the Navy at that time, and we actually had there between six and seven thousand line officers. Officers were scarce that they might be ready in time of war. Of all the vast States the only ships we had anywhere near ready were about 100 battleships and destroyers, and even they were not up to battle strength in many respects, which is essential to the success of the sea end, seem-

Q. That was put up to me at that time was to make 2,394 officers do the work of 7,000 should have been ready to do. The enlisted men were scarce, but we could get the raw material; and though the ships could absorb them in the ships and train them very much better than the officers. The situation with regard to men was mighty bad, but the situation with regard to officers was desperate.

Q. That Admiral Palmer and I put in some sleepless nights about that. We had to get officers and men, and we had to man our ships and carry on the war, not only that, but on the day I went to the Bureau of Naval Operations called on us to man and put in operation in the United States the 16 huge German ships that formed the nucleus of our fleet. At the same time they were calling on us from the "other end" to send in driving down the submarines, and we were taking over the other craft in large numbers, all of which had to be manned and trained as possible.

Q. The best combatant officers literally jumped up by the thousand, but they were not the original 2,394 to meet the demand. I made an estimate of the situation and I made the decision that there were certain things that simply had to be done. Our destroyers were needed abroad to meet the desperate situation of the submarines. Come what might, they had to go over, and the transports had to get their crews so that they too could fight. The transports could carry troops over. We had to man and train our submarines, but we hadn't do anything else, but also we had to get our submarines ready to go.

Q. Battleships had been robbed of their officers until they had only 21 line officers, and we had to get those battleships in fighting trim. The situation I came to the conclusion that those battleships would be ready in at least three months, for the British fleet had the Huns

up, and even if they came out to fight we would still have three months to in. I figured that each day that went by without the Germans coming on three months from that day before we would be called on to fight a general one and therefore we had three months we could use to develop and train personnel.

Mr. OLIVER. What do you mean by that?

Capt. LANING. I figured if that if the German fleet came out on any day some chance whipped the British fleet—which however improbable it might still had to consider as a possibility—it would be at least three months before they could repair themselves and be ready to tackle us. Of course, each day as it went by their coming out left us still three months grace for preparation. We decided to take the advantage of it.

We couldn't make those 2,394 officers go very far. I believed, however, that the finest officers in the world and that by using them as leaven in the dough of splendid officer material that this country has, we could turn out a loaf that met our requirements. The idea was to spread the leaven of trained officers as far as possible, and, making with it the splendid material we had, bring the whole thing to a fairly satisfactory condition. If we did only what could be done with our 2,394 officers, our part in the war would be small, but if we could carry out our idea and use them as a leaven and were given the time, we could meet every demand made. Every young man who came to us and who seemed to have the qualifications of an officer was to be at once put in training for an officer, and as soon as he had the rudiments of an officer's training we would send him to a battleship to be trained and absorbed into her complement.

When we decided to take that step the battleships had already been carrying 21 or 22 officers when they ought to have had 37 officers, and to place those gaps in them on them to fill the gaps was, to say the least, an experiment of dangerous proportions. We believed, however, that they could be trained quickly for the subordinate positions and later for higher positions and that by a process of younger officers using older officers and taking over the older officers' duties we could gradually release officers from various ships and make available for positions of greater importance on other ships we were taking on.

The plan was certainly radical, and in order to have success with it we had to have the hearty cooperation of every officer in the United States Navy. I went to see the scheme to Admiral Palmer, and he said:

"It looks like the only chance we have to do our part in the war, so let us try it, but before we put it into effect we had better talk to the commander in chief and the officers of the fleet to see if they think it can be done."

If the officers afloat felt that the proposition would not work, and if they were not in heart and soul and carry it out, it would be impossible to put it through. Admiral Palmer sent a telegram to the commander in chief and one to the commander of the cruiser and transport force, telling them that on certain days they were to be with them to confer on officer personnel, and on those days to assemble admirals, captains, and executive officers for the conference.

The fleet was at a base in Long Island Sound, and I arrived on the *Pennsylvania* the night before the conference. Admiral Mayo was abroad at that time and Admiral Coffman was in command. As soon as I arrived on the flagship I went to see Admiral Coffman. When I went in the cabin, Admiral Coffman, who is my very dear friend, said:

"Laning, I know what you are here for. You want to take more officers away from my ship, and I tell you now you can't do it. You have stripped us now and we are dangerous. If you take any more out of us you will ruin this fleet."

I replied:

"Admiral, I am sorry that we can't get any more officers from you, for to do so the plans we must have them; but at least you will let me talk to you about it, won't you?"

He said, "Yes." And I talked to him that night until well after 11 o'clock. I was leaving the cabin the admiral put his hand on my shoulder and said:

"It is the only way to do it, and I am going to back you up in it. There may be a good deal of opposition to it at the start, but it is the only thing to do."

The next morning I went in to the conference facing all those flag officers and admirals, and just as Admiral Coffman did, they knew what I was there for. They knew I was going to suggest that they give us some of those 21 officers they had to do with of 37; so when I began my talk I faced officers who I knew were naturally hostile to my plan. And well they might be, for I was calling on them to give up more of their already too few trained officers and the replacing of them with untrained material for officers, but material that was absolutely green and untrained. Admiral Coffman knew the situation and met it in a way in introducing me by saying,

the soundness of the plan, and that it simply had to go through. In the battle on sea, with the life of a nation at stake, it was rather the maintenance of our dreadnaughts that in three months they must be ready, and during that time must train green officers (as well as their crews) and give up 4 of their trained officers, reducing the number to 2,394.

They saw the reasoning in our proposition, and when my talk was over they agreed that it was the only thing we could do that would enable us to start in the war. More than that, they all said that it not only could but would be done.

Admiral Clevages's force and had a similar experience, and when I told them that I told Admiral Palmer that the fleet was with us and our crews were ready. We then issued our orders to the service, and from then on the Navy trained officers and men while it did its work of the war. We wonderfully did it work that a few outside of the service even in that desperate situation that we were in at the beginning of the war, but the Navy, as a whole was not ready to fight until many months later. Had we met the German Navy this year we could have faced them on equal terms in the readiness and ability of our Navy, but we must not have done so before our personnel was ready. The next enemy may not be the Germans, and we may be compelled to fight and at the beginning of the war. We can not and must not again count on having an enemy ready for war after war is declared and for that reason we must keep it ready.

At the beginning of the 2,394 officers we had in the beginning of the war in proportion to the training our personnel as the Navy's greatest accomplishment. We should take advantage of their magnificent work and keep the Navy ready and pay the price in effort and in treasure and we would be foolish if we had been so dearly bought by allowing the Navy to go back to the beginning of the war. It serves us nothing to pay billions of dollars for them useless by not paying the millions it takes to man them. We can not make a navy or at least can not make a fighting navy. At this stage we may have they count as nothing unless they can fight. We must have personnel. In the last few months the Navy, for the first time since the war, or in yours, has been ready to fight. Let us keep it ready for the maintenance of the personnel.

We must keep the Navy ready naturally divides itself into two parts. It is necessary to retain what we now have while we are building up our permanent strength and enabling what we have to become a part of that permanent strength. The legislation necessary to establish a permanent strength. The Congress and careful thought has drawn up the legislation covering these things. The legislation is passed as recommended the United States will at this time be able as to personnel and ready to fight with its full strength the Navy. No part of the legislation recommended can be omitted. The Navy Service, and I trust that the naval committee will see fit to keep it up and that Congress will enact it into law. Economy, efficiency and national safety demand this legislation.

To further emphasize the situation in regard to the personnel in the early stages of the war I refer to the letter submitted to the Secretary of the Navy by the Bureau of Navigation about the end of October, 1918. The letter is dated October 28, 1918 and was prepared by the bureau in accordance with instructions from the Secretary to submit information for his annual report made about the end of 1918. The letter is as follows:

#### NAVY DEPARTMENT.

##### BUREAU OF NAVIGATION.

Washington, D. C., October 26, 1918.

TO THE SECRETARY.

For the cooperation in annual report.

Very respectfully, a memorandum of October 15. b. Secretary's letter of

October 15, 1918. Your wishes expressed in the above reference the following work of the Bureau of Navigation is forwarded for incorporation in your annual report to the President.

Very respectfully,

25

At the time the United States entered the war, the personnel of the Navy was of a high standard, was entirely inadequate to meet the needs of war as it was to-day. Neither of enlisted men nor of officers were there enough to man the ships of the Navy that were then ready. It was possible to man and put in war those ships for which there were crews, but those ships were only a part of our fighting force. The newer battleships and destroyers were manned and ready for war was declared, but the older ships, including battleships, armored cruisers, etc., had only half crews and a few were not even in commission.

It was evident that if the Navy were to do its full share in the war by expanding the personnel would have to be adopted immediately. Fortunately for us the enemy was not at our doors. The allied fleet that for nearly three years the enemy sea forces in check were still sufficient to hold them enough for our personnel ready. In this we were very fortunate but we should not allow our Navy personnel be so reduced that we can not on the declaration of war put our fighting forces into operation.

The plans adopted for rapidly building up our personnel have proved successful.

\* \* \* \* \*

Capt. LANING. The letter then goes on to tell what we are building up that personnel. Further confirmation of the need for personnel at that time can be obtained from Capt. L. C. Smith, then Chief of the Bureau of Navigation, and Capt. L. M. Owens, who had charge of the enlisted personnel division. As to the material unreadiness of our ships with the fleet when war was declared, I refer you to a report submitted to the department at that time by Admiral Mayo, commander in chief. That report was made to the Navy Department and should now be on its files. It can be obtained from Admiral Mayo's files. Based on the work that was necessary to do on them at that time and taking into consideration our available repair facilities, it was found that it would require a period of over 100 days to get all battleships of even the fleet materially ready for war.

I have in my possession the original estimate of the time and work and later will refer to it and submit it in connection with another particular. Even though you may not care to deluge the department's records and congressional hearings to show that the department did not make sufficient effort to have the fleet ready as to material and personnel, the evidence that the Navy was not ready in these respects, will be before you in Admiral Mayo's letter just referred to and in the statement from House Document No. 11.

Passing on to the second particular that even when war was imminent things that ought to have been done were not done. The following is submitted:

For many months prior to February 1, 1917, our representatives in Germany were reporting on the situation over there. They gave us fairly accurate information of Germany's submarine program and of her intention to carry on unrestricted attack on merchant shipping, whether neutral or not, as soon as the submarines were ready. These reports can be found on the files of the Office of Naval Intelligence. But in spite of them the department even then failed to take steps to get the fleet ready for war. As a matter of fact the dreadnoughts did not go to the yards for work until summer—many weeks after the declaration of war. I wish to point out that had we sent the battleships to the yards in the winter 1916-17, and had concentrated on getting them

On the third particular, on February 1, 1917, Germany's campaign of unrestricted submarine warfare. At that time we practically gave up hope of averting war and, as never before, there was the necessity of at least preparing for a war against Germany. Certainly we should have done this then, to enable us to act promptly and effectively when it came. But although I was in the office of the Joint Operations and would have known of them, I did not know of these plans. So fearful of the result was I that on February 27, I prepared a memorandum on the subject. It

FEBRUARY 18, 1917.

From this view, there seems to be no general plan for handling the situation, and no other plan in mind than that developed to meet a possible attack on the present situation, the Navy Department as a whole, as if there was nothing next in the situation. While these are the ultimate menace, there is certainly no concerted effort to meet them. No one knows what particular task will fall to the Navy in this situation and therefore can not prepare himself for his part. It is a pity that what general plan must be followed in a situation like this, the whole department is at a standstill in requiring

... we are at least ready to put a plan of some sort in operation, and to discharge our duty if we fail to do so. We are not utilizing the resources of the island and they can be used to enormous advantage if we are not taken by surprise when the war should come.

... I handed to my immediate superior, who later ... It shows very clearly the situation in the depart-  
... the

Some few days later, just after the naval appropriation March 3, 1917, was passed, I took the matter up verbally with Admiral McKean, and the following morning, at a conference of the officers in Operations held in Admiral Benson's office, McKean brought up the question of formulating a plan for conducting the then inevitable war with the particular view of determining how to best utilize, to meet the then existing conditions, the new resources in money placed at our disposal in the appropriation bill. Admiral Benson then and there told the officers to bring the question up and submit plans for consideration. I began an estimate of the situation, and on March 13, 1917, submitted the estimate which embodied my idea of the plan to follow in our first war efforts. It must be remembered that at that time we were in possession only of general information. We had no inside information of the true state of affairs or as to what the Allies would want when we joined them in the war, and for this reason our estimate and decisions at that time had to be based very largely to our case at home. Still it was essential that we must once take all the steps we could to prepare both for our own war and for those things our information showed us we would have to do. It was not known until some time later that the greatest of all our naval efforts would be in overcoming submarines in European waters and in the transportation of troops. I will insert in the record a copy of that estimate and plan.

The CHAIRMAN. Was that plan the plan of the Bureau of Naval Affairs that you referred to before in your statement?

Capt. LANING. No; that is leading up to that plan. You will find it in a moment, after I have read a little farther.

The CHAIRMAN. Very well.

Capt. LANING. The paper is a long one. It analyzes the situation as it appeared three weeks before we declared war. It shows what we would have to do to combat the submarines and what we would have to do to arm up our forces suitable for that and other war purposes, and what we would have to do to get up the money resources then available to create and prepare for the additional forces the estimate showed to be necessary.

A study of the estimate should enable you to see how unprepared we were at that time, in so far as material was concerned for a war against submarines. It shows that with the exception of 52 destroyers, of which, I may add, only about 30 were in active service, the United States Navy had practically nothing with which to combat submarines.

The estimate of the situation is summarized at the end of the decision of 28 parts, each of which covered an action to be taken once. I will insert the entire paper in the record, but will here only the 28 parts of the decision:

#### DECISION.

1. Arm all merchant ships engaged in trade with the allies, cost to be charged to ordnance appropriations. Use guns of 5-inch or larger caliber, if available.
2. Encourage by subsidies and insurance as many additional ships as possible to enter into trade with the allies, arming all that do.
3. Encourage new construction of merchant shipping in all ways.
4. Enter into contracts for all 5 and 6 inch guns and ammunition for auxiliary ships. Ordnance appropriations permit.

1. To have the 16 dirigibles now contracted for and enter into contracts for as many as soon as possible.
2. To determine the air-patrol stations for the above dirigibles.
3. To have the emergency fund \$10,000,000 for dirigibles, stations, and other things.
4. To have the stations and rush to completion, or charter, 300 large size patrol vessels on the sea. These built should be not less than 110 feet long and not less than 24 knots.
5. To have or charter all craft suitable for harbor and in-shore patrol.
6. To have available at once for the above patrol vessels from the emergency fund 100 patrol vessels at once with suitable guns, to be paid for from the ordnance appropriations.
7. To have from the emergency fund \$5,000,000 to be used by the navy to have additional guns and ammunition for patrol vessels that are not in the appropriations.
8. To have mine sweepers by commandeering, charter, or purchase of other vessels. If 100 pair can not be obtained in this way construct them from the emergency fund for obtaining sweepers.
9. To have arm all mine sweepers from present ordnance appropriations.
10. To have Service that many largest size spar buys will be needed for lanes of travel, and set aside \$100,000 from the emergency fund to have them made.
11. To have Service has funds for the purpose.
12. To have Service patrols in protected and convenient harbors, setting out from the emergency fund for equipping them.
13. To have Service have 10,000 anchored contact mines.
14. To have Service have antisubmarine nets in large quantities both for use in lanes of travel, and for use of patrol boats.
15. To have Service emergency fund to Bureau of Ordnance for use in connection with purchase of mines and nets.
16. To have Service have all wing craft under construction or authorized: First, all authorized at earliest completion; second, all authorized destroyers, third, all authorized submarines.
17. To have Service from the emergency fund for rushing the above construction.
18. To have Service have authorized ships to completion to the greatest possible extent from appropriations.
19. To have Service as soon as it convenes to supply an additional emergency fund to supply authorized craft and to provide such other craft as may be needed not specially authorized.
20. To have Service of the remainder of the \$6,000,000 appropriated last year to be sent to the east coast yards.
21. To have Service have authorized new construction at earliest possible time and to have Service have appropriated for improving yards available and at once have yards to set up them properly. It must be remembered that this is absolutely necessary.
22. To have Service have the additional storeshouses provided for in the new bill for \$5,000,000 and sell \$5,000,000 to provide for such additional stores as may be necessary to handle the increased supplies and to have Service have large upon them the necessity of bringing our fleet to meet the ultimate menace which, in addition to all that is required, requires the all wing five battleships, first line, 20 second line, 20 destroyers, 40 coast submarines, 800 tugs, 100 fleet boats, 200 mine boats, 200 mine layers, fleet, 200 patrol ships, 8 supply boats, 200 submarines, 200 tenders.

What is referred to is here printed in full, as follows:

NAVY DEPARTMENT  
Washington, March 1, 1917.

#### ESTIMATE OF THE SITUATION

1. An appropriation bill having become a law and its funds made available.
2. To determine the best plan for utilizing these funds in the

## SUMMARY OF THE SITUATION.

About February 1, Germany announced her intention of destroying all without further warning in certain zones established by herself, around the nations in Europe with which she is at war. The United States declares Germany has a right to destroy any neutral ships without warning and without search and safeguarding lives, at once broke off diplomatic relations. Since that time both enemy and neutral ships have been sunk in the Baltic. German submarines without warning, but as yet no United States ships have been so sunk. In order to protect American ships from these illegal attacks the Government has ordered the arming of merchant ships and authorizes them to resist illegal attacks.

At this time the condition is not one of war, but with German submarines attacking our armed ships, a state bordering on war exists and the situation is such that we may be actually involved in war.

The situation has been gradually developing and in order that the Navy be ready to meet war conditions, Congress has passed an enormous naval appropriation bill and has made its funds immediately available. If the Navy is to be prepared for possible and probable war there is no time to lose in preparing for it. There is no doubt that Congress and the entire Nation expect us to immediately use the appropriated funds as are necessary to prepare ourselves. To fail to do so now to the best advantage may bring terrible disaster to the Nation, but if, when war comes, we may bring it to a successful conclusion. But the proper use for using the funds at once and in the best manner is that we may keep the war on the vast scale of the war in Europe, even if we do not altogether avoid it.

## ENEMY FORCES.

*Strength and disposition.*—The possible enemy forces in the present situation are those of all the Central Allies. On both land and sea their forces are enormous, magnificently trained and equipped, and are organized in a way beyond the comprehension of the vast majority of our population. They wage war in the most scientific way and apparently let no opportunity of injuring their enemies escape. They are brave, resourceful, and ruthless.

Fortunately for us, the tremendous forces of the Germanic powers are not operating against us in their full strength. Their vast armies are generally defensive and are opposed by armies of greater numbers and as splendidly equipped. To maintain her armies Germany depends entirely on her internal resources; this lies her strength. To maintain their armies, the Allies seem obliged to depend on the rest of the world, or at least to bring supplies across the sea, and in that lies their weakness—their strength because of the inexhaustible quantity of their supplies, but their weakness because of the danger to their communication.

The huge naval forces of the Central Powers, as great as they are, do not threaten the sea. Their coast is blockaded, and except for submarines their fleets are contained. So blockaded, except for her power of self-sustenance, Germany would have collapsed, but in spite of her enormous resources and her intelligence, she is facing serious shortages of food and possibility of other supplies due to the conduct of the war.

If the present conditions can be continued, everything points to the final success, but there is some doubt that these conditions will continue. There is but little chance of victory for the German armies until the Entente's supplies are broken, and it is at these, with the only weapons she has, that Germany is depending, and in so striking has denied our rights on the sea. It is yet too early to estimate the result of her blow, but it is to prevent the success of the blow that we must make efforts. Should we, with the Allies, fail in that effort, success may come to Germany and should it, it may fall to us to have to meet Germany's full strength alone.

It follows, then, that we must prepare ourselves to render futile and destroy the immediate menace of the German submarine campaign, in order to destroy the ultimate menace of her full strength used against us, but at the same time we must prepare ourselves to meet the ultimate menace if it comes, for unless we are prepared it is the very life of our Nation is endangered.

*Probable intentions.*—The enemy intentions are fairly well understood. With his enormous submarine force he is endeavoring to break the lines of supply of the Entente forces. Should he succeed, he may gain a decision or at least get a decision of which would leave him with far greater strength than we have. His submarine pressure works against his enemies in the field and against noncombatants.

supply of those in the field, he may win a decision. If he cuts off the communications, their demands may force an indecisive peace, and he will be in view. Even though he may not immediately succeed, the Entente population that their demands will force the Entente powers to send their fleets to save their populace from starvation. In such a case, the Entente will take advantage of the lack of protection to the Allied Fleet, and possibly engage it successfully, thereby gaining command of the sea and immediately threatening us, as well as the Entente powers.

Under the general plan, Germany is already operating her submarines. That she will continue to operate them there can not be doubted. In those zones that shipping converges, and it is there that submarines have their base. But knowing also that those zones are best defended, it is likely and probable that other much used lanes of travel will be attacked. Lacking bases, not a great many submarines can be used, and that would take many to stop shipping at the source. However, it is possible for some to so operate, and it is natural that they should attack those lanes that are nearest and most frequented. Such lanes are those of our own east coast ports, including the Panama Canal, and it is natural that we must prepare for counter operations at once, even though they are offensive operations in conjunction with the Allies.

When a nation has entered this war against her, Germany has at once delivered a powerful blow. Such blows delivered as soon as war comes have the effect of demoralizing and discouraging the new enemy and reducing the morale of Germany's own people. There is every reason to believe that we be involved in the war Germany will make such an attack. We may expect serious attacks from her emissaries within the next few months, but such attempts are not to be met by this department. The Navy a hard blow and a serious one is to operate submarines. Germany knows that we have practically no security force in our waters. A small submarine force could possibly deliver a serious blow. We must expect a blow.

Germany's intentions in the immediate submarine menace have been to create an ultimate menace, should she get into a position to adopt it, and to use full strength against us. It will probably take the form of an attack on the coast with a naval force to gain control, accompanied by an army to carry out a campaign on land. The details of the methods she would use are not known and will not be taken up here. That we must be ready to meet the attack is evident, and while preparing to meet and overcome the attack, we must not lose sight of the ultimate menace or fail to prepare to meet it. The immediate menace may remove the ultimate menace, but we must be ready to meet both, and against both we must prepare for both.

#### OUR OWN FORCES.

As compared with the forces of our probable enemy, we are insignificant and in no way ready to defend the country. Even if we were to take to prepare land forces, they can hardly be ready to meet the attack within a year. Our sole reliance for many months to come must be on the Navy, and the Navy must at once prepare to meet both menaces.

The Navy may be grouped into three classes: (1) Ships completed and ready for service or that will be ready shortly; (2) ships now under construction; and (3) the funds made available in the recent appropriations for the Navy, and for providing material in addition to (1) and (2). The first class will best utilize the third part of our force that this estimate is based upon. I must ascertain what is needed to meet the present menace, and then what is now ready, and then arrange my expenditures to meet the present menace as far as possible. I must realize that an expenditure in the wrong direction, will materially reduce any power to meet the ultimate menace, and the greatest care must be exercised.

As to the first class, my available fighting force now practically ready for service is: 12 battleships, first line; 21 battleships, second line; 9 armored cruisers, first class; 4 armored cruisers, second class; 12 cruisers, third class; 7 gunboats; 11 coast destroyers; 11 mine layers; 4 mine sweepers (with 1000 tons of mines); 26 aeroplanes, 28 submarines, 3 kite balloons.

Under forces appropriated for but not ready we have: Now building—N ships, first line; 1 scout; 27 destroyers; 58 submarines (coast); 3 submarines (fleet); 1 gunboat; 16 nonrigid dirigibles; 78 aeroplanes; 12 kites. Authorized—Three battleships, first line; 5 battle cruisers; 5 scouts; 15 submarines (800 tons).

Under funds immediately available that may be used to complete authorized or to provide material not specifically authorized we have the following:

|  |    |
|--|----|
| For aviation.....                          | 11 |
| Ordnance and ordnance stores.....          | 12 |
| Batteries for merchant auxiliaries.....    |    |
| Ammunition for merchant auxiliaries.....   |    |
| Storehouses, New York and Puget Sound..... |    |
| Naval emergency fund.....                  | 11 |
| For equipping navy yards.....              | 12 |

#### COURSES OPEN TO US.

In order to ascertain what to do we must first compare the above-listed forces with what we actually need to meet both the immediate menace and the ultimate. Let us therefore study the methods of combating each menace and thereby determine our needs after which we will determine how to provide all of them, or not, and to provide for all to provide those things that will best enable us to meet both and hold them in check until we can prepare additional forces.

The immediate menace is from submarines so our first step must be to render the menace futile and to destroy it. It will become futile if, in spite of it, we and our allies can maintain the allies' overwater lines of supply. If we destroy the first mission is gained. How can we do those things?

Submarines have only three offensive weapons—guns, mines, and torpedoes. Of these the gun is naturally the favorite for use because by its successful use it causes the most damage at the least cost. To use guns the submarine must operate on the surface, but so operating, owing to the very few guns they carry and the vulnerability of the ship, they are easily sunk by gun fire. A submarine can not operate on the surface against armed ships and hence properly arming ships requires that submarine attack while submerged and denies the use of their guns.

With their guns eliminated, submarines must depend on mines or torpedoes. Mines they may carry both the floating and the anchored types. They are well suited for using floating mines and at best such mines do not meet their requirements. Good lookouts usually enable a ship to avoid them. Anchored mines are more effective but submarines can carry only a few of them and when laid they can be quickly destroyed by sweeping. They can not be used in over 50 fathoms of water, and in quantity is limited they must be placed in the approaches to harbors. To avoid the danger from mines requires that we must keep certain lanes for ingress to and from our harbors, free of mines. This requires sweeping, for which special boats especially fitted for their work, are required. Owing to the facility with which mines can be placed and the large areas along our coast that are suitable for their work, we will require a very large force of mine sweepers, but with such a force dangers from anchored mines, placed by submarines, will be a minimum.

With guns and mines practically eliminated the only other weapon available to submarines that we need fear is torpedoes. Torpedoes are powerful weapons, but they are expensive and submarines can carry very few of them. By arming merchant ships we force submarines to depend almost entirely on torpedoes for their offensive operations and to remain submerged while attacking. This alone greatly reduces the danger from submarines, for working submerged they can use only slow speed and not choose their positions, and have great difficulty in getting the course and the target upon which knowledge accurate torpedo fire depends. But while merchant ships practically insure their safety from gunfire and coincidentally from torpedo fire less successful, these steps only tend to render submarine warfare more dangerous. We must expect many casualties even after we arm merchant ships, and the only way to stop those casualties is to effect the destruction of the submarines. How to effect their destruction?

To destroy submarines we must first locate them and then sink or capture them. A submarine's safety lies in her ability to completely hide beneath the surface of the water. Its greatest weakness lies in the fact that it can not remain submerged for a great length of time except while resting on the bottom in less than 30 fathoms.

the best means of destroying submarines is to utilize the most effective means of locating them and when they come to the surface to bring to bear the most effective means to destroy them. The best position for seeing submarines is from the air. We can locate them from surface craft, but eyes well above the sea not only see a larger area of water but can see better. Aircraft are therefore a necessity. They are lighter than air and entirely dependent on speed to remain up, are more effective than submarines. Lighter-than-air craft are especially suited for this work. They should be better arranged for the work, able to cover as much area as possible, and being capable of moving slowly in any direction if necessary. It would appear that we should have small lighter-than-air craft for the purpose. The dirigible appears best suited for it.

When we propose to sink submarines when located by the dirigibles we must have sufficiently armed near at hand. To have them near at hand at all times they must be available in great numbers. Those that operate close to the shore must be large enough to carry the necessary size guns, but those that operate far out must be large enough to withstand any and all weathers and be able to operate in any weather. It would appear, then, that we must have many large patrols and many smaller ones. For outside work the minimum size would be the 110-foot

type of patroling submarines by gunfire we may also destroy them by mines. Mines will infest. Nets to entangle submarines can also be used to destroy them in shallow waters. They should be used to protect all lanes of travel in sufficient quantities, to protect lanes of travel of shipping, and to be covered with entanglement nets.

There are three steps that the steps to meet the immediate menace are: first, to protect our merchantmen, but especially those carrying supplies to the entente

countries; second, to insure the number of merchantmen carrying supplies to the Allies to insure that they will be sufficient.

Third, to have enough mines and nets to sweep all lanes of travel from our harbor entrances to the bottom depth.

Fourth, to have enough buoys to mark the lanes of travel kept clear of mines.

Fifth, to have enough rigid dirigibles to maintain a close air patrol over the waters adjacent to our harbors and the waters adjacent thereto.

Sixth, to have enough patrol vessels, large and small, the former to operate offshore and the latter to patrol the lanes of travel for shipping and the waters adjacent thereto, working with the aerial scouts already mentioned to destroy sub-

marines and to sink mines in large numbers.

Seventh, to have enough nets to cover the outside entrances to all harbors and to have enough mines and nets to equip patrol vessels.

Eighth, to have enough of the material do we need? At this time it is impossible to tell the total amount we will require but it is far more than the present resources of the navy and more than our resources can produce in a short time. It is therefore to provide as much as possible of each kind at once, bearing in mind that the more we get now it will be far short of what we must have in the future.

Ninth, to have all armed merchant ships become auxiliaries and to equip them with the same guns and ammunition we now have ready for arming auxiliaries. We have a great many guns for the purpose we can probably arm all the merchant ships that now goes to Europe. But as more shipping enters for that purpose a great augmentation will be needed.

Tenth, to have in mind that they must have gun fire superior to that of the submarines. From this it follows that guns for merchantmen should be of equal caliber to those carried by submarines and they must be so placed as to permit them to bring to bear on the submarines. Depending on the way ships can mount guns they should be equipped with guns of 5 inch calibre or larger. To provide these, contracts should be made for all the 5 and 6-inch guns and ammunition for them that are now in the appropriation "Batteries for merchant auxiliaries, \$1,731,000." For merchant auxiliaries, \$7,731,000." Three-inch and 4-inch guns for small ships until larger guns are available, but all future guns should be of 5 inch calibre or below 5 inches.

Eleventh, to have all ships carrying supplies to the Allies, the United States Government ships and all others, to be provided by the Government with the same armament as the present naval appropriations. We can and should

encourage private ships to enter the trade by offering insurance or subsidies of vital importance that the supplies to the Allies be maintained. On the of maintaining them a favorable decision for the Allies rests and their success means our own success at the least cost.

To provide mine sweepers will not be very difficult. There are already motor tugs and steam fishermen that can be quickly taken over by purchase or charter. Sweeping equipment is easily obtained. The number of sweepers so obtained probably not be sufficient and we may have to construct many. We should have for at least 100 pairs immediately, arming each with a small gun, preferably 4. The sweepers will have to be obtained out of the "emergency fund" and \$100,000 should be set aside from that fund for the purpose. The battery, ammunition, sweeping equipment of the sweepers will have to come from the ordnance appropriations "Ordnance and Ordnance Stores" and "Reserve Ordnance Supplies."

In order that there may be proper buoying of swept lanes, an enormous number of buoys must be provided. These buoys should be provided by the Lighthouse Establishment and notice should be sent them immediately to provide those buoys. Lighthouse Establishment may not have funds at this time we could possibly borrow for them and arrange for reimbursement later. To make sure that the buoying is ready we should set aside \$100,000 for them from the emergency fund. The Lighthouse Establishment should be informed of the lanes to be kept swept and show the buoyage system to mark them.

Our coast air patrol as now arranged for provides for 15 stations. It seems that dirigibles would be the minimum for each station and that those stations near important ports where close patrol is necessary should have more. We have 16 dirigibles ordered and need 44 more to equip stations to the minimum, but if we get 64 that should be enough for a start. That means 64 more dirigibles than have been ordered, and these will cost about \$50,000 apiece. They should at once be ordered. The appropriation "Aviation, \$5,133,000." But in addition to providing dirigibles we must provide places for their stowage and operation. Of these we have not yet decided they will cost much. We must allow \$10,000,000 from our emergency fund for these purposes in addition to the "Aviation" appropriation.

Patrol vessels to be provided are of two classes—those for inshore work and those for offshore work. There are many small craft available for inshore work that can be purchased or chartered and perhaps not many small boats will have to be built. A very different situation holds for the larger patrols for offshore work. There are a few fair-sized yachts immediately available by charter or purchase but in addition we require many more. We should allow for at least 300 offshore patrol vessels at a cost of \$100,000 each (\$30,000,000). For patrols \$30,000,000 of the emergency fund should be immediately utilized. The arming and equipping of these patrols will have to be paid for from the Ordnance appropriations or other bureau appropriations.

Bases will have to be provided for these patrols and funds must be found for their maintenance since without bases they can not be maintained. Makeshifts can be provided if necessary, are available, and at least \$5,000,000 will be required for that purpose.

Mines will have to be provided from the Ordnance appropriation and in large numbers. Ten thousand should be provided for at least. Submarine nets also come from the Ordnance appropriations and are needed in enormous quantities. The Ordnance appropriations are probably insufficient to provide for as many nets and mines as are needed at once, so we should allot \$5,000,000 for those purposes from the emergency fund.

Up to this point we have discussed only those materials to meet the immediate menace. What we have found necessary to provide so far is material to meet the immediate menace alone. But what should be done to meet the far more dangerous long-range menace? To meet that requires that I must have a strong and well-balanced force. It is not sufficient to merely have the power to strike, for unless I have a secure information of force the enemy can attack my heavy ships at will, while I cannot attack him because I can get no information of his whereabouts. A study of what is required to meet the ultimate German menace shows what we should have. In the first column going into the reasons, the force we require is indicated in the second column. In the third column I have listed what we now have. In the fourth column what must be provided to give us the needed strength; and in the fifth column what has been done toward providing the material column three indicates is necessary.

|  | Number<br>required. | Now<br>ready. | To be<br>provided | Steps taken to provide<br>missing units.          |
|--|---------------------|---------------|-------------------|---|
|  | 27                  | 12            | 15                | 9 building, 3 authorized, but not contracted for. |
|  | 21                  | 21            |                   | Completed.  |
|  | 4                   |               | 4                 | 5 authorized, but not contracted for.             |
|  | 9                   | 9             |                   | Completed.  |
|  | 24                  |               | 24                | 1 contracted for; 5 authorized.                   |
|  | 120                 | 52            | 68                | 27 contracted for; 15 authorized.                 |
|  | 87                  | 29            | 58                | All under construction.                           |
|  | 60                  |               | 60                | 3 contracted for; 38 authorized.                  |
|  | 20                  |               | 20                | 3 contracted for.                                 |
|  | 20                  | 4             | 16                | None.   |
|  | 10                  | 3             | 7                 | Do.   |
|  | 114                 | 36            | 78                | All been ordered.                                 |
|  | 40                  | 20            | 20                | 1 building.                                       |
|  | 12                  | 4             | 8                 | 1 building.                                       |
|  | 9                   | 3             | 5                 | 3 authorized.                                     |
|  | 12                  | 2             | 10                | 2 authorized.                                     |

material previously mentioned as necessary to meet the immediate menace listed in the second column above, we should be able to meet even the worst. We may not even with those forces be able to win a decision over Japan, but it is practically certain that she would not be able to decisively defeat us. However, the minimum we should have to be even reasonably safe from

from the above table that we have much to do. It might appear at a first glance that we should at once prepare to meet the ultimate menace by completing all our ships and starting additional ships as necessary. Such would be the case if we had no other funds to do that after providing for the immediate menace. But we are providing for the immediate menace as indicated above, we have less money available in the emergency fund which is not even sufficient to rush to all authorized ships, much less to provide for additional destroyers and submarines. To determine how best to handle our remaining funds we must study the following program.

As to the ships authorized, the actual construction of only five has been completed. Two of these are well along in completion and two are started. All five may be completed before the ultimate menace comes and we may act wisely in expediting the construction of the other three authorized that can be made ready in time to meet the ultimate menace and therefore to use any of our emergency fund on them would be wasteful. It will be expedited to the fullest extent within their special appropriation. It should be taken to provide money to allow the work to be rushed. The cost of the first advanced, \$1,000,000 each should cover the cost of expediting the construction of the first advanced and \$2,000,000 each for the other two.

As to the submarines, excepting one scout, have not yet been contracted for. The cost of them can be completed in time to meet the ultimate menace, so we should not rush our present small emergency fund on them. They should be completed as possible under their present appropriations and other appropriations should be used to expedite these and to build the many others required.

As to the destroyers we urgently need destroyers. We should get all we can at the present time not only by rushing to completion all that have been provided for but also by starting as many more as we can put on the ways. We have 27 contracted for, 15 authorized, and all these can be rushed to completion at an estimated cost of \$200,000. We should allow money from the emergency fund for this and should ask for more money to provide additional destroyers and submarines.

The greatest immediate need for meeting the ultimate menace is to have submarines. We can not win a decision with submarines, but it is probable that with submarines we can keep the enemy from gaining one over us. A large submarine force can prevent an invasion for a while at least, and they should therefore be our first attention now. We should rush to completion all that are now authorized and as many others as the building capacity of the country permits; and we should ask to provide them.

As to the small size contracted for, and they can be rushed to completion at a cost of not over \$150,000. We have three 800-ton submarines authorized that can be rushed to completion at a cost of not over

\$250,000 each. We have three fleet submarines under construction that can be completed at a cost of not over \$300,000 each. We should provide for rush work from the emergency fund, but should at once ask for additional funds to provide for a summary of the rush work that should be undertaken on new construction. The cost is shown in the following table:

| Ships on which work should be rushed.            | Number. | Cost per ship to rush. | Total. |
|--|---------|------------------------|--------|
| Battleships, first line.....                     | 3       | \$1,000,000            |        |
| Do.....  | 2       | 2,000,000              |        |
| Destroyers.....                                  | 42      | 200,000                |        |
| Submarines:                                      |         |                        |        |
| Small.....                                       | 58      | 150,000                |        |
| Coast.....                                       | 41      | 250,000                |        |
| Fleet.....                                       | 3       | 300,000                |        |
| To be allotted for speeding up construction..... |         |                        |        |

The remaining ships called for on our list to meet the ultimate menace should be rushed to completion also, but not at the expense of our emergency fund. It should be urged to provide for these.

No consideration has as yet been given the essential shore stations and handling these large amounts of material required for either menace, yet in maintaining the upkeep of that material and to supply it requires vast additional shore plants. Our facilities for handling our fleet upkeep work are constrained even in peace times. They simply can not handle a larger fleet under time conditions. Toward supplying the fleet we find the same inadequate position. Fortunately we have some appropriations that can be used to meet emergencies outside of our emergency fund.

We have the remainder of the \$6,000,000 made available in last year's appropriation for equipping yards for building ships, and \$12,000,000 available from an appropriation in the event the Secretary of the Navy is unable to secure private shipbuilders contracts for the expeditious construction of the ships theretofore authorized at a fair or reasonable price to enable him to equip the navy with suitable and necessary machinery, implements, building ways, and equipment for the construction of such of said vessels as may be assigned to navy yards for construction. It is practically certain that private shipbuilders will be unable to construct expeditiously at a reasonable price all the ships authorized, and that the total, \$18,000,000, will be available for adding equipment to yards, which installed for building purposes, would be available and used also for upkeep purposes. The need of equipping yards is pressing and no time should be lost in all the funds available and allotting them to yards for equipment, etc. The \$18,000,000 available should be sufficient to cover the yards' needs for upkeep and I need not consider utilizing any of the emergency fund for that purpose at this time.

Supplying the fleets in peace times has reached a high state of perfection, but preparations are insufficient for an increased fleet, and especially so under war conditions. The bill contained two items of \$500,000 each for storehouses at New York and Puget Sound, but while these will help they will not nearly meet requirements. Central distributing depots will have to be provided, as well as distributing stations. The stations may be of a temporary nature, but funds should be provided for them at once. We should set aside \$5,000,000 from the emergency fund for that purpose.

It is also to be noted that the tremendous augmentation of naval craft needed to meet the immediate and ultimate menace requires tremendous additions in fuel depots. This is especially true of oil fuel, for while there will not be a great increase in coal burning craft there will be enormous additions of oil burners. Even now our fuel oil storage is inadequate and not underground, as is necessary for its proper protection. As establishing fuel-oil stations requires special appropriations for the purchase of land, Congress should be asked to make special appropriations for the purpose. Estimates have been asked for storing 2,000,000 barrels of oil to meet the fleet requirements at a cost of \$10,000,000 and that amount should be asked for, for the purpose.

A particular feature that must be borne in mind in this estimate is that the machinery and personnel of the department in Washington was designed largely on a peace basis. With the vast expenditures provided in the naval bill the act

are multiplied. Technical experts, draftsmen, material experts, and others are absolutely necessary to all bureaus and offices to carry on this work, yet the wording of the appropriation bill is such that it is appropriated in it can be used for any expense of the Navy Department unless specific authority is given by law for such expenditures. It is so that unless steps are taken to provide the additional personnel to do the work in the department the whole program may be seriously retarded upon the convening of Congress steps should be taken to supply the essential personnel.

We have covered to some extent the things we need immediately. We have not made sufficient provision to fully meet either the present or future menace, but if we do all that has been laid out we will be going in the right direction. We will at least have started some of the things immediately needed without which we are practically helpless. When the next Congress will again be in session and if more is needed, we will make that provision for it will be made. Having started the work, we will continue and tremendously increase it if necessary.

The amount that should be allotted now is about \$10,000,000 less than what we have. It is not safe to set it all aside at this time as there are surely other things needed at once. If we find the \$10,000,000 remaining will be for other purposes, we can devote it to increasing our material along the lines indicated above.

We should provide for the country's safety as seems to be the wish of the Congress. If we are about the intent of Congress, we should at once allot money in accordance with the following decision and proceed to carry that decision out as soon as possible.

#### DECISION.

1. All ships engaged in trade with the Allies, cost to be charged to the Allies. Use guns of 5-inch or larger caliber if available.

2. Provide armaments and insurance as many additional ships as possible to protect the Allies, arming all that do.

3. Destroy all construction or merchant shipping in all ways.

4. Provide for all 5 and 6-inch guns and ammunition for auxiliaries and operations permit.

5. Provide for the 16 dirigibles now contracted for, and enter into contracts for as many as possible.

6. Provide for the construction of the air-patrol stations for the above dirigibles.

7. Provide from the emergency fund \$10,000,000 for dirigibles, stations, and other things.

8. Build at once and rush to completion, or charter, 300 large-size patrol vessels, keeping the sea. Those built should be not less than 110 feet long.

9. Those built should have a speed of not less than 24 knots.

10. Provide for charter all craft suitable for harbor and inshore patrol.

11. Provide available at once for the above patrol vessels from the emergency fund.

12. Provide patrol vessels at once with suitable guns to be paid for by the Ordnance appropriations.

13. Provide from the emergency fund \$5,000,000 to be used by the Navy Department to provide additional guns and ammunition for patrol vessels beyond their appropriations.

14. Provide for mine sweepers by commandeering, charter, or purchase of suitable vessels. If 100 pairs can not be obtained in this way, provide for 100 pairs.

15. Provide from the emergency fund for obtaining sweepers.

16. Provide and arm all mine sweepers from present Ordnance appropriations.

17. Provide for the Service that many largest size spar buoys will be needed for the purpose of travel and set aside \$100,000 from the emergency fund to the Service for the purpose.

18. Provide for the Service patrol in protected and convenient harbors, setting aside from the emergency fund for equipping them.

19. Provide provide 10,000 anchored contact mines.

20. Provide provide ant submarine nets in large quantities, both for the purpose of lines of travel, and for use of patrol boats.

21. Provide from emergency fund to Bureau of Ordnance for use in connection with funds for purchase of mines and nets.

21. Rush to completion the following craft under construction or authorize the five battleships now nearest completion; second, all authorized destroyers and all authorized submarines.

22. Set aside \$35,250,000 from the emergency fund for rushing the above construction.

23. Endeavor to rush other authorized ships to completion to the greatest extent within the limit of their appropriations.

24. Urge upon Congress as soon as it convenes to supply an additional fund of \$250,000,000 to complete authorized craft and to provide such other material as may be needed not specially authorized.

25. Make immediate allotment of the remainder of the \$6,000,000 appropriated for the year to improve yard equipment to the east coast yards.

26. Call for bids on all authorized new construction at earliest possible time and thereby make the \$12,000,000 appropriated for improving yards available, and allot the money to the yards to equip them properly. It must be remembered that additional yard equipment is absolutely necessary.

27. Start the construction of the additional storehouses provided for in the bill for New York and Puget Sound and allot \$5,000,000 to provide for such additional storehouses and depots as may be necessary to handle the increased supply of material.

28. As soon as Congress meets urge upon them the necessity of bringing up to the required standard to meet the ultimate menace, which, in addition to the material above provided for, requires the following: Five battleships (first class), 3 battle cruisers, 18 scouts, 26 destroyers, 19 coast submarines (800 tons), 17 minesweepers, 16 mine sweepers (fleet), 7 mine layers (fleet), 20 fuel ships, 8 supply ships, 5 destroyer tenders, and 8 submarine tenders.

I have introduced this paper not only because it is an item of record but also and more particularly because it gives you some idea of the decisions already reached as to what to do in war and shows what should have been done during the weeks before we actually declared war. That Congress expected us to do those things was evidenced by the huge appropriation bill of March 3, 1917, that Congress had passed through.

On or about March 14, 1917, that estimate and outline of plan was handed to Admiral Benson, who, after reading it, directed V. O. Chase, Capt. W. V. Pratt, and Capt. F. H. Schofield to examine it and draw up a more complete estimate and plan. I was shown the results of their work, but was several times questioned by them as to certain features of my estimate, and Capt. Pratt told me that their decisions were practically the same that I had recommended. Later I was told by Capt. Schofield that they had completed the estimate and plan and that it had received the approval of Admiral Benson, but that they had been unable to get departmental approval to go ahead with it.

Had the department approved that plan, or even authorized Admiral Benson to go ahead with the plan, which must have been presented about the time war was declared, the various parts of the Navy Department would have been informed as to what their decisions were and could have proceeded to carry them out. With such a plan no one knew what to do. The Bureau of Ordnance, having no definite plan to provide guns and ammunition for, was forced to order them for all kinds of projects, whether or not the projects might be feasible in the war as it was necessary to wait. The Bureau of Supplies and Accounts had no information on what to base their purchase of supplies and was forced to buy not what actually would be needed, but what they guessed they might possibly be called on for.

Department of Navigation had no idea of what they should do as the personnel. Every bureau and every office was in a predicament. Such a plan was equally necessary to those without it; instructions could not be given them as to how to direct their efforts. All of these faults would have at once been remedied had there been an approved plan on which the whole could be concentrated.

I mean to infer that the Navy Department had no general scheme for war. As in all navies we had a more or less fixed plan for the conduct of a war along the ordinary lines; our ships are free to operate. What we did not have was needed at that time, was a plan for waging war against a foe that used only submarines. That such plans were not being made before is not remarkable, for until the Germans used submarines as they did, no one conceived of such a war. However, the time we entered the war, submarine warfare was an established fact, and its methods were sufficiently well known for us to be able to combat it.

War and economy in war both demand a general plan. It is a co-ordinated effort of the entire service along correct and definite lines to win a war. When there is no plan, it is impossible for those who supply material to tell what to get. When there is no plan, each bureau becomes fearful that it may not have everything that will be called for, and it provides material not only in excess of the needs, but material that may not be needed at all. In such cases sums can be wasted.

One of the failures to get authority to carry out the plan submitted was because there was no general plan for providing material to meet the conditions then existing, each office and bureau in the Department was forced to guess at many of the things it ought to get. Each, without reference to any other office, go to the Treasury and ask for allotments from the emergency funds with reference to these things.

Expenditures were frequently made, and resulting contracts for supplies were entered into without the Bureau of Supplies and Stores having sufficient cognizance to know how the emergency fund was being used. I know that one day, a month or two after the armistice, Admiral McGowan, Chief of the Bureau of Supplies and Stores, said to me:

"Remember the plan you tried to put through at the outbreak of the war that was to use the emergency fund, and which the Secretary wouldn't approve. I really had done it! The way things have gone, we find that after the emergency fund was used up, we had to go to other appropriations, we have overexpended the emergency fund by about \$165,000,000.

By congressional action, money was transferred from other appropriations to cover the overexpenditures. I do not cite this to show that the money was wasted or lost, but merely to show that the want of a definite plan for using funds that had been approved was not only impossible to provide exactly and only the money needed to carry on the war in the most efficient and economical manner, but also it was impossible to even tell how we stood financially, which allowed us to carry it on.

Without a definite general plan to work on, the operating part of the Department was in quite as much of a quandary as the material

part. Instead of concentrating on a broad and clearly defined plan, the Navy began the war with merely a series of efforts extended in several directions, and only coordinated as each effort received consideration in the same office, that of the Chief of Naval Operations. You can imagine the difficulties Admiral Benson was in under these circumstances. You can realize how impossible it was for him to send to Admiral Sims the antisubmarine craft that were wanted so badly on the other side.

You can see why for a long time he was unable to tell Admiral Benson what forces were ultimately to be sent to the war zone to operate against the submarines. Instead of having his original plan approved, he might put the machinery of our great Navy to work to carry out and insure a successful conclusion in the least possible time, but he was compelled to himself sink into details and get approval of first one part and then another part of his plans. I was and am still amazed that the Navy was able to accomplish the remarkable work it did in the war. It is certain that what it did accomplish could have been accomplished much more quickly and much more efficiently than it was accomplished if we could have had a plan from the very start—a plan that was based on conditions as they were. Furthermore, I believe that had the Navy worked on that original plan, frequently modified to meet the changing conditions and new information, as all war plans must always be modified, we could have accomplished all that it did and much more in a very much shorter time and with a much less expenditure of money. The above are my reasons for believing the fourth particular.

It should be clearly emphasized that subordinate officers of the Navy Department ought not to be criticized for any action that they may have led to large expenditures. In the absence of guidance from higher authority to guide them, it was their duty to do what they thought they could that in their individual opinion would help to win the war. They would have failed in their duty to the country if they had not assumed the responsibility and taken action to carry out the plans they themselves thought necessary, because of the absence of a general departmental plan.

X { Under the guidance of the Chief of Naval Operations the efforts did ultimately follow a correct and sound general plan. I don't believe the full plan was actually ever laid down on paper, but that under the necessity of having to get approval by piece-meal, a general plan could have been laid down. Operations did not follow a definite general plan at the time war was declared, but did not have the authority to order such a plan carried out. As nearly as I can recall, it was about the 1st of July, 1917, before a well-defined antisubmarine plan was approved. About that time the Secretary did approve the suggestions submitted by the "Board of Devices and Plans Connected with Submarine Warfare" and instructed the bureaus to take steps to carry them out. That, I believe, was the first really definite plan the bureaus were given, but it was not until, about three months after the war started, that the bureaus were given even as much of a war plan to work to as that.

Passing on now to the fifth particular, it would be impossible to explain the situation I have just described without touching upon a matter that I speak of only with great reluctance and hesita-

...since it were it not essential to a clear understanding of why plans were not approved and why delays occurred in many important matters. But as the personal characteristics of executives often have profound effect on the results, direct, an understanding of those characteristics is an understanding of the workings of that organization. It is the personal characteristics of the Secretary of the Navy that made it impossible to get approval of the really important plans. I found this myself, and many others found it. For those who are desired on this point I can give the names of

...a plan or a policy was presented to the Secretary he invariably delayed action on it. The personal interest in naval matters connected with the department absorbed so much of his time that he never had much left to give to us on the naval affairs. Therefore when we would present something, even though it might be urgent, we could secure only a postponement to discuss it. We would generally be directed to leave the matter for consideration. Now it is remarkable but true that the papers left for "consideration" were for the most part not seen by the officer who presented the paper, and if it was followed up the paper could not be found. If there were usually be some reason for not approving or delaying action. We always considered it much more a sound plan or policy than it was to get permission to carry it out. It generally took longer to get approval, and in getting it at all, than it did to formulate the plan. This condition finally became so bad that officers used to be obliged to put their plans and policies through without the required authority.

...in this respect were probably greater than those of the Secretary. I had only to get approval of plans or policies, for not only was I not a member of that kind to present but also, being in the personnel division, I had to prepare the vast number of orders to officers, commissions, etc., that the Secretary by his signature had to sign. I mention this only to show you how necessarily afforded me excellent opportunities of becoming familiar with the subject I am now discussing.

...I know, the Bureau of Navigation is responsible for the personnel of the Navy. The mission of the bureau is to recruit and distribute personnel. Early in the war the bureau was able to rarely obtain approval of its plans for performing its duties. From that time on the bureau was given more authority in those matters than actually it had. In spite of failure to get plans for obtaining men, and in spite of repeated orders not to take men into the service, Capt. Palmer directed that they be taken in and we were to sign the orders. Capt. Palmer himself can give you further information. When it came to plans for training men, approval was never to get. Capt. Palmer and Capt. E. L. Bennett can give you interesting details of their difficulties in that line and how they went ahead and did things without having the required authority. As for the distribution of personnel, the

Secretary of course rarely knew about the distribution except in the case of officers. But in the case of officers I met a most remarkable attitude in regard to sending officers not attached to ships for duty in the war area. I made it one of the rules of the department that when Admiral Sims asked for officers he was to get them. I always had lots of trouble getting such orders signed. As a matter of fact not once but several times during the war the Secretary told me, and told the chief of bureau, too, that he didn't want officers sent abroad. Of course they had to go and we sent them by the simple process of assuming an authority we did not have, by issuing the orders and passports ourselves.

Having above given you an insight into the difficulties of the department, I will now present some documents. The first document is one prepared by me on April 12, 1917, in an effort made at the request of Admiral Earle, Chief of Bureau of Ordnance, "Operations" do something to help him get approval of Congress for the reserve 14-inch shells for our dreadnaughts and for the torpedoes for our new destroyers. The document was prepared and handed to Admiral Benson by Capt. McKean with a letter having the paper presented to the Secretary by Admiral Benson. It reads as follows:

[Confidential memorandum for the Secretary of the Navy.]

NAVY DEPARTMENT  
Washington, April 12, 1917.

1. I have to invite your attention to conditions so alarming to the safety of this country that in my opinion immediate steps must be taken to avert them. These conditions are reported by the Bureau of Ordnance's quarterly report, "Preparedness for War." These serious conditions are summarized as follows:

(1) Shortage of shells, 14-inch caliber.

(2) Nonaward of contracts for 1,296 torpedoes required by the 1917 building program.

2. As the Navy stands to-day we have the full allowance of 14-inch shells for our battleships in commission having that caliber guns. These are the (1) *Arizona*, (2) *Nevada*, (3) *New York*, (4) *Oklahoma*, (5) *Pennsylvania*, and (6) *Texas*. Six ships are called into battle and expend their ordinary supply of shells—while the reserve is sufficient for a short battle—we have not on hand to-day sufficient reserve shells to refill their magazines. The total reserve supply of 14-inch shells for the fleet is 1,861, an average of less than 31 shells per gun. Furthermore, if this small reserve is used for refills there would be no shells at all available for the *Idaho*, *Mississippi*, *New Mexico*, now well along to completion. I can not bring too strongly to your attention that without shells for the guns battleships and all they contain are helpless. They not only can not defend themselves but can not even fight to save themselves. To be without sufficient shells for our largest and best battleships exposed to the Navy but the whole country to disaster. I most earnestly urge that the Bureau of Ordnance be given authority and orders to provide sufficient shells at the earliest possible time to fill out the allowance for the ships built to date and to complete the reserve stocks essential for those ships.

3. While the situation as to 14-inch shell is dangerous, that with reference to torpedoes is none the less so. Our new submarines, Nos. 78 to 107, and destroyers, Nos. 75 to 94, are all being speeded to completion and will undoubtedly be ready for service as soon as ready. Neither can be used unless they are equipped with torpedoes they were built to use. Unless the contracts for their torpedoes are awarded at once the ships will be ready before their torpedoes are.

The price for the 1,296 torpedoes involved, which has been the cause of delay in executing the contracts, has been adjusted and the contracts have been awarded to the E. W. Bliss Co. The price having now been satisfactorily arranged, it only remains to sign these contracts to start the work. It is earnestly recommended that the contracts be signed at once and the Bureau of Ordnance directed to have the work speeded to completion.

weeks before the declaration of war Admiral Earle had effort to get those contracts approved, but for some time was unable to do so. You can imagine the situation of Ordnance to find itself unable to place contracts that might be needed at any moment. With the Nation shells for our dreadnaughts and the torpedoes for our submarines were essential, and Admiral Earle had been urging for weeks but without result. On or about April 28 I handed back to me to find out from the Bureau of Ordnance was any change in the situation. I found the contracts had been placed, but was informed that on that day the shells was still unplaced.

Early stages of the war those of us working on problems of Ordnance saw that with skilled men leaving important war plants for the war we might become seriously handicapped in material for war purposes. At that time a number of men in the department begging us to take action that would prevent disruption of their plans through their men leaving the service at the solicitation of the Army which was seeking to raise a great campaign for them without regard at that time as to whether or not the men were needed in the private plants that were supplying war material.

I first brought this matter to the attention of the department by writing the Troenas Converter Co., who, I believe, supplied the munitions. It can be seen that such companies are the fundamental requisites for war and that if their employees supply munitions or the machines needed to make munitions could not get the munitions. Realizing the necessity of this important matter settled before any serious disruption occurred, on May 10, 1917, I prepared a departmental letter to the Troenas Converter Co., giving a plan for handling it, which letter I will submit.

The letter was not signed, nor was any action taken for some time on this matter. The original of this letter, with a further memorandum, was filed in the Operations file under No. 4188. I am not doubt be found there. At the same time I referred the Troenas Converter Co., which I will also place

submitted by Capt. Laning are here printed in full in the following:

Submitted on May 10, 1917, but not signed. Original is on file together with a further memorandum prepared by me explaining

and papers are forwarded to the War Department for consideration, and posted.

The Government is receiving daily a number of letters from private firms and factories of munitions essential to this department and to the allied nations, of the fact that through the enlistment of their employees in the war the manufacture of munitions is being seriously hampered. There is no doubt but that the War Department is having the same

the Government that the situation is serious, especially in view of the fact that at this time even of more vital importance than men. It is the draft system for raising the additional Army increments that

this feature will undoubtedly be covered, but in the forces that are recruited from volunteers it will continue.

The forces relying on volunteer recruits are (1) the Navy, (2) the Marine Corps, (3) the Regular Army, and (4) the National Guard. Even when the selected measure is passed these four forces will continue their call for volunteer recruits. The result will be to continue the present disastrous plan.

It is realized that to properly cover the situation and to permit every man in the country in the place he is best suited for will require an organization and authority of an executive department which it will be difficult to provide by legislation, and which can not be put into effect in time to meet the immediate pressing situation. I am of the opinion that the situation can be fairly well covered by coordination by the War and Navy Departments along the lines suggested in the attached correspondence. By this plan all Army, Navy, Marine Corps, and National Guard recruiting officers will become cognizant of the names of firms in the country engaged in making munitions for either department, and with that information be able to advise applicants employed by those firms not to enlist but to go to the work where they will be rendering the best service to the country. At the same time the plan provides for placarding the munition plants with authoritative notice to the men employed therein that by remaining at their work they will be serving the national interests.

While the plan outlined above will not insure the complete immunity of munition plants from loss by the volunteering of their essential employees, it is believed it will so materially reduce it as to make the loss negligible. It is considered simple to put in operation and its effect will be of vital good to the Government.

Hoping the War Department will see its way clear to cooperate with the Navy Department in putting the plan into effect, I am,

Very sincerely, yours,

The SECRETARY OF WAR,  
*Washington, D. C.*

[Inclosure.]

NAVY DEPARTMENT  
*Washington, D. C.*

DEAR SIR: Receipt is acknowledged of your letter of May 4, 1917, concerning the loss of services to your contracting plant, R. S. Newbold & Son Co., by the enlistment of men in the services.

The Navy Department recognizes the difficulty of the situation and agrees that work supplying machines can render no better service than to remain at work at this time. Having this view, the Navy Department is endeavoring to effect a plan to discourage such men from leaving that work to enlist, and I have no doubt but that R. S. Newbold & Son Co. will be inclined to accept the provisions. In the meantime it is hoped that your losses through enlistment will in no way interfere with the output.

Sincerely, yours,

\_\_\_\_\_, Secretary of the Navy

Mr. G. MUNTZ,  
*Vice President Tropenas Converter Co., Brooklyn, N. Y.*

The CHAIRMAN. You prepared these letters for the Secretary to sign?

Capt. LANING. Yes, sir. These particular letters I am sending you now, the originals were approved by Admiral Benson, but they were not approved by the Secretary.

Later, on June 1, 1917, this same question of the loss of men from munitions plants was still before us, at that time I was up in a different way in connection with the operation of the law, and when we again tried to get the matter before the War Department in a way that would at least cover individual men we were still unable to get any action. I will insert the letter in the record.

(The letter submitted by Capt. Laning is here printed in the record, as follows:)

NAVY DEPARTMENT,  
Washington.

Secretary of the Navy.

War Department

Mr. Lewis & Bros. Co. request advice on the subject of conscription of

the importance to the Navy Department of the material referred to, correspondence is forwarded to the War Department with the request that it exempt men listed from conscription under the terms of the law.

JOSEPHUS DANIELS.

Enclosing the original the Secretary of the Navy scratched over the

above penciled memo made by me at the time, as follows: "All this

HARRIS LANING.

1896. Failure to get approval of these letters caused great  
attaining an agreement with the War Department in the very  
idea of holding skilled men for the work in munition

we were formulating the Navy's plans for the war found,  
at stages, that appropriations made for specific purposes  
to use our money resources in such a way as to enable us  
to the best advantage in carrying on the war. War  
tactically change, and money to provide material to carry on  
it not usually be appropriated for specific purposes. In  
of the previous errors and to enable us to go on with  
out any further delay after obtaining approval, on May  
prepared for departmental signature a letter which was  
by Admiral Benson and submitted for signature. This  
was as follows:

NAVY DEPARTMENT,  
Washington.

ALB. STICKNEY: I have to invite your attention to a serious oversight in  
reference to the Navy of House bill 3971, making appropriations to sup-  
port services in the Naval and Military Establishments on account of war

is reported to the House there is absolutely no provision made for  
the purchase of destroyers, submarine chasers, patrol boats, mine sweepers,  
and many other additional small craft that will surely be required  
for extensive purposes in this war. I believe this to be a most danger-  
ous oversight. The Navy has already entered contracts for these craft up to the  
limit of appropriations, and the additional craft and other material required  
cannot be obtained because no funds are available.

It is impossible to forecast what direction additional construction or opera-  
tions of the exact kind of material they will call for. It is certain, how-  
ever, that when the time for action comes, this department must be able to act im-  
mediately on a large scale. I therefore recommend that Congress be requested  
to create a naval emergency fund of \$250,000,000, to be known as naval  
emergency fund, and to be available for expenditure in the discretion of the  
Secretary of the Navy not otherwise provided for.

It is made in the very near future, it may not be possible for the  
Secretary to make operations that may be essential to success in the war.

ALB. STICKNEY, Secretary of the Navy.

THE HOUSE OF REPRESENTATIVES.

It was not signed and was later returned to me for file.  
After been signed at that time it would probably have  
been what we needed in the way of money resources, and

what would have enabled the Navy Department to go on development and carrying out of plans for which there was no then available.

Of all the matters on which action was delayed there is none that gave the aid for material more worry or longer than that of getting the dreadnoughts materially ready. Before and after February 1, 1917, and even after April war was declared, the material condition of all our ships, particularly our heavy ships, was repeatedly discussed and asked to get them ready to fight. But the authority to have heavy ships ready was long coming. About the time war was declared announcement was made to the public that the Navy was entirely ready, but as late as May 18, 1917, we were still unable to get the battleships sent to yards to have work done that was to their fighting efficiency. I will now read a memorandum I prepared and which Capt. McKean signed and Admiral Benson approved about May 18, 1917.

NAVY DEPARTMENT  
Washington, May 18, 1917.

Memorandum for Chief of Naval Operations.

Subject: Repairs to battleships, Divisions 5, 6, 7, and 8.

1. Attached hereto is correspondence on the subject of repairs to battleships of divisions recently known as the active fleet, as follows:

(1) A letter from the commander in chief, setting forth in general terms the material condition of the ships referred to and pointing out the necessity of establishing a definite policy as to putting them in condition for any kind of service.

(2) Letters from each of the bureaus, Construction and Repair, Steam Engineering, and Ordnance, commenting on the above, indicating that the necessary work can be done, and each recommending that the essential work be done as soon as possible in order that the fleet may be ready for any service.

(3) Rough lists of the major items of repairs required on each ship.

2. It appears that the essential repairs to these battleships can be completed approximately the following times:

*Connecticut*, 45 days; *South Carolina*, 20 days; *Michigan*, 15 days; *New York*, 40 days; *Texas*, 40 days; *Oklahoma*, at yard, June 9; *Delaware*, 20 days; *Florida*, 50 days; *Arkansas*, 15 days (with turbines, 50 days); *Pennsylvania*, June 30; *Wyoming*, 30 days; *Nevada*, 12 days; *Arizona*, new propellers, June 30; *North Dakota*, 35 days for fire control and over 4 months to install new turbines, ready January 1.

3. Based on recommendations of the Bureau of Construction and Repair, it is suggested that a schedule for repairing these ships be considered along the following lines:

Boston: Take *Utah* immediately, followed by *Delaware*, then *North Dakota* (100 days).

New York: Take *Arkansas* and *New York*, immediately followed by *Texas* and *Wyoming*. *Arizona* to arrive middle of June for propellers (total, 105 days).

Philadelphia: Take *Connecticut*, *Michigan*, and *South Carolina* in order (total, 100 days). Commanded by commander in chief (80 days).

Norfolk: Following *Oklahoma*, take *Pennsylvania* (already arranged for) and *Florida* (or *Florida* may be sent before *Pennsylvania* leaves if yard is ready) to go to yard when material is ready (total, 100 days).

4. By the above the fleet will be ready for anything about the middle of June.

With this memorandum and the papers referred to in it which were later sent to the files, where no doubt they can be found, Admiral Benson was finally able to get approval of a definite plan for the overhaul of the dreadnoughts. I do not know when the work on the ships actually started, but you can see for yourselves the long time that was required to do the work of getting them ready for the work did start. Attached to the signed memorandum is

of memorandum and detailed lists of the larger items of work on each ship. These I will insert in the record.

## MEMORANDUM.

Below are lists showing the major items of work each battleship now at fleet that was unfinished when the ships left the yard to go to the fleet. The lists do not include any additional repair work that may have been done by the arduous winter maneuvers.

Now that practically all battleships require work that is essential to their service. The important work is mostly in the nature of the uncompleted fire-control systems necessitated by the 1915 fire control board and other changes made for better gun fire in action and therefore should be made as soon as can be found to make them.

We must also weigh the fact that the ships with the fleet have been out for five months and that in the course of a few months more they will be at fleet if they are to be ready to make their speeds in case of war.

From the above it would appear that we must give careful consideration to the work to be done on the fleet and weigh its probable employment. The time must come in a short time when each ship will require docking and some overhaul.

## U. S. S. "CONNECTICUT."

|  | Time to complete (days). |
|--|--------------------------|
| Rebuild and overhaul cylinders.....  | 64                       |
| Rebuild control valves to after dynamo stops.....  | 25                       |
| Rebuild training gear of 8 and 12 inch turrets to enable quicker shift to train from fast to slow rate of train (work started). No estimate.   |                          |
| Rebuild all 12 and 8 inch turrets; adjust to proper convergence, check with guns cross-connected and singly.....   | 25                       |
| Rebuild connecting gear of 12 and 8 inch turrets and install indicators to determine when oil motors are in neutral position (work was completed but indicators were not installed)..... | 10                       |
| Rebuild oil expansion boxes for oil motors, all turret guns.....   | 15                       |
| Rebuild geared train in place of chain drive in limit switch of 12-inch turret.....  | 25                       |
| Rebuild Repair.....  |                          |
| Rebuild and overhaul tight steel deck under and around No. 12, 7-inch gun turret.....  | 4                        |
| Rebuild and overhaul gun port shutters.....  | 20                       |
| Rebuild and overhaul tubes from upper deck radio station to after bridge.....  | 8                        |
| Rebuild and overhaul nonmagnetic torpedo defense fire-control station in place of present wooden one.....  | 20                       |
| Rebuild and overhaul fire-proofing of arc radio station.....   | 5                        |

## "SOUTH CAROLINA."

|   |    |
|---|----|
| Rebuild and overhaul inclining experiments.....   | 15 |
| Rebuild and overhaul blowers in both engine rooms.....  | 4  |
| Rebuild and overhaul protectors for sea charts.....   | 25 |
| Rebuild and overhaul shields and umbrella tops on torpedo defense stations in place of present.....                                   | 4  |
| Rebuild and overhaul continuous compartment in fire-room bilges.....  | 15 |
| Rebuild and overhaul armatures with fans in place.....  | 10 |
| Rebuild and overhaul bottom brases, starboard engine, repair leaks in water jacket.....   | 20 |
| Rebuild and overhaul three fire room traps.....   | 10 |
| Rebuild and overhaul all boiler safety valves to yard testing plant and adjust; determine if any repairs needed, if so make them..... | 30 |
| Rebuild and overhaul auxiliary lighting system.....   | 30 |
| Rebuild and overhaul install hydraulic speed gear for boat crane.....   | 30 |
| Rebuild and overhaul auxiliary lighting system.....   | 30 |

## "MICHIGAN."

## Ordnance:

1. Manufacture and install extension to 12-inch guns elevating controls of each 12-inch gun (work started).....
2. Change bag ejector at top of 12-inch auxiliary powder hoists so as to function without breaking powder bags.....

## Steam Engineering:

1. Overhaul counter-gear, etc. (work completed at yard, but not satisfactory).....

## Construction and Repair:

1. Fit cast steel bolster outboard on each hawser pipe.....
2. Manufacture and install strong backs for shell bins.....

## Steam Engineering (electrical):

1. Necessary electrical work in connection with changes in voice tube terminals, in accordance with 1915 board of fire control.....
2. Modify fire control salvo system, fire control board report (can be completed by ship's force).....
3. Install auxiliary lighting system.....
4. Mechanical distant control for search lights.....
5. Run feeder and connect up to panel for (1) 4,000 cubic foot blower.....
6. Install 1 1,000 foot ventilating blower.....
7. Remove and relocate rammer motor rheostats in Nos. 1, e, and 4 turrets.....
8. Number of small electrical items requiring from 2 to 10 days.....

## "NEW YORK."

## Construction and Repair:

1. Calk leaky compartments (not double bottom).....
2. Calk leaky seams and rivets in double bottoms.....
3. Renew two steel wire nets in mainmast.....
4. New sound proof radio booth.....
5. Weld steel plate protections around sea chests.....
6. Search light platforms.....
7. Rearrange present friction band steering gear, etc.....

## Bureau of Ordnance:

1. Ordnance work in connection with installation of two anti-aircraft guns.....

## Steam Engineering (electrical):

1. Provide and install director firing system complete.....
2. Provide and install ball bearings in all motors and remove, retap, and reinstall field coils.....
3. Provide and install return calls for fire-control voice tubes.....
4. Auxiliary lighting system, magazines, shell, and handling rooms.....
5. Turret salvo system alterations.....
6. Alterations in torpedo defense salvo signal system.....
7. Change fire-control telephone system to conform to plan for California class.....
8. Relocate searchlights.....
9. Fire-control telephones for anti-aircraft guns.....
10. Rearrange radio room.....
11. Overhaul and modify battle radio system.....

## "TEXAS."

## Steam Engineering (electrical):

1. Torpedo defense salvo signal system alterations. No estimate.
2. Fire-control changes, turret and target bearing system.....
3. Fire-control changes, telephone system to conform to California class. estimate.
4. Relocate searchlights. No estimate.
5. Provide and install return calls for certain fire-control voice tubes. estimate.
6. Auxiliary lighting in 14-inch magazine and shell rooms. No estimate.
7. Provide and install wiring for plotting indicators in conning tower. estimate.
8. Provide and install fire-control telephone circuit, aircraft guns.....

## Construction and Repair:

1. Install stiffening in way of 22 VS WT door-operating gear brackets...
2. Repair leaky seams, rivets, laps, etc., in double-bottom compartment
3. Renew gaskets on oval bunker doors.....

## REPAIR—Continued.

Time to complete (days).

|   |    |
|---|----|
| Admiral and Chief of Staff quarters.....  | 20 |
| Work on ventilation and coaling pipes, raise sprinkling pipes to permit storage of original number of powder tanks..... | 28 |
| Move and und torpedo defense stations.....  | 45 |
| Install over torpedo-defense stations.....  | 20 |
| Searchlight platforms.....  | 38 |
| Defense platforms.....  | 24 |
| Install present system and install additional fire-control voice tubes..  | 60 |
| Install friction band of rudder to clear armor.....   | 25 |
| Work on anti-aircraft guns.....   | 25 |
| Work on No. 1 turret.....   | 13 |
| Move and install an upper-deck radio house.....   | 10 |

Move the material for which is to be sent to ship, and ship to do work.

## "OKLAHOMA."

|  |    |
|--|----|
| Directoroscope, Mark IV, in turret.....  | 15 |
| Work in connection with installation of 2 anti-aircraft guns....   | 10 |
| Move and reinstall torpedo air compressor, accumulator, and pipes to the commission of after torpedo room.....               | 15 |
| Clutch and lever for shifting rammer motor, turrets 2 and 4.....   | 20 |
| Work on bottom of 20 pneumatic cylinder shell hoists, all turrets..  | 6  |
| Change inside diameter of nose caps in shell carriers of shell hoists in 4 turrets.....                                      | 12 |
| Move hoists securing guides in upper end of shell hoist tubes and space with countersunk head bolts in turrets 1 and 4.....  | 6  |
| Remove cups in clutch between elevating motors and speed gear in turret 1 and 4.....   | 6  |
| Install safety catch on rammer control levers in turrets 1 and 4..   | 15 |
| Remove brace trays (24) to cars of powder hoists in turrets 1 and 4....  | 15 |
| Install tight metal oil seal covers on rammer friction disks in turret 1..   | 6  |
| Remove bearings of shell rollers abaft upper hoists in turrets 1 and 4..   | 12 |
| Install heavier counter springs to shell trays in turrets 2 and 3..  | 4  |
| Electrical:  |    |
| Install light on each 2-gun turret adjacent to each sight scale.....   | 10 |
| Install fire-control action cut-out switches in plotting rooms.. No estimate.  |    |
| Install ammunition hoist motors and two 2-gun turrets.....   | 10 |
| Install additional cease-firing gongs for 5-inch guns, and cease-firing control makers in both torpedo defense stations..... | 15 |
| Install switch-boards, forced-draft blowers, to original position.....   | 15 |
| Install fire-for-firing system.....  | 3  |
| Install telegraph system.....  | 25 |
| Install sets for auxiliary lighting systems, magazines and handling.....   | 20 |
| Install wiring and switch panels for operating anchor windlass motor from main and/or after generators.....                  | 45 |
| Install voice tube from shaft alley to engine room.....  | 20 |
| Install mechanically controlled high-power search lights.....  | 10 |
| Install work for fitting up auxiliary radio room.....  | 15 |
| Install sets auxiliary lighting batteries.....   | 20 |
| Install work in connection with replacement of forced draft blowers..  | 15 |
| Install telephones.....  | 25 |
| Install plotting indicators in conning towers.....   | 10 |
| Install and install switches for various lights.....   | 25 |
| Install lighting system in magazines.....  | 25 |
| Install efficient torpedo defense salvo buzzer system..... No est.   |    |
| Install commutator bars forced-draft blowers.....  | 20 |
| Install repair, and install one 5-kilowatt transformer radio set.....  | 10 |
| Install armature for forced draft.....   | 10 |
| Install radio rotary gap motor.....  | 5  |
| Install high-low power device.....   | 10 |

**Steam Engineering:**

1. Install superheaters on 6 inboard boilers.....
2. Alter bottom blow overboard discharge piping in boilers as required connection with the installation of 2-inch independent sea chests in each boiler compartment.....
3. Cross-connection pipe between the circulating pumps for distillers.....
4. Fit connections for and supply portable air gauges for furnaces and takes.....
5. Shields over oil return rings, outside of connecting rod forks for air engines.....
6. Install system for cooling oil used for forcing lubrication of generators and generator turbines.....
7. Install exposed handwheels for operating gear for fuel oil cut-out valves.....
8. Steam hose and connections in each fire room.....
9. Install discharge line from dynamo condensor hotwell pumps to feed tanks.....
10. Replace electrical forced draft blowers by Terry steam turbine blowers.....
11. Renew brick in boilers (3 unfinished).....
12. Repair runner shaft and bearings main circulating pumps.....

**Construction and Repair:**

There are 88 items on the Construction and Repair list requiring from 100 days. Largest item is structural changes following removal of after torpedo room.....

**"DELAWARE."****Construction and Repair:**

1. Ash ejectors.....
2. Replace zinc protectors around sea chests with mild steel protectors.....
3. Install an approved design of gun spray operated from turret boats each 12-inch gun.....
4. Renew top of fire control towers.....

**Steam Engineering:**

1. Install motor type engine revolution telegraph. No estimate.
2. Complete installation of heating and cooling coils in starboard and forced lubrication oil tanks.....
3. Install 4 ash ejectors and 2 pumps in fire room.....
4. Complete auxiliary lighting system.....
5. Install 8 automatic contractor types controllers with master switches controlling blowers in blower room.....
6. Modify solenoid operated antenna switch.....
7. Make changes to ship service telephones.....

**Ordnance:**

1. Ordnance work in connection with manufacture and installation of powder conveyance hoists.....

**"FLORIDA."****Construction and Repair:**

1. Repair as necessary sections of sprinkling system and flushing fire main. No estimate.
2. Overhaul and make water-tight all 5-inch gun port shutters.....
3. Examine and caulk oil leaks in compartments C-3, C-4, etc.....
4. Renew asphalt formula where metal of hull is exposed in double bottom engine and fire room bilges.....
5. Overhaul steering transmission shafting and bearings.....
6. Overhaul coaling winch gear.....
7. Renew the inner and outer rings in fourth tier and the outer rings in tier of mainmast.....
8. Remove wire nets in cage masts.....
9. Remove, repair, and replace 34 McCreery elbows.....
10. Repair by acetyline process outboard casting of ash ejector.....
11. Make changes in voice tubes.....
12. Wind shields and umbrella tops, torpedo defense stations, etc.....
13. Provide and install bulkheads fitted with water-tight door at frame. install shelving, etc.....
14. Replace zinc protectors around sea chests with mild steel protectors.....
15. Strengthen bulkheads in wake of main feed pumps.....
16. Install antiaircraft guns.....

|  | Time to complete (days). |
|--|--------------------------|
| <b>Deck Repair—Continued.</b>  |                          |
| replace bulkhead for radio room.....   | 8                        |
| move radio station.....  | 15                       |
| replace Kelster meter.....   | 10                       |
| cut and install house on upper deck for radio station.....   | 25                       |
| get approved design of gun spray at each 12-inch gun.....  | 30                       |
| <b>ENGINE ELECTRICAL:</b>  |                          |
| have searchlights and control platforms to conform to 1915 fire-control board report.....                  | 60                       |
| get mechanical control of searchlights.....  | 40                       |
| have fire-control telephone system to conform to 1915 fire-control board report.....                       | 40                       |
| make changes in torpedo defense and turret salvo systems to conform to 1915 fire-control board report..... | 30                       |
| have voice tube system to conform to 1915 fire-control board report.....                                   | 60                       |
| make changes to voice tube call system to conform to 1915 fire-control board report.....                   | 25                       |
| get fire-control firing system complete.....   | 30                       |
| get auxiliary lighting system to fire and engine rooms, central station, etc.....                          | 20                       |
| get auxiliary lighting system in 12-inch magazines, shell rooms, and loading rooms.....                    | 20                       |
| get new telescopes, Mark IV, in turrets 2 and 3.....   | 15                       |
| get approved design of gun spray at each 12-inch gun.....  | 30                       |
| get 200-watt arc transmitter, etc.....   | 30                       |
| <b>ENGINE:</b>   |                          |
| have putted and defective tubes, both main condensers.....   | 30                       |
| get fuel-oil heaters.....  | 6                        |
| have direct steam lines in dynamo room.....  | 25                       |
| get back operating gear to cut-out valves main steam line.....   | 35                       |

| replace bulkheads in wake of main feed pumps.....                            | 30 |
| get foundations, platforms, etc., for three anti-aircraft guns.....          | 30 |
| get tanks for main, auxiliary, and vertical antennae leads.....              | 15 |
| get approved design of gun spray for each 12-inch gun.....                   | 30 |
| replace bulkheads in connection with rearrangement of arc radio.....         | 20 |
| get and installation of Kelster motor.....                                   | 20 |

## Ordnance:

1. Overhaul cross-connecting gear, turret No. 5.....
2. Install springs and other parts to upper powder-hoist doors for each turret.....
3. Install modifications to periscope mounts in turret officer's booths (each turret).....
4. Install a device on shell hoists to prevent premature hoisting (for each hoist).....
5. Install new clutches for elevating cross-connection gear of all turrets (each).....
6. Install directorscopes, Mark 4, in turrets (time per turret).....
7. Install approved 12-inch gun spray (for each gun).....

## Steam Engineering (electrical):

1. Submarine signal oscillator.....
2. Return calls from forward distributing room to both radio rooms.....
3. Install antennæ lead in 30-inch turrets, etc.....
4. Install gyro repeater compass in radio direction finder station... No est
5. Overhaul and calibrate shaft revolution indicator system.....
6. Install auxiliary lighting system in 12-inch magazines, etc.....
7. Provide and install director firing system complete.....
8. Changes in voice tube call system.....
9. Changes in fire-control telephone system.....
10. Changes to torpedo defense and turret salvo system.....
11. Install auxiliary lighting system fire and engine rooms, etc.....
12. Provide and install turret auxiliary lighting system.....
13. Install mechanical control on 8 searchlights.....

## "ARKANSAS."

## Construction and Repair:

1. Rearrange friction bands and tightening gear of rudder to clear armor.....
2. Pneumatic tube for delivery of radio messages.....

## Steam Engineering (electrical): Auxiliary lighting systems in magazines, engine rooms, etc. (started).....

NOTE.—No mention is made in report of turbine work required on *Arkansas*.

## "PENNSYLVANIA."

## Construction and Repair:

1. Rearrange after torpedo room.....
2. Metal wind shield around torpedo-defense stations.....
3. Canopies over torpedo-defense stations.....
4. Provide and install stowage for antiaircraft ammunition.....
5. Install valves and protections on all pipes that pierce armored deck over steering-gear compartments.....
6. Stowage for 5-inch ammunition.....
7. Install 10-inch copper antennæ trunk.....
8. Ventilation for auxiliary lighting system, engine and fire rooms, etc.....
9. Stiffen near after keel knuckle.....
10. Install supports for tops 5-inch hoists.....
11. Strengthen decks under lower handling room.....
12. Change port bucklers No. 1 turret.....
13. Install voice tubes between turret chamber and upper powder handling room..... No esti
14. Install voice tube from forward torpedo-defense station to barquette, etc.....

## Steam Engineering (electrical):

1. Install lighting system in magazines, etc..... No esti
2. Provide and install smoke-indicator system..... No esti
3. Shift electric leads to steering gear..... No esti
4. Electric indicator system for steering telemotors..... No esti
5. Auxiliary lighting circuits torpedo and steering engine room... No esti
6. Provide and install smoke indicator system.....
7. Install fire control circuits for antiaircraft guns.....
8. Complete installation of flagship battle radio.....

## Steam engineering:

1. Install separators in evaporator vapor lines, etc.....
2. Install distant control for steam stop valves fuel oil and booster pumps fire room..... No esti

The second memorandum and the lists of work had been prepared by me some time before war was declared and were items essential to the fighting efficiency of the ships. It should be noted that the items were all known to be necessary at the very time the announcement was made that the Navy was ready, for they were only essential work that had been authorized and left unfinished when the ships left about January 1 to go to Cuba for winter maneuvers. I have no record of the additional repair work required on those ships as a result of their several months of operations in tropical waters.

There is perhaps no achievement of the Navy that has been as favorably commented on as its work in transporting troops across the ocean during the war. I will now point out how hard it was to get the Navy Department to take any action that would enable the Navy to get control of and operate the transports.

In connection with my duties in regard to Navy material, early in May, 1917, after carefully studying the situation, I prepared a memorandum on the subject of the Navy manning and handling the transports that would be utilized in carrying troops abroad. Unfortunately I did not save a copy of that memorandum. However, about May 24, 1917, no action having been taken on the matter and a letter having been received concerning the use of the *Vaterland* for transport duty, I took the occasion to prepare a department letter to the Secretary of the Treasury, who at that time had possession of the seized German ships, setting forth the necessity of having troop transports manned and operated by the Navy and requesting that 16 of the largest, fastest, and most suitable of the seized German ships be turned over to the Navy to be fitted out for that purpose. The letter followed closely the lines of the memorandum I had previously prepared. It reads as follows:

N. S. C. 65.

Mat-1-M. L. 5 25.

NAVY DEPARTMENT,  
Washington, May 25.

SIR: I have to acknowledge the receipt of your letter of May 22, forwarding a copy of the letter from the collector of customs of New York, in which he recommends that the *Vaterland*, not being suitable for a cargo ship and being especially suitable for a transport, should not be intrusted to a merchant crew but should be under the command of an officer of the department that would operate her in the transportation of troops.

I most heartily concur in the collector's view and recommend that not only the *Vaterland*, but also such other of the seized German ships that are required for use as troop transports, be turned over to the Navy Department to be prepared, fitted out, manned, and operated by the Navy in that service.

In this connection I invite your attention to the necessity of the Navy operating all vessels used in the transport of troops during war, and especially of those vessels operating in waters where the enemy may be encountered. Unless such ships are manned and operated by the Navy the chances of their loss will be tremendously increased, and since their destruction will cause enormous loss of life and may jeopardize the campaign, we must take every possible step beforehand to reduce the chance of such loss to a minimum.

The first consideration in the transporting of troops is their safety. It must be remembered that while on troop ships the troops can not fight. A torpedo or even one lucky shot from a gun may sink a transport with practically all its precious freight of munitions and lives. It follows, then, that every plan for transporting troops must contain every possible safety precaution. The mere presence of a naval convoy is not in itself sufficient protection and especially so against submarine attack. The ships carrying troops must maneuver and operate defensively under command of the convoy commander.

Also we must not overlook the fact that each of these ships must be specially equipped with naval outfits of signal books, radio, etc. These things can not be entrusted to any but naval men. They are most secret and to allow them to pass into other hands endangers not alone the ships of the expedition but the whole Navy that uses them.

Again we must bear in mind that these ships carrying the most precious and essential part of our war forces must be entirely manned by men tried and true. The methods of signing up crews for merchant shipping if used in obtaining crews for vessels in our transport service leaves an open way for enemy agents or sympathizers to work into the crews of those vessels and they can carry out any nefarious designs they might wish. We must man transports from captain to coal-passer with the most dependable men available, so that there may be the minimum danger from enemy agents.

From the above it is evident that there can be no division of authority on the ships engaged in carrying troops. If the Navy is to be responsible for the safety of the convoys after sailing it can not permit any but its own representatives, trained to the requirements of the duty, to operate any part of it. Even then, only by close coordination between every unit of the expedition can success be expected and with the utmost coordination the duty is fraught with danger. We can not permit added danger by putting any phase of the troop transportation in the hands of untrained and unorganized assistants, or in the hands of anyone of whose loyalty and fidelity there can be doubt.

I therefore strongly urge that this matter be given careful attention and that not only the *Vaterland* but all the other vessels listed above as necessary for transport duty and that are not now assigned the Navy, be assigned to the Navy at once in order that they may be properly fitted and equipped for the work and manned and put in service as troop transports at the earliest possible time. As not only the safety of the expedition but also the success of our whole campaign in the war depends on this matter, it should be decided on now and not wait for terrible disaster to show us the error of adopting any other plan.

Sincerely, yours,

THE SECRETARY OF THE NAVY.

The honorable the SECRETARY OF THE TREASURY.

Four days later I prepared a letter to the Secretary of War asking the War Department's assistance toward getting the troop-transport service turned over to the Navy and the service established on a sound basis. This letter, which was returned to me some days later from Admiral Benson's office unsigned and marked "hold," reads as follows:

In reply address the Secretary of the Navy and refer to Mrr. 1-5/29.

NAVY DEPARTMENT, *Washington*.

(Penciled note:) "Hold."

Capt. McKEAN.

SIR: There is forwarded herewith a copy of a letter I am this day sending the Secretary of the Treasury, suggesting that certain seized German ships be turned over to the Navy to be fitted out, manned, and operated by the Navy as troop transports.

While the Navy Department does not desire to change the arrangements already made with the War Department concerning the immediate transportation of troops across the Atlantic, it feels that the ultimate problem is so essentially naval, that it would be derelict in its duty if it did not point out what it believes to be the most practicable and safe method of carrying out its part of the general mission.

The Navy is concerned in transportation of troops only from the time they go on board the troop ships until they leave the ships, but during that time it is entirely responsible for the expedition. The points of embarkation and debarkation mark the beginning and end of the Navy's responsibility, and in view of that responsibility it recommends a well-planned and carefully organized service.

The Navy Department is of the opinion that the transportation of troops should interfere as little as possible with shipping now engaged in transporting supplies across the Atlantic, and to that end proposes that certain seized German ships, especially designed for use as transports in war, be fitted up for the purpose. The ships can not be used immediately, but when repaired, equipped, and properly manned will be the best ships possible for the work. The ships named in the letter will give excellent service and will probably handle the transport question fully, enabling this country to deliver in the neighborhood of 70,000 troops per month on the western front.

The second memorandum and the lists of work had been prepared by me some time before war was declared and were items of value to the fighting efficiency of the ships. It should be noted that the items were all known to be necessary at the very time the arrangement was made that the Navy was ready, for they were only the work that had been authorized and left unfinished when the transports left about January 1 to go to Cuba for winter maneuvers. There is no record of the additional repair work required on those ships as a result of their several months of operations in tropical waters.

There is perhaps no achievement of the Navy that has been so favorably commented on as its work in transporting troops across the ocean during the war. I will now point out how hard it was to get the Navy Department to take any action that would enable the Navy to get control of and operate the transports.

In connection with my duties in regard to Navy material, on May, 1917, after carefully studying the situation, I prepared a memorandum on the subject of the Navy manning and handling of transports that would be utilized in carrying troops abroad. Unfortunately I did not save a copy of that memorandum. However, about May 24, 1917, no action having been taken on the matter, a letter having been received concerning the use of the *Vaterland* for transport duty, I took the occasion to prepare a department letter to the Secretary of the Treasury, who at that time had possession of the seized German ships, setting forth the necessity of having transports manned and operated by the Navy and requesting that 16 of the largest, fastest, and most suitable of the seized German ships be turned over to the Navy to be fitted out for that purpose. The letter followed closely the lines of the memorandum I had previously prepared. It reads as follows:

N. S. C. 65.

Mat-1-M. L. 5/25.

NAVY DEPARTMENT,  
Washington, May 25, 1917.

SIR: I have to acknowledge the receipt of your letter of May 22, forwarding a copy of the letter from the collector of customs of New York, in which he recommends that the *Vaterland*, not being suitable for a cargo ship and being especially unsuitable for a transport, should not be intrusted to a merchant crew but should be under the command of an officer of the department that would operate her in the transport of troops.

I most heartily concur in the collector's view and recommend that not only the *Vaterland*, but also such other of the seized German ships that are required for troop transports, be turned over to the Navy Department to be prepared, fitted out, manned, and operated by the Navy in that service.

In this connection I invite your attention to the necessity of the Navy operating all vessels used in the transport of troops during war, and especially of those operating in waters where the enemy may be encountered. Unless such ships are manned and operated by the Navy the chances of their loss will be tremendously increased, and since their destruction will cause enormous loss of life and material, and jeopardize the campaign, we must take every possible step beforehand to reduce the risk of such loss to a minimum.

The first consideration in the transporting of troops is their safety. It must be remembered that while on troop ships the troops can not fight. A torpedo or one lucky shot from a gun may sink a transport with practically all its precious cargo of munitions and lives. It follows, then, that every plan for transporting troops must contain every possible safety precaution. The mere presence of a naval convoy is in itself sufficient protection and especially so against submarine attack. The transports carrying troops must maneuver and operate defensively under command of the commanding officer.

the haphazard gathering of ships to transport troops, with perhaps no means of communication with the leader of the force, would be a real disaster. The country stands to lose all and gain nothing by sending out such a haphazard force. It may be justly likened to detailing an untrained force to go into the fighting line on land. Such a plan would have no chance against a well-armed and resourceful enemy. Even to a less extent would it be true in the case of any chance against the enemy's fighting navy, and to carry troops into the waters of the fighting front in industrial shipping, places of great possible danger.

Some of the details in connection with the transportation of troops, and of vital importance to be considered in assigning transports,

are:—(1) Vessels of suitable type, with sufficient capacity and speed.

(2) The operations of the vessels.

(3) The service for transport service requires care. Ships suitable must have a great number of men and cargo capacity for the equipment and supplies to be carried. Speed enters into the selection for several reasons.

(4) In the question of safety, for the greater the speed the more immune is a ship to attack.

(5) In the question of grouping the transports according to speed.

(6) In the question of speeds in one group of transports, the speed for all of the group must be that of the slowest ship. If we put the *Vaterland*, with 24 knots, and containing one ship of, say, 15 knots' speed, the *Vaterland* must go at 15 knot speed and at once loses the value of her great speed.

(7) In selecting and arranging ships for transport service, we must consider the requirements for each group, and sufficient groups to carry out our task.

(8) In the possible requirements of our overseas operation it would seem that a large number of ships should be provided. If of sufficient speed, each group can be sent out once each month, and this would give us a constant and regular supply of troops and supplies to the front. After a careful study of the ships available, the Navy Department is convinced that the best ships available are the so-called German ships. They were especially designed to carry troops and supplies, and are the best in the world.

(9) The ships to be put in service in the shortest possible time. It is advisable to use the ships which are at once the best and most available for the purpose.

(10) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(11) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(12) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(13) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(14) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(15) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(16) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(17) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(18) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(19) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(20) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(21) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(22) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(23) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(24) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(25) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(27) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(28) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(29) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

(30) The ships to be used below will answer the immediate requirements. They are the best ships available, and each group would form one unit of the transport service, and could be safely conveyed with the submarine situation as it exists at present.

Also we must not overlook the fact that each of these ships must be specially equipped with naval outfits of signal books, radio, etc. These things can not be entrusted to any but naval men. They are most secret and to allow them to pass into the hands endangers not alone the ships of the expedition but the whole Navy.

Again we must bear in mind that these ships carrying the most precious material part of our war forces must be entirely manned by men tried and trained in the methods of signing up crews for merchant shipping if used in obtaining transports in our transport service leaves an open way for enemy agents or sympathizers to work into the crews of those vessels and they can carry out any nefarious thing they might wish. We must man transports from captain to coal-passer with dependable men available, so that there may be the minimum danger from enemy agents.

From the above it is evident that there can be no division of authority on the subject of engaged in carrying troops. If the Navy is to be responsible for the safety of the transports after sailing it can not permit any but its own representatives, trained to the performance of the duty, to operate any part of it. Even then, only by close cooperation between every unit of the expedition can success be expected and with that coordination the duty is fraught with danger. We can not permit added danger by putting any phase of the troop transportation in the hands of untrained and unexperienced assistants, or in the hands of anyone of whose loyalty and fidelity there can be any doubt.

I therefore strongly urge that this matter be given careful attention and that only the *Vaterland* but all the other vessels listed above as necessary for the duty and that are not now assigned the Navy, be assigned to the Navy at once so that they may be properly fitted and equipped for the work and manned and put to service as troop transports at the earliest possible time. As not only the safety of the expedition but also the success of our whole campaign in the war depends on this matter, it should be decided on now and not wait for terrible disaster to show the error of adopting any other plan.

Sincerely, yours,

THE SECRETARY OF THE

The honorable the SECRETARY OF THE TREASURY.

Four days later I prepared a letter to the Secretary of War requesting the War Department's assistance toward getting the troop-transport service turned over to the Navy and the service established on a sound basis. This letter, which was returned to me some days later from Admiral Benson's office unsigned and marked "hold," reads as follows:

In reply address the Secretary of the Navy and refer to Mrr. 1-5/2

NAVY DEPARTMENT, Washington

(Penciled note:) "Hold."

Capt. McKEAN.

SIR: There is forwarded herewith a copy of a letter I am this day sending to the Secretary of the Treasury, suggesting that certain seized German ships be turned over to the Navy to be fitted out, manned, and operated by the Navy as troop transports.

While the Navy Department does not desire to change the arrangements now made with the War Department concerning the immediate transportation of troops across the Atlantic, it feels that the ultimate problem is so essentially naval that it would be derelict in its duty if it did not point out what it believes to be the most practicable and safe method of carrying out its part of the general mission.

The Navy is concerned in transportation of troops only from the time they board the troop ships until they leave the ships, but during that time it is responsible for the expedition. The points of embarkation and debarkation at the beginning and end of the Navy's responsibility, and in view of that responsibility it recommends a well-planned and carefully organized service.

The Navy Department is of the opinion that the transportation of troops by the Navy interferes as little as possible with shipping now engaged in transporting supplies across the Atlantic, and to that end proposes that certain seized German ships, designed for use as transports in war, be fitted up for the purpose. These ships are not to be used immediately, but when repaired, equipped, and properly manned will be the best ships possible for the work. The ships named in the letter will give *prompt service and will probably handle the transport question fully, enabling them to try to deliver in the neighborhood of 70,000 troops per month on the western*

round that all supplies for troops be sent on these transports, though it may be necessary to carry all that their capacity permits. Munitions, animals, etc., must, as a general rule, be transported by merchant ships, while fresh troops with their baggage must go forward on transports.

The rules for the Navy handling this service are set forth in general terms in my report to the Secretary of the Treasury, and in view of the necessity of at once establishing the service on the best possible basis I request that the War Department, if it is in the views set forth, assist in every possible way to establish the service as early as possible at the earliest possible time.

Very yours,

SECRETARY OF THE NAVY.

cc: the SECRETARY OF WAR.

Enclosed before, that letter was not signed and was returned to me with the following note:

"As late as July 3, 1917, I was still hammering away the little to get the transports turned over to the Navy. This is evident from a memorandum submitted by me to the Chief of Naval Operations on July 3, 1917, and which I will place in the record:

N. S. O. 65. Mat-1-ML (7/3). "M."

NAVY DEPARTMENT,  
Washington, July 3, 1917.

Enclosed

is a copy of a letter addressed to the President by the chairman of the Shipping Board, in which it is requested that all seized ships not already turned over to the Navy be transferred to the Shipping Board.

The letter states that while the Shipping Board is apparently adverse to the Navy or Army any of the seized ships that are to be used as transports, it suggests that the President give the matter consideration and that a decision of the Government shall operate troop ships should be reached after the arguments of all concerned are heard.

The board from the letter that the board states that there is abundant time to decide before the ships are ready to load. This statement would be correct if the ships were ready for use as a transport whenever she is ready to load.

A very considerable change must be made in merchant ships to make them suitable for transport use, and to delay making these changes would be to delay the readiness of the ships for the service. The decision should be made as early as possible time and the fitting-out work started.

In conversation with Shipping Board representatives it is understood that they are of the opinion that the German ships must be used as transports, but they are of the opinion that the ships should be officered, manned, and operated by the Shipping Board. The Army on "time charter" whenever it becomes necessary to use them. They apparently fail to grasp the idea that if we are to transport a large number of troops to France it will require a special service of large fast ships, and that the ships in that service will be worked to capacity and can not be used for anything other than to bring such cargo from their ports of call in Europe. Inasmuch as the ship is about to return. Inasmuch as the transports can not be used for any other work at all, it hardly seems proper that the board should have them officered, manned, and operated by civilian complements.

The danger zone with any but the best discipline and crew available is merely inviting colossal disaster. The board should officer and man its ships as all merchant ships are officered and manned. It is to read the reports of the officers in charge of our armed forces that the absolute menace to any ship by employing that method, yet it is to read the plan to apply it to ships carrying invaluable munitions and supplies when our success in war depends. Unless troop ships are manned by the trained and loyal men of the Navy the chances of their loss will be enormous, and, since their destruction will cause enormous loss of life and property in the campaign, we must take every possible step beforehand to reduce the chance of such loss to a minimum.

In consideration in the transporting of troops is their safety. It must be remembered that while on troop ships the troops can not fight. A torpedo or even a mine can sink a transport with practically all its precious freight.

of munition and lives. It follows, then, that every plan for transporting contain every possible safety precaution. The mere presence of a not in itself sufficient protection to troop ships, especially against submarine attack. When attacked, the ships carrying troops must maneuver and operate under the command of the convoy commander. It is evident that the gathering of ships to transport troops with personnel untrained to maneuver to communication with the leader of the force, is merely inviting defeat. The country stands to lose all and gain nothing by such a method of transport. It may be just likened to detailing an untrained industrial force to go into line on land. Such a plan would have no chance against a powerful submarine enemy. Even to a less extent would an industrial navy have any chance against the enemy's fighting navy, and to carry thousands of troops into the fighting front in industrial shipping places them in the greatest possible danger.

While there are a multitude of details in connection with the transport service, there are two points of vital importance to be considered in assigning these duties. These are:

- (1) The selection of vessels of suitable type with sufficient capacity and speed.
- (2) The personnel and operation of the vessels.

The selection of ships for transport service required care. Ships suitable for accommodations for a great number of men and cargo capacity for the supplies of the men carried. Speed enters into the selection for several reasons. It comes the question of safety, for the greater the speed the more immune is the ship to submarine attack. Next comes the question of grouping the transports by speed. If we mix ships of various speeds in one group of transport, the speed of the group at once becomes that of the slowest ship. If we put the fastest ship in a group containing one ship of, say, 15 knots speed, the group becomes for that trip a 15-knot ship and at once loses the value of her greater speed. It follows, then, that in selecting and arranging ships for transport service we should select ships of similar speeds for each group and sufficient groups to carry out our plan.

From a study of the possible requirements of our overseas operation it is found that four groups of ships should be provided. If of sufficient speed, each group could make a round trip about once each month and this would give us a steady flow of troops and supplies to the front. After a careful study of the requirements, the Chief of Operations is convinced that the best ships available are certain of the seized German ships. They are especially designed for transport of troops and can be put in service in the shortest possible time. It is advised that they be used, since by so doing the regularly established shipping routes will be maintained. These ships are at once the best and most available for the purpose. Of them those listed below will answer the immediate requirements. They are arranged as to speed and each group would form one unit of the transport service, plus a large unit as could be safely convoyed with the submarine situation as it changes. The groups are as follows, the estimated troop capacity being based on an allowance of 100 tons per man carried:

| Groups.                     | Estimated troop capacity. | Speed.        | Groups.                       | Estimated troop capacity. |
|-----------------------------|---------------------------|---------------|-------------------------------|---------------------------|
| <b>First group:</b>         |                           | <i>Knots.</i> | <b>Third group—Continued.</b> |                           |
| Vaterland.....              | 10,000                    | 24            | König Wilhelm II.....         | 3,000                     |
| Kronprinzessin Cecilie..... | 3,000                     | 23½           | Princess Alice.....           | 3,000                     |
| Kaiser Wilhelm II.....      | 3,000                     | 23½           | Princess Irene.....           | 3,000                     |
| <b>Second group:</b>        |                           |               | <b>Fourth group:</b>          |                           |
| George Washington.....      | 8,000                     | 19            | Cincinnati.....               | 5,000                     |
| America.....                | 7,000                     | 17.5          | President Grant.....          | 6,000                     |
| <b>Third group:</b>         |                           |               | President Lincoln.....        | 6,000                     |
| Hamburg.....                | 3,300                     | 16            | Frederick Der Grosse.....     | 3,300                     |
| Grosser Kurfürst.....       | 4,000                     | 15.5          | Barbarossa.....               | 3,000                     |

With a fleet of transports operating in groups as above we could handle 70,000 men a month, with all their equipment except animals.

To handle these ships safely, they must have a personnel trained to operate naval methods. This applies not only to the actual maneuvering of the ships but also to the specially trained men to man and operate the guns, the signaling and the radio outfit. Men untrained in naval methods can not operate any of these things and yet on them depends the ship's safety.

each of these ships must be specially equipped with radio, etc. These things can not be most secret and to allow them to pass along the ships of the expedition but the whole Navy must be entirely manned by men tried and true. The methods which will be followed by ships operated by the Navy in obtaining crews for vessels in our transport service must be such as to allow them to work into the crews of these vessels any nefarious design they might wish. It is possible to get out any transports from captain to coal-passers with the best men available, so that there may be the minimum danger from the crew being dependable men available and perhaps the only entirely dependable men available in the Navy. Even then, only by close coordination between every branch of the Navy can success be expected and with the utmost coordination we can not permit added dangers by putting the transport service in the hands of untrained and unorganized men of whose loyalty and fidelity there can be any doubt.

Every vessel given careful attention and all the vessels listed above as transports must be assigned to the Navy at once in order that they may be equipped for the work and manned and put in service as soon as possible. As not only the safety of the expeditions but the whole campaign in the war depends on this matter, the Navy must be reached without waiting for terrible disaster to show us the need for another plan. The best service possible is none too good for the Navy and that best service is the service of the Navy. We must not use these vessels as naval auxiliaries but only to take them out of naval control during such time as they are employed in carrying troops. The Navy Department does not wish these ships to be taken over by the Army but to have them revert to the Shipping Board when the transport service has been completed.

From the very start I felt that we would not get any departmental agreement on this very vital question as to who would man and operate the transports. During the month of May, 1917, in conversation with Gen. Pershing's Chief of Operations, this question was explained to him. As a result of this conversation the recommendation of Gen. Pershing and his staff to the War Department began to advocate the taking over and operation of the transport service by the Navy.

In many instances it seems probable that had the Navy taken positive action when the matter was first brought up, the matter could have been saved and the Navy would have had the transports and would have been getting them ready fully one month earlier than they finally did get them. It may be added that the transports were turned over about July 10, 1917, were with one exception, as suggested in the first memorandum.

There was great delay in getting the transport service ready for the Navy, so also there was great difficulty and delay in getting the Navy to take up the matter. The destroyer program, which was talked of naval effort, viz: The destroyer program, was taken up at the beginning of the war called for many destroyers to those provided for in the three-year building program. The piece-meal method of developing a general plan and the destroyer program was also called for. This was met in the orders for destroyers to be paid for out of the first

emergency fund, but the fund was too small to provide as like the required number. It was to provide for just such as this that caused me, on May 2, 1917, to prepare for the Secretary's signature the letter I inserted above addressed to the Speaker of the House, asking for an additional emergency fund of \$250,000, which letter, as you will recall, although approved by Mr. Benson, was not signed by the Secretary.

Evidently no action along the line of getting more modern destroyers and other small craft had been taken up with the Secretary prior to June 22, 1917, for on that date Capt. Schofield, Chief of "Operations" came to me and told me that in spite of all that had been impossible to get the Secretary to take up the matter of getting appropriations for additional destroyers. He said it was imperative to get action on this matter which was vital, and in order to force action it had been decided to each day submit a memorandum prepared by an officer giving that officer's argument on the necessity of providing the additional destroyers. Capt. Schofield then gave me a copy of his memo. which was to be submitted the next day and asked me to prepare the memo. for the following day. These memos. read as follows:

[Capt. Schofield's memoranda.]

NAVY DEPARTMENT  
Washington, June 22, 1917

Success in the present war means success in combating submarines. This is so patent to everyone that we have grown accustomed to the idea without properly stimulated by it.

No war can be won on defensive measures. The offense is the only known method of imposing our will on the will of the enemy.

To date, the most effective offensive against submarines is the destroyer. As the submarines extend the area of their operations seaward the "chase" becomes less and less effective and the demands made upon the destroyers increase.

The number of destroyers now is wholly inadequate. They are working under heavy strain. Their material will deteriorate. Units will be lost. These conditions at the present and foreseen demands have lead the General Board, all of the fleet, operations, and Vice Admiral Sims, to urge that every possible effort be made with facilities already obligated to the Navy, to build the maximum number of destroyers in the shortest possible time.

The above recommendation contemplates laying aside for the present the building down of additional battleships, battle cruisers, and concentrating on the building of destroyers.

The cooperation of shipbuilders and the authority of Congress are essential. If they may be fatal.

The following day I submitted this memorandum:

JUNE 22,

The country relies on the Navy to save the submarine situation and will hold the Navy Department responsible for any failure to do so. It is possible to save the situation, to save the situation, but failing to save it we will pay the penalty in life and treasure but we will actually jeopardize the existence of the country. It follows that this department must leave no stone unturned to its duty to the people and the country.

Up to the present time practically every measure we and our Allies have taken against the submarine warfare has been defensive. We are allowing our enemy continually increase the number of his submarines and enlarge his area of operations. It takes but an instant's thought to show that this policy plays directly into the hands of the enemy and that unless we can reverse the condition he must surely succeed in defeating us and our Allies suffer defeat.

Our present defensive measures are perhaps the most extravagant and wasteful as well as the most futile that can be devised. We are not using every effort to destroy the increasing number of wolves feeding on our flock, but rather are

immense cost, that these wolves may feed the better. To continue more than military defeat—it means economic ruin for all the world.

Our great wealth is no reason why we should allow it to be sunk in war as it is. It can not sustain the cost we are putting upon it. Congress, as well as our Allies, are spending billions for ships to feed our lives whereas a small part of those expenditures, if used to create ships would destroy them. Shall we continue to spend billions and shall we spend millions wisely and insure success?

Experience has developed but one type of vessel capable of coping with that is the destroyer type. It alone has the speed, offensive power, maneuver, and other characteristics that the submarine can not overcome. Specially equipped, will drive the submarines down, and keep them down. Should we not build every destroyer possible in the world?

Merchant ships built to be sunk will cost us life and untold treasure. Destroyer if kept afloat will save the situation. It is the Navy's duty to attack and since to drive the submarines from the sea to keep the merchant ships not infinitely less than to overfeed submarines on costly laden ships, our failure in the hour of need by not providing the only known cure—

HARRIS LANING.

MEMO show how strongly we had to argue before we got action. I have no knowledge as to what other officers' memoranda nor how long after the "memo" method was action was finally taken. It is sufficient for me to show what lengths we were put to to get action on vitally important and how such matters were delayed through the slow getting action. That these difficulties made the Navy's tardiness is certain; what the resulting delays cost in lives can no one can even guess.

Q. of my statement.

BERMAN. Capt. Laning, what was the feeling in the department the German ambassador had been given his passports? Was there a general feeling that war was inevitable?

LANING. As I recollect it, he was given his passports about the 1st of February.

BERMAN. I think that is correct.

LANING. The general feeling at that time among the officers was war was inevitable; yes.

BERMAN. And the general feeling among the officers of the Navy was that preparations should be made at once?

LANING. Yes.

BERMAN. Preparations for war?

LANING. Yes.

BERMAN. Can you give me any information as to the complement of officers and crews on the various battleships and destroyers in 1917?

LANING. On the battleships at that time we had what was called peace complement. That was about 85 per cent of what was considered to be the war complement. Later we had what we considered to be the war complement was adequate to meet the demands of war as it is waged today. Addition of submarines and certain other craft made

we have a great many more men for lookouts, and they have required many additional men; so that at the time of the war we had not what was then thought to

battle complement, but what we then called the peace complement and what we then thought to be the battle complement what we now know to be the fighting complement of those ships.

Of the destroyers at that time I think the crews were 94 men but when they got over into the war zone they found that to man submarines, particularly, the destroyers had to have something like 120 or 125 men.

Now, the figures I have given you, of course, were for the fleet. Those were the ships that were actually operating. There were a number of ships that were not operating. A number of large battleships were in reserve, and the armored cruisers were in reserve on the west coast. I think all but two were in reserve on the west coast. Of our destroyers we had approximately 30 with 94 men each and something like 25 that were manned by what we call reserve crews; that is, 50 per cent of their full complement.

The CHAIRMAN. Was any attempt made to bring them up to full fighting complement?

Capt. LANING. No, sir; we did not have the men with which to bring them up. The law at that time, I think, gave us about 100 men, and we were pretty well recruited up to that number, but at that time we had no way of increasing the number of men on the ships unless that law was changed.

The CHAIRMAN. Was any attempt made to enlist any more men?

Capt. LANING. Just at that time, Senator, I was dealing with materiel and operations, and I did not know much about the personnel situation, did not pay much attention to it from October, 1910, to July 16, 1917, when I went to the Bureau of Navigation, and I was competent to give you all the figures for that period, or to tell you what they did as to personnel at that time. I know that when the war started we did not have enough men to man all our ships.

The CHAIRMAN. Was there any plan of any kind made by the War Department to increase the efficiency of the Navy as to preparation between the 5th of February or the 3d of February, when the ambassador was given his passports, and the time that war was declared?

Capt. LANING. Oh, undoubtedly there were a number of things done.

The CHAIRMAN. What were the general plans of the department?

Capt. LANING. There was not any big general plan that I ever saw, but I am sure that each bureau went ahead and did a number of things that it could do to get ready, but I do not know what the general plan was.

The CHAIRMAN. Do you know whether the Secretary had any particular plan of his own?

Capt. LANING. No, I do not. I do not think he had.

The CHAIRMAN. And there was no general plan given out by the different departments?

Capt. LANING. Oh, no sir, there was no general plan. There have been some individual plans carried out, but there was no general plan at all.

The CHAIRMAN. Was any attempt made to put in commission the battleships that were in reserve?

LIVING. As soon as they could get the men, of course, they got them in commission; but that is a detail that did not come in for at that time, Senator, and I am unable to answer.

HURMAN. Was any attempt made to get merchant vessels, or anything about?

LIVING. No, sir.

HURMAN. For transporting either troops or supplies?

LIVING. I heard of no attempt by the Navy to get any troop carrier other than these that I have read to you. I initiated myself. I do not know of any other efforts to get troop transport at that time. We did get some merchant ships for certain naval work at that time, but that was not until after war was declared,

HURMAN. When were you transferred to the Bureau of Navigation?

LIVING. July 16, 1917.

HURMAN. Can you state the condition of the ships of the Navy at that time as to matériel?

LIVING. My recollection is that at that time we had started repairs to the large battleships. When I submitted that estimate, about May 18, and took up the subject of repairs to the fleet, a definite plan was established immediately after that, went on and was carried out during the summer of 1917.

As for the destroyers, they were repaired as fast as they came in, as soon as they were repaired a great many of them were in Europe, but that was an operating plan for handling those destroyers with which I am not familiar. In the first part of the war I dealt with matériel, practically entirely with matériel. There was nothing else.

HURMAN. Did you have anything to do with the personnel in the first few months of the war?

LIVING. No, sir, not until July 16, 1917.

HURMAN. I think you have stated that on July 16 we had something more than 6,000 officers, and we actually had around 2,400.

LIVING. We had 2,394 officers in the line of the Navy, that is, the permanent class of officers, on July 16, 1917, which was the day I took charge of the officer personnel division in the Bureau of Navigation. The actual situation at that time called for about 10,000 thousand trained officers, and we had gotten pretty badly short. I had begun to take officers off of the dreadnoughts, and in the Bureau of Navigation they had already stripped the dreadnoughts down to 22 commissioned officers of the line, the complement of those ships called for something like 37 or 40 commissioned line officers. Even by reducing those large ships to that the shortage was still so great that I had to make plans for the future, and that is entirely explained in my hearings before the Naval Committee, which I have inserted here, where I told you the desperate situation at that time. We were only able to get them into effect and carry them out because we felt that we would not have to fight on less than three months' notice.

We made our estimates for handling the officer personnel on the basis that the dreadnoughts would not have to fight.

that is, that the dreadnoughts that were on this side would not fight on less than three months' notice, and we based that on that if the German Navy came out and offered a general engagement while there was the possibility that they would not win, we had to figure on the possibility that through some chance they would win, but we believed that if they did win in a general engagement with the British fleet, it would take them at least three months to get ready to fight against us, and that we would have three months in which to get our personnel ready: so that was the basis of our plan for handling the officer personnel situation on July 16, 1917.

The CHAIRMAN. When did the first volunteer officers begin to be used?

Capt. LANING. When did they begin to enter the Navy?

The CHAIRMAN. When did they begin to be used as officers in training?

Capt. LANING. Do you mean by that men who were not trained before?

The CHAIRMAN. Men who were not trained before.

Capt. LANING. I suppose you mean at sea?

The CHAIRMAN. And in connection with that, when was the training of volunteer officers first begun?

Capt. LANING. That was begun before I went into the Bureau of Navigation, because when I arrived there they already had a course of reserve officers at the Naval Academy undergoing a three-month course of intensive training. That was started before my coming to the Bureau of Navigation, and that is something about which I cannot answer, Senator.

The CHAIRMAN. You can answer as to when they first began to graduate from this training and to be used in the Navy.

Capt. LANING. I could not answer that without refreshing my memory. I think it was some time in September, 1917.

The CHAIRMAN. So that during the time between July and September you were still going ahead with only about 2,300 officers when you needed 6,000 officers?

Capt. LANING. Yes. As a matter of fact you might say that only really highly trained officers we had during the war were 2,394. Of course, other officers took up the training in a reserve way. Those reserve officers were of the very highest class, and temporary officers were of a high class, but they were not experts in all branches of the naval service, even when the war ended, but were mighty expert along certain lines on which they had been working during the war. Of course, when a big war like that came you naturally want enough officers and men to man all your ships. We did not have anything like enough at that time. Of course, we could not have had enough at that time unless we had had a long training some years before to provide for it.

The CHAIRMAN. What is the shortest amount of training a civilian, who is not familiar with naval affairs, would need before he could be utilized in the Navy as an officer, in an emergency?

Capt. LANING. We did use them after about three months' training, is, after they had had that intensive training at the Naval Academy in the reserve class. Then we started other classes at other points.

everywhere where we had a station, we had a little training of officers, and we would turn them out in about three months. We send them out with the rudiments of a naval education, set them to work; but of course, they were not all-around by any means. We put them on one single job and they mastered that, and as soon as they had mastered that they would study another; and they gradually took up one thing and at sea, and developed into right excellent officers.

CHAIRMAN. So that, if early in February an attempt had been to train civilians as officers, you might have had some of those men to take part by the 1st of May?

LIVING. Yes, we could have had some of them ready to go to very excellent advantage, as we did use them later.

CHAIRMAN. But that was not done?

LIVING. No, sir; that was not done around February at all.

CHAIRMAN. The war began early in April. At what period you say that the fleet was ready as regards matériel and men to have engaged in a battle with the German fleet if it had come through the blockade?

LIVING. With regard to matériel I think it was ready about the end of September. With regard to personnel, it was not ready until the end of the war. You see, the battleships were used only for training purposes. We trained officers on them and men on them, but it was a long time before we had enough ready in what we called the active fleet, battleship force, to meet the title, before we had enough permanently in the personnel to be actually ready for battle. Of course, the ships sent to Europe were ready, I think, before the others. I could not say just when the fleet was actually ready. You have to ask the commander in chief that, sir—that is, in personnel. In regard to matériel it was not ready until the end of the war.

CHAIRMAN. You say that the department probably had some plan at the beginning of the war. You can not tell me what that plan was? What was the initial step to be taken in it?

LIVING. No, sir; I have not seen that plan, but it is always necessary to have a more or less well-drawn up plan to meet any emergency.

CHAIRMAN. You do not mean in connection with this particular war; but you mean in connection with any war, the plan would be the same?

LIVING. Yes; in connection with any war that might come whether they had such a plan or not, I do not know positively.

CHAIRMAN. And you do not know that there was any such plan ready before war was declared?

LIVING. For the war with Germany?

CHAIRMAN. Yes.

LIVING. No; I do not think there was any plan that would meet the emergency situation as it was then.

CHAIRMAN. What was there to meet other situations that might arise?

LIVING. Well, there is a general outline of a plan that was then used in a war with Germany if she had been fighting

The CHAIRMAN. When was that plan outlined?

Capt. LANING. That I do not know, sir. That would probably be handled by the General Board, and did not come under our

The CHAIRMAN. Was it in existence some time before April?

Capt. LANING. I think it must have been. I think there have been a plan before that.

The CHAIRMAN. But you are not familiar with the details?

Capt. LANING. No, sir; there was not any plan for carrying war along the lines that we actually had to carry this one on the assurance of that.

The CHAIRMAN. In his annual report for 1918 the Secretary of the Navy says:

Before the President went before Congress on the 2d day of April, 1917, and his epoch-making message, which stirred the hearts of all patriots, and in which he said, "America is privileged to spend her blood and her might for the principle that she has given her birth and happiness and the peace which she has treasured; God helps those who help themselves," the Navy from stern to stern had been made ready to the extent possible for any eventuality. More than a year before war was declared the President approved the three-year program of increase in the Navy, a radical departure from the long-accepted custom of making yearly authorizations for naval expansion, and Congress gave the authority and appropriation for this new policy of expansion. From that day to this hour, with appreciation of its pressing nature and with large vision of the future development of the Navy, the Congress has done everything that could be desired to insure effectiveness to the naval arm. This was done this after thorough study and full investigation, not only of the need for providing the required personnel and material, but also after the most complete investigation of the administration of the Naval Establishment.

Would you say that that statement was borne out by the facts?

Capt. LANING. No, sir; I do not think the Navy was ready to stem to stern when war was declared. I know it was not ready in matériel or personnel, and those are the things that make a Navy.

The CHAIRMAN. Do you think it was possible for the Secretary of the Navy to have done anything which he did not do, which he might have reasonably been foreseen, either to prepare for war after it came imminent or to have hastened its successful termination?

Capt. LANING. Yes; I think there were many things that he could have done. When war became imminent, he could have initiated that we have a plan of procedure. We could have laid out plans and could have been prepared to go before Congress immediately and state what was needed to carry out those plans. But he did not do that. We did not do anything.

The CHAIRMAN. One other matter that I omitted to ask you. Do you know anything about the conditions of our submarines at the commencement of the war?

Capt. LANING. No, sir. While I was in the office of Materiel Operations, I did not handle the submarines and I am not familiar with their condition.

The CHAIRMAN. Gentlemen, have you any questions which you desire to ask?

Senator KEYES. No.

Senator BALL. No.

Senator TRAMMELL. Capt. Laning, you speak of not being prepared in matériel and personnel. Was the Navy built up to the limit of personnel as far as authorized by law?

Capt. LANING. Approximately; yes.

MR TRAMMELL. Then the Navy Department was exercising its authority, and to its full limit, as far as authorized by law in the personnel?

MR LIVING. Yes; it had all it could get.

MR TRAMMELL. Whose neglect was it that you were not able as far as the law authorized you in matériel?

MR LIVING. That was due to the fact that we did not have the means to provide all the matériel that was essential. That is, on this point for instance, we are always developing new things in the line of control—that is, the control of the firing of the guns—recently those things were not put in because we did not have the means available to put them in.

MR TRAMMELL. The Navy Department was doing the best it was able as far as matériel was concerned, considering the available means?

MR LIVING. Oh, yes; there is not any question about that; the point I made was that it had not presented the facts to Congress to get the funds that it ought to have had to do those things.

MR TRAMMELL. Do you know whether or not Congress would have approved of it if they had requested it prior to our entrance into the war?

MR LIVING. Well, yes; I think Congress would have, because we were asked at that time to be sure that we were ready. At least it would have been put up to Congress. That is the way I think.

MR TRAMMELL. After all, that was a matter of conjecture on your part as to what Congress would have done?

MR LIVING. Yes.

MR TRAMMELL. As a matter of fact, Congress had not authorized greater personnel or any greater expenditure for equipment when we were operating under at that time?

MR LIVING. No, sir; it had not.

MR TRAMMELL. Now, between February and April 6, the day the war was declared, did Congress pass any law authorizing an expansion of the Navy?

MR LIVING. On March 3 it passed the regular annual appropriation bill and in that bill it made all of the funds appropriated immediately available, and made a particular appropriation of \$115,000,000 emergency fund to be spent at the discretion of the President for such things that were needed by the Navy. I do not remember the exact wording of the bill, but it had that emergency fund in it.

MR TRAMMELL. On March 3, a little over a month prior to the beginning of the war, somebody did bring about legislation making new appropriations then in existence. Do you think that the Navy Department had anything to do with that?

MR LIVING. I do not know. I can not answer that question. I do not know whether they did or not.

MR TRAMMELL. You do not know whether that was done at the request of the Navy or not?

MR LIVING. No, sir; I do not.

MR TRAMMELL. If that is true, then, Captain, you do not know whether the Navy Department was active prior to our entrance into the war as getting appropriations and trying to make some provision?

Capt. LANING. No, I do not know what it did about appropriations. The thing I brought up particularly about that time was that they had no plan of using the appropriations and they had no way of knowing what appropriations to ask for, as they had no plans.

Senator TRAMMELL. You are more familiar with the proprieties of the Navy, and probably of the Government, than I am, but would it have been proper for the Navy Department to have had and get out a war plan a month prior to the time we entered the war, and get out a war plan for a war with Germany?

Capt. LANING. Yes. We ought to have had one. You would talk about it, but you are always supposed to have plans for emergencies that may arise.

Senator TRAMMELL. Now, I am not talking about the question of preparation in different departments, and different operations. You stated that there was preparation being made by different departments. They were doing quite a good deal. But I am talking about a plan, just as though you were going into war with them, and it circulated all through the Navy and advise the Navy, generally speaking, that these are our war plans for war with Germany or other country? Would that have been proper?

Capt. LANING. Not to have spread it broadcast, Senator, no; it was proper to have a war plan for use in an emergency. You would not tell the whole Navy about it, but you only tell those who are concerned in getting certain parts of it ready so that they may know how to carry on their results. You should have such a war plan years before, if you can get it.

Senator TRAMMELL. Of course I realize the wisdom of that in a general way, but I mean a specific plan. You say there was no general plan, but I believe you did state that there was quite a deal of activity in the Navy after the ambassador, for instance, had been given his papers.

Capt. LANING. Yes.

Senator TRAMMELL. There was something being done?

Capt. LANING. Yes.

Senator TRAMMELL. There was not total inactivity on the part of all the different branches of the Navy throughout those months?

Capt. LANING. No, sir; there was not total inactivity. I stated that in the memorandum.

Senator TRAMMELL. The neglect, then, if there was neglect, consisted in the fact that the plan was not general, prior to our entrance into the war?

Capt. LANING. Well, that was the principal thing. That is the greatest defect, that there was not a general plan. No one knew what to do, and what anybody did do was rather on his own guess.

Senator TRAMMELL. You were connected with the Bureau of Navigation, were you, in 1918?

Capt. LANING. Yes, sir. I went there on July 16, 1917, and stayed there until the 31st of March, 1919.

Senator TRAMMELL. Do you recall having a letter brought to your attention by—I do not know whether it is Admiral Pratt or what rank was at that time; anyway, I will say Admiral Pratt—by Admiral Pratt from Admiral Sims; a letter dated August 13, 1918, in which the officer by the name of Carter made more or less criticism in regard to the manning, I believe it was, of the destroyers abroad?

LANING. Yes, sir; I remember that letter. I think it was on the subject of manning submarines, Senator. He had a letter in subject of which was "Set a Thief to Catch a Thief." Is

TRAMMELL. Yes, "Set a Thief to Catch a Thief." That is the subject in the letter.

LANING. Yes, I remember it.

TRAMMELL. Do you recall whether or not under the date of August 26, 1918, you wrote a letter to Admiral Sims in reply to his letter?

LANING. Yes, I wrote a letter.

TRAMMELL. Mr. Chairman, Capt. Laning admits that he wrote a letter to Admiral Sims on August 26, 1918, in reply to a letter it seems, by some officer by the name of Carter. The letter seems to have been entitled, "Set a Thief to Catch a Thief." I would like to present the letter of Capt. Laning. It just shows the Captain's views on August 26, 1918.

CHAIRMAN. Capt. Laning's views?

TRAMMELL. Yes; Capt. Laning's views.

CHAIRMAN. Will you read the letter?

TRAMMELL. It is a pretty long letter. I will read it, (Reading.)

NAVY DEPARTMENT,  
BUREAU OF NAVIGATION,  
Washington, D. C., August 26, 1918.

SIR: Pratt called me in this morning and handed me your letter of the 24th inclosure, "Set a thief to catch a thief." We are always glad to see your work especially from you, and inasmuch as the criticism in this letter to my office as well as on Operations it behooves me to sit up and take notice. I am not a part of Operations and therefore do not formulate the plan; nevertheless my mission to distribute the officer personnel to carry out the plan. I lay no claim to genius in carrying out that mission, and I have no doubt made mistakes, but they can not be laid to a lack of careful consideration. I have been confronted with although Carter says that is the reason for the contrary I have studied the plans and have made new estimates. As a result that even after reading Carter's screed, I am not convinced that we have erred in its general plans or that my office has erred greatly in its mission under them.

Operations followed along similar lines by officers from every force and yet when they came to my office and had the general plans explained, they saw the situation. Whereas before they had seen the situation from the point of view of their own force, after an explanation of the general plan they have altered their minds. Undoubtedly we on this side have erred in not making the plan widely known to the service, but there are two reasons for not doing so. It might not have been advisable to spread them broadcast; it might not have been advisable, the few of us who are in the jay bird seats over here are not in a position to do it. It of course is not my province to disseminate that plan. I am not the plan maker but I will endeavor to give you some idea of the situation as a matter of justification both to Operations and the Bureau of Navigation. If after my explanation, you feel that Carter is right and we have erred in our mind telling us where we have erred? If you will I promise the Bureau of Navigation will at once try to rectify, as well as it can, the situation and I am sure Operations will change the plans if they are found to be defective.

When the war was declared we must start from the beginning. When the war was declared we had in the Navy about 2,394 line officers. Of these about 350 (two thirds) were in the Naval Academy and could hardly be called experienced, but the argument let us accept it that we had 2,394 experienced officers of the line. These officers were all and the only trained officers we have had to date. Everything else we have is green and untrained, or at least was necessary for those 2,394 officers to not only plan our part in the

and carry out the operations, but also to provide and train all the other men that might be required. It should be remembered that that number was entirely inadequate to man the ships of the United States Navy as they existed and much less adequate to meet the enormous expansion of activity that has taken place.

Senator TRAMMELL. It is all right, Mr. Chairman, to put the letter in the testimony without reading it, if you are agreed that.

The CHAIRMAN. Are you familiar with the contents of this Captain?

Capt. LANING. I remember writing it, but I do not remember everything that is in it; no, sir.

The CHAIRMAN. Would you care to have the letter read in?

Capt. LANING. If you want to question me about it, I will be glad to be questioned about it. I do not remember everything that is in it.

The CHAIRMAN. Then perhaps it would be well to complete the reading of it.

Senator TRAMMELL. Very well. [Continuing reading:]

It is evident that a decision had to be made, and made at once, as to what we should do in the war. We could take our 2,394 officers and our 57,000 enlisted men what ships we could, and let it go at that, or we could use those officers and men as a foundation on which to build a truly great Navy, one that could deal some blows to the Huns. It was evident that what we then had could not carry out the war, so that the second plan had to be adopted. We may have made an error at that time, and should have been content with a 57,000-man Navy, in the 400,000-man Navy we are rapidly coming to. Up to the present, however, we have no reason to think we have erred in adopting the plan of an expanding Navy. We took advantage of the enemy's inability to strike hard while we were building up our Navy for such a great war. The problem as it seems to us was not to deliver a puny and futile blow at the start, but to build for the blows that in the end would crush the enemy. To have wasted our strength to strike quickly when that strength was not sufficient to win would have been foolish. We would have sacrificed in the end could have been only worse off than at the start.

Our mission was and is to decisively beat the enemy. If we accept some other mission we won't win the war. The first mission, subordinate to but a part of the main mission, was to defeat the U boats. Almost everyone assigned a task in the mission immediately ran away with the idea that it was about the only mission they had. They were fortunate enough to get in the game, but once there they were not their part in it. Even you yourself questioned the advisability of keeping our ships in commission, and suggested putting them out to send the personnel overboard. To have done that would have been disastrous, for those battleships have over 100,000 men and thousands of officers, which we would not have now, if we had carried out the suggestion.

We recognize the importance of the work against the U boats, but we did not think that their extinction could alone win the war, nor that even by sending 2,394 officers over we could extinguish them. As early as July 1 last year it was known on this side that no matter how much we curtailed the U boats the war would be lost if we did not get troops to France. How were the troops to get there? The Navy took them? The situation in our merchant marine was such that it simply could not carry out the task of transporting those troops, even assuming that their officers were sufficiently skilled in handling ships in convoys. The Navy had to convoy the troops across, but also it had to operate all the transports flying the United States flag. It at once became evident every cruiser we sent would be a vital factor, and that transports were even more vital.

Suppose the transport service had not been developed early; where would we have been to-day? Just as the little force we put in against the "U" was swinging the balance in our favor on the sea, so the transport and cruiser force was swinging the balance on land to our side. Hasn't it turned out that making your own transport and making the transport and cruiser force go were the allied salvation? We have operated over 40 troop transports and several hundred cargo transports. We could have had either the officers or men to man them had we stripped this side for it side early in the war; yet without them could the enemy have been stopped on

... saving the day, and I believe it would be unfair to put blame on putting them across instead of sending the personnel to chase the transports were essential, but neither one by itself could save the day. ... in our U-boat efforts the transports have gotten across, but ... the transports to sink U-boats our troops wouldn't have gotten over, ... would our allies be now?

... people that there were at least two important missions under ... the curbing of the U-boats and (2) the delivery of troops to ... only missions? I don't believe so, and certainly not after ... read some of your own letters on the subject of battleships. ... called on to send some battleships across, and I daresay all ... will sooner or later be called on, perhaps not with the Grand ... their important duties in the war area. Will anyone question ... keeping these ships ready? Because they are not being used ... proof that they won't be called on to-morrow. Anyhow, we ... ready, and surely in this you agree. This will account for our ... about our older battleships? There is the rub. What are ... They are the groundwork of the whole scheme for a Navy big ... Without them we would practically have no training place ... of thousands of men and the thousands of officers required ... new destroyers, transports, cargo ships, mine sweepers, sub- ... and the many other types of craft we are turning out in great

... of 10 regulars on each of these ships, or 180 in all. Hidden ... and all chances of honor and renown, those fellows work ... and make possible the manning of our thousands of ships. Does ... that we should cut off our sole means of preparing personnel for ... and more officers to the chasers? For the present we might get ... the long run we would do less to win the war. I believe that ... battleship forces are an essential part of the general mission and ... subsidiary missions can logically be sacrificed to insure the bet- ... another subsidiary mission. The missions are (3) for dread- ... ready for battle, and (4) for predreadnoughts to train com- ... men to man the ever-expanding Navy.

... our major operating forces, but have endeavored to show how ... is essential and one that can not be cast aside. We have ... such as the submarine force, the district forces, etc. Of these ... have any regular officers, and then only in small numbers. ... has made up almost entirely of reserve and Coast Guard officers. ... has only a leaven of regulars. The vast majority of officers ... to any naval vessel on this side are newly made. On dread- ... now have a total of 14 regulars; on predreadnoughts, average, ... 10; on first-class cruisers, 7; on smaller cruisers, 4; on gun- ... construction comes on the regulars will become fewer and ... Each regular is actively at work, each is engaged on the general ... what we believe will finally bring the total defeat of the

... not only officers afloat. There are a considerable number of ... their disgust, are held on shore duty. It may be contended ... there, but if one looks into the situation even casually he ... we have gotten along with so few on that duty. As a matter ... is that because of the lack of officers for the handling of the ... probably not succeeding as well as it should. Although every ... function has been called to active duty, and hundreds of ... put in such positions ashore as they are competent to fill, ... difficult time to carry on its work. We are spending billions ... providing of which must be handled by experienced officers. ... training alone on shore for which we must have some experi- ... Lakes Training Station, with 47,000 men, has three regular ... others are similarly curtailed. I could recite the details, and they ... there is no use. I am sure you will believe me when I tell ... officers are working to the limit of their endurance on shore, ... would have been considered impossibilities 18 months ... on shore is such that we are open to severe criticism because ... to do the work as it should be done or to properly safe- ... of billions of dollars.

One of the big tasks that has fallen to the Navy is to man and operate the merchant ships now being built by the Shipping Board. The supply of officers and merchant sailors is exhausted, and the Navy alone has the facilities and organization to provide the personnel. While the cry that 'ships will win' may not be correct, it is pretty certain that we can't win without them. The Navy will train and provide 20,000 officers and 200,000 men for these ships. We take many regulars to handle this task, but it takes some. Is their task such that it can be taken from it?

Perhaps it may be illuminating to tell you of our estimates of personnel presented to Congress recently. We figured that to merely man the permanent regular Navy on July 1, 1919, we would require 131,000 men, or count under training to fill vacancies caused by expiration of enlistment, men casualties, and men for aviation (regular), 152,000. Of the latter figures we speak. The former, mind you, are needed to man only regular vessels; warships, cargo ships, coast-patrol craft, etc. To properly officer and run just the regular ships would require 5,263 regular officers. But, in addition to that, we have other ships, where combatant officers are required, to the point of making the total of officers required about 8,600. To meet this we have now not 2,394 officers, only about 2,370, so we can have regulars, where regulars ought to be, only one out of three places. You can see the veneer or leaven of regulars has to be pretty thin in every force. I have spread it just as thin as I have dared. Each force would do a great deal better if it had more regulars, but I can't make it and as each force has to operate, we give them all we can and count on the rest away with the job with the only tools we have.

We can't win the war with anything less than all our forces. We might as well throw our battleships in the discard, but would you advise it? We can't throw our ships (old battleships) out and continue to expand. We can't cut down our transports without curtailing our troops movements. We can't cut down our shore end lest the sea end fails because of a shore-end failure. And so it goes the line. I have studied the situation—in fact, do nothing else but study it. I can't see any way to send a larger proportion of trained men to the chase than we are sending. I admit it would be well to do it if we could, but it can only be accomplished by sacrificing something else. Looking at it in the broad light, what would be the sacrifice?

Reading over Carter's article, do you believe he has my conception of the effort of the United States Navy? He has written a very convincing article. His caption is good and his logic sounds plausible, provided his premises are correct. He makes a general estimate of the situation from the one point on the line, and sees, though general deduction from local and incomplete information are valid. The great trouble with such arguments presented as his is, is that when spread over a wide area it weakens the morale. Over there you give us the devil because we don't want you to do. You feel we are failing you. Does it help the morale over here to do that? I know we, over here, are not in the limelight; that is how hard we work and how carefully we plan, there is no glory coming to those who are tied to the swivel chair. But please don't think we are quitting on the Navy. The Navy is paying the penalty of past shortsighted policy. That, we can't rectify at once, but I am sure we strive now, have strived in the past, and will strive in the future, to meet your necessities as far as we can with the small personnel we have. We know your needs and meet them as far as we can, but we can't give you more men than we ought to have, for the officers simply don't exist.

I suppose we must suffer disagreeable criticism for not sending more officers on regular service over there, but when you count those permanently there and those that go over and come back with the convoys and transports, I think you will find that very large per cent of regulars are quite actively engaged and that the small number who want to be similarly engaged but can't be that are on this side are doing vital work without whimper and without chance of reward. It is bad enough to be a chance in this war, but to have our motives and efforts impugned by officers who do not know of anything but the little part they can see is disagreeable.

Let me point out where Carter is dead wrong. In his opening paragraphs he states that the most important work of the United States Navy is either one of two: the defeat of the Germans on the sea or the defeat of the Germans undersea. Both that premise and the use of false logic he proves his case. Both his premises are wrong. The important work of the United States and its Allies is to *beat the Huns*. It doesn't make any difference where we beat them, just so we do. *be on the sea, but it is much more likely to be on land. It is the Navy's business to use its efforts to beat them whether it be done on land or sea. If we can't*

...and it looks like that is where we must beat them, then our only way to help beat them on land. And after all, beating them on the land is the final decision must be on land. We can win this war if we beat them on land and can prevent them beating us on the sea, and it looks like we will be successful. Carter fails to see this; fails to grasp what is at stake and therefore his whole idea is illogical.

...than in his assumptions. He apparently thinks the ... is the cure-all. Suppose we had done as Carter implies we ... that doesn't tend to curb the U-boats. Wouldn't the Allies ... day if we had adopted that plan a year ago and forsaken our ... Suppose we had kept up our troop arrangements and cast ... didn't "Fritz" have a better chance to win on the sea with our ... irreparably out of business? The mere fact that even if he ... Grand Fleet, there is another fleet ready to fill the gap must ... his plans, and anyhow if it didn't, it is a mighty good thing ... fleet against the slight possibility of his success. As a matter ... isn't any cure-all. We have got to work along all our lines, ... can, keeping in mind that defeating the enemy on one line ... itself win the war in a reasonable time.

... or base tacks as Carter calls them. I admit we have not put  
... vessels. We have, however, put the best men there we  
... should have sacrificed our heavy battleships or our training  
... men. I don't agree; neither do the officers in Operations, and I  
... I know that many officers over there are of that opinion, but  
... the entire situation in coming to it? And is the calling of our  
... at the remote contingency Carter calls it? It does not seem so  
... the contrary.

"...it requires more brains and experience to handle convoys and hunt submarines?" and then says that if the answer is "no," it's a new deal. Even if the answer were "no," it doesn't follow that it's a new deal, because we must always consider the relation of the means to the end. Here is where his false premise looms up. You can't get the answer to his question is "yes." The biggest thing we are doing is putting fighting men into France and our best brains must be concentrated on these accomplishments. I don't believe we would facilitate the best by putting the brains now doing that work on hunting

"The big day officers are enough for the hunting squadrons, but since they are going to grow or steal, sending that many was a "Hobson's choice," as you might say. I wanted to send more, would have been only too glad to send more, but we can't see the wisdom of stopping other Navy efforts to get more of these hunting officers so rotten as to be a scandal!" They are the best, aren't they, like the rest of us, get away with the job? I'm not here these days and the need is quite close at home, yet I'm in charge of our policy.

Carter says that a goodly percentage of submarine officers are regular board and even that many will be hard to place on chasers one might think we had a few hundred more. It shows how little he understands the situation. Our chasers, cruisers, battleships, and everything are running on ragged can raise the number of them we have. If as Carter would be chosen from those in the war zone and sent to sea has no objection to your so assigning them. Of course assignments over there, but his Carter's argument comes to a wise man.

But the objection comes up because it does not appear to be considered in the importance by those in authority. Appearances are often not reality in this case. As a matter of fact, we have planned to be here 10 hours than Carter has minutes. If he thinks the crowd is going to get up nights over the vital importance of swatting the birds, he is wrong. We have weighed the question in that line and it is not a good plan, which I do not believe he has done, and our decision is to stick to the general plan instead of on the narrow

... we have not yet decided on their organization, for the simple reason that it isn't certain how they can best be organized, even though the commanding officers won't be equal to the

because they did not graduate before 1914. If we carried out his ideas take 117 officers prior to the 1914 class just for commanding officers and dividers of those boats, about 9 per cent of the officers below captain and 1914 class. As some 600 officers must come out of that same group for destroyers the rest of the Navy must also be run to a large extent by them. I can't quite see how the supply can anywhere near meet the demand. This illustrates the futility of telling how to do things when one doesn't know the situation or ignores it to prove his case.

It is a good thing to act a thief to catch a thief, but if you haven't the thief can only put your best substitutes on the job, and that is what we are doing.

Carter's argument doesn't bother us much because it is based on incomplete information and false assumptions from which anyone who sees only his immediate surroundings is unable to get a correct perspective. Your own short letter, however, in a paragraph states as follows:

"When the history of this war comes to be written there will be a number of facts that will not be very creditable to the United States Navy. If hearings are had on the conduct of the war, a number of rather disagreeable facts must inevitably be brought out. Without going into details I may say that as far as the Navy is concerned we have fought this war with the bulk of our experienced personnel of the Navy on this side of the ocean where there is no war. We will have to be able to show that it is entirely necessary that we should have had to fight the war over here with a large proportion of reserve officers who did not have the necessary experience."

And it is that paragraph that hurts. Are you sure that the bulk of our experienced personnel is on this side of the water now? Of course if you don't count the transports you are right, but if you do count them as being engaged in action you are wrong. Do you realize that ultimately two-fifths of our experienced personnel will be on destroyers alone and of the remaining three-fifths at least half will be there before the war is over, provided of course transports and cruisers may be considered as working in the danger zone? The bulk may not be there to-day but we are expecting them to go and are planning for it. Please remember experienced officers number all told only about 2,370 and there is much for them to do in the future that may be less spectacular and not deserving of credit, yet for all that it is worth without which the Hun can't be licked.

Please don't think for a minute that I alone can change the situation even if I am in error. It is not my province to determine operating plans. Such plans are made in our bureau but it is our task to provide personnel to carry them out when needed. We have endeavored to do that and at the same time have fought hard for proper consideration for the personnel. We started with a handicap we have been able to work off. Criticism is easy, and just criticism beneficial, but there is more lowering to the morale than unjust criticism, and criticism made with knowledge and thought is apt to be unjust. I am not claiming that we don't have a lot of it, but that which comes from a paper like Carter's is not just.

I am sorry to have taken so much of your time and I will consider it a favor when you will come back at me and point out where we are wrong. I certainly hate to do that though I have to stay on this bum job I am also making a mess of it. I feel that even if there is no honor or glory in it that after all it wasn't so bad. And don't lose sight of the fact that it is only by loyalty to the general plan and holding to it that decisions are gained.

Before closing there is one question I want to ask. In your opinion, when the Navy has an actual and vital part in the war, is it advisable to separate the experienced officers from the bulk of the naval forces, in order that some personnel with particular missions should be better able to accomplish their missions, and doing disregard the fact that we actually interfere with the Navy's primary mission in the war? Carter's article is based on the answer yes to that question as are a number of "disagreeable facts" that you tell us we must face.

With best wishes to you and all of your gang, one of which I long to be, believe I belong there, I am as always,

Sincerely yours,

HARRIS LANING

Was that letter expressive of your views on August 26, 1918, on the points that it touched upon?

Capt. LANING. Yes, sir.

Senator TRAMMELL. You have not changed your views in regard to the matters that you touched upon at that time?

Capt. LANING. No, sir.

TEMAN. I suggest, that if you have a copy of Mr. Carter's letter, you produce that and let it be included in the record along with this.

TRAMMELL. I have not a copy of that. We might see if we can get it.

TEMAN. Will you try to get it from the department?

TRAMMELL. Yes; I will see if I can get it.

What is referred to is here printed in full in the record as

#### THE THIEF TO CATCH A THIEF, OR WHY SUBMARINES ESCAPE.

One of the most important work of the war to be done by the United States Navy? Is that that of preparing to defeat the German High Seas Fleet if it should extend to mastery of the surface of the sea. The British Grand Fleet has been busily and successfully attending to that for three years before our entry

into the war. Then it must be defeat of the German Undersea Fleet. If this German Undersea Fleet (the U boats) be accepted as the most important threat to the United States Navy, the only thing to be sure of is that we are going to meet it by some available known way.

What we have adopted consists of building merchant ships to replace every sinking ship as much as possible by light craft, to prevent as far as possible the loss of our commerce from sinking them; hunting the submarine with light craft and specially designed detection devices; and patrolling certain beats with few of submarines, whose only weapon of destruction is the torpedo. We do not doubt that all of these elements should be employed, but there is a question of weightiness as to which should be given the most thought. It is not that it would be folly to try to build ships faster than they could be destroyed by submarines roaming unhampered about the waters through which our shipping must pass. It has already been stated by competent authority that a convoy system alone will not protect them. It has however, also been stated that an offensive which will destroy or drive the submarine from these waters is the answer to the problem. Such an offensive has already been inaugurated by the task, hunting vessels with specially designed detection devices and destruction. Nevertheless, until the personnel of the vessels and the tactics are capable of solving the problem, the problem will continue.

When in generalities and get down to brass tacks have we put the task of hunting vessels? We have not. The problem is one which requires brains and experience that can be obtained. Most of our regular officers are not the vessels than those employed in hunting. The battleships in the fleet have an average of eight regular officers below the rank of captain, and the Naval Academy class of 1915. They have in addition many lieutenant commanders, of the reserve force. If it is true that the German Fleet can be expected to successfully deal with the German High Seas Fleet, what would be the harm of using some of these officers in more important duty if we had to go to the extent of stripping the battleships to the bare bones of four or five years ago? They would still have the trained men and a sufficient number of officers to keep them in perfect condition as regards material and probably could hold considerable drill and

be able to keep these ships with full complement of officers of them in a condition which most all are morally certain will never exist, and use them in a perfect condition as regards material, and use their officers in the hunting of enemy submarines?

There are more brains and experience to keep ships "standing by" for a rescue than it does to prosecute an offensive against the wily and tricky

There are more brains and experience to handle convoys and escorts than it does to hunt the wily and tricky submarine officered by the pick of the

There are many of these questions are no, then there should be a new deal - and of the experienced regular officers

On our battleships in home waters alone there is an average of eight officers of useful qualifications. In the entire Navy there are approximately 110 officers, junior to Captain, but senior to the Naval Academy class of 1915, and the number there are but 11 now assigned to hunting vessels.

Is that a fair assignment?

Is the task before this hunting force of such little importance or of such accomplishment that 11 regular experienced officers are sufficient?

The hunting vessels are being officered mainly by young inexperienced officers, bright, keen, and willing men who it is believed will eventually learn the "deliver the goods." Undoubtedly they will eventually learn a lot about it, but I believe that like the allied armies they will always be a lap behind. By the time they have learned what to do to cope with the submarine tactics it will be to-morrow and there will be new tactics by the submarines.

Our regular officers, on the other hand, can learn the game in much less time; then will have a fund of knowledge from past naval experience upon which for initiating advances, change and amplifications of tactics against the submarine.

No matter how bright and keen the reserves are, is it to be expected that they can learn in a few minutes that which regular officers have acquired in from 4 to 6 months?

Many of these young reserve officers are men who were lawyers, bankers, and cantile men with no technical training prior to entering the Navy. The charge of vessels fitted with mechanical devices of an extremely complicated nature and if they learn them at all it can only be in a merely superficial way.

Is it to be expected that they can ever learn these devices as well as regular officers who have been brought up on mechanical "gadgets"?

Is it to be expected that officers who do not have the capabilities and experience of the devices of their vessels at their finger tips, can handle their vessels in the same manner as officers who do?

There will be times when certain devices will not be suitable, and certainly will be. For example—at certain times a submarine runs at a very slow, noiseless speed, or balances, or rests on the bottom, obviously a listening device of little value in detecting her. Here a magnetic, electrolytic device, or a hydrophone must be used and in using it, frequently the listening device must also be used to ensure the submarine has not started to run at an audible speed; or, it may be that a charge judiciously used will start the submarine running away at an audible speed. In all these cases careful judgment resulting from naval experience will be needed to decide what to use and when and where to use it. It might be advisable to hunt along a re-tiring search curve. How many of our reserve officers are there who would realize that such a maneuver was the thing; and how many could be expected to realize it?

In connection with knowing the submarine's tactics, who would know more about it to expect and who would be expected to size up a situation more quickly than a regular officer? In other words, should there not be a liberal percentage of experienced submarine officers taken from submarines and put into hunting vessels?

Furthermore, should they not be the best submarine officers; that is, choose those who have had experience in the war zone?

This whole question of experienced officers for hunting vessel is brought up and it does not appear to be considered in the light of comparative importance of having the authority to control it. Capt. R. H. Leigh has repeatedly emphasized the necessity of having experienced officers with the 110-foot chasers, but up to date there have been but two added. There are at Corfu four regular officers of the 110-foot chasers, and one reserve officer of that experience. These 5 officers are utilized on 1 tender, 36 chasers and a shore base.

Is it a sufficient number considering the importance of the task?

The Navy Department is about to assign officers to the first of the Eagles, 18-knot hunting vessels, and has cabled that they will be officered by four of the best officers, a commanding officer not senior to the class of 1914 Naval Academy, an executive officer formerly a boatswain or gunner, an engineer formerly machinist or electrician, a trained reserve, and a communication officer who will be a reserve officer. The department has also stated that no division commanders for these vessels are contemplated.

The commanding officer at the most will have had but four years' experience in graduating from the Naval Academy, and there will be no division commander with any greater experience to guide them.

Would it not be better to assign to every group of six one commanding officer of considerably great experience, to act as division commander as well as commanding officer?

and better to have more Eagles commanded by officers senior to the independent division commander as well?

Q. Is their work of greater importance than hunting the submarine, and are they to be spared for hunting?

A. Due to a natural trend of thought inherited from the past that the work went with the size of the ship, and the curve of battleship, cruiser, submarine, etc., followed right down to chasers, in the assignment

of the work of the importance of the work of the Navy in this war?

Q. That reserve officer should be replaced by regular officers, but rather than add should be added and the reserves kept as well. The question of promotion, which is bound to arise, need be given very little consideration. One of the lower ratings of enlisted men and all hands fleet downward for the reserve officer take chief petty officers' quarters, etc. If necessary, the reserve officer signals, do electrical work, etc. An educated man can do this better than an uneducated one, and when the emergency arises we then have a man. In most all exploration expeditions, etc., there have been reserve men who have roughed it (cooked, cut wood, slept on the ground, etc.) just like carriers, and others did. The Army officers are doing worse in

the same corresponding in size to those of ours which have three officers and carry five or six as their complement.

Q. Do they realize the advantage of many officers?

A. When they are manned by the most skillful and experienced officers it is

the best against them in hunting tactics our least skillful and experienced

submarines are manned by officers who have been trained in submarine and submarine school boats, and in war submarines.

Q. Do you put against them as many similarly trained officers as possible?

A. "Catch a thief!" Let's try that and set against the submarine many of our skillful and experienced officers possible to obtain—and as many reserve officers as possible.

W. R. CARTER.

A. I just want to ask one or two more questions. One of them from that letter is as follows:

Q. It is stated that Operations has erred in its general plans, or that my office, or the staff, has erred greatly in carrying out its mission under them.

A. That is in your office in 1918. You still agree to that?

A. Yes, sir.

Q. TRAMMELL. I judge from that letter—I am not going to put it in any more extracts from it—that you had a broad view of the entire situation, Captain, and you considered that you had to consider this side, and that you were looking at it with a vision covering not only the operations abroad, but the country, in preparation, and everything of that kind?

A. Yes, sir.

Q. TRAMMELL. And that was the reason that you said that "secondary," or "subsidiary devices," using your language, were made superior to the primary, main mission of carrying out the general plan?

A. Yes, sir.

Q. TRAMMELL. As far as you felt at that time the general plan, do not know whether you called it, you might call it—navigation or operation, you felt that it was being carried on proper lines?

A. At that time, yes, sir.

Q. TRAMMELL. Yes.

A. Yes. That was August, 1918; yes, sir.

Senator TRAMMELL. Well, in August, 1918. You were not connected with it until July, 1917, were you?

Capt. LANING. Connected with what?

Senator TRAMMELL. The Bureau of Navigation.

Capt. LANING. Yes; I reported there on July 16, 1917.

Senator TRAMMELL. That is what I say, July, 1917.

Capt. LANING. Yes.

Senator TRAMMELL. You seem to defend, in this letter, the part of the department in the matter of the handling of the officers, the personnel, as to its plan of distribution, and so on, between this side and the other side; and as between the war zone and the port zone. Was that policy at that time, when you wrote that letter in 1918, any different from what it was, say, 18 months prior to that time?

Capt. LANING. Yes, sir. Up to the time I went in Navigation in July, 1917, we did not have any general plan, and we built up a general plan after that. That is, it was built up a part here and a part there until the Bureau of Navigation had a pretty definite idea of what its mission was, and we were carrying out that plan in accordance with that doped on this piecemeal method. We were carrying that out until I wrote that letter to Admiral Sims.

Senator TRAMMELL. But even prior to the time that you became connected with the Bureau of Navigation there had been something done, I believe. You said in your direct testimony that that you had withdrawn certain officers from some of the dreadnoughts. If they had done something of that kind, had they not?

Capt. LANING. Before July, 1917?

Senator TRAMMELL. Before you went in there.

Capt. LANING. Yes, sir.

Senator TRAMMELL. They were doing something, were they not, when you got into the bureau?

Capt. LANING. They certainly were. They were doing all that they could.

Senator TRAMMELL. Prior to July, 1917?

Capt. LANING. Yes, sir.

Senator TRAMMELL. I do not question the efficiency of your service, and I think you no doubt rendered a splendid service, but I wanted to find out if all these other officers were doing nothing at the time you got into the Bureau of Navigation in July, 1917.

Capt. LANING. Did my testimony give you that idea? I do not intend it so.

Senator TRAMMELL. No; it did not; but you made a remark a while ago that after you got in they got everything all right.

Capt. LANING. No; I did not say they got it all right. I told you I spent some sleepless nights about that time.

Senator TRAMMELL. That was the substance of it; that the things pretty well organized and going after you got in.

Capt. LANING. Well, it took a long time to do it.

Senator TRAMMELL. I know you did splendid work. I have the impression, though, that it is a fact that a very large percentage of these naval officers did fine work. I do not feel that one man did it all, and I do not feel like one man made all the mistakes. I believe officers are just about like everybody else; some are

by mistakes and some of them do some good work. I was impressed that most of them were doing pretty good work. Just my casual observation.

Anyway, the department was at work on this problem, and connected with the bureau here?

LANING. On the problems of personnel.

Mr TRAMMELL. Yes.

LANING. Certainly; yes, sir.

Mr TRAMMELL. I do not think I have anything further to ask.

CHAIRMAN. The statements made in this letter, Capt. Laning, of the general plan, refer to the plan in operation in August, was this letter was written?

LANING. Yes, sir.

CHAIRMAN. That does not, as I understand it, refer to the first six months of the war?

LANING. No, sir.

CHAIRMAN. And to the matters that were connected with Sims's letter of January 7?

LANING. No, sir; that dealt with the time at which the letter was written, August, 1918, if I am correct in the month. By that time a more or less well-defined plan had been built up, and I stated in my testimony that especially a correct and sound general plan had been built up, and this was the result of it. But it was in the early part of the war that we should have had a plan and did not have it.

CHAIRMAN. And it does not approve of the lack of support that was given to Admiral Sims during the first few months of the war when we were to furnish him with a sufficient staff to conduct his

LANING. Not at all. This letter dealt only with the question of supplying some submarine chasers. The question of supplying Admiral Sims's staff came up largely before I entered the Navy. Navigation. You see, I did not get there until July 16, 1918, and I do not remember now what arrangements had been made, but up to that time we did try to send him officers whenever we could get them; and ultimately I think we got him practically all the officers he needed.

CHAIRMAN. What were the circumstances leading up to the writing of this letter? Were you asked to write that letter by the department or was it a private letter?

LANING. No, sir; this was all personal correspondence. Capt. Pratt received a letter from Admiral Sims inclosing a paper

entitled "Set a thief to catch a thief," and the idea was that if you were to catch German submarines the thing to do was to put our own officers on subchasers, and that they knew the tricks of German submarines and would catch them; and it went on in any way to criticize the distribution of officers. Capt. Pratt handed the letter over and said something about its being one of my pigeons, and that I had better prepare a reply; so that I wrote a letter to Admiral Sims, so that he would get an idea of what the personnel situation was with us at that time. That was in 1918, before the war started. I think I made pretty clear in that letter that the personnel situation was still pretty bad.

Mr TRAMMELL. The chairman's question suggests another question on my part. Of course, the letter speaks for itself. 7

is the best evidence. The letter is a very strong defense of the action of the Navy Department up to that time in the matter of the subjects touched there in the letter. Now, while the man involved in the original Carter criticism, of setting a thief to catch a thief, might have been in regard to providing officers for destroyers, you went ahead and elaborated on several other matters in the letter, discussing the general plan of the Navy and going into the transport question and everything of that kind; and the man, as I understand, wants to rather make it appear that this was at the inception or the dawn of this plan. If that was the case, why did you go ahead and recite in here the accomplishments that had been made by the department up to that time?

Capt. LANING. I do not understand the question, Senator.

Senator TRAMMELL. I do not say you agree with that idea, but the chairman wants to convey the idea, apparently, that this was the beginning of the plan.

The CHAIRMAN. I wanted information.

Capt. LANING. He did not convey that idea to me.

Senator TRAMMELL. Yes.

Capt. LANING. When he asked me the question he conveyed the idea that at this time there was a plan and that it was not a plan that was evolved in the first two or three or four or five months of the war, and when I answered him I told him that it was a plan that was evolved in the first three or four or five months of the war, but it was evolved in the course of the war up to that time. That was a year and a half, approximately, after the war started.

Senator TRAMMELL. Now, if we are going to bring in the question of a year and a half after the war, at the period of this letter, August 26, 1918, what had the Navy done toward furnishing transport for troops?

Capt. LANING. They had furnished a great deal of transport for troops.

Senator TRAMMELL. As a matter of fact, we had over a million soldiers over there at that time, and you took the position in your letter that that was even probably more important than the submarine question. You gave importance to each, but you emphasized the position that the man that was dealing with the submarine problem must not lose sight of the other problem.

Capt. LANING. Yes, sir.

Senator TRAMMELL. Now, this letter was really commenting largely not only upon the plans, but you also recited more or less to the accomplishment of the plans, on August 26, 1918; told the number of officers you had in training and men and about the 400 at camps on the Great Lakes; and you did not utter any criticism at that time about what had not been done during the first three or four months of the war.

Capt. LANING. Why, of course, I did not; no, sir. I would not have uttered as much to anybody, until I was called before the committee.

Senator TRAMMELL. I notice that you rather resented Admiral Sims's threat about investigation. That is one part that you seem to take to heart more than anything else, may be.

Capt. LANING. Yes, sir; I was personally concerned in that.

TRAMMELL. Here is an extract from Admiral Sims's letter which seems that he had in mind investigations back in 1918.

When the history of this war comes to be written there will be a number of features which are creditable to the United States Navy. If hearings are held on the conduct of the war, a number of rather disagreeable facts must inevitably be brought out. Without going into details, I may say that as far as the Navy is concerned, we have fought this war with the bulk of our experienced personnel of the wrong side of the ocean where there is no war. We will have to be able to turn out as many as necessary that we should have had to fight the war over here with a portion of reserve officers who did not have the necessary experi-

ence in reply to that. [Reading:]

"The paragraph that hurts. Are you sure that the bulk of our experienced personnel is on the wrong side of the water now? Of course, if you don't count the cruisers and transports, which are right, but if you do count them as being engaged in active service, do you realize that ultimately two-fifths of our experienced personnel, destroyers alone and of the remaining three-fifths at least half of them before the war is over, provided, of course, transports and cruisers are working in the danger zone? The bulk may not be there to-day, but we are sending them to go and are planning for it. Please remember experience tells us that all told only about 2,370, and there is much for them to do over there. It is a spectacular and not deserving of credit yet for all that it is work that the Hun can't be licked.

at least, did not agree with Admiral Sims's criticism in that letter. Admiral Sims had his criticism about the way you were sending the personnel and the officers, and you at that time were in agreement with the admiral on that question, and stated that you were doing the best you could with the whole plan considered, and that your primary mission should not be set aside for a secondary mission.

That is what you said in that letter. I have just read that letter. That is all, I think.

TRAMMELL. Capt. Laning, in August, 1918, the submarine situation was what, do you remember?

LANING. No, sir; I have no statistics on that.

TRAMMELL. I think the testimony shows that at that time it was something like 100,000 tons a month.

LANING. They had been greatly reduced at that time.

TRAMMELL. They were greatly reduced and the submarine situation practically under control at that time, was it not?

LANING. Well, it was only about the middle of the summer, immediately after the middle of the summer, that the sinkings began to decrease materially; but the exact statistics I do not know. But we began to feel certain, then, that we were going to stop the submarines there in time.

TRAMMELL. At that time we were still sending troops over the ocean, is that right?

LANING. Oh, yes, sir; the troop shipments each month were heavy, I think.

TRAMMELL. So that with the submarine situation under control, with the vital importance of sending troops over, might not that call for a change in plans?

LANING. Yes, sir; but I do not know.

TRAMMELL. Whereas, in the early part of 1917, it might be said that the submarine situation, in August, 1917, ceased to be a vital matter?

Capt. LANING. Oh, the situation changed very materially at that time.

The CHAIRMAN. That is all.

Senator TRAMMELL. Well, now, you express an opinion in your letter on the question of the relative importance of the submarine and the providing of transports. You stated in this letter that the matter of providing transports and being sure to make arrangements for getting the troops over was really of greater importance than the matter of the temporary victory over the submarine at that time. You stated that in that letter, in substance, I, of course, am not quoting it exactly. I just ask you that because the chairman asked you the other question.

Capt. LANING. Yes; I stated that.

Senator TRAMMELL. You stated, once, that if we took a little force and sent it over there and they defeated our little fleet by an effort, with the submarines, then we would have nothing. You stated that in this letter, in substance?

Capt. LANING. Yes; I stated we could not rob the other side of the chance to send everybody over to hunt submarines.

Senator TRAMMELL. Your letter went into the policy very much in regard to that of the department, on this side and the other, and your views were then in harmony with the policy adopted by the department. Any man that reads your letter fairly could not say anything else.

Capt. LANING. No, and I do not say it.

Senator TRAMMELL. Your views were thoroughly in harmony with those of the department when you wrote that letter?

Capt. LANING. Yes, and they still are, even at this time, Senator.

Senator TRAMMELL. That is all I have.

The CHAIRMAN. We will adjourn at this point until tomorrow morning.

(Thereupon, at 1 o'clock p. m., the subcommittee adjourned until to-morrow, Thursday, March 25, 1920, at 10 o'clock a. m.)

# NAVAL INVESTIGATION.

THURSDAY, MARCH 25, 1920.

UNITED STATES SENATE,  
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.

The committee met, pursuant to adjournment, at 10 o'clock in room 235, Senate Office Building, Senator Frederick Hale presiding. Senators Hale (chairman), Keyes, Pittman, and Trammell. CHAIRMAN. The committee will come to order. Capt. Palmer, will you take the stand?

TESTIMONY OF CAPT. L. C. PALMER, UNITED STATES NAVY.

(Witness was sworn by the chairman.)

CHAIRMAN. Capt. Palmer, will you state what official position you held during the war and what were the general responsibilities of that position?

CAPT. PALMER. I was Chief of the Bureau of Navigation of the Department from approximately the latter part of August, 1918, until the last day of October, 1918, when I was detached for duty with Admiral Rodman abroad.

The duties of the Bureau of Navigation apply generally to personnel, recruiting, training, and enrollment of both officers and men, and assignment of these officers and men to the various activities of the Chief of Naval Operations. Under the bureau are the United States Naval Academy and the four great training stations at Norfolk, Newport, Great Lakes, and San Francisco, and the receiving ships and seaports, and the recruiting bureaus and stations which are scattered all over the country.

In addition we have charge of the Hydrographic Office, which takes charts and sailing directions, and the Naval Observatory, which has to do with the nautical instruments and time system.

CHAIRMAN. Will you state the condition of the personnel of the Navy at the time when you were assigned to the Bureau of Navigation as to the sufficiency of the officers and enlisted men to carry out then in the Navy, together with the requirements of the war?

CAPT. PALMER. I do not believe I will be able to give it in actual figures except what appeared in the printed reports at the time and the report of the present Chief of the Bureau of Navigation. Generally, when I came into the office there were approximately 10,000 regular line officers and about 51,000 men, with an additional 400 reserves.

There were about 9,000 militia, I should say, but they were not mobilized and did not get into the service until the war started. Of course I remember that this was the basis; this was the little force

cers and half a million.

But we had only 100 men.

mber 5, and is also i

ject, which stated t

ations gave us an additional list of  
for war, and as those came I revised  
nished the department with informa-  
on February 20, 1917, and on that  
mmittee on the subject of our urgent

the numbers that we were short for the shortage of reserves on account operations wanted us to man for war and their figures.

an opportunity on February 20, in that number did not include any working estimates would be necessary to be given impetus which war or mobilization might result in the rapid construction of mines and destroyers, all of which require the rate of 9,000 per 100 destroyers; needs, adding up, roughly, 20,000 for

that 96 men per destroyer was not sufficient  
things.  
it was found that it had to be modified. However, it was modified,  
so that had to be modified. However, it was modified,  
mortgage still greater.  
was generally based on the three-year building program  
had just put through. They gave this program,  
that ships would be completed approximately in 1921;  
would be completed then. So I sent to the Chief of  
total would be completed then. So I sent to the Chief of  
Construction and Repair and asked him to give me  
information he could as to dates of completion of the vessels  
I could prepare the personnel beforehand, and could ask the  
to ask Congress for the necessary people. The Chief of  
Construction and Repair sent me a list of estimated  
completion, and he put a paragraph in there saying, "This  
date, and things may arise which may change this  
time"; but generally it showed that the three-year  
program would be completed at the middle of 1921, and on  
my basis of our personnel needs, because Congress  
continuing program then on which to work.

Q. That was in 1917?

A. Yes, that was in 1917.

Q. This was started before that. In fact, it was the first estimate that was started in the bureau, and in my first annual report that was printed on the 10th of October, 1916, there was a statement that I had prepared this estimate sheet, and on the first page that I estimated, for instance, that we had 100,000 men plus 10 per cent, roughly something over 110,000 men, plus approximately 43,000 reserves.

But that was before we had gone into the war?

The CHAIRMAN. And the plan was not a war plan? It was a peace plan, providing for the increase that Congress had provided for.

Capt. PALMER. Yes. We really had no authority to go on with arranging anything on a war-plan basis. In fact, that was quite enough to do to get action on the peace plan work because of that large increase. Most of this data was presented to the committee and submitted to the Congress in the recommendations that went out particularly our necessity for more officers. We were behind, and I wanted to get the course at the Naval Academy shortened to three years, simply to make up the number of officers who would be required to make this material building program a real live one. For instance, one thing we had to start on was recruiting service. The recruiting service had not been required to do any special work, because we had only a certain number allowed by Congress, and the machinery was not in operation. It was necessary to have it in operation, so that was one of the principal things that I had to undertake—to reorganize the recruiting service.

The CHAIRMAN. Can you tell me what provisions of law exist under which expansion of the regular personnel could have been accomplished by means of reserves?

Capt. PALMER. Yes. I can refer best—

The CHAIRMAN. Pardon me. Did you have something further to say on the other matter?

Capt. PALMER. No, sir. I can refer best to Admiral Washington's report of this year—he is the Chief of the Bureau of Navigation, in which report he has very ably laid out the things that were authorized by Congress to give us ample provision to provide personnel. The first step, of course, was the law that Congress put through, that of August 29, 1916. That gave the authority for an increase of enlisted personnel to a total of 68,000 enlisted men plus 6,000 apprentice seamen. That is a total of 74,000 men. This first law gave the President authority to increase this number of 68,000 to a total of 87,000, and we assumed that that would allow 6,000 apprentice seamen also, and that authority was equal to 93,000. That was to be given in case of emergency. And the President, when he was asked to do that, when the request was taken to him by the Secretary on the 5th of May, 1917, signed it immediately. The President also signed the thing immediately as an emergency measure. There was also a reserve bill which was worded so that it was quite difficult to give it a definite, legal interpretation on many of the points, but it was also so worded that a favorable interpretation would permit you to do anything with it. It is one of the best things we have ever had. We could do anything we wanted in order to advance the interests of the war.

Senator TRAMMELL. What was the date of the passage of that law?

Capt. PALMER. August 29, 1916.

Senator TRAMMELL. August 29?

Capt. PALMER. Yes. Now, the further things that were authorized. On May 22, 1917, Congress authorized a temporary increase from 87,000 to 150,000, and also an allowance for an additional 10,000 apprentice seamen.

nothing was on July 1, 1918, when Congress authorized a peace force to 137,485 men, including apprentices, and also a temporary force of 181,000 plus 24,000 apprentices, and an engineering corps from 350 to 10,000. That latter was added. I must say that Congress was practically unanimous in everything that the department asked for and for pushing the successful conclusion.

CHICKMAN: The same was true just before war was declared, was it? The large increase was provided?

POWER: Yes. This dates back as long as I was in the Navy, goes back to the latter part of August, just before the war. That the Navy Department had to do was to ask and Congress gave things. Our naval committees in both the Senate and House had the most hearty spirit of cooperation, and the whole thing was plainly "Just show us how we can help you and we will

help." particularly in this Senate Naval Committee the two members were assigned to the committee for naval work and to other needs. There was the acting chairman, and later the late Senator Swanson, and Senator Lodge. They impressed me as being going around like two brothers. They could be together most of the time, and they were all working to do everything we could for us. They let it be known that they could be called at any time, day or night. Senator Swanson and Senator Lodge were charged with this thing, let it be known that they could be called at any time, day or night, for anything so far as the Navy was concerned, and that was the attitude as to everything.

CHICKMAN: Also that prevailed before the declaration of war?

POWER: Yes. In fact they were of the greatest help to me, Senator Swanson and Senator Lodge, who represented the committee and were of the greatest help to me.

There is peace times a navy should have a sufficient number of officers and men to properly man all the vessels of the active fleet with a certain percentage for shore allowances, and the vessels in the reserve force we should have 50 per cent of regulars and allow for the other half for reserve personnel. That would be a great deal better for us to have all regulars on the ships, active and reserve, but it is a question of congressional appropriation, and if they cut down it is best to make some compromise having 50 per cent of the personnel on the reserve ships composed of regulars and 50 per cent of reserves. Of course that is not the case after going over the personnel situation during the war, because that was not the condition at the time war was declared; the naval peace personnel was far short of the peace needs. That is simply to man the vessels, which the Chief of the Bureau told me had to be manned. That is just for peace times, for mobilization business.

The shortage of regular personnel at the declaration of war was, of course, a great handicap of the Navy's activities, because the Navy had to begin at once and have our officers and men afloat. It is that is that lots of people can talk understandingly of the value of ships and their money value, but a very much smaller number that ships are only effective when they are efficiently manned. There is no charge against people for not knowing that,

because it is quite human to talk in material things, but when dealing with personnel and know what the needs are, that is the point about it.

Personal requirements do not receive sufficient attention from point of view. When a ship is authorized, of course the personnel should be authorized by Congress in sufficient time to have personnel recruited and trained. Now, I have spoken of that in annual reports, and I think people are generally in accord with the idea now. It was not originated by me, but I brought it up in several places in the printed report, that a proper procedure should be, if it is possible to authorize the necessary enlisted personnel approximately two years before the estimated date of completion of the ships, where that can be done. Of course, the estimate of completion will change, but that two years was what I asked for as a reasonable allowance for the time taken to recruit and train them.

The CHAIRMAN. Admiral, what recommendations did you make prior to the war and during the first few months of the war to prepare for the necessary personnel, with particular reference to the enlisted men; and also state whether the department did everything possible to assist the personnel bureau in these recommendations, or if not, in what particulars it opposed them.

Capt. PALMER. I do not know that I can——

The CHAIRMAN. What recommendations did you make previously about the enlisted men?

Capt. PALMER. I do not know that I can give that in detail. I have not all the papers on the subject. My recollection would be that I have a good many of the points, but I would not say that I could give all.

The CHAIRMAN. Can you tell us in a general way?

Capt. PALMER. Let us see. Of course the first thing was to reorganize the bureau, to put that on a business basis that would produce the proper number of men and officers, that we were ordered to prepare. It did not take much time to organize the bureau.

The CHAIRMAN. This was done prior to the war and during the first few months?

Capt. PALMER. Yes; it did not take much time to prepare. We started the organization of the recruiting service, put it on a practical basis, so that we worked up from practically no enlistments, to a large number in January. We were gradually working up.

The CHAIRMAN. What was that date?

Capt. PALMER. Just roughly, in January. I have not any accurate dates on the subject.

The CHAIRMAN. Nineteen hundred and seventeen?

Capt. PALMER. Nineteen hundred and seventeen. Of course the war was not then an assured fact, and we did not have that incentive to make the young men come in. I think if they had known that war was really coming, they would have jumped in just as soon as they found it out, but it did not start immediately. It took some time to work up the recruiting districts. You know the recruiting districts which were under my bureau were spread

Q And these had to be increased largely in number. In the month of January the recruiting service, I think, had been obtained in the whole year before, but only due to the fact that they were not authorized to do so in the year before. There was a certain limited amount allowed by Congress.

A It was first organized to meet all those conditions. For instance in preparation. We got our Navy recruiting bureau in New York speeded up, and they did begin enlisting and enrolling the assistance of the newspapers and periodicals all over the country. The recruiting bureau, to help us out and they gave us assistance. I don't say we recruited about everybody in the country but they did come across. In fact, I do not know of anybody that helped us, in the various activities of civil life, in the amusement houses, the business people, the clubs, in fact, everybody without distinction of class. But we also reaped the benefits of the work that was done by the officers and members of the Navy League all over the country. They had been endeavoring to help us out on recruiting. The Navy League was not prominent at the time as far as coming out as a recruiting agency was concerned, but we reaped the results of their work. They were actively engaged in helping out the Navy. They collected large cash sums to promote different works which we were before the House Naval Committee. They were for places to build barracks, we were told that they had some place somewhere on Long Island. I think Mr. Hicks and we began to look into those sites, because we had been expanding the training station at Newport, which, of course, was our place to expand in. However, I think those of the Navy League heard about our needs for barracks there and they were to furnish the money and build all the barracks that we needed. That was not done, because I think Mr. Hicks and I about that time took up the subject with Newport. I think that we were going to get the ground there, and I think it was very much better for us to expand from a small place than to establish a new overhead by going to a new place.

Q Now, good many other people at this time I believed were thinking very soon, and so I speeded up all the activities that I had arranged, for instance, with the commander in chief of the fleet, while his force was still in West India, to have my officers on each battleship in active training, so we should enter the war.

A Do you remember when that was?

Q No, it was several months before the war started, I think.

A So that several months before the war started, you were not aware that war was coming?

Q Yes. That is, I was certain as far as my belief went, that war was coming.

Q That was your belief.

A Yes.

Q Now, I think

The CHAIRMAN. Was that the belief generally in the department?  
Capt. PALMER. That was the thing I was going on, in order to provide personnel, and that was the belief on which I acted. I came down here before the various committees on the proper way that we required to put through. In that particular case, that was just an incident to show that there were several steps to be taken to push this thing; and that was the first definite step toward the commissioning of officers from enlisted men. We had not done that before, except through the ordinary course of events, but it was evident that we were so far behind in officers that we had to take some steps so I wrote to the commander in chief a confidential letter, because we could not state anything about getting into the war; but we knew we must have officers, and I wanted to start them and try it out, and all the officers in the fleet were anxious to get every enlisted man who had ability. They have always been that way, and they thought they could put it over. So they put enlisted men on watch, just took the officers off and put the enlisted men on watch, those who were capable, and they came across beautifully.

It was rather slow getting it started, but they had them. The Admiral Mayo reported that the thing was an entire success. Although that was started by the bureau then, that was not the original idea of mine, because officers had suggested that from time to time, and as far as that is concerned all the things that were suggested by the bureau during the war were really not original proposals. They had been suggested from time to time by officers who had been thinking about this.

Now, at that time I urged the listing of merchant ships under the American flag. This was along in December, I think, that I suggested that, so that we could enroll that personnel. That was the kind of personnel that we needed very much during the war, but we had nothing in the way of a merchant marine. We did not have sailors and navigators, as some of the other countries had.

The CHAIRMAN. This was in December, 1916?

Capt. PALMER. In December, 1916, before the war. We wanted to be able to employ those officers and such men of them as were capable.

Another important point about that was that we could enroll them and if we had authority to enroll them, then we could start in training them and give them the necessary instruction as to naval matters so that when war did start we would have that force prepared instead of having to do all the teaching afterward.

This matter of listing merchant ships was started. It was considered by naval operations to be most important, from our point of view, and I think we got them partially listed somewhere in January or February. That was one of the steps of preparation.

Now, in the printed hearings before the Senate Naval Affairs Committee on February 20, 1917, quoting a memorandum that was sent to the department at the time, it was shown that we would spend a great deal on shipbuilding. All our work in the Bureau of Navigation was based on the estimate that we believed the war would last a year or three years. Of course, that was simply our own estimate, in order to go ahead with work. Actually, in coming down to the department's preparation of personnel we worked out a sheet which was good.

stance, from the knowledge we had of the things that ought to be done, and from the orders we had from the Chief of Naval Operations. So that we knew at any time where we were going to get our personnel and how we were going to train it and where, at all our schools, training stations, and colleges, and just how we were probably take to deliver these men to the Navy, that is to say, what the Chief of Naval Operations wanted us to do.

As for the work, as it continued during the war, every activity of the department whether afloat or ashore was carried out, certainly with large numbers of officers and men. That is, we had the men ready by the time the ships were ready to start; and that is not saying they were trained. They were ready as they could be in the time that had been given us.

As for the work of the war activities, whether afloat or ashore, the officers that we had to start with in both the line and staff, and the few regular men we had to start with, were responsible for the wonderful work that was accomplished afterward, but expanded ten-fold, and while they were expanding and the officers and men they were doing all these active things were based for by the department.

HEWMAN. Captain, what I want to find out is whether you made any recommendations to the department about preparing the necessary personnel to be used in the Navy?

FAWNER. Yes.

HEWMAN. About enlisted men especially?

FAWNER. Well, I wanted to get in the enlisted men.

HEWMAN. Whether you made direct recommendations to the department?

FAWNER. Oh, yes; I made direct recommendations to the department based on the knowledge of our great shortage of regular enlisted men for peace needs, at the beginning of the war. This, I was based on the instructions from the Chief of Naval Operations. I urged the department to do everything in their power for the recruiting of regular enlisted men.

HEWMAN. Generally that the department did this. The Secretary of the Navy. He liked to see the members of the enlisted men that he spoke of it and wrote about it many times. He wanted the enlisted men come in. Of course, some of the difficulty in getting them in were very difficult for us, because at the beginning of the war, the Secretary would not let us employ regular enlisted men we were so far short of men that we needed temporary stations to be able to recruit the men, and without regular pay officers and other men we could not recruit the men. That was the great difficulty; that is, the delay in getting the regular officers who were willing to come. I do not know if that was that that was not allowed, but I know it was not.

HEWMAN. They delayed you in getting the necessary enlisted men?

FAWNER. Yes. I will not say that that delayed us—that it was a hindrance in the war though. It delayed us in getting men to carry out our schemes, and, of course, it had something to do with the training of them.

The CHAIRMAN. But, in general, the Secretary approved plan of the increasing of the enlisted men?

Capt. PALMER. He did.

The CHAIRMAN. Now, how about officers? Did you make recommendations about increasing the officers?

Capt. PALMER. If I may finish on the subject of the enlisted first—

The CHAIRMAN. Yes.

Capt. PALMER. As I understand it you want to know what I took, and whether I did my part of the job as well as I know.

The CHAIRMAN. No; we do not question that, Captain. You are not on trial. We simply want information about whether you are backed up by the department.

Senator TRAMMELL. I think what we want to get is the facts of them, not whether the facts reflect on anybody or commend anybody. We want commendatory facts if there are any, just as facts that reflect on anybody. That is the fair thing to do.

The CHAIRMAN. Yes.

Capt. PALMER. I think I am open to as much criticism as anybody else on this, and if I did not do the things correctly, I think it is the time to bring it out.

The CHAIRMAN. But you yourself are not on trial in any way.

Senator TRAMMELL. The defendant is absent to-day.

The CHAIRMAN. I do not know that there is any defendant.

Capt. PALMER. It does not make any difference to me. I just like to mention here that in all this business I am very appreciative of the wonderful work that our naval officers and regular enlisted men did, to buck against all the obstacles they had, which, from my point of view, personally, were due to original shortage of personnel. I have never had the opportunity to say before how keenly appreciative I am of the wonderful work that these officers and men did; but I want to say that in addition to the regular service people in line and staff, when we got the reserves and militia and national naval volunteers and coast guard people, and the reserves of various classes, including the yeoman who helped us out so wonderfully during the early part of the war, they are deserving of just as much credit.

We got, during the war, of, course, a great many of the officers in. In fact, there were five retired rear admirals and the armed guard commanders who had been in my bureau for years, and they came across beautifully; and they not only were thoroughly loyal in the way they did things, but they had the credit too. They showed up beautifully.

Now, I started schools, or rather I did not do it, but my officers, Commander Overstreet and Lieut. Bennett at the time were responsible for any good from those; they started schools and training camps and in colleges and technical schools in every part all over the country; and these schools were added to from time to time as the additional requirements came in for those things. I make a reference to the scope of these schools by referring to what they were, to show what the Navy was doing. They had courses for practically all trades, and that including courses for divers, electricians and radio men, carpenters, machinists, blacksmiths

engineers, painters, bakers, cooks, stewards, hospital attendants, men, which men, camoufleurs, musicians, voemen, telegraphers, signalmen, steel and concrete construction men, electricians, fitters, firemen, quartermasters, helmsmen, gyrocompass men, mechanics, lookouts, armed-guard crews, submarine boat crew men, hydroplane crews, life and free balloons, divers, laying and mine-sweeping experts, paravane operators, men, hydrophone specialists, aviators, aviator mechanics, etc., etc.

Q. Now, for any operations we were called upon for. That is, the powers of the bureau on that, and in addition to that the powers of universities and technical schools and manufacturing plants and hotels and civilian organizations, all very important to themselves on this.

A. Yes. Did you make recommendations about these different things?

A. Yes.

Q. Were those recommendations followed out?

A. Yes. At the training stations I gave instructions to the schools, and at the schools, and they carried them out. They were in line with the bureau's idea of what was necessary for the war. I really was able to keep hands off altogether. I delegated the duty to them, and they came up to the mark and delivered.

Q. As to other schools were concerned, where they were initiated on the side of the training stations, at schools, we had a hard time in getting them through. There was the question of whether we needed the people. I think it was all due to the fact that the department could not see the need of getting hold of them before and training them. They did not appreciate the need to train people for engineering duties, and so forth; they had a general attitude of "Well, we can postpone that"; they would postpone it. I know how long it took to take these people to the front, and we could not postpone it; and we really had a great deal of difficulty in getting the schools through.

Q. When did you first take up the question of starting

A. Well, we started schools of one kind and another

A. We took up that question with the department before the time war was not declared. But my opinion was that we were going in war; and there was another thing that was going on, and that was that the office of naval operations was going on.

A. Well, we will probably have to do this, and that; and

A. For me, going far enough back to get the men ready in time so that I could deliver the goods when the war came.

A. The thing was that the general board had some paper from the office of Naval Operations sent to me, on which to base my work, and that paper said that the Bureau of Naval Operations

A. I have the personnel ready within a week of the time the war was ordered. Of course you can not get the personnel ready in a week of the time, unless you have taken steps long

A. That was the point that I brought up to the department.

This was before the war, and during the war this was a common thing. There was just lack of appreciation of how long it takes to train people, how long it takes to build the barracks, and so on, and started in order to carry out the instructions that came from the general board. To be prepared when the ships were compared with the personnel, I had to start long before.

Senator KEYES. Capt. Palmer, who had that lack of appreciation?

Capt. PALMER. Mr. Daniels, the Secretary of the Navy, was one with whom I was most closely associated on these things; it is my opinion of it. Mr. Daniels, as you know, wanted to have things done, and I know that he was badly worried on it in 1917. I could refer to his annual report and to his speeches, and so on, as showing this, and I know that he was really delighted that things were done; but it is my impression that he did not fully appreciate the needs as we saw them. I was charged with personnel business, and I had studied the thing carefully; not only I myself, but all my officers; and we were convinced that the steps were necessary for preparation in order to be able to carry out the chief of naval operations' orders to provide men in time of course the chief of naval operations frequently said, "It is going to be you will have to man so many ships of this kind, and you have to get the men for them." The important thing for me to know was when those men would be required; and in each case, operations required "We want them as soon as we can get them. We want to have them now, or within a few weeks." Of course I could not recruit men and train them and get barracks for a few weeks. So that, after one or two orders of that kind, and that operations could not have foreseen the need of, I decided it was up to me to be prepared for any operation they had, to take the responsibility of going ahead and working this organization into a production plant, keeping it up to peak load all the time, that I would be prepared for anything that came across.

The CHAIRMAN. And you took matters in your own hands and went ahead?

Capt. PALMER. Yes; I did. I did not do that, however, until I had exhausted every means to get the thing done. I think, in fact, the whole thing was due to procrastination.

The CHAIRMAN. On the part of the Secretary?

Capt. PALMER. Yes, sir. I was forced—

The CHAIRMAN. Did the Secretary give you any reasons for not carrying out of the plan?

Capt. PALMER. Well, no reasons, of course, that appealed to our people that were charged with personnel; they would say "We have too many reserves now. We don't want more."

The CHAIRMAN. This was within two or three months immediately preceding the war?

Capt. PALMER. And after the war.

The CHAIRMAN. And after the war had begun?

Capt. PALMER. Yes, sir.

The CHAIRMAN. He said that we had too many reserves?

Capt. PALMER. Yes, sir. That was due to a lack of appreciation of what was required in order to get the people together. On one hand, I had the office of Naval Operations stating that

—were to be started—and I knew that if I did not do in time I would not be doing what I was ordered to do. I started with seeing that the personnel was provided in time; on the one hand I was pushed by Operations to get them, and on the other hand I could not make any headway with the department getting the steps necessary to take in order to get them. I took the subject of housing the men, and a good many others. I simply got the statement, after many trials and pressure being in its most forcible manner, "We have no appropriation," and I think that was the correct statement. But still, they wanted me to do these things. They said, "We have no men at that time;" and this meant getting ready for each one of these things. So that when I came to the end I came to a stone wall on it, I decided it was best to take the steps necessary to deliver the men in the time, and I did not have the appropriation or did not have the money.

CHAIRMAN. One minute, Captain.

PALMER. Yes, sir.

CHAIRMAN. In regard to appropriations, you have already said Congress was ready to appropriate anything that the department asked for?

PALMER. Yes, sir. I know the members of this committee. They will do anything we can for you, any time," and I felt that Congress would do anything the department asked; so I felt confident that if I took the responsibility of going around the law, in order to get the appropriations, I had heard all the Senators and all the Representatives, statements of the people all over the country that they were fighting the war to the limit; and so I thought they meant it, and they meant it, and I thought there was no reason for that appropriation that would delay our works for months, so I thought it would be to go ahead with it, to take such steps and go ahead with the thing.

arranged, for instance, with the captains of the training stations, particularly with the Great Lakes training station, and we came to the conclusion that the work could be done, and that we could go on without having full authority of Congress at that time, and by the time it could be presented to Congress the department we might be along a couple of months on these stations, and be just that much in advance, so that we would be ready to put the men, for instance, in cold weather.

to say that the Congress did not come across that way. I went before the Appropriations Committee and was asked what they had heard that barracks were actually built at Great Lakes and some other places, and they asked how they were built without any money, and I told them that it was not true, that when I could not get authority to do it, when I got the department to take the authority on that point, the question whether they should have taken it or not. I have been things that kept them from taking it, but when I did not take it, I went ahead with the assistance of the money at the stations. And you probably all have heard of

the Great Lakes Station and the way it boomed ahead, but we had even at that station enough quarters for the men in the. But we were very much further on to the required number than would have been had we delayed and waited on the appropriation.

Now, before that Appropriations Committee they mentioned that I had, in a way, taken the law into my own hands; but they also were very pleasant about it, showing that they approved, and they actually did approve all the expenditures.

The same thing happened before the House Naval Investigation Committee which investigated the war, I think some time, the latter part of 1917, and they note here in their report of investigations:

At the commencement of the war our training stations could only accommodate about 6,000 seamen; but the Chief of Navigation early assumed the responsibility of increasing the housing room at the various stations, and we now have various training stations barracks for more than 50,000.

That is, they approved the action taken in advance.

That is about all I can remember for the time on the subject of enlisted personnel.

The CHAIRMAN. What about the enrollment of officers and the Reserve Force?

Capt. PALMER. As I said, that reserve law, you could do as well with it. The first thing was to get legal decisions on it. It took considerable time to do that. It was signed in the latter part of August, and it took a long time to do that; but it gave us authority to do anything we wanted, so that we got favorable decisions at a time, and started in enrolling. I sent some officers out to the Great Lakes district, for instance, to get hold of those officers and men who were seamen, and there were a few we had in the coast guard, who were tied up on account of the ice in the Great Lakes, and we actually got them before the war and sent them down to Admiral Mayo's fleet, and had quite a number of them down.

But in January there was something appeared in the papers that we now had over 1,000 reserves, and I am not sure where it was published; but, at any rate, it was brought to the Secretary's attention, and he said that he wanted the enrollment stopped. He said, "We have got enough men now. We have got enough men for a year." Of course, we told him what our needs were, and that we did not have enough men; that we were just on a peace basis, and we were short about 1,600 reserve officers and 39,000 reserve men, and we ought to hump it along and enroll just as fast as we could, and get these people in. He said, "No; I want it stopped."

The CHAIRMAN. Who said that he wanted it stopped?

Capt. PALMER. The Secretary.

The CHAIRMAN. He said that he wanted the enrollment stopped.

Capt. PALMER. Yes; and he gave the order that they should be stopped.

I would like to say that I had a talk with the Secretary just a few days ago, and the Secretary does not remember anything about it. He said, "I have no recollection of it." I told him some of the details that happened at the time. The Secretary asked me, "Can you produce the written order?" I told him that I could not; that it *might be there*. But he gave me the order directly, and told me

not stop, and that was the first time. I mean, he frequently told me to stop. The reason he frequently told me to stop was he wanted to go ahead and get them.

SEYMOUR: That was the first time he told you, and that was

SEYMOUR: The latter part of January.

SEYMOUR: 1917?

SEYMOUR: Yes, sir. I do not remember the exact date, but that was very strongly impressed on my mind, because our object was getting officers and men and training them for the purpose of whether we could get the people in early; and I remember the statement, as an argument, "Well, the ships are not ready, just wait until we get a little more information." But I knew they were going to be ready, and I knew that they were ready we could not get the people started; so I started them. I made exceptions --

SEYMOUR: That is, you did not stop the enrollments?

SEYMOUR: No, sir.

SEYMOUR: Later on, after the war had started, did the Secretary stop the enrollments stopped?

SEYMOUR: Yes, sir; they were ordered stopped--oh, I should say a few times. But in the meantime--

SEYMOUR: Up to about what time?

SEYMOUR: Oh, I should say-- this is just a general guess, but about the latter part of 1917.

SEYMOUR: The latter part of 1917?

SEYMOUR: Yes, sir; and it was done later, too; but, for instance, I was ordered by the department to prepare, or when they would have to prepare, for taking over all the merchant vessels. I knew that that would require more than six months before we would get anything of value; and later on they did get the order from them to man a sufficient number, and they called for 222,000 officers and men. That was the order. And I had the machinery going so that we could use men by the time the ships were ready, all of them. They were the best trained men in the world, but they were not ready, and that was possible because we went ahead of them in time.

SEYMOUR: At the close of the war, of the 500,000 men, substantially we had in the Navy, how many were in the reserves?

SEYMOUR: There were more men in the reserves than in the active service. When I left the bureau, which was the last day of the war, I think we had approximately 290,000 reserves.

SEYMOUR: Practically 3 to 2?

SEYMOUR: Yes, sir; 290,000 reserves; and at that time we had about 100,000 active. Well, we had over 30,000 reserve officers. Now, just after that we got those people and that they kept on going, and the department was really pleased that it was done. I know we were often called on to give the number of officers and men, when the Secretary was to make a speech, and that was a question in my mind whether the storm would be after he found out that more men had been enrolled than at any last time; but in pretty nearly every case the Secretary was pleased with the numbers. He was pleased with the figures.

that the barracks were built. He went out and inspected the Lakes, and he was delighted with the barracks, and I really that everything that was done along that line was done so redound to the department's credit. In fact, so far as the end of reserves was concerned, and when it was ordered stopped time, I told Mr. Daniels, "Those people are going to save for the Navy. We can not afford to stop enrolling them." "We started with an initial shortage, and this will get us a very difficult predicament." If we had been required, of course go into the war with a single enemy on the 6th of April, 1917, we would not have been able to take any of the officers and men on the ships which would be required to go into the area of operations and engage in actual battle. I could not have induced anyone to let me get them off the ships; and therefore it would have been impossible for us to do any of that training. I want to say the conditions were very favorable so far as the conditions of this particular war are concerned, and we ought not to make conclusions because we won out on that proposition we could win out again had to go right out and fight.

The CHAIRMAN. Did the Secretary ever criticize you for not going out his orders; or did he ever talk to you about the fact that he had not done so??

Capt. PALMER. Well, the Secretary sent for me several times on the subject. In fact, I was in the Secretary's office at least three times each day. This was all, generally, in regard to the assignment of a man or an officer, or something like that, which I wanted to ask about. He said, "I told you to stop the reserves; it has not been done. Now, I want to see the order about stopping the reserves"; and he wanted them stopped. Pretty soon he found out that some one was in some place, and he would ask me about it. I would say, "Mr. Secretary, we had to go ahead. We had these people and those people." And I said, "We got the War Operations and we simply had to go ahead." Well, the general idea was, "Well, don't get any more." That was the general idea.

The CHAIRMAN. If you had not done so, the Navy could not have performed the signal service during the war that it did perform.

Capt. PALMER. It could not have done anything, sir. It could not have done anything.

The CHAIRMAN. Now, Capt. Palmer, can you tell me anything about the plan to shorten the course at the Naval Academy?

Capt. PALMER. Well, yes, sir; I can. I was very much interested in that. It all comes back to the shortage at first. I took the question of increasing the number of men there, and Congress was always willing to do that; and I took up the question of reducing the course from four years to three years for such a period as might be necessary to provide the necessary officers for the three-year training program. Even if we reduced the course to three years, that is what we could do, as far as graduates of the Naval Academy was concerned, we would be in 1921 still shy about 500 officers.

Now various people had different opinions on that, and the opinion of the Secretary was that the course should be increased. In fact, that was what he said time and again. He said, "My idea is that we should increase the course to five years." I was not in accord

that I was in accord with keeping it at four years provided we could do it, and I think every officer felt that way about it, but it could be done; but we were face to face with the conviction that there was a shortage of officers, which meant continued lack of efficiency due to that shortage, and I think they all agreed that we should reduce it to three years. At any rate I know that the Chief of Naval Operations said that he believed it, and the Superintendent of the Naval Academy, Admiral Eberle, believed it, and I felt so important that I talked with the Secretary time and again until he said he did not believe it, he did not want it.

CHAIRMAN. This was immediately preceding the war?

MR. PALMER. That was when I first started in. This was to get the three-year building program on a peace basis, in order to make the program a live one. I think I mentioned that in my first report of October 10, 1916. On page 4 of that report I said:

—

is the great shortage of officers—

and it was necessary by Congress to make the completed program a live one.

discussed in that and in the memorandum to the department of the officers. That was really much more important than the men, because it takes so much more time to train an officer, and I stated that the output of the Naval Academy should be for a limited period, returning to normal conditions when shortage of officers had been made up.

and stated:

in this recommendation in this report the bureau recommends that the appropriate each Senator and each Member of the House of Representatives that the course at the Naval Academy be reduced to three years until the shortage is made up, and that the present first class be graduated on April 1, 1917.

that that was a measure that was necessary in my mind, and in the case of the officers who were attached to the department at that time in order to prepare for our three-year building program that had been given us. I said:

of primary importance in order to properly meet the wishes of Congress to the first arm of defense as expressed in the large program provided for in the

in my statement in my regular annual report, October 10,

Secretary was against that. He was against the reduction of the course. He was looking along the educator's line, which was against him to do, and I was looking along the line of the needs of the Navy, and it was a question which was the right step.

that I want the young officers from the academy to come out in a better condition, so before I put this proposition up I got the Superintendent of the Naval Academy to go over this thing, I got the Chief Educator, and I got him to tell me what he thought.

He grew up a course and said that by modifying certain of the courses and speeding up during certain parts of the year he could do it also, since the war was coming on, he felt perfectly confident that the increased incentive of war would make the midshipmen ready enough to get away with a four-year course in three years, which was actually the case.

In addition we had precedents in regard to that. Several had been graduated before their time, and I got a list of the ones taken at random, who had been graduates of those classes, and I made an argument to show the Secretary that we still could get good graduates when it was necessary to take a strenuous step and reduce the length of the course for any purpose, and that I regarded this time as much more important than previous times. I got a list of graduates of officers, and I had it ready for the Senate committee. There were five from each class for instance, taken at random, and the Secretary happened to be one of them at the time, a very able officer, and the others were all about the same.

I took this thing up again in my hearings before the House Committee on December 5, 1916, and again as appears in the record of my hearings before the Senate committee on February 20, 1917. On February 20, the time of February 1, when I wanted these graduates, had already passed, and as the war clouds seemed to be approaching very much nearer, it was still more important to get them out, because we were so short of officers to start the war.

The CHAIRMAN. When was the length of the course finally reduced?  
 Capt. PALMER. The Secretary said that he did not agree with it, and he would never listen to it. I told him Admiral Benson was for it and Admiral Eberle, and that practically all the officers who had been talking on the subject were for it. He said, "Well, I am for it," and he would not listen to further argument about the matter as far as the Navy was concerned. I think he was just wedded to the educational value of the four-years' course, and I think it was quite right for him to be so in ordinary times; but when I went before the Senate committee they put it in the bill, and when the Secretary saw it incorporated in the bill, he said that that was dead against his ideas, and that I should not have gone down to the Senate committee on that.

The CHAIRMAN. That was February 20?

Capt. PALMER. Yes. I told the Secretary that I had authority from him to go; that I had one not down without the authority which he had given for the chiefs of bureaus to go before the committees and say what they thought was best for the Navy; that I acted on that authority, and my responsibility in the case, as far as of the bureau only, was such that I ought to present it, and therefore I did present it. He told me then that he was dead against it, and that he would try to knock it out, and I think it was a mistake in regard to the number of years that this should stand; but at the rate it gave us a start, and I knew that if we got it started, the course of the war would show that it was absolutely necessary to continue it, even if they had not thought so before. But Congress passed it through, and later I remember the Secretary spoke about it in some of his speeches at the academy, or in his talk to the people, and that these young men had come out and developed in a fine way by this intensive course of three years at the academy.

The CHAIRMAN. If the plan had been adopted in December instead of in February, would you not have had available a considerable number of officers in the first part of the war?

Capt. PALMER. Well, no, sir, we would not have had any officers available the first part of the war if it had been adopted in December, before the war, instead of in February, but we

ships ready, and in training as actual officers afloat. The Chief of Naval Operations said must be put before the war, for mobilization. In fact, that was our troubles just before the war, that we were not in the mobilization plan. Now when I speak of mobilization I do not mean the board matter of mobilizing the country and so forth, such as they had abroad, but that thing that would get the ships together and that the Government wished to have them, wherever the Chief of Naval Operations wanted to have them, and put them on a war organization rather than on a peace organization. To do that I wanted more officers, and for that reason I wanted to get the officers and officers, to put them in places where active duty was withdrawn and sent to sea. I wanted to get them from the college. I wanted to get them from the post graduate course at the Naval Academy, the post graduate course, not the undergraduate course, and I wanted to get that first Naval Academy class. There were 170 men in it, and when you are very short of men that way. With those people we could have put the mobilization as far as our allowance of personnel was concerned, and not have been required to shift officers and men from one kind of ship to another kind of ship simply to get on the war plan instead of the peace plan. The reserve force were required to be put in the active force. The active ships were being sent to yards for some time, that meant taking the officers off the active ships. Now, Captain, what were your instructions from the Chief of Naval Operations to the commanding officers abroad for Admiral Sims's staff? Now, Admiral Sims had gone abroad, as far as I knew, for mobilization and bring it back to the Navy Department and know what plans to work on. That was my instruction. I did not know whether that was it or not, but at any rate I went to the Chief of Naval Operations and went over as a staff officer.

The Chief of Naval Operations had told me that he would not like for him submitting direct requests for personnel. I told some of his assistants and subordinates, when they were going through, would say, "Now we must have this," and then come down and talk to us about it and say, "We want that officer." There were a great many requests, and I got them together Admiral Benson said, "I am going to tell the people in my office to the effect that all requests must come through me." So all the requests for Admiral Sims were sent by cable and letter to the department.

They were called on by Operations to put 20 ships, 100 tugs, 100 Ford boats, merchant vessels, and there were hundreds of things, the armed forces, and we provided the personnel as best we could for operations. We did not get an order to send a lot of people abroad to Admiral Sims, but I knew that for Capt. Pratt frequently, and I knew that from the people up in Operations. I heard later that it was not through some of the officers in Opera-

tions, possibly through Capt. Pratt himself—he said, “We ought to get some people over there to Sims. Can’t you do something for us?” Well, whenever such a request as that came in, we sent it up and I got the detail officer, who was Capt. Laning, or Commander Baldridge, and asked them what they could do, and invariably they could get people if Operations were willing to give them up for some other activity. At any rate we went as far as we could in giving them, but the request did not come to us from Admiral Benson except later on in the war when he sent personal requests, and in the war also Operations began to send down the carbon copies of those cablegrams. I do not think they were prepared to do so earlier in the war, because, as you may remember, we did not have any clerks and we were scattered all over the city in dozens of places, and I think it was probably very difficult for Operations to have worked just up to date. It got very much better when we supplied them with the yeowomen as clerks, and I think it was after that that we used to get carbon copies of the cablegrams.

The CHAIRMAN. At substantially what date was that?

Capt. PALMER. I think it was somewhere along in the latter part of 1917, but we did not get any orders from Operations to send people over, except when they definitely said, “We want such and such a person sent,” and then we always sent him. I think that Admiral Sims asked by name for a good many people from Admiral Benson’s office, but Admiral Benson felt that it was necessary to keep them there. I remember Admiral Sims later asked for a name for an officer in my office, and I did not let him go. I think it was best to keep him in my office, because he was in charge of the important work from my viewpoint—that is, the supplying of personnel on the big expansion that was required. But later on another officer went over and the Chief of Naval Operations sent several of his officers over to Admiral Sims.

I am not very clear about any of the dates there, because I did not keep any files. When I left the bureau in October, 1918, I did not take any files with me. My recollection is that later on he sent the officers that he required and also the enlisted men that he required.

As far as enlisted men were concerned, the department was responsible for his not getting enlisted men. I was responsible for that. I did not know that he had not gotten the number of enlisted men until it was brought out here the other day, and I was then would be questioned on that. We got the enlisted men to him as soon as we could get them trained, with the kind of a start we had, and I do know that the reserve and enlisted men for the destroyers that went to Queenstown were sent as soon as they possibly could have been sent, with all the activities that the Chief of Naval Operations directed us to perform in putting ships in commission from that day on. With all those activities it required a great many enlisted men, so that they could not be gotten together and trained in time. All this had to do with things before the war, preparation, training stations, etc. But at any rate, when the enlisted men got over there I know that they did not have the barracks ready for the number we sent. However, that is so only—

The CHAIRMAN. But so far as it was concerned during the last months of the war, when Admiral Sims was calling for officers on

as far as the Bureau of Navigation was concerned, if the operations had been willing to send them over, you could get the men?

ROBERT. We could have provided them by taking them from the mines. Operations said, "You can do so." They were the most important activities; and I think that at that time decided, "We can not afford to take these men from these places."

ROBERT. You say, however, there was one officer sent over?

ROBERT. Yes; Lieut. Commander Daniels—now Commander—expressed in reading Admiral Sims' statement, that he was on April 30. Our detail officer in Operations came to me and he said, "I was just up in Operations, and I saw a telegram from Sims asking for Daniels, and I have already ordered Operations asks you about this, you can say he is already on his way." That was Commander Daniels. He was acting as an aide, and he did go over with the destroyers.

ROBERT. In many of those cases it was difficult to get space to send officers and men, but Commander Daniels did go over early in the game. I think Admiral Sims's testimony was received word on April 30 that Daniels had been sent; the detail officer also picked up an officer from the mine force. I think it was, a radio officer or communication officer; he was sent out of the mine force at the same time, and they went over there. I think they made use of him at Queensboro. He was free, for instance, temporarily; Commander Daniels was temporarily free, and then we would hear something from him. As he had said that he wanted some officers, and we would send those that was available, without saying anything to him. I had taken that up to Operations, they would have said, "Send him if you can." When the second batch of officers came over we sent five officers that they could use with the destroyers.

ROBERT. As far as the personnel was concerned, we had, I think, as fine a personnel as it was possible to have. They went over when they went over there. They had five regular officers and a crew. This number was greater than the number of officers that the British had in their destroyers, according to reports that were brought back. In fact, we got word from the British that the British destroyers had but two regular officers and that the others were made up of reserves. So the impression is that our personnel over there was as fine as it could be. We did not have a great fund of regular officers to draw on for any of the activities, because we started with a total line officers, and they had to expand to ten times as many. I can see one officer had to fill the place of 10.

ROBERT. What instructions did you get from the department regarding enrolling or promotions on the other

ROBERT. Well, there was an order for no enrollments on the other side. I am generally in accord with that idea. That is, I think that we should go over there and take any one who was fit for himself. The idea was that we here on this side had a personnel there was available, and we could send it over as practicable, as soon as it had some training; but

there were other considerations. The department took the right at first that we should not have any enrollments abroad; think that general stand was good. But then came the request for definite numbers of people. "We must have them for this and that because we have not any regular officers right here." We kept turning those requests. I did not get those requests; they did not come to me until a good deal later, because all of the personnel went to Operations, and I do not remember just whether Operations took that up or not, or whether they knew the department laid down the general policy that there should be no enrollments and took no steps along that line.

For instance, when they had the investigation as to whether the department had done in regard to giving Admiral Sims the backing up in personnel abroad I was called before that committee and they asked me if I knew that Sims did not have the personnel that he asked for. This was before the House Naval Investigation Committee in 1917, the latter part of the year. I told the committee there that I did not know about that, for all the orders about personnel came to Operations; but that I had received a letter from Admiral Sims shortly before that, saying that as far as he was concerned, the bureau was doing very satisfactory work. He did not mention his shortage to me; but of course it was quite proper for him to send his recommendations to his chief direct.

At that time I did not know that the department had sent a telegram to Admiral Sims asking him about what was the condition of his personnel, and I did not know that the reply came from the department. I did not know anything about that until the other day. Although that was a part of the subject it did not come to me. Admiral Sims either wrote or told me, that he was just in the most urgent need for six dozen officers in his place at London. I am rather inclined to think that Capt. Pratt told me about it, but I am not sure, because he mentioned the fact that we had better send so and so over to London and in every case where we had the authority to do it we did it. In any rate, we had the order out about enrollments, and the Secretary did not want to enroll anybody abroad, and even in that case that later on another letter came over about it, and then I decided as I told the Secretary a few days ago, that it was a necessity to give an armed guard officer the necessary enrollment blanks not for the 6 that Admiral Sims asked for, but for 12, because I thought maybe he might want to open it up a little bit more. But the general principle of enrollments abroad still existed, and I think the general principle was right; but I think it was also right that we should send over a few when he made that urgent appeal for the part of the thing.

The CHAIRMAN. You did send over enrollment blanks, so they could enroll them on the other side?

Capt. PALMER. They were enrolled.

The CHAIRMAN. And that was not under the orders of the Secretary of the Navy?

Capt. PALMER. No, sir. Now, about promotions abroad.

The CHAIRMAN. How about promotions abroad?

OWNER The promotions abroad the department is not so far. I am responsible for those—or the lack of promotion and change of the personnel and I got requests from all these important operations that we had, in all parts of the land of the country, and in each case they had most of the officers and trained officers; all of them had that; and to size up the situation and consider all the requests. The officer thought that the people closest to him were the ones concerned, and I think they were, from each man's point of view. I thought I had the only officers in the Navy in my mind. I wanted to make them all admirals, and I think everybody was about it, and the only reason they felt that way was all officers were doing just wonderful work against odds. It was a one-person-win-the-war business; it was the whole thing as a team.

The reserve officers, the reserve law, as I have said, was a thing to interpret, and things did not get along for a considerable length of time. We had no persons in the different districts of these people; so that, for instance, their records giving credits were months behind at the beginning of the war. I have officers there to do it. And the promotion business, it came up not immediately but later on, and I think we got the better in promotions. I think that I could; that is,

I think I could have done better in promotions if I had a little earlier, but I had a good many calls for a promotion of things than promotions, and the promotions of class 2 and 3, which took in a great number of the men of the first class, were approved by all concerned—both sides.

The other classes were class 4, who were coast defense people, and class 5, for flying officers.

For coast defense people, it was necessary for us to adopt a plan for promotions and not allow any particular officer to go to any place to establish a plan, and I think that is something to do now. I may be wrong, but I think head-on and adopt that, so that all forces would get an equal chance. Promotions should not be made on various bases. I know there is much comment about the fourth class either. In the flying corps, Admiral Sims made a recommendation about it. I think he mentioned at that time two of them who had German planes, and one of them who had done just as well, but had not quite accomplished what he was supposed to, through no fault of his own, and I have forgotten the names. Some of them, I think, were for advancement to a better administrative position. But all of them were very young, and I did not get out a good plan of promotion until along in July, 1918. You will remember that any of them were not in the war very long at that time. Promotion was really a secondary thing, from my point of view at that time, and I felt that as we would get along towards the end of the war a great stress should be placed on that, so that we could give all these people their just dues before they left the service. We worked out a plan of promotion for class five officers, for the young officers in aviation, and I only made it out because they were all very young, and it would give them something

to look forward to. That plan was for more rapid promotion came to any other class, but it was not in active operation the war nor in the middle of the war. It was only late in that that plan was in active operation.

And the principal thing, I think, Admiral Sims desired able to give the men promotion on the field, as he spoke of a man does an heroic thing—brings down a plane or something of that kind—to give him promotion on the field. I admit that was a good viewpoint, but mine was different, and the department was responsible for this. I felt that knowing the conditions as to the number of heroic acts that were being done day after day, the number of men that had brought down 5, 10, and 20 airplanes actually to their credit, and were still either enlisted men or officers, the principle of promotion for heroic deeds was not the one; that promotion to a higher grade should be for qualification in that grade after comparison with other officers, and not for heroic duties. We can find a great many men who are very brave but have no ability beyond that. So that I felt that if we promoted a man on the field for an act of heroism of that kind, we might promote him the next week for an act really as brave, and the next week men were doing that week after week, and our total limit of promotion was to the rank of lieutenant commander. I thought that recognition should have been given by appropriate medals, but medals were not available, by letters of appreciation until the medals could be given. So that, on that subject of promotion, the department is not responsible. I am responsible.

The CHAIRMAN. I think that Admiral Sims's testimony that his officers had very low rank who were connected with him was correct. Capt. PALMER. Yes.

The CHAIRMAN. In order that they might have proper recognition for dealing with—

Capt. PALMER. Foreigners.

The CHAIRMAN (continuing). Officers of similar position in our Allies.

Capt. PALMER. Well, that was very much discussed at the time between officers in all services. Our limits, you see, were limited to lieutenant commander, and during the first year of the war we were allowing only lieutenants in the reserve. Lieutenant commander was the highest rank which would correspond to the most expert duties along certain lines. I remember, for instance, it was given to Mr. Daniels to Mr. Vandyke, for instance—lieutenant commander then for administrative people all along. And Mr. Daniels was promoted to Mr. Osborn, whom he had in charge of the naval prison, and he considered him the foremost in his line; and that was the reason for the lieutenant commander's rank—to give it to the leading men. As to the value of rank with the foreigners, it is really an interesting thing; but you could see that our officers—commanders, ensigns, lieutenants—were conferring all the time with people like admirals and admirals in foreign navies, and we could never hope to do anything like that, because the law of Congress would not go beyond lieutenants, and not until the last half of the war did we promote to lieutenant commanders. They had the same trouble here in the United States, but the ranks were apportioned in accordance with the ability of the people to carry out certain technical duties. That point was

the bureaus came to the Secretary and asked for technical ranks in the bureaus. That was just before the war—many months of the war.

They were at their wits' end to get the proper people and did not have any officers, and they could get very few on the outside who were worth \$10,000 or more, and to come into the Navy with the rank of lieutenant commander called for a pay, I think, of \$3,000 a year plus allowance—they could get in that way men that they could not get outside for from \$7,000 a year up. In fact, I remember another bureau, that of Construction and Repair, made an error then that they really needed of that kind in the early part of the first months of the war, and they showed that it was approximately 70 or 80 high-class men at a total cost of \$350,000, whom they could get just by giving them ranks up to lieutenant commander at \$3,000 and lieutenants at \$2,000. They showed that it would be a great saving. But the Secretary did not want to let them in. He said he did not want to encourage people to come in the department. Of course people could not do that business, and we did not have the people in the country. That was one bureau that submitted a request, and they also said that if the war kept on they would have a much greater expansion. Now, I do know that all sorts of people got together, time after time again, with the Secretary, and they said that there was a great necessity for these technical men to give them the proper equipment and therefore get them, because they knew that they would be lost to all sorts of other organizations, in the Army and other departments, everywhere, and that they would be lost to us at a very high percentage at the time; but we never got them in large numbers. I know, for instance, in the Bureau of Construction and Repair they wanted to have 70 or 80 of these high-class men, but we got only a few, later on, after a great delay.

Q. Now, Captain, can you tell me what plan of operations was given you by the department, or by the Chief of Naval Operations, as to which to base in logical manner your general future assignments of personnel to different forces?

A. I did not quite understand the question.

Q. What plan of operations, if any, was given to the department or the Chief of Naval Operations on which to base your assignments, your general future assignments, of personnel in a logical manner, to different forces?

A. Oh, well, we had no plan. We had only a mobilization plan which was a sheet stating the vessels which would be mobilized. That was gotten up by the Office of Operations, but we had no definite plan on which to base our assignments. I could not go on the plan that we were going to have a battle-ship warfare or a submarine warfare or anything of the kind. I could not look far enough ahead and specialize on anything such as regards numbers and duties; but I did receive orders from time to time, they said "We will have to have 10 ships here probably within a month"; or the next time they said "We must have trawlers"; probably had to have 20 trawlers. And another time it would be, "We are going to have mine force business now, and we want to have the

vessels ready on a certain date." Of course the mine force is a large organization, and the transport force was another very large organization; the ships that we required to take the Army, and later to bring the Army back. I must say they were a fine lot, too. The Navy takes off its hat to the Army on the men they sent over there, and the way they looked and the way they acted. They were splendid. We had various calls of them from time to time, and in each case, when I would say, "We want these to be ready," they would say, "Oh, we want them just as soon as you can possibly get them; in fact, in a month or two months." Just ordinarily the training of any people, and the equipment of them, and so forth, and getting barracks ready for them, can be done in two months to speak of.

The CHAIRMAN. But was there any general plan in the department under which all the bureaus could cooperate together, and what was to be followed out throughout?

Capt. PALMER. Not that I know of, sir. Not in my bureau did not get anything of that kind. In fact, we had something from the general board which said that we should be prepared to furnish in a week after the order the personnel. We had no plan. I understood, though, that a plan was being prepared in Operations, and I went up and asked for it several times—that is, an estimate of the situation and what we were to do, because it was very valuable for me to have such a thing that I could place the personnel in a logical way, and endow and train them; but I was told that there was a plan in process, and they were getting one at that time. That was just before the war. And I heard again that it was being drawn up during the last months of the war. But I did not get that plan. I do not know whether it was actually gotten out or not; but I understand the thing that affected personnel was some letter, which I think was mentioned in Capt. Laning's hearing yesterday, something about personnel which showed the priorities of ships in August; that is, which ships were to have the call for personnel, that is, whether they were to be battleships or destroyers.

The CHAIRMAN. Did you get any orders about priority of personnel?

Capt. PALMER. Not until that time.

The CHAIRMAN. What time was that?

Capt. PALMER. I do not remember what date that was. July or August.

The CHAIRMAN. 1918?

Capt. PALMER. No, sir; 1917.

The CHAIRMAN. 1917?

Capt. PALMER. Yes, sir. But, of course, that was not the plan we could go on in personnel. We had already established our own priorities. Since I found that there was not any such as I expected them to have; that is, I had been led to believe from the War College course up there—which I have not had the opportunity to take yet, but I had been led to believe—that thing would generally have a plan drawn up for the personnel situation which existed at the time, and say what you are to do. "Each force is to prepare this and prepare that," and so I thought there would be such a plan. But when I found that there was not and we could not get a definite order of the kind, I went ahead

To be sure, that is not a very good way to do, I did not have the information which should have been tried to work out any plan. I established my own vessels, but that really was a very small part of it. I established the priorities which the department got out later on, of July and August. But I remember one thing it was, I wanted to know enough about the war to believe I could make use of personnel on battleships to train others. Of course, we were short on personnel right at that time. I asked Operations if they could give me any probable areas in which our battleships would not be actively required for actual fighting, and I was told they could not. I said, "Can you give me six months?" "No." Just in that case I did not feel justified in saying, "Well, you can go on the assumption that they will not go in action for six months, or one year." There was the cry always to have the battleships ready for action, and of course, if they were to be ready for anything at all, of course, take people off of them to train others; I worked out in my own bureau, with my own planning and my own bureau, a scheme for making use of the officers that were available in order to do that I had to establish some definite assumptions, one of which was, I made the assumption that the active fleet would not be required to take active part in the actual operations of the war zone within six months

and that was a decision which was made without adequate basis. It just happened that they were not called in that time to adopt something, so that I took that plan and then I took off 6 officers from the 36 or 34 out of the actual fleet and then put them in to train other people for the enormous expansion in the other activities. In fact, the battleships were busy all the time. Every ship afloat was a training ship for the destroyers afterwards on the other side. But taking 10 officers off of the battleships when they could not have had enough officers, was a very important thing. I did not have been able to do it at all if I had not come to the attention of Admiral Mayo and gotten his cooperation. He took a broad view of the situation, and I think it shows just what a broad view he is. I explained to him what I thought were the requirements and the great expansion we needed for forces everywhere. He would have been perfectly justified in saying, "Well, I am going to keep them," and I am going to keep them"; and I believe I think that stand I could not have gotten them. But he took the whole situation from a broad viewpoint, and he said, "I am going to keep them, but I think it is not best for me, for my battleships, for the way we have got to win this war." So that, I took the officers, one at a time; and the captains rightfully objected. I think I would have made a great deal more objection if they had objected; and they did object and persisted in their objection at the same time they went to the job. They said, "We are at your order, and we will deliver the goods"; and they did. That was a step that I had to take on the assumption that

about two years to train a recruit so that he will an ordinary war's man, and 10 years to train officers, you can see that not have any more trained men than we had in the beginning.

Senator TRAMMELL. You provided them and they had at least sufficient training to meet the situation?

Capt. PALMER. To get the ships going. I do not mean they would meet the situation in the most efficient way, by any means, but they were the best under the circumstances, with the amount of time given for training. They trained them intensively at all places, and they did very fine work.

Senator TRAMMELL. The point I wanted to get at was, were they sufficiently trained and equipped to get the desired results?

Capt. PALMER. It would be pretty hard to tell, Senator. I think that in specific cases we had people—for instance, Admiral Sims—that a certain bunch he had on little yachts or trawlers, I have forgotten which, over on the French coast, were very inefficient. I think he used the words, "Their inefficiency was deplorable." I have forgotten whether it was on yachts or trawlers; some of the vessels. But, at any rate, I would not be sure that he was not right in that. I do not know about the actual adjectives in the cases. I think there were a good many cases where there was a good deal of inefficiency among the organizations, that is, I mean among the individuals in organizations.

Senator TRAMMELL. As a matter of fact, would not that apply to people in the regular Navy? Would it not apply to some particular individual connected with any man's staff? Some particular individual connected with your bureau, for instance, might not measure up to the highest standard?

Capt. PALMER. I will agree with you on all except my bias. [Laughter.]

Senator TRAMMELL. That is what I thought.

Capt. PALMER. Oh, yes——

Senator TRAMMELL. I did not mean to reflect on anybody's human nature and the frailties of human nature and the accomplishments and achievements of human nature run throughout the war just as through any ordinary, everyday bunch of men; that is the point I am making.

Capt. PALMER. That is exactly right.

Senator TRAMMELL. But the broader point is, taking it as a whole, did not the men that you provided accomplish results?

Capt. PALMER. I should say that the results accomplished by the Navy were perfectly wonderful during this war. I would say that they were accomplished in spite of the obstacle of not having the best people to start with, and having a short time to train, and the newness in the war. I think the results were wonderful.

Senator TRAMMELL. That is my opinion. I would not pick out some isolated case of some fellow that made a failure, and cite that as the precedent for the Navy or for the reserve forces.

Capt. PALMER. No, sir.

Senator TRAMMELL. I would take it into consideration as a whole.

Capt. PALMER. I know what a fine showing our battleships made, for instance, and our destroyers, made. In fact, all the commands *we have seen* in the papers and in books, bear that out; and Admiral

assistance, speaks of the wonderful lot of men we had on ships, and that they were ready for anything. Also Admiral says about his people in the battleship force in the North Atlantic we have occupied a very high position with the fleet. Fact. I could mention also the mine forces; I could name all the forces.

Q. TEAMMELL. I believe you stated you began to take looking to the enlargement of the Navy, and looking preparation of the Navy, very shortly after you went into the Bureau of Navigation office in 1916, did you not?

A. FARMER. Yes, sir; I undertook activities; I undertook to do it. Yes, sir; I did.

Q. TEAMMELL. Was that restricted alone to the bureau with which you were connected or did that same activity go in the Bureau of Naval Operations, I believe you call it?

A. FARMER. Yes, sir. Senator, I do not want to put in anything out of my own bailiwick. I could only give you what is far as anything else is concerned. I know that Admiral and his associates stated to me, "We know this is a big job and personnel is concerned because we have not any to start with. We would like to help you." That was the attitude of Admiral and all his officers, and I must say that they helped the Bureau of Navigation did any good work, it was because the Bureau of Operations helped.

Q. TEAMMELL. I presume in providing personnel and trying to get men to meet the situation, that you would not have been at the Bureau of Operations had not been making some preparation for additional craft for the utilization of those men. It seems to me the interest folly to have been doing that?

A. FARMER. No, sir; I would not have made any preparation for the data on which to go about the number of ships, the mobilization sheet on which I worked.

Q. TEAMMELL. They did have a mobilization sheet on which they worked?

A. FARMER. Yes, sir. That was providing for vessels that we were going to have with regard to my future operations of supplying men to the vessels in the Navy, the kinds that would be with them and the kinds that would be with them in the mobilization. Of course they were not ready so far as the mobilization was concerned and they were ready. In fact some of our greatest troubles at the mobilization stations were because we could not send men that we had to get them on the ships on the mobilization dates, and the ships were not ready, a certain number of them, so we had the mobilization stations congested and that meant there was difficulty in getting those men and getting them properly housed.

Q. TEAMMELL. It is very evident from your testimony that you had sufficient information on which to equip as best you could for the mobilization of a sufficient number of men to meet the needs of the different vessels and in other different places where they were required, at the time that it was required?

A. FARMER. Yes.

Q. TEAMMELL. You had sufficient information to do that before the mobilization.

Capt. PALMER. I had sufficient information, not in regard to details of them, but I went on and worked the Navy to getting all officers and all men of all kinds as soon as I could.

Senator TRAMMELL. Now, there has been more or less said the question of the general plan. What if a general plan for the war and carrying out the conduct of the war so far as was concerned had been made in January, 1916? Would the subsequent developments during the war have justified the carrying out of a plan in detail?

Capt. PALMER. I should say that any plan of the kind would have had to be modified here and there, but I should say also that it might have been made looking toward, for instance, what the character of the war was from the information that could have been accumulated from the two previous years that the foreign countries were at war.

Senator TRAMMELL. Do you not think that those things were taken into consideration in the manner of making preparation in the matter of ships and different equipment and also in the question of mobilizing the personnel? Do you not think that that had something to do with it?

Capt. PALMER. That plan that they had?

Senator TRAMMELL. That was an element of consideration.

Capt. PALMER. Well, I should think so; but, of course I do not get the benefit of any of that because my instructions from operations were from day to day, "We think we are going to do this," and the next day or the next week, "We have to shift from this to that." For instance, they would say, "Here, we want so many more officers, aviators on these ships, or we want armed guards, or we want to provide for two of the new ships, and for the armed crews on them," and the next time would be the establishment of a patrol force, and really nothing I could go on as to picking up any kind of men or doing anything—

Senator TRAMMELL. Do you not think that the developments that they were developing rapidly day by day would have a great deal to do with it?

Capt. PALMER. Very much.

Senator TRAMMELL. You spoke of the armed guards. It was not until February that Germany declared that there was going to be an unrestricted submarine campaign.

Capt. PALMER. That could not have been foreseen.

Senator TRAMMELL. That could not have been foreseen, and no definite policy could have been formed, when the Germans did not adopt the unrestricted submarine policy until February.

Capt. PALMER. The necessity for armed guards came out of a clear sky.

Senator TRAMMELL. The submarine menace did not reach its height until July, 1917.

The CHAIRMAN. April.

Senator TRAMMELL. It did not reach its height until July, 1917, according to the chart filed by Admiral Sims.

The CHAIRMAN. There were 800,000 tons of shipping sunk in April, which was the highest number.

Senator TRAMMELL. But its height was not reached until July. There might have been a greater number at some previous time.

mer did not begin to fall off until after July 1. I am going to have that report filed by Admiral Sims. I do not know whether it is or is not. I presume that it is reasonably so. So a general report might have been made in December, 1916, or January, 1917, and have proved totally inadequate to have met the situation developed?

PALMER. It might.

MR. TRAMMELL. Was there such delay on the part of the Navy during its part of the war after we entered the war as to the war for any great length of time, in your opinion?

PALMER. Well, it would be just an opinion. I do not know if it prolonged the war. I should say—I can give an opinion as far as my personnel is concerned, I mean that it would be nothing I am qualified to talk on—I should say that all those who had were simply due to postponement—well, I guess "postponement" would be the word—and when I found things to be done after taking every step I could, I went ahead and did it as far as personnel so we did not really have many delays, as far as the Navy was concerned, on winning the war, on the total thing. I should say that we had a week's delay or a month's delay as far as the Bureau of Navigation was concerned. But I do not know the general plan.

MR. TRAMMELL. I believe you stated that you did begin preparing in 1916 to enlarge and increase the efficiency and strength of the Navy?

PALMER. Yes, sir.

MR. TRAMMELL. Congress passed a law in August, 1916, providing a considerable increase, did it not?

PALMER. August 29 they passed a splendid bill, a splendid bill.

MR. TRAMMELL. Do you know whether or not the Secretary of the Navy was in sympathy with that measure?

PALMER. I think he was fully in sympathy with that measure, in my impression. I would not like to speak for him, but I was fully in sympathy with it.

MR. TRAMMELL. I think that is all, Capt. Palmer. You may be seated.

At 12:45 o'clock p. m. the subcommittee adjourned on Friday, March 26, at 10 o'clock a. m.)

# NAVAL INVESTIGATION.

FRIDAY, MARCH 26, 1920.

UNITED STATES SENATE,  
COMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.

Committee met, pursuant to adjournment, at 10 o'clock a.m.  
in Senate Office Building, Senator Frederick Hale presiding.  
Senators Hale (chairman), Keyes, and Trammell.  
CHAIRMAN. The committee will come to order. Capt. Taussig,  
take the stand?

BOY OF CAPT. J. K. TAUSSIG, UNITED STATES NAVY.

(Witness was sworn by the chairman.)

CHAIRMAN. Capt. Taussig, can you give the committee any  
idea as to the steps that were taken by the Navy Department  
and conducting activities in the recent war, and espe-  
cially regard to the personnel of the Navy and the destroyer  
force, and will you please state what duties you performed from  
beginning of the World War in 1914 up to the present time, show-  
ing facilities for observation, and stating in your own way your  
views of any matters pertinent to this investigation?

TAUSSIG. I will, sir. I have a prepared statement which,  
with permission of the committee, I will present.

CHAIRMAN. Very well.

TAUSSIG. The following duty was performed by me just prior  
to the beginning of the World War:

Assistant to officer in charge of enlisted personnel, Bureau of  
the Navy Department, from April, 1912, to May, 1915, a  
period of three years.

Acting in connection with and commanding U. S. S. *Wadsworth*  
from 1915, to November, 1917, a period of two and one-half  
years, eight months was after the United States declared war.

Acting in connection with and commanding the U. S. S. *Little*,  
from January, 1918, to August, 1918; eight months dur-  
ing the war.

Charge of Enlisted Personnel Division, Bureau of Navigation,  
Department, from September, 1918, to May, 1919, a period of  
eight months.

Because of the length of time necessary to educate officers and  
to train enlisted men in times of peace, it will be necessary  
to go to the committee the state of the naval personnel when  
we entered the Great War, and the reasons for its condition  
to begin as far back as 1914, when the European conflict  
began and when it became practically certain that this country  
would or later become involved. Unless measures had been  
taken as early as 1914 to place our personnel on a proper and adequate

CHAMAN. Very well.

CHAMAN. The report, in its changed form, was published in connection with the annual report of the Secretary of the Navy, 1914, and relating to personnel, follows:

"The general board can not too strongly urge upon the department the necessity of continuing to carry out the repeated recommendations of the general board from year to year, to provide the fleet with a personnel, active list and reserve, sufficient to the manning of the fleet for war.

"One of the general board this is a matter of even more serious importance, for it can not be too often repeated that ships without a personnel to man and fight them are useless for the purposes of war. The purpose of the fleet is long and arduous, and can not be done after the war. This must have been provided for long previous to the beginning of the war. Every ship of the fleet found at the outbreak of war without provision for its manning by officers and men trained for service can be considered a useless mass of steel whose existence leads only to a false sense of

the strength of the fleet is measured too often in the public mind by the number of material units. The real strength of a fleet is a combination of its personnel and its material; and of these two elements the personnel is too often forgotten and neglected in making estimates of the fleet. The general board can not impress this point too strongly on the department and recommend too earnestly that every effort be made to correct this. It is urged to provide for a personnel on the active list, supplemented by a trained reserve sufficient to man every vessel of the fleet when the call

comes in time of peace keeps all the ships of its navy fully manned and in full commission. But all leading nations except ourselves provide an active list, officers and enlisted men, to keep the best of their fleet in full commission, and all the serviceable ships of their fleet in a material condition for war; and in addition a trained reserve of men sufficient to complete the complements and fully man every serviceable ship of their navies, and furnish a reserve for casualties. Thus every nation except ourselves is prepared to mobilize its entire navy, by order, with the trained personnel for service. We alone of the naval powers provide no such reserve. Our active personnel too scant, and trust to the filling of the complements of the trained men recruited after war is imminent or declared. To quickly mobilize the Navy serviceable for war (including ships which are now in commission with trained crews is impossible owing to the absence of a trained

personnel. All that has been herein set forth, the general board recommends: That the department be asked for providing an active personnel, officers and enlisted men, to keep in full commission all battleships under 15 years of age from commission, all destroyers and submarines under 12 years of age from authorization, all cruisers and all gunboats, and all the necessary auxiliaries that go to make up the fleet, and of furnishing nucleus crews for all ships in the Navy that are in commission in time of war, and the necessary men for the training and other shore

work. The general policy be adopted of expanding the active personnel with the reserve in the proportion indicated in (a).

That immediate steps be taken to form a national naval reserve of trained officers and enlisted men, and that this work be pushed until this reserve, in connection with the active list, reached the point where, combined with the active list, it will be sufficient to man the entire fleet with war complements and furnish 10 per cent reserve for casualties.

That the Naval Militia be expanded in number and that the department encourage and improve its training to the end that it may still more effectively reinforce the regular service at need.

GEORGE DEWEY.

The report itself shows that the Navy was in a very unsatisfactory condition so far as personnel was concerned.

Turning to paragraph 43 (a) of the just quoted report of the general board, which paragraph is the one from which the recommendation of an immediate increase of 19,600 men had been removed, it is stated in his annual report, dated December 1, 1914:

By wisely utilizing the present personnel all ships of the classes named contained in full commission without addition to the present enlistment and no legislation is needed to carry out their recommendations. This is clear in a report by the Chief of the Bureau of Navigation, which is printed in the on page 64.

The figures submitted by the chief of the bureau in this report not allow for adequate complements for the ships mentioned in the General Board's report, and did not provide for nucleus crews for other 225 ships of the Navy required manned by the General Board. As the officer in the Bureau of Navigation who actually worked out the details of the enlisted personnel to ships and stations, and personally prepared the orders for such details, I know that the personnel as it existed at that time could not be utilized so as to man the ships as recommended by the General Board.

The General Board had found that in order to carry out its recommendations an immediate increase of 19,600 men of the active force was needed.

We in the enlisted personnel division of the Bureau of Navigation who were charged with the administration of the personnel division found that the immediate increase should be approximately 19,000 men.

The Secretary requested no additions for the active enlisted personnel. Consequently, the unsatisfactory personnel situation continued.

While in the Bureau of Navigation, and immediately after leaving the bureau in 1915, I made an exhaustive study of the whole personnel situation. The official records were at my disposal. I had an experience of three years in the administration of the enlisted personnel force of the entire Navy. This study resulted in my writing in 1915 a paper on the subject of "Naval Personnel."

It was shown in this paper among other things:

1. That the allowed complements of the Navy ships in commission were "peace" complements and were from 15 to 30 per cent less than would be required in time of war.

2. That, in spite of the inadequacy of the peace complement, the ships did not even have these allowed peace numbers on board. Battleships in full commission having an average of 100 vacancies in the enlisted force.

3. That there were 42 ships with only three-tenths of their complements on board, 16 ships with only one-tenth of their complements on board, 38 ships out of commission with no personnel on board. No personnel was available to fill these vacancies.

The CHAIRMAN. Have you a copy of this paper with you?

Capt. TAUSSIG. Yes.

The CHAIRMAN. I would like to have a copy of it inserted in the record.

Capt. TAUSSIG. I have here the only copy extant, one of the original copies; but the committee is welcome to have it.

The CHAIRMAN. I would like to have it put in the record. Was it an official paper?

Capt. TAUSSIG. No, sir; this paper that I am talking about is not an official paper. It is a study that I made.

The CHAIRMAN. Was it presented to the department?

Capt. TAUSSIG. I mention that later, here. If you will just let me finish this point, then I will bring out just that point about it, and show its status.

LEHMAN. Very well.

FURSIG. The next point is:

there were in the Navy in 1915 a total of 1,920 commissioned officers and 53,000 enlisted men.

to put what material we had (plus 75 auxiliaries to be purchased) in operation for war there would immediately required a total of 4,440 line officers and 106,900 enlisted men. We had 2,520 line officers and 53,900 more men than we had in 1915.

the staff corps were correspondingly weak.

after impressing into service all our available organized and unorganized reserves, including the Naval Militia, we would still have been short of immediate requirements 1,088 line officers and 29,000 enlisted men.

much additional personnel would be required as the war progressed.

the Naval Reserve Force consisted of only 150 men.

it took considerable time to educate officers and to recruit enlisted personnel.

report on naval personnel was submitted to and accepted by the War Department for publication. It received "first honorable mention" in the prize essay competition for that year.

in accordance with Navy regulations, the department's authority to publish the report was requested. The Navy Department refused to publish the report without giving reasons, and as a result it was not printed. That answers the question you asked me.

LEHMAN. Yes; that answers my question. I would like to have that report inserted in the record.

The report referred to is here printed in full in the record as follows:

#### NAVAL PERSONNEL.

It is a pity that good men with poor ships are better than poor men with

#### INTRODUCTORY.

The United States has so neglected the opportunities for placing its Navy upon a defensive basis, we are, to-day, in a position which, in the event of a sudden attack, would be precarious. Our enemy would have no difficulty in dealing us a staggering blow from which our recovery would be very difficult at the best. While recent events abroad have forced upon the imagination of the country's unpreparedness, there appears to be a general feeling that this condition of affairs applies mainly to the inadequacy of the number of ships. The true situation, however, is that the personnel of the Navy has been overlooked. It is evident that the country does not appreciate the necessity for an adequate and efficient

personnel. This paper is to discuss only that phase of unpreparedness which applies to the personnel of the Navy. It is realized that all the intricate questions involved are not thoroughly elucidated, and some can not even be touched on; but by stating the facts, and by making a few observations and suggestions, it is hoped that some understanding as to what we have, what we need, and what we can do will be imparted to those who need enlightenment, and to those

who are responsible for the efficient number of ships, and that those we have are not in the proper proportion to the number of ships. It is realized that the European conflict, which has shown the world that we have not sufficient personnel to man our insufficient ships, is a lesson that we have not learned. That we have not sufficient personnel as we have are not in the proper proportions to the number of ships is a lesson that we have not learned. Not only is our personnel

inadequate for manning the ships now on the Navy list, but no provisions made for supplying the necessary personnel for the vessels under construction those recently authorized. The country, through the press, is crying for more. The country apparently does not care whether or not the ships are manned. This is certainly a most peculiar state of affairs. That it can be due to the fact that the people do not understand the true situation. They know the facts. The reason for this ignorance is their lack of interest in naval matters. To them the ships are everything. They see a division or squadron steam majestically by. Each vessel has the Stars and Stripes display on its peak. The onlookers pride themselves on being Americans, and say to one another, "We can lick anything afloat." It is the valor of ignorance. It never occurs to them that these ships have on board only about three-quarters of the personnel necessary to man them properly; that, owing to this lack of personnel, they are not able to "lick anything afloat."

This lack of knowledge concerning naval personnel applies not only to the public at large, but also to their Representatives in Congress, and (what is most unfortunate) to the Navy itself. We can rest assured that there is no such lack of knowledge as the naval attachés of the various foreign embassies in Washington.

That the Navy, as a whole, does not appreciate the true situation and does not know the facts, is shown by the conflicting testimony given by those high in command before the House Naval Committee during the consideration of the last appropriation bill. It was held by some that there was sufficient personnel for all immediate requirements. It was held by others that we were short of requirements many hundreds of thousands of men and 18,000 enlisted men. In view of such conflicting opinions, it is not to be wondered at that Congress failed to pass any personnel legislation. So our lack of providing for continuing the building of ships, without making provision for the necessary personnel, remains with us year after year with our present weak personnel as before. It is hoped that the fallacy of this inane procedure will be realized before it is too late, that the country will awake to a realization of the fact that an unmanned ship is more than no ship at all, as it requires protection instead of giving it; that a poorly manned ship is more or less of a menace in that it would be called on to accomplish what is required of a fully manned ship, with probably disastrous results.

The quality of the personnel has steadily improved. The quantity of the personnel has spasmodically increased until to-day it is numerically greater than ever before. But while this numerical increase has been developing, the material has also increased and at a much more rapid rate than the personnel. Consequently we find ourselves with less personnel in proportion to our material than at any previous time. If it were true that "man for man we are as good as other navies," this condition would avail us little if, in case of war, the average must be lowered by the introduction of a large untrained element. Such a contingency confronts us at present. It behooves us to remedy this condition as soon as practicable. It is not sufficient that in peace times our personnel be as efficient as that of any possible enemy. It is essential that the personnel be in a status where there is every reason to believe we are as efficient as, or more efficient than, any possible enemy with whom we may be drawn into a war. That our personnel is not on this basis is unfortunately true. The fact the greatest need of our Navy to-day is an adequate and efficient personnel.

Practically all of our personnel legislation has been done piecemeal. The existence of a general staff has resulted in the absence of a progressive program. When appropriating for ships, provision is made for armor, armament, and equipment. Sometimes necessary ammunition is authorized. Never is provision made for manning the ships when completed. This procedure continues year after year until our personnel becomes so inadequate it is imperative that something be done. It is not until then, a rider is attached to an appropriation bill providing for an increase in the number of men, or relieving some intolerable condition among the officers. The provision for men is always inadequate, as the fact that it takes time to recruit and train men for service on board ship is repeatedly overlooked. The result, when the additional quota has been recruited and passed through the training courses, we find, owing to the completion of new vessels and the authorization of others, the same unsatisfactory conditions prevailing as existed a few years previous when the additional men were authorized. The relief for unsatisfactory conditions among the officers has usually been temporary in character, as almost without exception, such relief to the officers of one corps or grade, has, in the course of a few years, resulted in an intolerable situation in some other corps or grade. Naval officers can be held partly responsible for this unsatisfactory legislation. They have differed widely in their opinions as to what is necessary and what is best, that Congress has had great difficulty in ascertaining the true state of affairs. But practically all of

the necessity for a general staff and have advocated legislation for the same body. Consequently in so far as the lack of such a staff has effected the personnel condition, it seems equitable that Congress should be made aware of the situation. There is no doubt that had Congress authorized a general staff on a properly represented, such a staff would have welded together the various opinions as to what is desirable, with the result that a bill of the Navy, the Navy Department, and the Congress would have been introduced and enacted into law. We would not then have had the existing personnel conditions that now exist. There appear to be no prospects of the authorization for a general staff, in view of which there is no satisfactory personnel legislation. However, if we could produce a staff of officers high in rank, who is willing to take up the cudgel and make the necessary and necessary reforms, there would be an excellent chance of satisfactory results. The Navy has, on several occasions, produced satisfactory results, their ability, zeal, magnetism, and force of character, have, by and by, succeeded in getting for the service many reforms that were long overdue. The efforts of these officers have been along material or technical lines. They have neglected the personnel. A personnel champion is needed at present.

The statistics of what follows relate to the entire enlisted force, and, in the case of the line officers of the commissioned personnel. The various staff corps are not because of a lack of appreciation that these corps are most important, but because of the late necessity for suitable naval organization, but because that the existing conditions in the line is equally true of conditions in the staff corps. The statistical data becomes boring. For these reasons, therefore, the following is used for illustrating our weakness.

#### THE FACTS CONCERNING OUR ACTIVE FORCES.

In 1915 the active list contained 1,920 commissioned line officers, distributed in the various grades as shown in the following table:

TABLE I.—*Distribution of commissioned line officers.*

| Grade. | Number in grade. | Percentage of whole number. |
|--------|------------------|-----------------------------|
| .....  | 24               | 1.3                         |
| .....  | 90               | 4.7                         |
| .....  | 122              | 6.4                         |
| .....  | 204              | 10.6                        |
| .....  | 351              | 18.3                        |
| .....  | 761              | 39.6                        |
| .....  | 368              | 19.1                        |
| .....  | 1,920            | 100.0                       |

In the above, as extra numbers, 6 rear admirals, 20 captains, and 100 lieutenants. This makes the percentage of the whole number higher in these grades than would be under normal conditions.

The total commissioned warrant officers and warrant officers of the line are approximately 670, distributed as follows:

|       |     |
|-------|-----|
| ..... | 200 |
| ..... | 200 |
| ..... | 270 |

The enlisted force of 48,000 men and 3,500 apprentices, making 51,500. This number is exclusive of men performing duty on ships assigned to the Navy and of those prisoners in confinement who are sentenced to discharge. Included in the number are approximately 1,500 men of the Navy. These men can not be considered as a part of the fighting force. At the present time the Navy is recruited to its full authorized strength, so the total number of men, including those on naval militia ships, and the prisoners, is about 53,000.

inadequate for manning the ships now on the Navy list, but no provision made for supplying the necessary personnel for the vessels under construction those recently authorized. The country, through the press, is crying for more ships. The country apparently does not care whether or not the ships are manned. This is certainly a most peculiar state of affairs. That it is due to the fact that the people do not understand the true situation, I know the facts. The reason for this ignorance is their lack of interest in naval matters. To them the ships are everything. They see a division of ships steam majestically by. Each vessel has the Stars and Stripes display on its peak. The onlookers pride themselves on being Americans, and say to themselves, "We can lick anything afloat." It is the valor of ignorance. It never occurs to them that these ships have on board only about three-quarters of the personnel necessary to man them properly; that, owing to this lack of personnel, they are unable to "lick anything afloat."

This lack of knowledge concerning naval personnel applies not only to the general public at large, but also to their Representatives in Congress, and (what is most important) to the Navy itself. We can rest assured that there is no such lack of knowledge among the naval attachés of the various foreign embassies in Washington.

That the Navy, as a whole, does not appreciate the true situation and the facts, is shown by the conflicting testimony given by those high officials before the House Naval Committee during the consideration of the last appropriation bill. It was held by some that there was sufficient personnel for all immediate requirements. It was held by others that we were short of requirements many hundreds of men and 18,000 enlisted men. In view of such conflicting opinions, it is not surprising that Congress failed to pass any personnel legislation. So our lack of provision for the building of ships, without making provision for the personnel, remains with us year after year with our present weak personnel. It is hoped that the fallacy of this inane procedure will be realized before long, and that the country will awake to a realization of the fact that an unmanned ship is more or less of a menace in that it would be called on to do what is required of a fully manned ship, with probably disastrous results.

The quality of the personnel has steadily improved. The quantity of it has spasmodically increased until to-day it is numerically greater than ever before. But while this numerical increase has been developing, the material has advanced but at a much more rapid rate than the personnel. Consequently we find that we have less personnel in proportion to our material than at any previous time. If it were true that "man for man we are as good as other navies," this could be availed of little if, in case of war, the average must be lowered by the introduction of a large untrained element. Such a contingency confronts us at present. We must remedy this condition as soon as practicable. It is not sufficient that our personnel be as efficient as that of any possible enemy. It is not sufficient that the personnel be in a status where there is every reason to believe that they are as efficient as, or more efficient than, any possible enemy with whom we may be drawn into a war. That our personnel is not on this basis is unfortunately the greatest need of our Navy to-day is an adequate and efficient personnel.

Practically all of our personnel legislation has been done piecemeal. The existence of a general staff has resulted in the absence of a progressive policy in appropriating for ships, provision is made for armor, armament, and ammunition. Sometimes necessary ammunition is authorized. Never is provision made for manning the ships when completed. This procedure continues year after year until the personnel becomes so inadequate it is imperative that something be done. And not until then, a rider is attached to an appropriation bill providing for an increase in the number of men, or relieving some intolerable condition of officers. The provision for men is always inadequate, as the fact that it is necessary to recruit and train men for service on board ship is repeatedly overlooked. The result, when the additional quota has been recruited and passed through the training courses, we find, owing to the completion of new vessels and the authorization of others, the same unsatisfactory conditions prevailing as existed a few years ago when the additional men were authorized. The relief for unsatisfactory conditions among the officers has usually been temporary in character, as almost without exception, such relief to the officers of one corps or grade, has, in the course of time, resulted in an intolerable situation in some other corps or grade. Naval officers can be held partly responsible for this unsatisfactory legislation. They have not been widely in their opinions as to what is necessary and what is best, that Congress has had *great difficulty in ascertaining the true state of affairs.* But practically

the necessity for a general staff and have advocated legislation for the same. Consequently in so far as the lack of such a staff has effected the personnel condition, it seems equitable that Congress should be made aware of it. There is no doubt that had Congress authorized a general staff on the same basis as the Army, such a staff would have welded together the various opinions as to what is desirable, with the result that a bill would have been introduced by the Navy, the Navy Department, and the Congress would have passed and enacted into law. We would not then have had the existing personnel conditions that now exist. There appear to be no reasons for the authorization for a general staff, in view of which there is no satisfactory personnel legislation. However, if we could produce such an officer high in rank, who is willing to take up the cudgel and make the necessary reforms, there would be an excellent chance of satisfactory results. The Navy has, on several occasions, produced such results through the ability, zeal, magnetism, and force of character, have, by such means, succeeded in getting for the service many reforms that were necessary. The efforts of these officers have been along material or technical lines. They have neglected the personnel. A personnel champion is not at present.

Comments of what follows relate to the entire enlisted force, and, in fact, to the line officers of the commissioned personnel. The various staff corps are not because of a lack of appreciation that these corps are most important. The necessity for suitable naval organization, but because that organization conditions in the line is equally true of conditions in the staff. Much statistical data becomes boring. For these reasons, therefore, this is used for illustrating our weakness.

#### THE FACTS CONCERNING OUR ACTIVE FORCES.

In 1915, the active list contained 1,920 commissioned line officers, distributed in the various grades as shown in the following table:

TABLE I.—*Distribution of commissioned line officers.*

| Grade. | Number in grade. | Percentage of whole number. |
|--------|------------------|-----------------------------|
| .....  | 24               | 1.3                         |
| .....  | 90               | 4.7                         |
| .....  | 122              | 6.4                         |
| .....  | 204              | 10.6                        |
| .....  | 351              | 18.3                        |
| .....  | 761              | 39.6                        |
| .....  | 368              | 19.1                        |
| .....  | 1,920            | 100.0                       |

In the above, as extra numbers, 6 rear admirals, 20 captains, and 100 lieutenants. This makes the percentage of the whole number higher in these grades than would be under normal conditions.

As to commissioned warrant officers and warrant officers of the line, there are approximately 670, distributed as follows:

|       |     |
|-------|-----|
| ..... | 200 |
| ..... | 200 |
| ..... | 270 |

The enlisted force of 48,000 men and 3,500 apprentices, making 51,500. This number is exclusive of men performing duty on ships assigned to the fleet, and of those prisoners in confinement who are sentenced to discharge. Included in the number are approximately 1,500 men of the fleet. These men can not be considered as a part of the fighting force. At present, the fleet is not recruited to its full authorized strength, so the total number of men, including those on naval militia ships, and the prisoners, is about 50,000.

In order to illustrate the extent to which this personnel is distributed the table is inserted showing the status of all serviceable vessels:

TABLE II.—*The status of ships.*

| Class of ship.        | In full<br>com-<br>mis-<br>sion. | In re-<br>serve,<br>0.3 of<br>crew. | In ordi-<br>nary,<br>0.1 of<br>crew. | Not in<br>com-<br>mis-<br>sion. | Under<br>con-<br>struc-<br>tion. | Autho-<br>rized. |
|-----------------------|----------------------------------|-------------------------------------|--------------------------------------|---------------------------------|----------------------------------|------------------|
| Battleships:          |                                  |                                     |                                      |                                 |                                  |                  |
| First line.....       | 7                                | 1                                   |                                      |                                 | 6                                |                  |
| Second line.....      | 13                               | 8                                   | 1                                    | 3                               |                                  |                  |
| Armored cruisers..... | 6                                | 3                                   | 1                                    |                                 |                                  |                  |
| Cruisers:             |                                  |                                     |                                      |                                 |                                  |                  |
| First-class.....      | 2                                | 3                                   |                                      |                                 |                                  |                  |
| Second-class.....     | 1                                | 1                                   |                                      | 2                               |                                  |                  |
| Third-class.....      | 10                               | 4                                   | 1                                    | 1                               |                                  |                  |
| Destroyers.....       | 38                               | 17                                  |                                      | 2                               | 11                               |                  |
| Monitors.....         | 5                                | 2                                   |                                      | 2                               |                                  |                  |
| Submarines.....       | 38                               |                                     |                                      |                                 | 19                               |                  |
| Transports.....       | 2                                |                                     |                                      | 3                               | 1                                |                  |
| Gunboats.....         | 21                               | 1                                   |                                      | 7                               |                                  |                  |
| Supply ships.....     | 4                                |                                     |                                      |                                 | 1                                |                  |
| Fuel ships.....       | 22                               |                                     |                                      | 1                               | 1                                |                  |
| Converted yachts..... | 5                                |                                     |                                      | 11                              |                                  |                  |
| Tugs.....             | 48                               |                                     |                                      |                                 |                                  |                  |
| Tenders.....          | 7                                |                                     |                                      |                                 | 2                                |                  |
| Special types.....    | 7                                | 2                                   |                                      | 1                               |                                  |                  |
| Torpedo boats.....    | 1                                |                                     | 13                                   | 5                               |                                  |                  |

In addition to the large number of ships, there is our extensive shore establishment that must be provided with personnel. This comprises the Navy Department with its bureaus, offices, and important boards; the War College, Naval Academy and four training stations; the numerous trade schools; 18 navy yards and with their various adjuncts; an aeronautical station; and many smaller stations as hospitals, magazines, recruiting stations, and radio stations. The shore establishment is so large its requirements demand 25 per cent of the total commissioned officers, 35 per cent of the commissioned chief and warrant officers, and 20 per cent of the enlisted force.

Below is shown the number in each grade and the percentage in each grade of officers performing duty on shore:

TABLE III.—*Officers performing shore duty.*

| Grade.                             | Total<br>number<br>in grade. | Number<br>perform-<br>ing duty<br>on shore. |
|------------------------------------|------------------------------|---|
| Rear admiral.....                  | 24                           | 16  |
| Captain.....                       | 90                           | 50  |
| Commander.....                     | 122                          | 63  |
| Lieutenant commander.....          | 204                          | 103   |
| Lieutenant.....                    | 351                          | 99  |
| Lieutenant (j. g.).....            | 761                          | 147   |
| Ensign.....                        | 368                          | 20  |
| Chief boatswain and boatswain..... | 200                          | 80  |
| Chief gunner and gunner.....       | 200                          | 80  |
| Chief machinist and machinist..... | 270                          | 80  |
| Total.....                         | 2,590                        | 747   |

Although such a large percentage of the officers and enlisted men are performing duty on shore, their numbers are reduced to the lowest practicable limits. The establishment is for the proper maintenance of the fleet. The fleet would be maintained if the personnel on shore were increased. Those of us who go to sea find that the ships do not get as good service at the navy yards as they should; and

responsible at the yards, or who are performing duty at the yards, know the best of getting the efficient service that would be forthcoming if adequate personnel were available. To further reduce the shore complements in order that the depleted fleet complements would result in a reduction in efficiency of the fleet.

The personnel on shore is very unfortunate. The inadequacy of the shore personnel is most deplorable. From Table II we ascertain that there are 100 vessels having only three-tenths of their full commissioned complements, 100 vessels having only one-tenth of their full complements. There are 100 vessels in commission with no personnel on board (except a few shipyard hands). There are 41 vessels under construction and 29 vessels authorized for construction for which there is no personnel, and for which no provisions are made for the necessary officers and crews.

It is true that the vessels in full commission had their full authorized complements. But it is a grievous mistake to suppose that the full authorized complements, as now authorized, are "peace" complements, and not war complements. These peace complements are from 15 to 30 per cent less (both officers and men) than the necessary properly to fight the ships. But what is still more serious, these full commissioned ships have not even their allowed peace complements. All of them are short a number of officers, and the battle fleet is short a vacancy list of over 100 men per ship. It was recently necessary to reduce the complements of destroyers by 20 per cent in order to provide crews for the new ships. There are no reserves—either officers or men—available for emergency. When a new ship is to be commissioned, one or more already in service must be taken out of commission, or the personnel for the new ship provided by a transfer from the already depleted line. This general reduction process continues for some time. The Navy lives from hand to mouth so far as personnel is concerned, and the living is most frugal. But there is no relief in the new construction nearing completion, the conditions must continue until such time that any provision Congress may make for additional personnel is effective.

The statements of the facts leave no doubt as to the inadequacy of the personnel. How can we survive, with discomfort, this state of affairs in times of peace, and how can we overcome the handicap in case of war? Not unless our enemy can be so weak, and there are no prospective enemies in sight who have the strength to permit themselves to decline to such an extent.

The number of line officers is inadequate, but the various grades are not equally deficient. Captains are performing the duties of rear admirals, lieutenant commanders those of lieutenant commanders, and lieutenants those of lieutenants. They perform the duties and have the rank of the higher grades, but they receive neither the rank nor the pay of the higher grades. The seriousness of this situation is added to by the fact that the personnel is at a standstill, except in the case of ensigns to junior lieutenants. The grade is being increased at the rate of about 125 a year. This has produced a current of unrest and a feeling of discontent among the personnel, which is detrimental to the efficiency of the service. With the present situation it is made manifest by a spirit of indifference with which the personnel goes to work. All officers feel that the time has arrived when they must do something to relieve the present unsatisfactory condition. They know that the present situation as has recently been recommended will not produce the desired results. It is necessary to place the commissioned personnel on a proper basis. The present condition of the personnel is today at a lower ebb than at any time during the history of the Navy.

The assignments have been evident from time to time have been based on the needs of the personnel situation. A few years ago the vessels were assigned to the yards in accordance with the characteristics of each ship, and the assignments were permanent. These assignments were supposed to be permanent, but the Bureau of Navigation took steps toward assigning and transferring personnel. It was decided that both officers and men could serve on ships that went to the yards for repairs. The lack of permanency in the assignments of vessels was manifest by a comparison of the details made a few years ago with the details of today. Numerous cases have occurred where vessels' home ports have been changed owing to certain material conditions in the vessels themselves. The Navy yard for more or less work, or even for political reasons.

The effect on the personnel appears not to have been considered, and if considered, it would have been dismissed without serious thought. Only recently have the home yards been changed from Portsmouth, N. H., to New Orleans, La. The effect on personnel was clearly defined by the commanding officer of one of those yards. As usual, personnel considerations were subjected to the material viewpoint of subjugating the personnel to the material survives in spite of the fact. "Historically, good men with poor ships are better than poor men with good ships. We appear to ignore a fundamental principle when we make the personnel subordinate to the material. The mere possession of good material can not produce efficient personnel, but an efficient personnel will, by reason of its very efficiency, make the material to a high standard.

Despite the lack of collective efficiency as represented by the whole Navy, which is due to inadequacy in numerical strength and weakness in organization and administration, it must be conceded that the individual efficiency and character of officers and men has steadily improved. The reason for this is the high standards and duty standards required. The selecting-out board produced a healthy effect in individual effort, and increased the average efficiency through the elimination of many below the average. The establishment of post-graduate schools for officers, and the facilities offered for special instruction along various lines, have had a marked effect in boosting individual efficiency. The general trend of the times in demand for a higher state of individual efficiency in all walks of life, has left its impression on the naval personnel. As for the enlisted men, one has only to look back to the time before the Spanish-American War in order to appreciate the great advancement that has been made. Higher qualifications for enlistment, more stringent rules for conduct, improved methods of discipline, a firm stand against liberty bells, drunkenness, and the establishment of training stations and trade schools, all have had a salutary effect.

And yet, with this marked advance in individual efficiency, the collective efficiency has failed to keep pace through no fault of the personnel actually on the ships and stations, but because the inadequacy of this personnel has been too great a handicap, and because the personnel in general has received repeated setbacks to the benefit of the material. The inadequacy of the personnel has not only produced the singular result of having all our ships underofficered and undermanned, but has caused so many and such frequent changes in the personnel, that the necessary work required to make an efficient fighting machine can not be developed. Target-practice rules prevent the employment of artificial means so far as the personnel is concerned, but there is not a ship in the Navy that is not forced to use artificial means in the employment of its personnel during target practice. It is regrettable that the confidential nature of "Report of Battle Practices, Spring, 1915" prevents quoting in full of the remarks made by the commander in chief of the Atlantic Fleet concerning the shortage of personnel in his fleet during the last battle practice. It is unfortunate that no matter what legislation the next Congress enacts, the present state of affairs must continue for some time, as officers and men can not be made over in a day, owing to the length of time required to educate the officers, and to recruit and train the enlisted men.

#### PERSONNEL REQUIREMENTS IN CASE OF WAR.

Should the country be involved in war it would be necessary, in order to man our ships and shore stations, to have an immediate increase of 2,520 line officers, 647 commissioned warrant and warrant officers, and 53,900 enlisted men. The percentage of increase over what we now have are 130 for the line officers, 100 for the commissioned warrant and warrant officers, and 102 for the enlisted men. These figures are so astonishing it is not sufficient to pass them by with the mere statement of fact, but, in order to make the truth impressive, it is considered necessary to set them out in detail and in tabulated form the requirements of the various units which compose the Navy as a whole. First, the requirements for services afloat will be shown.

## TABLE IV.—Requirements for immediate service afloat in case of war.

|    | Flag officers. | Captains. | Commanders. | Lieutenant commanders. | Lieutenants. | Lieutenants, junior grade. | Ensigns. | Total line officers. | Chief boatswains and boatswains. | Chief gunner and gunner. | Chief machinist and machinist. | Total warrant officers. | Enlisted men. |
|----|----------------|-----------|-------------|------------------------|--------------|----------------------------|----------|----------------------|----------------------------------|--------------------------|--------------------------------|-------------------------|---------------|
| 1  | 3              | 12        | 12          | 48                     | 96           | 96                         | 216      | 485                  | 24                               | 36                       | 48                             | 108                     | 14,400        |

| 26 | 1              | 1         | 1           | 1                      | 1            | 1                          | 1        | 1                    | 1                                | 1                        | 1                              | 1                       | 7,500         |
| 27 | 1              | 1         | 1           | 1                      | 1            | 1                          | 1        | 1                    | 1                                | 1                        | 1                              | 1                       | 600           |
| 28 | 1              | 1         | 1           | 1                      | 1            | 1                          | 1        | 1                    | 1                                | 1                        | 1                              | 1                       | 91,300        |

included all vessels on the Navy list excepting those specially designated as unsuitable for war purposes; all vessels under construction to be completed by January 1, 1917; all the fuel ships that are manned by merchant crews, and 75 vessels, which is the minimum number that can be maintained. The number of officers and men required adequately to man these vessels are not a matter of hearsay or guesswork. They are based on the experience that has shown to be necessary.

For all vessels excepting those designated as unfit for war purposes in case of war, provided the personnel could be obtained. This is what actually happened in the Spanish-American War; and it is a fact for an instant that the Government is spending large sums of money for the maintenance of men-of-war that would not be used in case of war, and that the public funds would be an extravagant waste.

Of the 40 vessels all but 4 are manned by merchant crews. Two of the four are gunboats, which the department evidently considers can not be satisfactorily manned by merchant crews. There can be only two good reasons for operating vessels with merchant crews. One reason is because there is not enough men to detail for this duty; the other is because it is cheaper. The Navy now conducted operates more or less satisfactorily in peace time, but in case of war efficient service in time of war unless the merchant crews are replaced by Navy crews. This is due to the unfortunate fact that the Navy is composed of practically all nationalities except Americans. If the crews would have to be discharged, many would desert, and the rest would be untrusted. There are no American merchant sailors to take the place of the merchant crews, and we should have to provide naval personnel for them.

In the Spanish-American War found the Navy Department making great efforts to purchase vessels of all descriptions, and as a result of these efforts a large number of vessels were obtained and manned with Navy crews. Should we again find it necessary to purchase vessels and convert them into mine sweepers, patrol boats, supply ships, fuel ships, and transports, we would have a large merchant personnel, and a lack of organization among

fishermen, towboat men, and yacht crews, there will be much difficulty in crews for the purchased vessels. But we may rest assured that they will be chased, nevertheless.

As our organization on shore has always been inadequate for the proper training and maintenance of the fleets, and as the local organizations of the navy yards and stations have been undergoing frequent and disorganizing up an estimate of the actual requirements for the entire shore establishment, in war, can not be so accurately made as for the vessels of the fleet. That a large of officers and men would have to continue on duty ashore after the beginning of hostilities there is no doubt. An estimate of the requirements is made in the following table:

TABLE V.—Requirements for immediate service on shore in case of war.

| Station.                           | Flag officers. | Captains. | Commanders. | Lieutenant commanders. | Lieutenants. | Lieutenants (junior grade). | Total line officers. | Chief boatswains and boatswains. | Chief gunners and gunners. | Chief machinists and machinists. | Total shore personnel. |

A 30 per cent increase over the number of officers now performing shore duty be considered a very modest estimate when contemplating the probability amount of business to be accomplished will at least be doubled and that a high degree of efficiency will be demanded from the shore establishment than is evident at present.

There is an impression in some quarters that, in case of war, it will be a matter immediately to send to sea all officers performing shore duty. Not only is the impression that this could be done, but many believe that it would be. Those who entertain this conviction fail to comprehend that the fleets can not exist without the assistance of the shore establishment, and that this is the reason for the existence of and for the maintenance of the shore stations with their numerous personnel. The fleet must depend on the navy yards and stations for stores, repairs, and docking. The fleet must depend on the War College, Naval Academy, and training stations for the necessary trained personnel. The fleet must depend on the Navy Department for information and instructions, and for the administration of all affairs not directly concerned with the internal management of the fleet units. In fact the efficiency of the fleet depends in a great measure on the efficiency of the shore establishment. Surely, in view of this, it can not be expected that the Navy Department, when war is imminent, will cripple the fleet by depleting the shore stations of the personnel necessary for their proper conduct. This brings up the important question as to what personnel is necessary for the proper conduct of the shore establishment. The answer must be—the sea-going personnel. Only when we go to sea can we appreciate the necessity of having the shore establishment commanded and operated by men who thoroughly understand the personnel and material requirements of vessels employed on active duty. And only men who have been to sea can thoroughly understand these complex requirements. It is essential, therefore, that line officers continue on duty at the Navy Department, the navy yards, and other shore stations after the beginning of hostilities, and any reduction in the number of officers performing such duties will result in a corresponding reduction in the efficiency of the fleet. Navy yards are military establishments and must be operated in accordance with military principles and methods. In order to do this successfully

rank must be the controlling factor. An officer of any other corps can not have the necessary experience or education along the proper lines to cope with the difficulties that would confront him in time of war. To place the navy yards under civilian control would undoubtedly have the result

that the Academy and the training stations must continue in operation unless, otherwise, we are to fill vacancies in the numerous vessels with personnel untrained. There should be not less than 5,000 apprentices under arms, and the training period should be reduced to two months. We should give us only about 80 men a day to send to the fleet. To construct training stations would require 1,000 men as a minimum. The navy yards where recruits and ex-enlisted men are being enlisted and assembled at all times no less than 3,000 men. The large number will be due to the fact that they can not be distributed without first collecting them. The process

of collecting the officers and men required for duty afloat and duty on shore, it is estimated that there be a 5 per cent excess to allow for casualties, sickness, etc., while traveling to and from their stations. If this percentage is not provided, it means that our ships and stations will never have their full complements, and the utmost importance that this condition be not allowed to confront us in

time of war. The numbers of officers and enlisted men required for service afloat and duty on shore, and the 5 per cent additional necessary for casualties, etc., it is a simple matter by combining these to ascertain the total required at the beginning of hostilities. If from this total we subtract the men now possessed, the result will be the necessary additions that must be provided by our reserves and such recruits as can be mustered into service. The figures stated below, are most impressive:

TABLE VI.—Total requirements for immediate service in case of war.

|     | Flag officer | Captains | Commanders | Lieutenant commanders | Lieutenants | Lieutenants (j. g.) | Ensigns | Total line officers | Chief boatswains and boatswains | Chief gunners and gunners | Chief machinists and machinists | Total warrant officers | Enlisted men |
|-----|--------------|----------|------------|-----------------------|-------------|---------------------|---------|---------------------|---------------------------------|---------------------------|---------------------------------|------------------------|--------------|
| 1st | 1            | 80       | 138        | 372                   | 998         | 946                 | 1,000   | 3,583               | 326                             | 233                       | 399                             | 958                    | 91,300       |
| 2d  | 1            | 85       | 120        | 165                   | 215         | 15                  | ...     | 665                 | 92                              | 102                       | 102                             | 296                    | 10,500       |
| 3d  | 1            | 8        | 13         | 27                    | 61          | 50                  | 50      | 212                 | 21                              | 17                        | 25                              | 63                     | 5,100        |
| 4th | 1            | 17       | 271        | 564                   | 1,272       | 1,041               | 1,050   | 4,440               | 139                             | 352                       | 526                             | 1,317                  | 106,900      |
| 5th | 1            | 10       | 122        | 204                   | 351         | 561                 | 368     | 1,920               | 200                             | 200                       | 270                             | 670                    | 53,000       |
| 6th | 1            | 8        | 149        | 360                   | 921         | 380                 | 682     | 2,520               | 249                             | 152                       | 256                             | 657                    | 53,900       |

#### THE SOURCES OF SUPPLY.

The sources of supply for providing the personnel required, as shown in the table. The first of these sources consists of the retired list, the Naval Reserve, and the Naval Academy. The second source consists of ex-officers and ex-enlisted men, and the untrained masses.

Of those on the retired list have been retired because of old age, length of service, disability, undesirability, or personal request. There is no doubt that these officers, if assigned to active duty in time of war, would give to the very best that is in them. While a number of them are well quali-

or duty ashore, only a comparatively few could be expected to perform duty afloat. Many of these officers would undoubtedly be assigned to duty in the Navy Department, and arrangements have been made for the necessary cases where the officers' ages or physical condition permit of active service. However, in view of the fact that most of these officers were retired because of unsuitability for active duty in times of peace, we should not count on men for any great length of time under the strain that war conditions impose.

Below is shown the number of retired officers of the line and the number grade to be assigned to active duty in case of war:

TABLE VII.—*Retired officers of the line.*

| Grade.                          | Number on retired list. | Number to be assigned to active duty. | Percentage. |
|---------------------------------|-------------------------|---------------------------------------|-------------|
| Rear admirals.....              | 144                     | 23                                    |             |
| Commodores.....                 | 45                      | 22                                    |             |
| Captains.....                   | 63                      | 31                                    |             |
| Commanders.....                 | 105                     | 80                                    |             |
| Lieutenant commanders.....      | 40                      | 26                                    |             |
| Lieutenants.....                | 44                      | 35                                    |             |
| Lieutenants (junior grade)..... | 18                      | 15                                    |             |
| Ensigns.....                    | 30                      | 28                                    |             |
| Chief engineers.....            | 23                      | 2                                     |             |
| Past assistant engineers.....   | 20                      | 7                                     |             |
| Assistant engineers.....        | 13                      | 10                                    |             |
| Chief boatswains.....           | 42                      | 28                                    |             |
| Boatswains.....                 | 17                      | 15                                    |             |
| Chief gunners.....              | 20                      | 15                                    |             |
| Gunners.....                    | 17                      | 14                                    |             |
| Chief machinists.....           | 19                      | 16                                    |             |
| Machinists.....                 | 41                      | 37                                    |             |
| Total.....                      | 701                     | 404                                   |             |

As the commodores to be assigned to active duty were advanced to their grade on retirement, and never performed the duties of flag officers, they must be considered as captains. The engineer officers are of such age and have been retired long that there are only a few duties to which they can be assigned.

There are fewer than 600 men who have been retired on the completion of 30 years service in the enlisted force. In view of their ages, not more than 100 could be fitly assigned to active duties.

The Coast Guard, which in time of war would probably be placed under the control of the Navy, has the foundation for an excellent reserve provided the Department will arrange with the Treasury Department for the training of the personnel along the lines that would make them the most useful in case of war. But if this were done, the Coast Guard can not be considered as an organized reserve so far as the manning of the Navy material is concerned, because the entire personnel would be required to man its own vessels and stations. Therefore no assistance in manning our ships in time of war can be obtained from the Coast Guard.

There is authority for the formation of a reserve of 25,000 ex-enlisted men who received honorable discharge from the Navy. The actual strength of this organization is at present less than 150 men, so its value as a reserve must be considered as negligible.

While the Naval Militia is the only organized reserve, unfortunately it can not be considered an efficient trained reserve. The units composing this organization are a conglomerate assembly, each having its own standard of efficiency. Until the passage of the Naval Militia act by the last Congress, there were no apparent attempts on the part of the Central Government to make the various units into a well rounded organization. In some States the organizations resembled social clubs. In only a few of the States were there any semblances of real efficiency. That the organization as a whole is so inefficient as it should be is not the fault of the individuals who, through their love of patriotism, join this service. These men deserve much credit for giving their time to such drills and such service as are practicable. The fault has been partly with the State governments in not making suitable laws and appropriating sufficient funds, and partly with the Central Government in not insisting on suitable laws and in withholding financial aid until assured that the money provided would bring an adequate return.

The Naval Militia act, if conscientiously enforced, will be conducive to a great end—unity throughout the entire organization. It provides for the organization of militia in units of convenient size, in each of which the number and location of the distribution of the total enlisted strength among the several units of officers and other enlisted men shall be established by the Secretary of the Navy. He shall also establish the number of officers, petty officers, and other enlisted men for the organization of such units into larger bodies for administrative and other purposes. Provision is made for the examination of officers and the appointment of instructors from the regular naval service. The Secretary is authorized to call the Naval Militia into the service of the United States when it is necessary; and when so called the militia shall be governed by the regulations and the articles of the government of the Navy. Naval Militia units, when called into the regular service shall rank with but after the regular Navy in the same grade and rank; except that for the purpose of command shall exercise command over a combined force composed of regular Navy and Naval Militia officers and of vessels commanded by officers of the Naval Militia. All officers of the Naval Militia of or above the rank of lieutenant shall be regarded as junior to lieutenant commanders of the Navy. Officers when called into the service of the United States shall, during the time so called, be entitled to the same pay and allowance as provided for the Regular Navy. An enlisted man shall be held to service beyond the term of his enlistment.

There are some defects in the provisions of the Naval Militia act, there is no doubt, but by taking advantage of its many good points, to make a really effective naval service. The Navy Department has enthusiastically accepted the idea, and it is to be hoped that the militia will respond with an equally enthusiastic endeavor to do their part. The order issued by the Navy Department sets forth in detail the unit of organization, the ratings of enlisted men, qualifications of officers and the examinations required. This order states that the various organizations in order to be eligible to participate in Federal funds; uniforms, equipment, etc.; and in order that they will be accepted into the service of the United States without further proceedings, must comply with the provisions of this general order before

they are accepted. The several States would be much better prepared for efficient fighting in the event of hostilities if the Navy Department would require that the militia be organized along certain specific lines, instead of along general lines as is now the case. The militia units get practically all their training on small vessels of little value for war purposes. A few days each year a so-called modern vessel is made available. But with the limited time available it cannot be expected that the militiamen can become efficient seamen or warshipmen.

The idea of training them all-around men-of-war-men should be abandoned, and they should be trained for duty on the auxiliaries such as supply ships, transport ships, minesweepers, and patrol vessels. We would then have, at all times, a force which could relieve the large number of trained men on the auxiliaries. This would enable the department to transfer men to ships where their services will be urgently required.

The age limit on men may first enlist if he is over 30 years of age. In the future they may first enlist up to the age of 45 years, and they may continue to serve up to the age of 62. We who go to sea know that under modern conditions a man over 45 years of age who is capable of performing efficient duty is exceptional. There are no places for old men on modern men-of-war ships. It is more apparent in war times than in peace. Since the sole purpose of the Militia is to supply a reserve for the active service in time of war, it should be made to have the militia composed only of officers and men performing active duty. This will not be the case if the militia's strength is made up of men between the ages of 45 and 62. As our reserve forces are organized, they tend to make the organizations effective on paper only. That there is such a tendency is shown not only by the general order setting forth the Naval Militia requirements, but also by the provision for the reserve composed of ex-honorably discharged men. The reserve takes the form of a graded retired list for the enlisted men, and is an effective fighting force to be called on when the emergency

As men of the Naval Militia when mustered into the service of the United States can not be held beyond the term of their enlistments, steps must be taken making the term of enlistment of sufficient length to eliminate the probable large percentage of the militia being short-time men at the crucial moment their services may be required.

Twenty-one States and the District of Columbia are represented by Naval Militia organizations. Each State makes its own laws in regard to the numerical strength of its organization. But whatever this strength may be, the units must be in accordance with the Navy Department's requirements. On July 1, 1915, the total Naval Militia strength authorized by the State laws was 12,574. On this date there were enrolled 606 officers and 7,706 enlisted men—only 65 per cent of the allowance. Of the 606 officers, 483 are of the line and are distributed as follows:

TABLE VIII.—*Line officers of the Naval Militia.*

| Grade.                          | For line duties only. | For engineering duties only. | Total. |
|---------------------------------|-----------------------|------------------------------|--------|
| Commodores.....                 | 1                     | .....                        | .....  |
| Captains.....                   | 5                     | .....                        | .....  |
| Commanders.....                 | 20                    | .....                        | .....  |
| Lieutenant commanders.....      | 35                    | 6                            | .....  |
| Lieutenants.....                | 119                   | 26                           | .....  |
| Lieutenants (junior grade)..... | 93                    | 14                           | .....  |
| Ensigns.....                    | 122                   | 27                           | .....  |
| Warrant officers.....           | 7                     | 8                            | .....  |
| Totals.....                     | 402                   | 81                           | .....  |

As the commodores, captains, and commanders become subject to the same conditions as the lieutenant commanders of the regular service when operating together, they are considered as lieutenant commanders in making assignments to active duty.

To provide the requisite number of junior officers it will be necessary to send two or three senior classes of midshipmen to sea. If two classes are sent, about 100 officers will be obtained; if three classes are sent there will be an additional 100 officers. There will be some reluctance about sending these young men to sea, and it is certainly a reflection on our methods that our personnel has become so depleted as to make it necessary in time of war to reduce the amount of instruction considered essential to prepare the midshipmen for service afloat in times of peace. But there is no question that the midshipmen, with from one to four years of training at the Naval Academy, will make much better junior officers than could be obtained from any other source; and the great demand for junior officers will force the Navy Department to detail them to active duty with the fleet. During the Spanish-American war a large number of naval cadets were sent home on leave until the war ended, and at the same time, a number of acting naval cadets were appointed to active duty in civil life. It is to be hoped that political influence will not again be able to cause such a fiasco on the service.

There are a few ex-officers and many ex-enlisted men who would immediately answer the call to the colors in case of hostilities. Some of the officers are now in the Naval Militia organizations, and, therefore, have been included in Table VIII, leaving only a small number to be included among the unorganized reserves. The thousands of enlisted men who would enlist, constitute a valuable potential reserve that is of the utmost importance to the country. The Navy Department desires to organize these men and succeeded in obtaining legislation, authorizing such an organization, which must not exceed 25,000 men. The plan has proved a failure, for the men will not enlist in the reserve owing to certain conditions imposed. For example, the law authorizes the Navy Department to require a large amount of active service of all men in the reserve; and although the department has waived this requirement, the men will not enlist as long as the power to call them into service in time of peace remains. The small amount of compensation does not warrant the sacrifice of unnecessary chances on their part. They undoubtedly feel that they are discriminated against when it is considered that, as trained personnel, they would be liable for one or two months' active service each year, while the untrained men of the Naval Militia are required to perform only a few days of active duty with the regular service. But even if these men do not enlist in the reserve, they are a valuable asset, as it is probable that there are about 15,000 of them whose ages and physical condition are such that they could be counted on to enlist in the regular service.

Besides these 15,000 honorably discharged men there are about 3,000 men with the Navy who have been severed by other than honorable means, and who are counted on to enlist if the department will permit, and if, in the event the President will grant them amnesty. Our need for trained men will be necessary to take these men back into the service, just as after the Spanish-American war. It is another case where our shortsighted providing sufficient personnel will require us in war times to depend on men not considered suitable in peace times. The numbers of trained men as a reserve in case of war have been enumerated. If the various numbers are put together and the total thus obtained is subtracted from the numbers needed at the beginning of hostilities, the remainder will be the number of men to be obtained from the untrained masses. This summary is made as follows:

TABLE IX.—Summary of organized and unorganized reserves.

| Flag officers. | Captains. | Commanders. | Lieutenant commanders. | Lieutenants. | Lieutenants (junior grade). | Ensigns. | Total line officers. | Chief boatswains and boatswains. | Chief gunners and gunners. | Chief machinists and machinists. | Total chief warrant and warrant officers. | Enlisted men. |
|----------------|-----------|-------------|------------------------|--------------|-----------------------------|----------|----------------------|----------------------------------|----------------------------|----------------------------------|---|---------------|
| 100            | 80        | 28          | 42                     | 25           | 28                          | 279      | 13                   | 20                               | 53                         | 125                              | 100                                       |               |
| 67             | 145       | 107         | 149                    | 468          | 4                           | 3        | 8                    | 15                               | 7,796                      | 150                              |   |               |
| 650            | 650       |             |                        |              |                             |          |                      |                                  |                            |                                  |   |               |
| 5              | 10        | 10          | 10                     | 35           |                             |          |                      |                                  |                            |                                  | 18,000                                    |               |
| 2              | 53        | 80          | 100                    | 197          | 142                         | 837      | 1,432                | 47                               | 32                         | 61                               | 140                                       | 25,956        |
| 6              | 83        | 149         | 360                    | 921          | 390                         | 687      | 2,520                | 219                              | 152                        | 256                              | 617                                       | 54,900        |
| 22             | 30        | 69          | 260                    | 724          | 58                          | 1,088    | 192                  | 120                              | 195                        | 507                              | 28,944                                    |               |

This table reveals a really startling state of affairs. It can not be possible that the officers, the Congress, and the people realize that with all our available active and reserve—there would still be required at the very beginning in order to man such material as we possess, an additional 22,000 line officers, 500 warrant officers, and 29,000 enlisted men. Can we obtain this additional personnel must be recruited and partially trained and made available for active service, and in order to recruit and train them how many ships will be required? And can it be realized that during these two years so many ships added to the Navy, and there will be many casualties, so that officers and additional officers and men must be continually provided? That it can not be appreciated or we would not continue to hear the loud cry for more ships, and only a faint peep for additional personnel. We must realize that we need the personnel much more urgently, and if disaster comes our first duty should be to obtain sufficient personnel to man at least the ships we could use at the beginning of a war. It will be hard enough to obtain the officers and men required for new ships and to replace casualties, if we started, without leaving until that time the providing of our immediate needs.

One of the means to obtain the higher officers required would be to promote the officers over grades. It is doubtful, though, if the promotions would actually be made, as officers would be required to perform the duties of the higher grades before the corresponding rank and pay. This, of course, is an injustice imposed only by the officers concerned, and consequently there is not a remedy, especially as the usual status of the Navy list has required

assignments for some years past. Whether or not the promotions are actual it would be necessary under present conditions to assign officers to perform duties of higher grades, as follows: Twenty-two captains perform flag officers' duties, 121 lieutenant commanders perform captains' duties, 121 lieutenant commanders perform commander duties, and 381 lieutenants perform lieutenant commanders' duties.

As there are only 351 lieutenants on the active list, it is evident that even they would be called on to perform lieutenant commanders' duties, provided the department desires the duties of that grade to be efficiently performed. The watch duties would of necessity have to be done by those who are not lieutenants and ensigns, and the 1,100 places for junior officers would have to be vacant until some means of filling them could be found.

The 500 warrant officers could be furnished by promoting chief petty officers, a number of such petty officers who have passed the required examination have not been advanced owing to the policy of the Navy Department to keep the number of warrant officers down to the lowest possible limit the Navy can struggle with.

So the really big problem that would confront us immediately on the outbreak of hostilities is how to obtain 1,100 junior line officers, and 29,000 enlisted men. It is confessed that we can not possibly obtain them. Therefore it is absolutely necessary that immediate steps be taken towards placing our naval personnel on a basis that in the case of war overtaking us in the future, we will not be in the predicament that we now find ourselves.

While the figures concerning officers relate to the line only, the fact must not be overlooked that the various staff corps are just as deficient in numbers as is the line, and what has been stated in regard to these deficiencies of the line is equally true of the staff.

There should be, in peace times, sufficient personnel, active and reserve, to man immediately all our ships and stations on the outbreak of hostilities. What portion of this force should be active, and what portion should be reserve, depends on the policy of the Navy Department with reference to the status of the vessels of the fleet in peace times, and on the number of reserves that can be organized so as to be immediately available on the outbreak of hostilities. It is manifest that the number of vessels kept in full commission should be as large as possible if the fleet is to be ready at the beginning of a war. Therefore it is essential that our active naval forces at all times, be as large as the financial problem involved admits.

Our present status with reference to the proportions between active forces and reserves, and in comparison with the total forces required is shown below:

TABLE X.—*Proportion between present active, reserve, and required forces.*

|  | Commissioned officers. |           | Warrant officers. |           | Enlisted men. |
|--|------------------------|-----------|-------------------|-----------|---------------|
|  | Number.                | Per cent. | Number.           | Per cent. | Number.       |
| Present total active force, Table III..... | 1,920                  | 43        | 670               | 51        | 52,000        |
| Total required force, Table IX.....        | 1,432                  | 32        | 140               | 11        | 29,000        |
| Additional required force, Table IX.....   | 1,088                  | 25        | 507               | 38        | 27,000        |
| Total force necessary, Table VI.....       | 4,440                  | 100       | 1,317             | 100       | 108,000       |

From this table we learn that our active and reserve forces together are only 43 per cent of what they should be in the case of commissioned officers, 66 per cent in the case of warrant officers, and 73.5 per cent in the case of enlisted men. It is important that immediate steps be taken to make up these deficiencies. The important question is what proportion should be allotted to active forces and what proportion to reserves. In view of the fact that a large percentage of our reserves are not organized and are not in any way under obligation to serve in the Navy, and in view of the urgent results obtained from all efforts to form a satisfactory naval reserve, we conclude that the greater part of the additional forces necessary immediately on the outbreak of war should be obtained by adding to our active forces, and such additions should be made as soon as possible. In other words our active naval forces should be 75 per cent of the total forces needed, and the ratio between actives and reserves should be as three to one.

between the personnel of our Navy and of the other leading naval powers is attributable owing to the unreliability of the information at hand. It is, however, probable that while the active personnel of the navies of Great Britain, Germany, France, Italy, and Austria approximate the same per 1,000 tons of ships, the effective trained reserves in each of these countries is so much larger as to make comparisons startling. In the powers mentioned the reserve is 50 per cent as large as the active forces, while in this country it is only 12 per cent as large as the active forces, and if we include the reserves whom we guess will offer their services in case of war, the reserve is 16 per cent as large as the active force. We also know that the personnel of these countries are organized from men who have actually served in the navy, while our personnel are drawn from men who are in the merchant marine. The differences in the personnel and the differences in the characteristics of the people enable these foreign countries to organize well-trained reserves which appears to be impossible in this country. These foreign countries also have merchant marines which the United States governments, thereby giving a claim on the personnel of the merchant marine, is not the case in this country. In addition, the personnel of these foreign countries are natives or citizens of their respective countries, a distinction that the United States can not claim.

A comparison between our personnel and that of foreign countries shows that our active and reserve forces give us 83 officers and men per 1,000 tons of ships, while the average in the six navies previously mentioned was, just at the close of the present war, 123 officers and men per 1,000 tons of ships. It is therefore evident that not only is our personnel deplorably inadequate, but it is without reference to the foreign navies, but it is alarming when we consider the great extent to which the foreign countries surpass us in the equipment of national defense and preparedness. The comparison is a strong argument for immediately improving our personnel conditions. It is not sufficient to organize a naval reserve in this country, to be composed of yachts, motor boats, and fishing vessels. That such organization is necessary in order to place the country on a proper defensive basis is proved by all who have followed the European war. But we must not be deceived into believing that such reserves will in anyway make up the shortage as shown to exist on our men-of-war and at the naval yards. If these reserves are organized they will be required to man the yachts, motor boats, and fishing vessels, and will not be available for any of the vessels shown in Table VI that, in case of war, we would require 4,410 commissioned line officers, 106,900 warrant officers, and 106,900 enlisted men. As, owing to the small size of our active reserve, the active forces should be 75 per cent of the total force, if properly prepared for an emergency we should now have in our active reserve 3,300 commissioned line officers instead of only 1,920; 990 warrant officers instead of 570, and 80,000 enlisted men, instead of 53,000. Having shown the necessity to devise a means of supplying the

#### THE REMEDY.

It is very far below what it should be that, it is, of course, impossible to do in a short time. Unless we throw discretion to the winds and say that that will be impracticable, or that will not be satisfactory, we are forced to a period of from 5 to 10 years to elapse before the naval personnel can be brought to that standard of efficiency which is required for such an extended campaign. To do this in the shortest time possible the only means must be to obtain more officers and men. The problem is a comparatively simple matter. We have not more of them than the law does not allow them. We are recruited to the limit of what has been so recruited for a year or more. There should be a provision made for an increase of 50,000 enlisted men, at the rate of

5,000 a year, required because in 10 years the added construction will require 20,000 men in addition to the 30,000 required at the present time. If we get all these men at once, and in view of the inability of our organization to make an increase it is not desirable that we endeavor to obtain them all at once. However, an increase of 5,000 a year will permit a healthy expansion of the force, can be trained and distributed without any great upheaval, and the men can be enlisted each year provided enough recruiting money and sufficient funds made available for properly carrying on

the business. The question of distribution in the various ratings is now in the hands of the Navy Department. This is as it should be, and, in consequence, no legislation concerning the enlisted force is essential other than that which simply provides for an increase.

The two great defects in the officers' lists are lack of numbers and lack of flow of promotion. Now that the selection-out board has been abolished, the Navy Department has adopted the policy of not accepting voluntary retirements. The lack of numbers will be partially remedied by the normal sized graduating classes from the Naval Academy. These classes, with the present number of appointments authorized by law, should average 175 graduates a year. The number of retirements, resignations, and deaths in the line of the Navy should average about 300 a year. Therefore under present laws and rules we can count on the total number of line officers increasing at the rate of 145 a year. In 10 years we would have 1,450 line officers than at present, and the total would then be 3,370 line officers or 30 per cent more than the number required for efficient service with our Navy at its present size. It is certain that in 10 years from now there should be at least 4,000 line officers. After that total is reached, the policy in regard to ridding the service of obsolete officers will be so well established that there will not be any great numerical increase in vessels, but as new ships are completed, a corresponding number of old ones will be discarded. In other words, if a regular building program of proper balance is adopted, we can expect that in 10 years the Navy will have reached the number of ships beyond which Congress and the people will be unwilling to go. From that date the new construction will be for the purpose of replacing the old vessels. The Navy will then require 4,000 commissioned line officers on the list to provide the 75 per cent of the total that would be necessary to properly man the ships and shore stations in case of war. As there are now only 1,920 commissioned line officers, it is evident that we must furnish 2,080 in the next 10 years—an increase of 208 a year. The Naval Academy is the only source from which these officers can be properly supplied, and we have seen that under the present régime the academy only furnishes sufficient graduates to give an average increase of 145 officers a year. Therefore it is necessary to increase the academy output so that the average increase for the next 10 years will be 238, which is the 208 increase required, plus the 300 officers which will be created by retirements, resignations, and deaths. However, the increase authorized in the number of midshipmen will not be felt in the service until 4 years have elapsed, so no matter what is done in this respect, for the next 4 years our increase will average only 145 which gives a total of 580 during that period. The increase in the number of midshipmen must be such that in the 6 following years there must be supplied the difference between 2,080 (the number required in 10 years) and 580 (the number obtained in 4 years), a total of 1,500. This means an average increase during this 6-year period of 250, or 105 more than the present average. Although the number required will not be twice that being furnished, it will be necessary to double the number of appointments to the Naval Academy in order to secure the desirable and necessary weeding-out process that is so essential in order to obtain graduates who can reasonably be expected to make good officers. We must conclude, then, that in order to obtain the necessary number of line officers as required by the law, it is practicable, there should be legislation authorizing the doubling of appointments to the Naval Academy for a period of 6 years.

One of the greatest faults in all personnel legislation affecting the officers is the rule to fix definitely the number of officers allowed in each of the grades, from ensign to admiral, instead of having the number in each grade determined by a definite percentage basis so that any increase in the total numbers would be felt in proper proportions in each grade. The fallacy of such legislation as we are now laboring under can not better be illustrated than in the case of the lieutenant grade. In 1905 there was not an officer of this grade in the Navy. To-day there are over 700 of them and the number is increasing more than 100 a year. Under the present laws and rules the officers at the bottom of this list must remain in their grade for 30 years. This condition has been brought about mainly through the absence of a proper distribution of the officers in the various grades. Our conclusion, therefore, must be to the effect that immediate legislation should be enacted which places and keeps the various grades in a definite ratio to each other. Should this ratio be? There is an apparent tendency towards making such ratios depend on a tonnage basis; that there should be so many flag officers, captains, commanders, etc., for each 1,000 tons of ships. This basis may be satisfactory for a few years, but after that, unless the proportions between the ships of various grades do not change, there must be a readjustment. Changes are bound to take place; therefore readjustments will be necessary. These can easily be made, but...

may, a better basis for apportioning the officers in the various grades would have to be based on our actual requirements for each grade in case of war, rather than on a changing tonnage basis.

Columns V and VI are shown the numbers of line officers now in each grade and the numbers that should be for immediate war service. By placing these numbers together with the percentages in each grade, it is a simple matter to determine what the numbers in each grade should be with our present total and could be based on a total of 4,000 commissioned line officers, which number is determined on as being requisite for a peace basis 10 years from now.

TABLE XI.—*Proportion of commissioned line officers in grades.*

|                       | 1   | 2                         | 3   | 4                         | 5   | 6   | 7   |
|-----------------------|---|---------------------------|---|---------------------------|---|---|---|
|                       | Number now on active list extra numbers in parentheses. | Percentage in each grade. | Number required for war purposes, Table VI. | Percentage in each grade. | Number should be in each grade at present, based on column 4. | Number that should be in each grade, based on total of 4,000. | Increase required in each grade within next 10 years. |
| Captains              | 24 (6)  | 1.3                       | 69  | 1.6                       | 34  | 65  | 41  |
| Commanders            | 90 (20)   | 4.7                       | 173   | 3.9                       | 75  | 155   | 65  |
| Lieutenant commanders | 122 (10)  | 6.4                       | 271   | 6.1                       | 117   | 245   | 123   |
| Lieutenants           | 294 (4)   | 10.6                      | 564   | 12.7                      | 244   | 505   | 301   |
| Ensigns               | 331 (1)   | 18.3                      | 1,272                                       | 28.6                      | 550   | 1,145   | 794   |
|                       | 741   | 39.6                      | 1,641                                       | 23.4                      | 450   | 835   | 174   |
|                       | 348   | 19.1                      | 1,030                                       | 23.7                      | 450   | 930   | 582   |
|                       | 1,920   | 100                       | 4,440                                       | 100                       | 1,920   | 4,000   | 2,080   |

The numbers of captains and commanders are due to the numbers in those grades designated as such and who are in addition to the authorized total. Extra numbers are not included in the total.

Table XI shows the present distribution of the commissioned line officers in accordance with the percentages of the total. Column 4 shows what these percentages should be to make the distribution equitable, and column 5 shows the numbers that should be in each grade in accordance with the percentages given in column 5. To make this redistribution there should be immediate legislation to the effect that:

1. That on the passage of the act the various grades of commissioned line officers be adjusted so that the percentage of the whole number in each grade

|                        | Per cent. |
|------------------------|-----------|
| Captains               | 1.6       |
| Commanders             | 3.9       |
| Lieutenant commanders  | 6.1       |
| Lieutenants            | 12.7      |
| Ensigns                | 28.6      |
| Midshipmen and ensigns | 47.1      |

That the act should provide that on the 1st day of July of each year an adjustment of the grades shall be made on this same percentage basis, which shall be made every 10 years, when the Secretary of the Navy shall require a board of officers to determine whether or not the percentage basis should be changed. Such adjustments shall be made thereafter in accordance with the recommendations of the board.

When the commissioned line officers are concerned, these two provisions, together with the provisions for midshipmen at the Naval Academy, are all that are necessary to make the distribution on a proper basis. That this is so will be demonstrated.

The board which requires an immediate readjustment would result in the promotion of sixteen captains to flag officers, 21 commanders to captains, 70 lieutenant commanders to commanders, 70 lieutenants to lieutenant commanders, and 114 ensigns to lieutenants.

These numbers are not large when it is considered that in each case a large number of officers are performing the duties of the next higher grade. This remedy would remedy the injury done by the abolishing of the selection-out by the Navy Department not to accept voluntary retirements.

All of the lieutenants (junior grade) who would be immediately promoted performing the duties of the senior grade, and all of them will have been so longer in their present grade.

The provision for adjusting the numbers in each grade on the 1st of July will provide for the necessary flow of promotion. It has been shown that in the next four years there will be an average annual increase of 145 line officers. The total increase when properly distributed in accordance with the percentage recommended, will give a yearly increase in the allowed numbers in each grade as follows:

|   |       |
|---|-------|
| Flag officers.....                          | ..... |
| Captains.....                               | ..... |
| Commanders.....                             | ..... |
| Lieutenant commanders.....                  | ..... |
| Lieutenants.....                            | ..... |
| Lieutenants (junior grade) and ensigns..... | ..... |

Therefore this annual readjustment, without the aid of resignations, retirements and deaths, would result in the following numbers of promotions on the 1st of each July:

|  |       |
|--|-------|
| Captains to flag officers.....                 | ..... |
| Commanders to captains.....                    | ..... |
| Lieutenant commanders to commanders.....       | ..... |
| Lieutenants to lieutenant commanders.....      | ..... |
| Lieutenants (junior grade) to lieutenants..... | ..... |

But, even without the assistance of the selecting-out board and the voluntary retirements, we know from the results of recent years that the resignations, deaths and retirements due to age and disability will make the following averages in promotions:

|   |       |
|---|-------|
| Above the grade of captain.....                   | ..... |
| Above the grade of commander.....                 | ..... |
| Above the grade of lieutenant commander.....      | ..... |
| Above the grade of lieutenant.....                | ..... |
| Above the grade of lieutenant (junior grade)..... | ..... |

These added to the numbers to be promoted due to the annual increase in the various grades will give an average yearly advancement as shown below:

|  |       |
|--|-------|
| Captains to flag officers.....                 | ..... |
| Commanders to captains.....                    | ..... |
| Lieutenant commanders to commanders.....       | ..... |
| Lieutenants to lieutenant commanders.....      | ..... |
| Lieutenants (junior grade) to lieutenants..... | ..... |

Four years after the 1st of next July the total line officers would (owing to the increase in midshipmen) be augmented annually by 250. We would then have the six years following an average increase in each grade as follows:

|   |       |
|---|-------|
| Flag officers.....                          | ..... |
| Captains.....                               | ..... |
| Commanders.....                             | ..... |
| Lieutenant commanders.....                  | ..... |
| Lieutenants.....                            | ..... |
| Lieutenants (junior grade) and ensigns..... | ..... |

This would result in the following promotions on the 1st day of each July:

|  |       |
|--|-------|
| Captains to flag officers.....                 | ..... |
| Commanders to captains.....                    | ..... |
| Lieutenant commanders to commanders.....       | ..... |
| Lieutenants to lieutenant commanders.....      | ..... |
| Lieutenants (junior grade) to lieutenants..... | ..... |

As the total line officers increase, the number of vacancies due to resignations, deaths, and retirements for age and disability must increase also, so the average number of vacancies created from these causes during the six-year period may reasonably be counted on as—

|   |       |
|---|-------|
| Above the grade of captain.....                   | ..... |
| Above the grade of commander.....                 | ..... |
| Above the grade of lieutenant commander.....      | ..... |
| Above the grade of lieutenant.....                | ..... |
| Above the grade of lieutenant (junior grade)..... | ..... |

and annual promotions would be obtained by adding these numbers to the annual increase in the various grades:

|                                 |     |
|---------------------------------|-----|
| Line officers.....              | 14  |
| Line sailors.....               | 27  |
| Transferees to commanders.....  | 46  |
| Transferees to lieutenants..... | 83  |
| Transferees to lieutenants..... | 163 |

This illustrates the important fact that, if the present law requiring three years for three years remains effective, and if new legislation is enacted for a number of midshipmen for a period of six years and fixing the percentage of each grade on a definite percentage basis, we can, during the life of the Navy up to a satisfactory strength and at the same time, have a flow of promotion without resorting to any schemes contemplated, or the formation of an active reserve list.

It is necessary for the satisfactory operation of any plans requiring any method of selection is complicated. The opinions, both within and without the Navy, as to the best form of selection are numerous and varied. The best method of selection to be selected has not been demonstrated to the satisfaction of the officers concerned. Consequently, there is, at present, no legislation pertaining to promotion by selection that will be successful. There will be so much opposition to any forms of selection that have been suggested or contemplated, that the mere presence of a proposed bill will probably be sufficient to prevent its passage. The necessity for practicable legislation necessitates the elimination of any method of promotion by selection. The greater efficiency that would be obtained by legislation of this character must be sacrificed owing to more important considerations. We need now, more than ever, more efficient officers and a proper flow of promotion. As both of these can be obtained by legislation that does not involve any method of selection, or by legislation resembling an active reserve list, every proper endeavor should be made to obtain the simple legislation, especially as the chances for passage are increased by the simplicity of the proposed bill.

It is not sufficient numerical strength can be obtained to make it possible to deplete the number of officers by any method of selection. Before this time arrives there probably will have been organized a staff of officers from all corps, and on which the seagoing personnel will be drawn. Such a staff created by act of Congress and containing some officers of all the various corps, will, of necessity, have the confidence of the Secretary of the Navy, and of the entire Navy. It will be able to devise the best and most satisfactory form of selection, and the method for carrying it into effect.

It is not that requires the mature deliberation and action of such a staff, but that it is necessary, indicating the necessity for promotion by selection, that a staff be created, it will be necessary to have a board appointed to advise for the necessary legislation. But no board will be able to carry out its duties with the approval of and has the support of the service. A board composed in the main of seagoing officers both of the line and staff. As the various staff corps are in practically the same unsatisfactory position as in the line, any legislation for the purpose of improvement must include those corps. It is essential that these corps be included in any way, and therefore there should be enacted into law the following:

Section 1. In the staff corps the percentage of the whole number in each grade shall be that authorized for the line.

Section 2. The annual increase in the number of line officers there shall be the same as the increase in each of the various staff corps.

Section 3. It is all that are necessary to place the staff on an equitable basis as far as numbers in each grade, total numbers, and flow of promotion are concerned.

Section 4. It is included that in order to take immediate steps to place the staff on a satisfactory basis as soon as practicable endeavors should be made to enact the following simple legislation enacted:

Section 5. The numbers of midshipmen for a period of six years shall be the same as the numbers of the various grades of line officers on a proper percentage

Section 6. If this percentage basis as the total number increases,

4. The staff corps to have the same percentages in each grade as authorized by the line.

5. The percentage of increase in the various staff corps to be the same as the percentage of increase in the line.

The active service, 10 years from now, should have 4,000 commissioned line officers and 100,000 enlisted men. These numbers are only 75 per cent of the total that would be required to man all the material in case of war. It will therefore be necessary to increase our available reserves to 1,350 line officers and 33,000 enlisted men. There are now this many officers if we include 650 undergraduates at the Naval Academy. Efforts should be made to produce this total without making it necessary to send the midshipmen to sea. The total of 33,000 men can be obtained in desirable portions of the naval reserve act are expunged and if endeavors are made to increase the Naval militia organizations. The naval militia is the best through which to obtain the necessary reserve officers.

Warning must again be given against the organization of reserves that are for service in peace times only. The maintenance of such reserves is a waste of money and their attempted training a waste of time. In addition, the presence of such a reserve on paper leads to a false sense of security that may prove dangerous when reliance must be placed on them in case of war. It must also be reiterated that such desirable organizations that may be composed of the fishermen, tugboat men, and yachtsmen for the purpose of manning their own vessels in time of war, can in any way be considered as an effective reserve so far as the manning of the Navy ships and shore stations is concerned.

#### CONCLUSION.

The apathy concerning the naval personnel has resulted in the adherence to principles which account for the present unsatisfactory conditions. The principles are:

First. The sacrifice of efficiency to economy.

Second. The subordination of the personnel to the material.

Third. The construction of new vessels and the establishment of additional stations without provision for the personnel necessary to man and to operate them.

Fourth. The restriction of the number of officers in each of the upper grades of the service to a percentage basis as the means for determining the number in each grade.

Legislation which will enable the Navy to abandon these false principles has been needed. The European war has shown our people that preparedness is necessary for successful military and naval operations. Our representatives in Congress have been ready to enact the required legislation provided the interests of the Navy are presented in clear and concise form. Without the introduction of complicated and complex features. It has been shown that only simple legislation is necessary to produce the much desired improvements in our personnel. Therefore it would be better for the present, to abandon the advocacy of any legislation that by reason of its mere complexity may defeat the ends in view.

Although good men with poor ships are better than poor men with good ships, we must awake to the realization that in order to be successful in war as it is waged today, we must have both good men and good ships in adequate numbers to make victory possible.

Capt. TATTSIG. The inadequacy of the personnel, as shown by the report of the General Board, and by the figures deduced by the personnel division of the Bureau of Navigation, clearly demonstrated at this time, 1915, and in the following years. As the department did not recommend and did not strive to increase the personnel at this time, the efficiency of the Navy was clearly adversely affected both preceding and during the Great War.

This will be shown by quoting from official reports.

#### SERIOUS SHORTAGE OF PERSONNEL IN ATLANTIC FLEET.

In the spring of 1915, which was only a few months after the General Board recommended an immediate increase of 19,600

Q. The Secretary reported no additional enlisted personnel was added?—

A. Admiral F. F. Fletcher, the commander in chief of the fleet, made the following report to the Navy Department on the situation of the fleet:

Q. The most vital weakness in the Atlantic Fleet is the shortage of officers. It takes approximately 10 years to educate and train an officer, and no one can provide officers when trouble is imminent. Expansion of the fleet by the number of officers available. The fleet is handicapped not so much by the shortage of officers but by the inexperience of the large number of men who have been added to the Navy in the past few years.

Q. Coupled with the shortage of officers, has resulted in officers being overtaxed their capacities and for which their experience and judgment is required?—

A. Due to the short enlistments, our men require continuous training, and this necessarily results in a lessening of efficiency. The shortage of officers is confined to battleships, but exists in all types of ships. Second in importance to the shortage of officers is the shortage of men. The shortage of men is of importance to the shortage of officers, since there will always be a certain number of untrained men who can be made efficient in much less time than the developing officers. The shortage of men in the Atlantic Fleet, coupled with the shortage of officers, has prevented the fleet from attaining the degree of efficiency that is expected. Too much emphasis can not be placed on what is probably the most serious weakness in the fleet to-day—lack of trained officers and enlisted men. To equalize the shortage in the different vessels of the fleet, the exchange of officers and men tending to promote instability in the efficiency of the various units of the fleet. With a few exceptions the Atlantic Fleet is short of the complement of officers and men necessary to maintain the shortage of enlisted men in the battleships alone, as I reported in my report, exceeds 5,000 men. It is evident that undermanned and undertrained ships are kept in a state of preparedness and efficiency to meet on any emergency in other navies. I believe that all ships in full commission should be kept fully manned for battle, ready for any emergency that might be called. In no other way can the units of the fleet be kept in an efficient state.

Q. Must be placed on this report of the commander in chief of the Atlantic Fleet, coming at a time when the department reported no additional enlisted personnel as necessary. It is an admission that the fleet were not in an efficient state, and this admission by the commander in chief.

Q. What was the date?

A. It was made in the spring of 1915, and immediately after the fleet practice that year. The exact date I have not, but it was in the spring of 1915.

Q. The shortage of personnel was felt by all classes of vessels, was it not?—

A. It was felt by officers of wide difference in rank as very much as by enlisted men, and that it did adversely affect the efficiency of the Navy, is shown by the following extracts taken from reports made to the Navy Department in 1915 by fleet gunnery officers of the Atlantic Fleet, Lieut. Commander, now Capt., T. A. Kearney.

Q. These reports were made when?

A. These were all made in 1915, at the time that the fleet reported that we needed no additional personnel.

Q. You must strongly urge that immediate attention be given to the problem of adequate and permanent personnel. Every problem, every emergency that we have engaged in during the past year has but emphasized that we have neither the officers nor the men necessary to the efficient operation of our stations. The constant changing of officers, coupled with the constant practice of assigning to juniors duty beyond their years, experience, and training. The unsatisfactory conditions as regards personnel are so general as to every organization in the fleet—battleships, destroyers, and

marines, and auxiliaries—and have during the past year been made the subject of repeated reports.

Gunnery efficiency is concomitant with general efficiency, and both are dependent upon the efficiency of the commissioned and enlisted personnel.

Gunnery officer, Atlantic Fleet (Lieut. Commander, now Capt., T. A. Keane):

"Improvement and incentive will also come if the department will direct its attention to—

"(a) To an increase in complements of both the enlisted personnel and commissioned personnel.

"(b) To the prevention of inopportune detachments of officers and transfers and to the creation of such impediments as will render discharge, either by expiration of enlistment practically impossible, except during overhaul periods.

Recent investigations along entirely independent lines fully confirm the conditions set forth in the target practice reports of the *Wyoming*, *Texas*, *Arkansas*, *Georgia*, and other ships, that our present maintained complements, including officers and men, are inadequate to even peace time target practice requirements. Continued cruising under war conditions would be physically impossible; even when continuing night and day practices are indulged in, a large percentage of personnel remain more or less, continuously on active duty until the practice is completed. Not only do we lack a reserve to draw upon for replacements due to casualties, but we are so hard pressed to man existing and essential stations that a considerable proportion of both officers and men are doing double duty to the detriment of their paramount activities. Broadside battery crews are in part borrowed organizations; and the personnel of handling room crews are all too frequently a heterogeneous combination of engineer's force, marines, and such other men as are best spared from some other less exacting employment—men whose initial loyalty and allegiance are to other duties and divisions. These are conditions that have to-day and have existed for some time. It is pertinent to ask what would we do if war be declared to-morrow.

"The shortages in personnel are as apparent in the flotilla as in the other vessels of the fleet. With the present complements it is manifest that the exacting requirements of continuous service could not be met."

Executive officer, U. S. S. *Florida* (Commander, now Capt., W. S. Crosley):

"It is a fact that every effort has been made to retain individuals at their stations in which they have drilled, and it is probable that the *Florida* does not suffer more than other ships on account of shifting personnel. However, it can not be denied that the complement is so small that the loss of one man is felt, and that the decrease in personnel decreases efficiency."

Commanding officer U. S. S. *Georgia* (Capt., now Admiral, R. E. Coontz, Chief of Operations):

"The serious shortage of officers and men on board all battleships and especially the old ones, is a matter of record. The extreme seriousness of this condition is well known by the department."

Commanding officer U. S. S. *Kansas* (Capt., now Rear Admiral, H. F. Bryan):

"The existing shortage of personnel on ships of this class was shown by the fact that had to be employed to man properly the 8-inch turrets of this ship."

Gunnery officer U. S. S. *Nebraska* (Lieut., now Commander, G. V. Stewart):

"This ship suffers severely from the lack of officers and men and more from lack of permanence in their duties and stations."

Commanding officer U. S. S. *New Jersey* (Capt., now Rear Admiral, J. L. Johnston):

"The efficiency of a ship or a fleet at the commencement of war will depend upon its preparation before is declared, and if not ready with an aggressive enemy, may not be an opportunity to complete the preparations before a disaster has occurred. It is therefore highly important that each ship in commission be kept ready. The frequency with which officers and men are now transferred, together with the shortage of both, it is very difficult, if not impossible, to do this."

Gunnery officer U. S. S. *South Carolina* (Lieut., now Commander, T. G. Elliott):

"There was a certain amount of artificiality in connection with this practice, due to the shortage of complement."

Commanding officer U. S. S. *Utah* (Capt., now Rear Admiral, H. P. Niblack):

"At every battle drill or practice the serious shortage of trained officers and men in one particular or another is forcibly brought to our attention."

Commanding officer U. S. S. *Kansas* (Capt., now Rear Admiral, H. F. Bryan):

"\* \* \* It must be admitted that we are not making progress in gunnery as we should. This lack of progress is believed to be due principally to two conditions which affect all ships—the shortage of commissioned and enlisted personnel and the constant shifting of the personnel."

First Division, Atlantic Fleet (Rear Admiral Mayo):

Attention is invited to the remarks of the gunnery officer, *New York*, lack of permanency of personnel and to the fact that the ship is undermanned."

5 *U. S. S. New York* (Lieut. Commander G. J. Rowcliff):

"the lack of the permanency of the personnel the most fruitful producer that we have. It seems that it is impossible to depend on the continuity of either officers or men longer than to get a smattering of what is new. Add to this that the ships are underofficered and undermanned and it resolves itself into one where stations are filled because the names are back rather than because the individual is chosen to fill the station."

5 *U. S. S. New York* (Commander G. J. Rowcliff):

"reports I have made the statement that one of the principal reasons for the work is crude and never progresses further than the elementary personnel changes so fast that it is impossible to put the work on a

"Every one admits that the situation in regard to personnel has been worse day by day. Those responsible for the detail of officers and men have been living an existence from hand to mouth because there is no time when it becomes necessary to fill vacancies."

6 *U. S. S. Asiatic Fleet* (Admiral W. C. Cowles):

"I was at the navy yard, Olongapo, from the 19th of February until the completion of the repairs, and during this time her ordnance officer was detached and it was impossible to send any officer to the *Saratoga* to replace him.

"There were 70 men in the deck force short of complement, and there were 100 men in addition."

7 *U. S. S. Florida* (Commander, now Capt., W. S. Crosley):

"The personnel, however, was amply emphasized by this prac-

8 *U. S. S. Rhode Island* (Lieut., now Commander, W. R. van Auken):

"The more officers on board to provide for war conditions.

"The ship is man both sides of the 6-inch and 3-inch batteries 75 per cent."

"That the deficiencies and changes in personnel are the most serious which prevent ships being at all times in a top-notch state of battle

#### REPORT OF ELEMENTARY PRACTICE, 1915-16.

9 First Division, Battleship Squadron (Rear Admiral Coffman):

"The commander can not too strongly impress upon the department the fact that the ships of this division suffer because of lack of adequate personnel

"The allowed complements are considered far too small to properly man the ships and this deficiency is always accentuated by a shortage of trained personnel. Such a condition of affairs necessitates the use of substitutes some of which are more or less incompatible, with consequent

10 *U. S. S. Arkansas*, Capt., now Rear Admiral, W. R. Shoemaker:

"The ship is not now for battle efficiency is a fair degree of performance in the past. It is serious with the men, but especially so with the officers.

"The ship is worse off than others, but these conditions do not conduce

11 *U. S. S. Utah*, Capt., now Rear Admiral, A. S. Halstead:

"The ship is the lack of permanence of personnel, presumably because of the officers and men. No lasting results will be obtained until a permanent system of personnel is brought about."

12 *U. S. S. Utah*, Commander, now Capt., E. H. Watson:

"The number of changes in officers and men in every ship is the principle factor in the deficiency."

"The reports just quoted mostly come from our battleships in the fleet, those few ships which in accordance with the General Order of the Commander in Chief should be fully manned at all times. Many other reports and letters in the files of the Bureau of Naval Affairs and department which substantiate this deplorable condition of the personnel. In the Secretary of the Navy's annual report of December 1, 1915, recommendation was made that

Congress authorize an increase of 10,000 men, which would bring total authorized enlisted strength to 61,500.

In 1915 the General Board recommended:

With full war complements for all ships of the Navy ready for service in 1917, minimum number required at shore stations 74,700 men will be needed. In the event of war the personnel of the Navy must be greatly expanded to provide for aviation, coast-defense districts, patrol craft, and other auxiliary duties of every sort, as well as for a reserve of men under training to replace casualties. The Coast Guard, Naval Militia, and Naval Reserve will be far from sufficient to meet demands. The Navy is the first line of defense of the country. For peace purposes in the fiscal year 1917 the General Board regards as inadequate any strength less than 67,000 men in the regular Navy.

The department requested a strength of only 61,500 men, which was 5,500 less than the smallest force the General Board recommended for peace requirements. The General Board's estimate was based upon the inadequate complements allowed at the time, and not upon the adequate complements recommended by the Commander in Chief and other officers. The department continued to take no adequate steps toward providing sufficient trained personnel for war purposes. Naval Reserve law which had been passed would not provide the necessary men in large numbers for years to come.

The very unsatisfactory condition in which the Navy had been left owing to inadequacy of personnel, was fully appreciated by the Chief of Bureau of Navigation in August, 1916. He recommended to the department an immediate increase of enlisted personnel to an active force of 93,957 men. He also recommended that "from 5 to 10 per cent be added to this number for increased complements and war contingencies, and the authorized enlisted strength should be increased to this number in time for the necessary recruiting and training." Reserves were considered to be necessary in addition to the active force. While up to this time the department recommended an active force of only 61,500 men, we suddenly find the number jumping to 93,957 men plus 5 to 10 per cent for casualties, 10 per cent of this number would make the total for the three-year building program 102,000 men, approximately 49,000 more than the department a few months previously had recommended.

The chief of bureau, Admiral Palmer, also recommended the order to provide for the shortage of officers "that the appointments be allowed each Senator and each Member of the House of Representatives be increased; that the course of the Naval Academy be reduced to three years until the shortage is made up; and that the promotion of the first class be graduated on February 1, 1917."

Congress authorized, on August 29, 1916, an immediate increase in the active enlisted personnel to 74,700 men and authorized the President in emergency to bring the total to 93,000. The Secretary had recommended only 61,500 men. This was the first really adequate step toward placing the personnel on a proper footing.

These recommendations and the corresponding action of Congress came too late to permit having an adequate personnel by the time this country entered the war, a few months later. In the meantime the efficiency of the entire fleet was adversely affected as shown by the following official reports made to the Navy Department in 1916 and in the spring of 1917 up to the time of our actual entry into war.

and extracts from some of these reports. These were in 1916.]

#### SPRING OF 1916.

*U. S. S. Atlantic Fleet* (Lieut. Commander, now Capt., T. A. Kearney): "The increase in personnel has been general and insistent throughout the fleet."

"The complements and a permanency of detail we may reasonably expect will result in general efficiency."

*U. S. S. New York* (Capt., now Admiral, Hugh Rodman):

"As stated by others concerning the frequent changes in personnel is nothing that can be added to it. Yet if is one of the glaring deficiencies of the fleet."

"The personnel cannot be obtained when officers and men are continually transferred."

*U. S. S. South Carolina* (Lieut., now Commander T. G. Ellyson):

"The better results from gunnery in the fleet is primarily due to the fact that the men running the gunnery jobs have not the necessary rank."

*U. S. S. Arkansas* (Lieut. Commander, now Commander, D. A. Johnston):

"The lack of personnel seriously affects the battle efficiency of the fleet."

*U. S. S. New Jersey* (Lieut., now Commander, L. N. McNair):

"The lack of personnel on the ship to properly man all battle stations and to meet the requirements of the Navy Regulations. \* \* \*

"The lack of personnel on the ship to properly man 6-inch and 3-inch batteries and the lack of personnel are manned."

*U. S. S. Wyoming* (Lieut., now Commander, R. S. Holmes):

"The personnel was especially noticeable at division practice. Hand-to-hand combat was depleted to such an extent that continuous loading would be impossible. The shortage and lack in permanence of personnel is most noticeable."

*U. S. S. San Diego* (Lieut., now Commander, G. C. Pegram):

"The personnel is handicapped by the shortage of personnel and officers to man the battle stations without having to shift from one station to another. The constant shifting of personnel prevents attaining a high state of efficiency."

#### REPORT OF BATTLE PRACTICE, AUTUMN, 1916.

*U. S. S. Atlantic Fleet* Vice Admiral Coffman:

"The condition of most of the ships in one way or another called attention to the lack of personnel and in some cases to the lack of suitable training. This condition is well known and a matter of record and cannot be denied and will not be enlarged upon. It is sufficient to say that the condition is essential not only to man the battle stations, but there is a lack of personnel in order that expirations of enlistments may be adequately covered."

*U. S. S. Division 5* Rear Admiral Dunn:

"The condition of the ships is of the opinion that the paramount cause for the failure to make a better showing was due to their long stay in the fleet and lack of complement and lack of permanence in personnel."

*U. S. S. Division 7* Rear Admiral T. S. Rodgers:

"On September 30, 1916, the *Florida* took up on the pay rolls 25 men and transferred 25; the *Florida* received 530 men and transferred 535; the *Utah* received 166 men and transferred 166. A high degree of permanency of personnel is necessary for a high state of efficiency and no amount of drill and standardization can counteract the constant changes in personnel."

*U. S. S. Arkansas* Lieut., now Commander, W. E. Eberle:

"The condition which always exist, lack of permanence of personnel and lack of training were met with in the preparation for this practice. \* \* \*

"The lack of permanence of personnel, can be overcome, the second time around, will automatically disappear."

*U. S. S. Arkansas* Lieut., now Lieut. Commander, Monroe Kelly:

"In the preparation for short-range battle practice one of the greatest troubles division officer had to contend with was the frequent changes in personnel. It has been stated quite often that one reason why our work in target practice is not and never progresses beyond a certain stage is that the personnel changes so often that it is impossible to put the work on a stable footing."

Commanding officer U. S. S. *Michigan* (Capt., now Rear Admiral, Brittain):  
 "It has been necessary to train almost a complete new outfit of pointers, gunners, broadside and turret gun, due to the big changes being continually made in the personnel."

Gunnery officer U. S. S. *Delaware* (Lieut., now Commander, Logan Cress):  
 "No other fact has been so forcibly brought out by this practice as the shifting personnel. Altogether some 28 officers on this vessel were utilized in directing the ship control, fire control, and gunnery work. Of these some 15 (the commanding officer, executive officer, navigator, and gunnery officer) were 55 per cent had joined the ship since she last fired, and 6, or 22 per cent, were in the same or equal positions as held on previous practice. Figures can be given for the crews, pointers, etc., but figures are unnecessary in this report in this respect. It is to say that the situation was as bad, if not worse with the crew than with the officers."  
 " \* \* \* Altogether the complement of the ship is short, on a peace basis 75 men."

Gunnery officer U. S. S. *Minnesota* (Lieut., now Lieut. Commander, J. H. Coffman):  
 "The same trouble is still being experienced with lack of permanency of personnel. For several years this unfortunate condition has existed, and there seems to be no immediate relief in view."

Gunnery officer, U. S. S. *Texas* (Lieut., now Commander, H. L. Pence):  
 "On this ship there is a serious lack of men to properly man stations for target practice. Commanding officer U. S. S. *Vermont* (Capt., now Rear Admiral, H. O. Smith):  
 "The necessity for permanence of personnel can not be too much emphasized. As long as the Navy has too few men to man those ships that must be kept in service so long will it be inevitable that many changes will be required, and ships will be short-handed. To remedy this there should be a surplus of men. \* \* \*

Commander battleship force, Atlantic Fleet (Vice Admiral Coffman):  
 "The commander battleship force considers that the provision at all times of adequate personnel is necessary. It is apparent that a large number of faults in the final analysis are chargeable to the inadequacy and inexperience of personnel, caused by the fact that there has not been available an excess of personnel for training in time of peace."

"The deficiencies in operation can best be handled by improving the methods and opportunities for training. In this respect there are two fundamental difficulties which can not be well handled by the commander battleship force. In order that personnel may be highly developed, it is necessary that there be maintained on each ship not only a full complement of officers and men, but a surplus complement in order that reliefs for anticipated vacancies may be put in training to occupy the vacated positions when prospective vacancies occur. This condition, it is evident, is very hard to realize, but it is hoped that eventually the effectiveness of training and the efficiency of operation may be increased by a proper adequacy and permanency of personnel."

Those are the reports we had up to the 1st of January, 1917, a few months before we entered the war.

The foregoing extracts deal almost entirely with the condition of the battleship force up to a few months before our entry into the war. It should be pointed out that the battleships were, on the whole, better provided with personnel than any other force.

These quoted extracts taken from official reports show:

1. That the entire Navy, for several years prior to the entry of this country into the war and up to the time of actual hostilities, was not as efficient as it should be owing to lack of necessary personnel.

2. That this state of affairs was reported to the department by the General Board, by the commander in chief of the Atlantic Fleet, and by the numbers of other officers.

3. That the department took no adequate steps to remedy the situation.

the department's policy in regard to personnel was one of stress rather than one of preparedness. My province to point out the result of this lack of preparedness so far as it affected the entire Navy during the war, as there was first-hand information that can do this better than I. As I commanded destroyers before and during the war, at some time the senior destroyer commander in the Navy, with the committee's permission to make a statement in this service.

**MRMAN.** What committee is that?

**MRMAN.** With regard to the destroyer service.

During the Bureau of Navigation in 1915 it was necessary for destroyers recommended by the General Board to be on commission be retained in this status to reduce their war-time complements by 25 per cent. After a trial was operating on these reduced complements the experiment failed and the old complements were reestablished. However, establishment of these old complements did not mean destroyers would be provided with the personnel required. They could not be so provided, as the personnel was not available and not exist, and it was manifestly impossible to provide what did not exist.

Following extracts from the official reports made during 1916 on the personnel situation affected the destroyers.

From the reports made during the year previous to our entry into the war: (Reading.)

Destroyer Force, Atlantic Fleet (Rear Admiral, now Admiral, Gleaves): "During the period of training the complements of ships were short, so much so, from time to time it became necessary to transfer men from ship to ship and all vessels might operate. Such transfers frequently broke up gun crews and groups in training."

Followed by a table showing the average per cent of vacancies in destroyers to be 15 per cent of their allowed complements.

From 1916

USS *S. S. Nicholson* (Lieut., now Lieut. Commander, L. C. Shiebler): "The personnel made it necessary to employ men at stations that they were not trained for war."

USS *S. S. Nicholson* (Lieut., now Lieut. Commander, L. C. Shiebler): "Operating on a reduced complement, which makes it necessary to neglect stations that should be manned by deck force. Consequently the efficiency of the engineer's work is neglected."

USS *S. S. Nicholson* (Lieut., now Lieut. Commander, L. C. Shiebler): "The practice was artificial, inasmuch as there were not enough men on board to properly man the battle stations necessary for war."

USS *S. S. Aylwin* (Lieut., now Commander, J. S. Barleau):

"The reduced complement absolutely necessitates the use of every man in the crew, the number of a gun's crew."

"The fact that five officers is the minimum requirement for a war complement of this type."

"The reduced complement is utterly inadequate."

USS *S. S. McDougal* (Lieut. Commander, now Commander,

"It was concluded conclusively that four officers are not sufficient in time of

war, worth the time and money spent in preparing her for war, she would require additional cost of two more officers to afford her the protection

Commanding officer U. S. S. *Wadsworth* (Lieut. Commander, now Capt. Taussig):

"The complement, both officers and men, is not sufficient for a proper manning of guns and torpedo tubes, and at the same time keep an adequate ammunition supply and run the engines with fires under all four boilers."

Gunnery officer U. S. S. *Balch* (Lieut. J. M. Cresap):

"The shortage in personnel is an ever-present handicap, one gun crew being composed of a ship's cook, coppersmith, and four firemen. There are not enough men on the ship to man all guns and torpedo tubes, magazines, and handling room, and enough men below for full-power steaming, as would be necessary in time of war."

Commanding officer U. S. S. *Dale* (Lieut., now Commander V. K. Coman):

"\* \* \* with a shortage of one-seventh of the ship's company, are the principal and attributable reasons for the division as a whole not making better success."

Gunnery officer U. S. S. *Ericsson* (Lieut., now Lieut. Commander R. M. Deane):

"This ship was placed at a serious disadvantage on account of nonpermanent shortage of men."

Commanding officer U. S. S. *Jacob Jones* (Lieut. Commander, now Commander W. S. Pye):

"This ship has been from 12 to 14 men short of her complement during the target practice period."

Commanding officer U. S. S. *Wainwright* (Lieut. Commander, now Commander F. H. Poteet):

"During the quarter in which this practice was held this ship had 85 men short of complement."

The bad effect of this shortage in personnel, together with the operations of the destroyer force during the year preceding the entrance of the United States into the war, is shown by the unsatisfactory results of the target practice for the year preceding the war. These target practices were held, of course, with the view of making the ships efficient for war, and as many vessels as possible were supposed to take part in them. However, only seven destroyers of the force held a sufficient number of practices during the year, and were classified in the usual manner. In regard to this the department announced to the service in reference to the destroyers:

The gunnery trophy will not be awarded for the gunnery year 1916 because of a small number of vessels completing the year's work and because the scores made by these vessels do not warrant the award of the trophy.

Therefore, it is seen that at the outbreak of war even the department recognized that the destroyer force was not as efficient as it should be.

#### OVERHAUL OF DESTROYERS.

It was customary for the destroyers to go to the navy yard for a year for overhauling. These periods usually came in the summer and fall.

From January to April, 1917, the destroyer I commanded by *Wadsworth*, was operating with the fleet in West Indian waters. In addition to carrying on the prescribed target practices, we were also after diplomatic relations were broken off in February, employed on patrol duty and in picketing the fleet. The service was unusually hard and arduous. In fact, from January 8, 1917, the day the *Wadsworth* left the navy yard, until April 13, 1917, the day we were received to proceed to the navy yard to prepare for active service—a period of 99 days—the *Wadsworth* was actually under way on 75 of these days. As a result we had had practically no general overhauling of hull and machinery.

The other five destroyers selected to accompany the *Wadsworth* had been operating in a similar manner.

I had nothing to do with the selection of the six destroyers which composed the first division to be sent across, I understood they were selected as being in the best state of preparedness. Although these six destroyers were in fairly good condition they were, after three months of hard and continuous sailing the time when they should go to the navy yards for regular spring docking and overhauling, the necessity for beginning to be apparent.

As a thorough overhauling we had six days in which to make repairs and to prepare for distant service, and for duty on which we might be called.

Our duty was to be we did not know. The division, without a supply ship and without knowledge of how or where supplies were to be obtained, sailed under sealed orders.

One of what had to be done on account of the lack in preparedness, my experiences while commanding destroyers in the submarine danger zone may be cited.

When a new destroyer placed in commission, 25 of the best crews were taken from those destroyers actually operating in the face of the enemy in order that these new destroyers should have really trained men at all.

It was in practically all destroyers that remained in the war zone, a year having nearly a complete turnover in their personnel. The instability of personnel was the greatest detriment to the efficiency of the destroyers.

While the destroyers could operate against submarines to a degree of success, I am safe in saying that not a single destroyer in the war zone, shortly after the turnover in personnel commenced, was in really satisfactory or efficient condition for taking part in a fleet action or engaging enemy destroyers. Had been the intention for the destroyers to engage enemy destroyers it would have taken at least a four months' separation with stable crews away from the war zone in order that they could have been expected to operate successfully.

It is a fact that this procedure of depleting the class of the destroyers in the war zone was absolutely necessary under the conditions of lack of trained personnel in order that the destroyers could operate.

In fact Admiral Palmer, the chief of the Bureau of Navigation, cabled Admiral Sims that unless this procedure was taken proper personnel could not be provided for the destroyers. But such procedure should not have been necessary. It would it have been necessary had our personnel been trained from the beginning of the war.

#### CONCERNING THE NEW DESTROYERS.

When the first destroyer commanders sent home from the war zone to take command of the new war program destroyers, I was assigned me to duty in connection with the U. S. S. *Albatross* command that vessel when commissioned. The *Albatross* was the first of the war program to be completed. Owing to delays in construction, she was not placed in commission until April 1918, a year after we entered the war.

All destroyer commanders placed in charge of fitting out new vessels had the greatest difficulty in obtaining suitable crews. In fact it was not possible to get suitable crews, because the personnel did not exist. Each crew was made up approximately of 25 men returned from the war zone, of about 25 additional men that were picked up from various sources, and about 25 men with practically no seagoing experience. We could and did go on convoy duty immediately on being placed in commission.

It would have required a long period of training before we could have operated efficiently or successfully against enemy destroyers or have taken part in fleet action.

#### SUMMARY OF EVIDENCE.

X To summarize the testimony just given it is evident that the following facts have been established:

1. That when the World War started in 1914 the personnel of the United States Navy was entirely inadequate for peace purposes and deplorably deficient should this country be thrown into the war event which was apt to occur at any time.

2. That this deplorable and unsatisfactory condition of the personnel was brought to the department's attention by the General Board of the Navy, by the commander in chief of the Atlantic Fleet, by the officers of the Enlisted Personnel Division of the Bureau of Navigation, and by many other officers of high rank.

3. That these same officers made repeated and emphatic recommendations to the department that immediate steps be taken to remedy these unsatisfactory conditions, showing conclusively in their reports and recommendations that the efficiency of the Navy was adversely affected by the great shortage of personnel.

4. That the department not only ignored these recommendations but took steps to prevent the reports as to the unsatisfactory personnel conditions from being made public, and the Secretary of the Navy in his annual report to the President in the fall of 1914 stated that the numerical strength of the enlisted personnel was adequate and in his report of 1915 that only an additional 10,000 men were needed, while the General Board in its 1914 report had stated 19,600 men were immediately needed.

5. That the department did not take adequate steps to provide personnel absolutely necessary for proper conduct of the Navy even on a peace basis, with a result that when this country entered war in 1917 the ships of the fleet were not as efficient as they should have been and for a large number of ships there was no trained personnel at all.

6. The policy of the department in regard to personnel was one of unpreparedness rather than of preparedness. Such steps as were finally taken were too late to place the personnel on a proper basis at the time this country became involved in the war a few months later.

7. That as a result of this department policy of unpreparedness the larger part of the ships of the Navy operated throughout the war with inadequately trained personnel, and in consequence they were not as efficient as they should have been.

at the efficiency of the destroyers in the war zone was due to the necessity caused by our unprepared personnel of taking many of their most efficient men to the United States to form crews for the new destroyers.

Q. Unless these nucleus crews had been taken from those actually operating in the face of the enemy the department would not have been able to provide sufficient trained personnel for the new destroyers to permit their operating.

A. The new destroyers commissioned during the war were not for fighting purposes on account of the large proportion of untrained personnel on each one.

Q. Then, Capt. Taussig, what have you to say in reply to the statement of the Secretary of the Navy in his annual report that the Navy from stem to stern had been made ready to the fullest extent possible for any eventuality?

A. I think, sir, that my statement here covers that.

Q. You would not say that the personnel of the Navy was not ready?

A. No, sir.

Q. You have spoken of many changes in personnel on the part of the Navy. Was that a necessity, to make the changes as rapid as possible?

A. The instability of the personnel, that is the lack of continuity of officers, was caused entirely by the inadequacy of the system. The whole system of providing personnel was one from which there was practically nobody on the receiving end of any vacancies. The consequence was that men were discharged at the expiration of their enlistments, and there was nobody to fill the places, and a man's place was not filled until some man else came in. That could only have been prevented by an adequate system of training. There was no possible way of preventing shifting, so long as the personnel was not sufficient numbers.

Q. It was not the custom to assign men to battleships for certain training on battleships, and then to assign them to destroyers?

A. Not prior to the war; no, sir. They had to do that after the war commenced, in order to get a trained personnel.

Q. But prior to the war that was not the system employed in the Navy.

A. No, sir; we did not have them to train in that way. We did not get enough men to fill the complements, much less to have them trained to train.

Q. I think you have stated that Admiral Fletcher said it takes 10 years to thoroughly equip an officer.

A. Yes.

Q. That does not mean, does it, that officers could not be of value in the Navy in a much shorter time.

A. Why, no, sir. It means that an all-around naval officer should be able to perform any duty and every duty at once with his rank, can not be trained in less than 10 years.

Q. In other words, officials for the higher commands?

A. Not necessarily the very highest commands. The officers on the battleships, such as the heads of war departments, the gunnery officer, the navigator, and men of

sort, those officers, in order to be efficient, require at least 16 years of service. We can not possibly do it in less than 10 years.

The CHAIRMAN. But if the recommendations of the officers of the fleet in regard to increase in personnel and in officers, made in 1905 and 1915 had been followed, it would have been possible to have trained officers who would have been of use after the war began.

Capt. TAUSSIG. Oh, yes, it would have given us those young officers that much sooner and given them that much more training.

The CHAIRMAN. And it would have released the other officers for higher duties.

Capt. TAUSSIG. It would have released them for higher duties. They would have stepped up. It was a step-up process and it was an essential process where the younger officer had to take the place of the older officer, because the older officer was needed for something else higher up.

The CHAIRMAN. Senator Trammell, have you any questions to ask the witness?

Senator TRAMMELL. Admiral Fletcher made that criticism in 1905, is that right?

Capt. TAUSSIG. In the spring of 1915, sir.

Senator TRAMMELL. If you would take that literally then you would have had to start in 1905 with the getting ready of officers for this war than could have been prophesied probably in 1917—I mean, if we were going to rely upon his statement?

Capt. TAUSSIG. There was a great difference—

Senator TRAMMELL. The present Secretary was not in charge of the Navy Department in 1905, was he?

Capt. TAUSSIG. No, sir.

Senator TRAMMELL. Construing his criticism literally then was a neglect on the part of the Navy Department in 1905?

Capt. TAUSSIG. No, sir, I do not agree with you there. The great steps were being taken in 1905. The great trouble came when the big extension of the matériel of the Navy commenced. The expansion of the matériel, when those big battleships began to come out, was after 1905. Practically up to 1912 the personnel situation was not acute, because we did not have so much matériel. It became acute in 1912, when Congress then authorized that the personnel strength be placed at 51,500. In 1905 there was no war imminent. In 1914 there was war imminent, and all the officers of high rank in the Navy believed we were going to be forced into that war. Not only the officers of the highest rank believed that, but the ones like myself.

Senator TRAMMELL. The point I have in mind is that you always got to be anticipating war 10 years in advance, so that your officers are concerned, according to his statement, and do not know of anybody in this country who is so prophetic in his vision of the future that he can anticipate a war 10 years in advance if it is a matter of preparing for war that is imminent.

Capt. TAUSSIG. There were a good many who anticipated it.

Senator TRAMMELL. That is what you would call purely a matter of guess.

Capt. TAUSSIG. No, sir, it is a study of history.

Senator TRAMMELL. A good many people thought that the war was coming to an end.

17555. But they had no historical evidence to go by.

17556. THE GOOD BOOK says that there shall be wars and wars, and soon the end will come. They thought the end had come to an end by now, but it has not come to an end. You can not always tell about those things.

17557. When the recommendation was made that the Navy be increased 750, with a margin of 5 to 10 per cent additional, do you know whether or not that legislation was favored by the Navy?

17558. I know this: That in the Secretary's annual report for 1915, he stated that an increase of 10,000 men, which would make 67,000, was all that we needed. I know that the testimony of the committee which resulted in a big increase, showed a desire on the part of the Secretary at that time to this in the General Board, represented by Admiral Badger before the committee, made an urgent appeal for the increase, and that an increase was made, I think, because Congress appreciated that it was needed, not because the department urged it. That is my explanation.

17559. That is your view of it, but do you not know whether the Secretary recommended that increase or not in August,

17560. The only official recommendation of the Secretary that I know in his annual report of 1915, made a few months before the meetings of the committee were held, in which he said that only 10,000 men were needed. That is all I can give you on that, sir.

17561. In the same month in 1915 was the General Board recommending ninety-seven thousand and odd men? Have you any evidence to show that the General Board at that time recommended more than the 10,000 additional?

17562. The General Board said that --

17563. I think you said that they recommended about 10,000 more than the Secretary recommended at that time.

17564. I happen to know something about the inside of the General Board at that time, but I do not think it is proper for me to tell it because I was not there, and I would suggest that some member of the board be called on to tell you. I do know that the General Board knew they had to submit figures that the Secretary would accept. I know that they were restricted.

17565. Who was at the head of the General Board at that

17566. I think Admiral Dewey was still at the head of it. They were restricted in their recommendations, and in this critical situation before the public they were recommending a report that the Secretary would accept, and all their recommendations were founded on this basis. Now, for instance, I know that at the figures that 67,000 men were the least number that they would be willing to recommend -- 67,000 the least possible. They based this on the very inadequate complement that they then had, which everybody knew to be inadequate. They did not take the complements that were really needed. If they had taken the complements that were needed, as it came out afterwards, they would have had

to ask for approximately 93,000 men, and it was shown that we went into the war we should have had at least 106,000 men in the Navy—that is, to be on board the ships and man the naval stations on that day. That is what we should have had, and we were very far short of it.

Senator TRAMMELL. The point I am getting at is that you say that the General Board and the secretary differed in the latter part of 1915 to the extent of less than 5,000 men in what they agreed in this increase?

Capt. TAUSSIG. I said they differed in that, in the report of the General Board on the peace basis, not for preparation for war, it was to maintain the ships as if no war was in sight, and the secretary said it was the smallest number that they were willing to set. He said that they had to come down to a small number because they thought that if they put in a big number that recommendation would not get out.

Senator TRAMMELL. I understand what you are trying to do. You are trying to make it appear that the secretary in August, 1915, did not favor the bill that was passed at that time, as far as personnel was concerned. So far the logic of your suspicion and your conclusion is that he had recommended in the latter part of December considerably less. Now, your own testimony shows that in the latter part of 1915 the General Board recommended only 74,700. Then the secretary is guilty of not being in sympathy with this measure in August, and you based it upon the fact that his recommendation was less in the latter part of 1915; why is it that you do not say that the board were opposed to it because they recommended less in the latter part of 1915?

Capt. TAUSSIG. You will notice that the way the General Board reported is that they came in with this minimum number. They had to come down to the minimum. Every officer in the Navy knew that if we went into the war we would need over 100,000 men. There is no question about that. The figures in this report show conclusively that the General Board were restricted. That is the trouble. The General Board were not free to come out with what they thought, because if they came out with what they thought they could not get anything out at all. Ask Admiral Fiske what happened. I suggest that you ask him. He was there, and he can give you the actual information as to why even the figures recommended by the General Board are inadequate. I will admit that those figures were inadequate, and the General Board knew they were inadequate and they had to do it to get anything.

Senator TRAMMELL. The point in my mind is that I can not see why you charge the Secretary of the Navy with not being in favor of this, and base it upon these figures, and yet you do not charge the General Board with that. That is the point I am getting at. In other words, you seem to think that the General Board had a right to revise its figures, but that the Secretary of the Navy did not have a right to revise his figures six months afterwards.

Capt. TAUSSIG. After this legislation went through the secretary came out and praised it very highly. In fact, I think he came out in his annual report, and stated afterwards that this legislation, which brought the Navy up to a total of 93,000 men, was the first time adequate legislation had been provided.

\* TEAMMELL. Your idea then was that they should have waited in 1914 for a war that did not come for five years.

\* TAUSSIG. Yes; that is my idea.

\* TEAMMELL. I suppose if we had not gotten into the war we would have considered that this country had pursued a policy in not expending an enormous amount of money for five years for a war that they did not get into?

\* TAUSSIG. No, sir; I think we ought always to be prepared

\* TEAMMELL. That is a difference of opinion.

\* TAUSSIG. I am only stating my opinion, sir. My opinion is we should always be prepared for war.

\* TEAMMELL. I find that a good many people think this country should not be a military power and maintain an enormously large Army at an enormous expense to the people of the country, but should not maintain an enormously large Army in peace time. Others think you should do it. That is purely a matter of your favor that and the Secretary does not favor that. I do not care to ask any more questions.

\* GUYAN. Capt. Taussig, the increases you speak of that you recommended in the personnel, were not the increases for a war basis, were they, for the Navy?

\* TAUSSIG. This minimum number, this 67,000, were in order that we could have their peace-time complement, the minimum number to be in the service in peace times. For instance, when we went into the war, I can give you exactly how many ships did not have on board in personnel, if you would like.

\* GUYAN. I think it would be well to put that into the record.

\* TAUSSIG. On March 31, 1917, the last date of complete compilation of the entry of the United States into the war, we had 250 ships. We had what were known as in reserve, 47 ships, less than half their complements on board, 47 ships that were known as in ordinary, 16 ships with just enough men on board to prevent absolute deterioration. The commission with no Navy personnel on board 51 ships. When the figures as they were on the 31st of March, 1917, six months after declared war. That was the last complete compilation. The personnel required to man those ships, even with their peace-time complement, was 72,622, which was considerably less than in the Navy at that time.

\* GUYAN. But to give them an adequate complement and carry out the building program that had been laid out, the program laid by Admiral Palmar would not have been any

\* TAUSSIG. It would not have been enough to put them in the war and to run the shore establishment. Of course it would have everybody off the shore.

\* GUYAN. And that had not anything to do with the general program for the war such as came up later on?

\* TAUSSIG. No. I can not give firsthand information on that. The increase to 137,000 was forced through after that.

The CHAIRMAN. It was simply a plan to put all the ships had in the Navy at that time on a basis where they would be in case war came up, was it not?

Capt. TAUSSIG. Yes. I should like to call your attention to the fact that in this paper I spoke of only 75 auxiliaries that we immediately need to be manned by Navy crews the instant we went into the war. The General Board in some report which I saw at that time said that the required number of auxiliaries would be at least 400. The number of 106,000 which I deduced came out on a basis of 75 instead of 400 auxiliaries. Of course, we knew those figures were based on the number required immediately the day we went into the war. We all knew we would have to have an enlarged number of men in addition to that to be trained, and the expansion of the shore establishment. We could not do that. You can not run ships without people on shore to look after them. That is an impossibility.

The CHAIRMAN. I do not think this is within your province for the information of the committee can you tell me whether it is customary for the Secretary of the Navy or the Chief of the Bureau of Operations to consult with the General Board before a recommendation is made by the board?

Capt. TAUSSIG. I do not know, sir.

Senator TRAMMELL. I want to ask you a little about those ships. Had any of those ships that you say were not manned at that time been practically discarded because they were out of date and needed more modern equipment and more modern war vessels were concerned?

Capt. TAUSSIG. Yes, sir; there were a few.

Senator TRAMMELL. Did you think they ought to keep those ships constantly manned?

Capt. TAUSSIG. I think we should not in time of peace carry those ships on the Navy list that we are not going to use in war, and therefore every one of those ships being required, if only for housing purposes, for housing the men, for which purpose we did not need enough, every one of those ships would have to be used, and we would have to have men on board them to take care of them.

Senator TRAMMELL. The main trouble then was that they were not on the list. It was not the main trouble that they did not have to be manned?

Capt. TAUSSIG. Every one of them was used in the war. They were not all used to fight with, but every one of them was used. Although some of those ships are put down as unfit for war purposes, even the few that were so put down were used for housing purposes or something, and we had to keep men on board them, and men were kept on board during the war. Out of the 400 I think about 100 were classified by the department as unfit for war service, but as they were used for housing purposes or something.

Senator TRAMMELL. Did you have any trouble in getting men put on them during the war—ships of that character?

Capt. TAUSSIG. Of course we had trouble.

Senator TRAMMELL. Did you not put men on them?

Capt. TAUSSIG. Yes; there were men eventually put on every ship.

Senator TRAMMELL. In other words, you think those ships

as unfit for war should have had a full quota of men on board in 1914?

WESSON. I think we ought to have commenced in 1914 to fill quota, which we did not do. I will not say that those ships had the same number of men as if they were going to war; they had to have a certain number of men on board to maintain a sanitary condition.

TEAMMELL. Why did you not tell us in the first instance that there were a number of those ships that were unfit for war instead of trying to create the impression that they had 500 men on them, and that it was a great neglect to have them there, although you knew there were 12 of them that were unfit for war purposes?

WESSON. I do not understand your idea at all, sir.

TEAMMELL. I just want to get at the fairness of the

WESSON. I wish to state emphatically that I have said no such thing as creating a wrong impression in any way. I stated from official documents throughout to substantiate what I said, and I can not believe anybody around here thinks I am trying to create a wrong impression. I am out to tell the truth.

TEAMMELL. Part of it, but not all of it.

WESSON. If I told all the truth, sir, I would be here a week.

TEAMMELL. That is what we want you to do, to tell all the truth. You may feel that it is exceedingly fair to try to make it appear that the Secretary of the Navy was not in favor of 97,000 men in August, 1916, because he recommended less in 1915. Yet that same logic does not apply to the other people who recommended only 74,000 in 1915, but were favorable to the larger number in 1916.

WESSON. You stated in answer to a question by the chairman that 500 men was authorized just for the manning of the ships in existence. Do you know whether that is correct? That was for the purpose of making preparation to man the ships that were also authorized in the same bill in August, 1916, for the whole program, was it not?

WESSON. My understanding is that it was partly for both.

WESSON. I think that was included in my question.

TEAMMELL. No; you stated the ships then in existence.

WESSON. I think I stated both.

TEAMMELL. Of course, the record will show what you said, but you did not understand it that way. That is the reason I am going to ask you about it. Now, Captain, it seems you have had some experience in connection with the personnel. Did you have any difficulty in 1914 in enlisting the required men into the service?

WESSON. Not in 1914; no, sir. We did previous to that.

TEAMMELL. Did you in 1916?

WESSON. I was not in the Bureau of Navigation in 1916, so I did not have to do with it then.

TEAMMELL. The reason I asked the question, Capt. Wesson, was yesterday that they had some difficulty in recruiting the authorized strength in 1916 and even in the early part of 1917 until the war was very imminent, and then they did not have any trouble.

Capt. TAUSSIG. I can not state at first-hand as to that only give an opinion on it.

Senator TRAMMELL. Was not that constant changing and due quite a bit to the difficulty in holding people in the specially the enlisted personnel that you speak of, and they wanted to get out when their time ran out?

Capt. TAUSSIG. We were recruited up to our full strength by law in 1914. We had every man the law allowed. We stop recruiting for a couple of weeks, except the men who re whom we had to take in. In 1914 we set up our recruit tions for about two weeks except as to reenlisted men, be were full up to what the law allowed. We could have gotten men that could have been needed.

Senator TRAMMELL. But you do not know as to what th tions were in 1916, as to whether they had recruited up to strength or not authorized by law in 1916?

Capt. TAUSSIG. Oh, yes; they were recruited up, up to the authorization for the increase came in.

Senator TRAMMELL. Do you know when the naval reser was passed?

Capt. TAUSSIG. There were several naval reserve laws. was a law passed first, I think, in 1914. It was while I was in the Bureau of Navigation. I am not sure of the date wh passed the law later providing for the big reserves. I think August 29, 1916. It was modified several times. I can not give those dates.

Senator TRAMMELL. I think I have no more questions.

The CHAIRMAN. I think that is all. You may be excused.

Capt. TAUSSIG. May I have my testimony sent to me to report for correction? I should like to get back to my station.

The CHAIRMAN. Very well.

#### TESTIMONY OF REAR ADMIRAL C. P. PLUNKETT

(The witness was sworn by the chairman.)

The CHAIRMAN. Will you please state to the committee what duties were which you were performing just previous to the entry of the United States into the World War and what duties you performed during the war?

Admiral PLUNKETT. In the summer of 1915, while I was at Naval War College, in September, Mr. Daniels sent for me to Washington, and on my arrival here I was acquainted with the fact that on the recommendation of Admiral Benson, commander of the fleet, I had been selected for director of gunnery exercises, engineering performances, director of target practice. As I had three months of my work to do at the War College I wanted to complete the course there, and, further, I wanted to go to sea, although not due for sea. However, the gunnery situation in the Navy was pretty bad. I think Capt. Taussig's testimony pretty fully substantiates the situation at that time. I received orders which provided for my traveling back and forth between Newport and Washington until the end of the War College course, when I could return to the duties permanently, the idea being to get the run of the college as soon as possible and see what the general situation was.

latter part of December, 1915, I took over the active gunnery under the Chief of Naval Operations as one of

that duty until July, 1918, when I went abroad, but for five months of my tenure of office, beginning along in the first of my time was taken up with the organization and the naval railway batteries which went to France in the first year, so that I did not take a very active part in the training of the fleet during those last few months. Owing to a shortage of officers, no officer was sent there to relieve me, but during the fleet, under the able command of Admiral Mayo, everything that I could have done would have in anyway been successful progress of gunnery training, it being pretty well organized and systematized by that time.

At the beginning, when I took over the duties of gunnery at the Navy Department, I went to Mr. Daniels and stated in a positive manner that there could be no gunnery without men. We did not have the people. To make a long story short, for two years, first and last, for two years, without ever making anything upon him whatever, that we could have no successful gunnery in the American Navy until we had a sufficient personnel.

I say right now that in all my dealings with Mr. Daniels we have been treated with greater courtesy by anyone, but he is not the man that I ever had anything to do with that I practically made no impression upon. I make that preliminary statement so that you may understand the situation perfectly.

Q. Now, Admiral, will you state what your duties were after

FRANKETT. After July, 1918, I was in France in command of a naval battery.

Q. Until the end of the war?

FRANKETT. Until the end of the war; yes. At the end of the war when we were on the verge of entry into the war, the fleet was at the highest state of efficiency that it has been in the history of the American Navy. In my opinion this was due to two things: first, to the commander in chief of the fleet, Admiral Mayo; second, to the realization of the number of men that were needed for the war to fight her efficiently in battle.

Q. As to the question of shortage of personnel was most acute at that time which were in commission, there was a great deal of discussion. There were memoranda and reports and other things about the number of men required to man a ship efficiently. As a result of this we have some definite information from the people in command of the ship that the number of men that we thought we needed to fight those ships efficiently could not be berthed in the ships. The ships were not big enough to hold the crews that we needed to fight in the ships.

Q. With your considerable experience as executive officer of four battleships, and having commanded a couple of battleships, and having given the best part of 15 years of my life to the question of organization, I felt that I was in a pretty good position to estimate what a ship needed to fight her.

Q. When Admiral Mayo became the battleship-force commander he said that when he was division commander he made a report

in regard to shortages of personnel, which I think Capt. quoted. When he took over the more important command of the battleship force he took up this matter very seriously, the question of what was the proper force aboard of a battleship in fight the ship efficiently.

I might say right now for the benefit of Senator Trammell, officer in my recollection ever dreamed or ever thought of personnel sufficient to man everything carried on the Navy have it ready for battle at the outbreak of the war. All we on was that the ships which were turned over to us to operate which we called our fleet, should be fully manned and should be for war; that is all.

As the result of Admiral Mayo's efforts, in which I heartily concurred, we finally arrived in the course of two years at what correct number of men and officers in order to man our ships were then in commission so that they would be efficient in The numbers which we arrived at were far in excess of the which were contemplated in the original design of the ships.

I might say as bearing directly on this and also having an on the number of these men, that in 1915 we woke up to the fact we had built a number of very excellent ships, but we had no out how to fight them. Before 1915 there was a fire-control ordered, which went right into the question, not of using the of the ship one at a time but how to use all the guns at the same so as to bring the greatest volume of fire to bear upon the enemy it was the report of that board that pretty nearly turned the upside down, and was the first step in the direction of showing what we actually needed in the way of officers and men on order in order to fight them in battle and to bring all their offensive defensive weapons into action at the same time. Natural money was asked for at once, but it takes time to produce the equipments that were required to be installed in those ships, and naturally our latest ships were the first ones to receive them.

Again, owing to the methods which were taken up under Admiral Mayo's direction, and in fact mostly by his orders, the people Navy had brought home to them what gunnery should be in order to arrive at those results. This board was in intimate touch with the most efficient methods for using our guns and torpedoes.

Up to 1915 we had been conducting battle exercises by the method of the engagement by firing a single gun in order to get the approximate range of the enemy, followed by another gun after that shot landed, some 20 seconds later, also with a view of getting the some correction being applied to that second shot; in other words the method of approximation. The question of range finding was taken up seriously. Up to 1915 we had comparatively no efficient range finding instruments. Those are instruments of prime importance and at the outbreak of the war we had only a sufficient number of them for our first-line ships. The ships in reserve had practically no range finders worth mentioning.

All those things and the concentration on gunnery training brought home to us the fact that we were terribly undermanned, and in those reports that Capt. Taussig speaks of here which flowed over my desk in volumes, which kept me pegging away at the Secretary of the Navy all the time asking for more men, and representing to him the fact that we needed those men.

may seem odd, when I was a subordinate officer, that I took memorandums to the Secretary of the Navy; but I assure you I took them there because the Chief of Naval Operations had asked the talk he had in his system.

CHAMAN. Who was the Chief of Naval Operations?

FRANKETT. Admiral Benson. He said, "If you can get and get them. I can not get them."

Shortly after I took over the direction of gunnery, the resolutions, which you probably remember of Representative Representative from Massachusetts, who offered resolutions in the House of Representatives, which were adopted, calling the Secretary of the Navy for a statement as to the gunnery of the fleet. The resolutions were referred to me for answer with reference to gunnery efficiency of the fleet were in and therefore the answer which went to the House of Representatives to the Speaker, and later a similar answer which went to the United States Senate in response to resolutions submitted by it was prepared by me in my office from the actual data at that time.

Mr. Daniels took a very live interest in gunnery in the and was very much pleased with the answers that we were able to give, because these answers clearly showed that while we were not broken down, we were on the up grade; that things were going on in gunnery, and eventually, about a year afterwards, when made considerably more progress, Mr. Gardner visited the Navy, with permission of the Secretary of the Navy, and we consulted thoroughly that he was on the wrong tack, and that we were doing everything that was possible to build up the gunnery of

the fleet, not only to the ships which were in commission, and to the knowledge which was going on to the Navy at large was restricted to the officers who were actually on the ships in

Those who were on shore and other duty had not taken up these matters. But never in the history of the Navy has there been anything more intensive than the gunnery of the fleet which took place in 1916 and 1917 and 1918. That was that when the war broke out, although we were not in the gunnery efficiency of the ships that were in the fleet was higher than it ever had been in my recollection of the Navy. As a matter of fact, we had just one battleship, the USS Oregon, which practiced at nearly 20,000 yards, the longest range ever practiced by the service, and she made the phenomenal record of hits under battle conditions.

I was in the fleet in the spring of 1917, and left there about the middle of the year and came back to Washington, and on my arrival in the summer of 1917, I submitted to the Chief of Naval Operations a report on the status of gunnery operations in the fleet, in which I set out the practices that had taken place, in a general way, in the fleet, and I gave first-hand information as to the state of the fleet at the outbreak of the war. I did not comment in any way on the excellence of the training, but just merely stated that target practice had been carried out, and made a statement that the training continue just as it had been; that I was in full agreement with the charges to make; that I was in full agreement with

commander in chief that everything had been done in the laying down correct lines for gunnery training, and that, when war broke out, we saw no reason for making any change in that direction. That the one thing was to insure the permanence of the personnel, that is to say, of the people who were actually in the fleet when war broke out, in the battleships and our destroyers; to retain the people absolutely intact in order to hold our gunnery efficiency at the level we had reached at that time, and which, I say, was the best in the history of the American Navy.

If you remember, about that time, or shortly before it, the guard duty was ordered by the President; the question of putting guns on merchant ships and assigning crews. As I said before, we had only trained men we had in the Navy were the men in the fleet because anybody who had been out of the fleet was behind the times. We were moving fast. And the first call for 400 armed guards in the fleet, naturally the people sent were the people who were manning guns of the type we were putting on the merchant ships, and also those who could be spared without impairing too greatly the turret efficiency of the ships; so that the first people that went to man the crews which manned the secondary torpedo defense batteries on our battleships, and the officers and petty officers which went to man them.

But, as a division on a battleship of secondary battery guns has two or three officers, and as they amount to no less than 25 in some ships, and it only required at the outset from two to three officers on armed guard ships and three only on the liners, you can see that the officers capable of directing the fire of those guns were a little insufficient; and therefore we had to have more officers for armed guard duty, and that was where the trouble began.

The CHAIRMAN. What was the date of that?

Admiral PLUNKETT. I forget now. It was continuous. It began just before our entry into the war and continued right along practically the whole of the year 1917. In fact, it ran up to 1,700 or 1,800 vessels; I do not know how many; a very large number. So the officers who were capable of being assigned to this duty were exhausted. But it involved our going into our turrets and taking a turret off; for instance officers who had had anywhere from two to three years' experience; officers who were thoroughly conversant with our gunnery training methods; officers who were of the highest possible sort in regard to our gunnery training and were in sympathy with it. And that was the beginning of the downfall, you might say, of the fleet efficiency; and I have seen nothing on record to indicate that they ever fully recovered from it, not even when the armistice was signed. Of course, they were as efficient as human perseverance and the mentality of the men at the head of it could make them, but, as testified by Admiral Palmer here, in October, 1917, he began a process of forcing the battleships to give up their reduction allowance of officers still further, nearly 50 per cent, and in filling the vacancies in the battleships—the total number of officers—officers of very little or no experience; officers, for instance, who were not in the Navy before the war at all; some of them college men, others who were sent to Annapolis for short courses of training, reserve officers.

of 1917, when Admiral Rodman took his ships abroad on the other side, the condition in those ships was pretty much as in our battleships that stayed behind. They were depleted of the number officers that they had in the spring when we entered the war, and had practically only a few officers; and naturally they were not ready for battle right over there. The *Texas* actually had, later on, pretty much all of her crew green men. She was the ship that had been given a trophy as the result of her work just previous to when she arrived on the other side had not fired a gun at all. That was due, in her case, that she had been unable to get ashore, and had to go to the navy yard and be completely repaired. But at the same time, with 75 per cent of her crew green men, the wildest imagination would not claim that she was ready for battle, and I believe that is the way she was at her arrival, to Admiral Rodman. The truth of the matter when we entered the war we were forced to take the defensive. Instead of the offensive, we took the defensive. The organization of the patrol forces of the Atlantic was a defensive measure. That force brought into being everything that could be converted into a scout. We had almost all of our big cruisers, which had been in reserve at that time. They had to be brought around. In fact, I think that most of them started immediately before we entered the war. I remember exactly what the situation was. We had one, which was the flagship of the destroyers, the *Scattle*. But we had practically all the small craft we had, of whatever type, that could be used for patrol purposes; and that, in a measure, was the force that Capt. Taussig showed you. These craft, of very little military value, were called into being; and that, in the patrol, if you saw one of these submarines, and you saw him sunk you, you gave warning to many of the other ships that they could start and search for him right away. It was these craft contained military value enough to offer a defense, but they were there for scouting purposes. That was created, the defensive force that I speak of, was a very short time turned into the splendid force that we had on the other side. In fact, in Admiral Sims's letter he refers particularly to the fact that we were organized on this side for operations here, instead of being organized on the other side for operations over there. I think, however, before the situation began to clear up a great deal of time. I think you must realize by this time that we had no plan for entering the war—no war plan. We had a mobilization plan giving the list of ships and the number of men and the location of them, but there was no plan for making war—using the ships for war purposes. It simply called for their mobilization. As we entered the war, I expect the Chief of Naval Operations was flooded with all sorts of suggestions as to how to make war. I know that I offered such a suggestion; and I guess a good many others did. But all our suggestions were based on a lack of information, because, when all was said and done, we entered this war I think the majority of us thought that the war was pretty nearly over. As a matter of fact, it was

its most critical stage. Our information was insufficient and tentative. In fact, in many cases it was absolutely wrong, as we afterwards found out.

However, there was no plan for the offensive action. What plans there were, or whatever plans were first evolved, were all defensive.

I am not aware how long that continued, as I was not in intimate touch with the orders which went to the different commanders as would indicate when the attitude changed; in the absence of any plan, the most natural thing to do was to take a defensive until you find out "where you are at," and that was the situation.

To man the ships that were in the mobilization plan there was partially, exhausted practically everything in the way of personnel that we had, and I think that Capt. Palmer and Capt. Taussig clearly brought out what we expected to happen; in other words, we were not surprised.

The CHAIRMAN. That you were not what?

Admiral PLUNKETT. That we were not surprised. In other words that we expected it. I do not think there was anything in the few days of the war that turned up that surprised us in any way whatever. I do not think that there was any reason why we should have any other mental attitude in regard to it; that it was just pulled away off; that we had been a long time trying to get more men to impress upon everybody that a navy without men was no navy, that a ship without a proper complement was no ship. We had had any luck, but we realized that the moment we got in the war the stuff would flow in so fast that you would not know what to do with it; and that is just what happened. Money came tumbling in. Lord! There was money to a finish. Men offered their services. We would have broken up Gen. Crowder's conscription plan. We had taken everybody that wanted to go in the Navy. When it came to the question why we could not recruit our people in 1915 and the answer is that the era of profiteering had gotten under full sway in this country, and men could make so much money out of it and there being no prospect of a war in 1916, why should they go into the Navy? So that when war actually did come upon us, we were short-handed, and it was nothing but the natural instinct of the American that saved the day. They came in vast numbers, more than we had quarters for, more than we could handle, more than we had anything for. These people came and offered their services.

Men were willing to throw up big positions in order to come out at a meager salary. I think that was testified to by Capt. Palmer here. He said here that the Bureau of Construction and Repair had 70 men on their list who were willing to come with the Navy, whose salaries running from \$10,000 a year up, and who were perfectly willing to come with the Navy for \$3,000 a year. We met that everywhere. But that does not make a Navy. That is simply material to work with. And so fast was this thing traveling, and so fast were we expanding that in June, or in the early part of May, 1917, Mr. Darr sent for me one day and he said, "I want you to go to Boston, New York and Philadelphia and Norfolk, and look into this recruiting business." He said, "I do not want you to say a word to a living soul, but I want you to come back here and tell me what you think."

Mr. Chairman, I went right straight to Mr. Palmer, just as I could walk, and I said, "The Secretary is getting a little about this reserve business."

CHAIRMAN. What was the date of this?

MR. PRUNKETT. It was in May.

CHAIRMAN. May, 1917?

MR. PRUNKETT. May, 1917. I said, "I do not know anything about reserve business. I am here in Washington. I do not know what you fellows have been doing, but I know that you must have some pretty good people. Now, it would not be a good thing if this thing suddenly stopped, even though you made a few mistakes."

Then I started off, and I went to these various places and came back I made a report to the Secretary, saying that under no circumstances should he do anything to stop the increase in the Naval Reserve; that we were having brought to the material there was in the country, and that, in time, we could put that material into what we needed to carry on the war. I think that proved true, for without those people we never have carried on this war. Of course I do not know whether he believed or not. He probably did not. But, at all events, I put it upon him as fully as possible the importance of the question, which Admiral Palmer testified. The struggle between him on the question of reserves continued long after

He was afraid of getting too many people, so that he would not know what to do with them. But, considering the shortage of men and our facilities for handling these people and for keeping them and preventing them from getting sick, etc., we kept it as all we possibly could all the time.

We changed from a purely defensive attitude to an offensive attitude about through a realization that the war was over there and through the fact that we began to understand that the secret service was of such a high class that nothing could be done to coast and do material damage anything which would be a material way to win the war without ample warning. It is fully borne out in the reports which came from time to time that their predictions are nothing short of phenomenal. They must have used the ouija board or something like that.

Now, how they ever got the information, it was so exact, and the effect of gradually reducing the patrol force which we

lost here of vessels which could be used in the anti-submarine campaign, and their replacement by other types, submarines, etc. It is entirely probable that we could not have replaced our ships within one month or two months of the outbreak of the war, if we did not have the personnel, nor did we have, we got without the most strenuous opposition, probably, the vessels which could be used for purely coastal patrol. But my private opinion is that the reason we did not take the offensive is the fact that we were not equipped with skilled and trained personnel. In other words, we were not in a position to fit our cloth. I might say, in passing, that the advanced proposition, which was clearly beyond any doubt, although the Allies had been doing this for some time, was

the breaking up of the efficient condition of what we

had in commission at the outbreak of the war, for the simple reason that when you put a military man on board of a merchant ship they want to deny him the air necessary for his sustenance. They hate to have him around. As a matter of fact, I think the presence of guns on merchant ships is very much against the wishes of the merchant people; but they did put them aboard, and in order to avoid any possible disruption or disputes, although there were a few minor ones, of course, we sent the highest type of our petty officers in charge of these guards, and officers, so that if questions did arise, they would be handled in the proper manner, and I might say, in passing, that if the members of this committee have never read the reports of our armed guards, especially those written by our chief petty officers, they have missed some of the most illustrious history that has ever been written of the sea. The work that those people did is thrilling and I do not know a single solitary case in which they failed to measure up to what was expected of them. But it raised Cain with the American Navy.

That also was a defensive move. The first solution of that was the adoption of the convoy system, which was an offensive measure. That is to say, if a submarine wanted to get a merchant ship he had to fight for it. If you remember, there was great stress laid on the arming of merchant ships, which was a purely defensive measure. I think I am correct in that, am I not?

The CHAIRMAN. Why would not the submarines have to fight to get the ships that were armed?

Admiral PLUNKETT. As Admiral Sims explained to you, they got them without their ever seeing them.

The CHAIRMAN. But they had to get them by torpedo instead of guns?

Admiral PLUNKETT. Yes; they had to get them by torpedo instead of guns.

Senator TRAMMELL. I think the admiral is correct in saying that it is to be considered a defensive measure. I think the President took the ground that we had a right to arm them, without our even being at war with Germany, and they were armed before we were at war with Germany, so that it certainly was defensive then. If it had been, it would have been an act of war.

Admiral PLUNKETT. Yes; I think that I am right in that.

Senator TRAMMELL. Yes; it is considered so in international law. We were not at war with Germany when we first armed our merchant ships.

Admiral PLUNKETT. I have not any familiarity with international law.

Senator TRAMMELL. I am just saying that I think you are correct in stating that that was a defensive measure.

Admiral PLUNKETT. I am simply saying that it was not a measure of offense against the enemy, but it was purely a defensive measure.

The CHAIRMAN. I was just getting the point in my own mind.

Admiral PLUNKETT. So that if we continued it after we went into the war, we were still adopting a defensive measure and not an offensive measure. In other words, our trained personnel was being used for defensive purposes and not for offensive purposes. Do you get my point?

The CHAIRMAN. I get your point. I wanted it explained.

MR. FRANKETT. Yes. There is the parting line, as referred to in the letter of January 7 that Admiral Sims wrote, and that is the parting line between the fleet and when I speak of the fleet I mean the fleet as it was not ready for war at the end of the war, because we were not able to train officers and men to conduct the gunnery of a fleet.

MR. FRANKETT. It has come up here, how long we should have started to get officers. Ten years is not a minute too soon. We should have all our ships fully manned and ready for war. It is a matter of policy with which we are not concerned in this hearing. But when you attempt to keep 16 battleships in readiness unless you keep them fully ready for war they are a waste of money you are spending on them, because everything that a ship does not understand that the reason of their inability to fight and fight effectively; and a ship that is not manned can not fight effectively, no matter what the reason may be.

MR. FRANKETT. In the hearing Capt. Taussig says that if the fleet that we sent over on the other side had been required to do the fleet work by which he means work in the defensive action and possible action against destroyers, action against submarines and other types of ships, the general work that the fleet is capable of doing he wanted four months to go away to get the fleet to train. Now, this is the officer who, when he was in the fleet and was asked how long it would take for him to get the fleet in readiness, said that he was ready. What he meant was ready to go after submarines just as you find in Capt. Taussig. He states that in August, 1917, there is a memorandum from the Chief of Naval Operations, paragraph 4, I think from Capt. McKean here saying that in August the fleet was ready for anything. He does not mean that. He does not mean that they are ready for anything, but he means that it will be ready for anything; they will have the material; they will have the men; they will have the instruments for handling them, and all that he means is that he is too good a gunnery man to mean anything. The point of the matter is that if we had been up against the fleet at the outbreak of this war we would be paying the indemnity instead of their paying it; and all because we did not have the fleet ready. Because, ship for ship right through the line, the fleet was ready for anything, although they stood the British on at the battle of Jutland, we were ready for them if we had the fleet. We did not have them. The reason we did not have them was that the Navy Department would not let us get them. He would not let the Navy Department committees in Congress, would not let us do anything about getting more men, in spite of the fact that everybody in the Navy Department far enough to the bottom knew that we must have more men.

MR. FRANKETT. If it is a question of 71,000 or 61,000 men, they are not going to get the number; and no officer of the ability of the officers in the Navy would recommend, except under the most extraordinary pressure, a recommendation so far short of the recommendation of 67,000 men, for what we are doing. I never have at any time acquiesced in the view that we have sufficient personnel. I have never acquiesced in any view

the statements in any of these reports that we were ready from stem to stern; and I do not acquiesce in any report to-day that in any way that our fleet is anything but a wreck of what it was.

The CHAIRMAN. A wreck now?

Admiral PLUNKETT. Right now; to-day.

The CHAIRMAN. How about when the war commenced?

Admiral PLUNKETT. I have given you a statement of what condition was when the war commenced.

The CHAIRMAN. The same would apply, that we were not from stem to stern when the war commenced?

Admiral PLUNKETT. All that were ready were the ships that actually fully manned, or nearly fully manned, and in commission. Those ships, in my opinion, were ready, but those were the only ones. And by that I mean the battleships and destroyers. I do not mean the submarines, because I understand there was not one of them that was ready. I do not know. That you can probably get from Admiral Grant. But I limit my statement absolutely to those two types of ships alone, which do not go to make a fleet, by long odds. That is only part of a fleet. Our scouting force we had not.

As for the auxiliaries that go with the fleet, we had just about enough for our peace-time purposes and no more.

The CHAIRMAN. Do you know what ships we had that were in an adequate state of preparation at that time?

Admiral PLUNKETT. What ships that were?

The CHAIRMAN. Yes; other than destroyers and battleships.

Admiral PLUNKETT. Well, I could get that information if you want it. I have not got it right at hand.

The CHAIRMAN. I would like to have that information put in the record.

Admiral PLUNKETT. We had one battleship that had just come out, the *Arizona*. At the outbreak of the war she was not ready for war in any sense of the word, because she was a brand new ship. She had been in the navy yard up to December of the previous year, fitting out. She was a beautiful ship, and is to-day probably one of the most efficient ships, they say, in the fleet. But she had not been subjected to any firing to speak of. In fact, I do not remember just when we conducted her firings, but we fired all of those 14-inch guns on the *Pennsylvania*, the *Oklahoma*, the *Arizona*, and the *Nevada*, in order to find out what caused the tremendous dispersion of our guns. We have also conducted experiments ever since then—that was in 1916—and we are no nearer the answer to-day than we were then. One reason for it, I think, is due to the fact that when Congress practically offered us a proving ground, to cost \$10,000,000, the Secretary only allowed \$1,000,000. I remember going to him and talking to the Chief of Ordnance. He said, "We have got to get this proving ground and find out why these shells are flying all over the place instead of where they are intended to go, and we must have a proving ground where we can fire the guns and then go and dig up the shells later and find out why this thing is going on." We understand that the German dispersion is very much less than ours, and the British, even, is considerably less than ours.

There is one thing sure, that one salvo goes down here, and another beautiful, and the next one that comes down here, they are scattered all over the lot. I think you were probably shown one salvo

the target fired, and that was published with big headlines "Successful shooting of the Navy," and that was a case where they fired had 12 shots in a very small pattern. As a matter of fact, they have not solved that thing yet. Of course, a man does not mean to cuss his tools until he is pretty well exhausted all possible errors that the personnel can make; therefore I have never been on the side of the people who cuss things because they do not work just the way you want them to right off the bat. In fact, I have been an advocate of firing everything—every shot that we fired—with the idea of getting the information out of it that we can possibly get, so that if we make any errors, we are going to find out what they are, and then we can take steps to avoid them. That is the only way to make improvements in gunnery, just through intensive observation and practice.

Q. There was a case where we had this opportunity, and the Committee said, "For Heaven's sake, go and see the Secretary of the Navy, get this thing all tied up, and they have given us a good proving ground, and he will not allow us but to go on." So I went down again and argued the matter with him, and he was as lively and pleasant as usual, but he thought \$1,000,000 was a big price just then, and he could get more later. We never got it any later. That was the time for getting it, if ever; but as a matter of fact, we are still up the stump. We do not know anything about the dispersion, and I guess the best standard we got was firing of this same type of gun, 14-inch 50-caliber guns, over to France, where we fired at ranges very, very much shorter than what would be the battle ranges on the battleships, and this data could not be of very great value.

Q. These show that those guns are phenomenally accurate at long ranges. Of course that is where the projectile goes up into the air, and comes down. It is almost like going up to the clouds and coming down on the earth again. It is an entirely different firing at those high angles. The angle of firing of these at present does not give a range much in excess of 23,000 yards. With the later types of ships we are building, the angle goes up to 30,000 yards because of the increase of elevation of the gun operation. But, as a matter of fact, we are to-day about where we were 4 years ago on that. We have not got it solved.

Q. CHAMBERLAIN. You stated that the reason you could not get more men in the Navy in 1916 was because the cost of living had gone up, wages and salaries had gone up, and there was no prospect of that time. You mean so far as the people of the country are concerned in general?

A. PLUNKETT. Yes.

Q. CHAMBERLAIN. Not as far as you in the Navy were concerned?

A. PLUNKETT. Nobody thought there was going to be any trouble; the majority of the people in the country were glad to get out of war. They were pretty well satisfied about it. As a matter of fact, everybody was.

Q. CHAMBERLAIN. I mean the Navy?

A. PLUNKETT. Yes; the Navy, too.

The CHAIRMAN. There was a feeling that we might go in, was there not?

Admiral PLUNKETT. Well, I don't know; not if there was a feeling of keeping out of it. Of course, after the *Lusitania* note, a good number of us thought that there was no way of keeping out of it. We were sure we were going into it. There was no doubt about it. Of course, you could not tell. You were dealing with a mighty uncertainty when dealing with the Hun. If you can guess four things out of five, they can do, they are pretty sure to do the fifth.

The CHAIRMAN. But was there a feeling that our Navy should be prepared if the war should come?

Admiral PLUNKETT. I never heard of anybody that exercised any other feeling.

The CHAIRMAN. That is all.

Admiral PLUNKETT. In other words, I think the vast majority of our people took the idea that these notes, where the President was writing to the German Government, were getting stronger and stronger all the time, and if the situation became absolutely desperate over there, there is no telling what they would do, and that eventually we would get into the war. It was no surprise when we were in the war; none at all.

The CHAIRMAN. Now, the gunnery practice of the fleet, you say was excellent in 1916.

Admiral PLUNKETT. In 1916? No; this was in March. We had just completed some long-range practices down the coast of Cuba, firing at greater ranges than we ever fired before, and I think that the average percentage of hits of the shells that fired—and there were probably 8 or 10, at least, that fired at this long range—was about 12 per cent of hits, because I remember writing to Admiral Sims, who was at the War College when I was back, telling him what we had been able to do, and that he would have to modify the game-board rules up there at the War College that we had discovered we could hit at much longer ranges than they had allowed for in their rules for plotting the war games at the War College, and I believed if we could keep on the way we were going and hold our people for another year, we would doubtless get good scores. I was very enthusiastic about it.

The CHAIRMAN. The statement that we were efficient—

Admiral PLUNKETT. That just only applies to those ships that were in full commission down there, and the battleships.

The CHAIRMAN. That does not mean that the personnel conditions had been improved by that time?

Admiral PLUNKETT. No, no; we still did not have the full complements in the ships. This is just the gunnery thing. Of course, the only thing that was particularly encouraging about the gunnery was the fact that we had everybody with us, and the information that we had on all possible things that can enter into efficient gunnery efficiency—were widely circulated in the fleet, in the fleet there; the officers were thoroughly conversant with what we found out by means of cable and from intensive training under Admiral Mayo, and the fact that these people were tremendously impressed by these things and were using it and doing everything that could be done to bring up the gunnery of the fleet, was most encouraging.

The CHAIRMAN. But you were still short of men?

Mr. PLUNKETT. Still short of men.

Chairman. And what you had was simply enough for the number actually there?

Mr. PLUNKETT. Right there. Admiral Palmer brought that early. We entered the war with 2,300 officers, and I don't know the number of men was, but that was what we had. I was with me in a naval battery. Five hundred of those men were with a gun prior to the war. I had six graduates of the gunnery class down there, four former warrant officers who had formerly entered as junior lieutenants at the time. I had a naval volunteer officer who was a lieutenant, a professor of international law at the University of Michigan—he had been a lieutenant—and then there were 25 other officers that I made out from seamen, second class, to chief machinist's mate. We had young men, college men, that we had on our rifle ranges at the various naval stations; all young men of intelligence and some of them of rare ability. Those people did the stunts that they did they did remarkably well—perfectly, in fact. I would not ask for better people. But that is the kind of people of the Navy. I have got them to-day down to the rank of lieutenant. I have two of the destroyers now, on which, outside of the commanding officer of the destroyer, the rest of them are all young people, and none of them, except in some very exceptional cases, will qualify for the ranks they now hold. But they are intelligent, and they have got snap and push enough, and they are giving them the chance. They will learn in a while. But I do not know how many of them are staying with us. Most of them are worried to death with their families, and how they are going to make both ends meet. But they are doing remarkably well under the circumstances.

Chairman. Have you any further questions to ask, Senator Keyes?

Mr. TRAMMELL. I do not think so.

Chairman. Senator Keyes, have you any questions?

Mr. KEYES. No, sir.

Chairman. Have you any further statement to make, Admiral Palmer?

Mr. PLUNKETT. No, sir.

Chairman. Then we will adjourn until Monday morning next. At 1 o'clock p. m., the subcommittee adjourned until May 1, 1920, at 10 o'clock a. m.)

## NAVAL INVESTIGATION.

MONDAY, MARCH 29, 1920.

UNITED STATES SENATE,  
COMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.  
Committee met, pursuant to adjournment, at 10 o'clock  
p.m. 235. Senate Office Building, Senator Frederick Hale  
Senators Hale (chairman), Keyes, Pittman, and Tram-  
merman. The committee will come to order. Admiral  
Will you take the stand?

**TEST OF ADMIRAL A. W. GRANT, UNITED STATES  
NAVY.**

Will you please state to the committee what duties you performed  
beginning of the World War in 1914 up to the present time,  
positions you occupied in the Navy?

GRANT. At the beginning of the World War in 1914 I  
was in the Navy, in command of the battleship *Texas*, on  
station off Mexico, and continued in command of that vessel until  
1915, when I was ordered by the department to command  
a force of the Atlantic Fleet and to supervise all sub-  
marine commission on the Atlantic, Pacific, and Asiatic stations.  
I was promoted to the rank of rear admiral September, 1915.

I continued until the 20th of August, 1917, when, by  
order of the department, I assumed command of battleship Force 1,  
Atlantic Fleet, with the rank of vice admiral.

I continued until March 31, 1919, when I was detached  
from that command and ordered to command the navy yard at Wash-

ington. Will you state to the committee what steps were  
taken by the Navy Department in preparing and conducting naval  
operations during the war, and especially in regard to the submarine  
war situation? I would rather have you make a state-  
ment in your own language rather than to

GRANT. To answer that question, I will have to tell you  
the submarine force was its evolution. Up to and including  
1915 the Government owned 38 submarines afloat, which  
were named, from A-1 to the K type of boat, inclusive. I  
will give you, which you can put right into  
showing the type of boat, the number of boats in their  
dates of acts authorizing their purchase.

TRAMMERMAN. The table will be inserted in the record.

(Admiral Grant here read from the table referred to, which printed in the record, as follows:)

| Type.        | Number of boats in type. | Date of act authorizing purchase. | Type.         | Number of boats in type. |  |
|--------------|--------------------------|-----------------------------------|---------------|--------------------------|--|
| A-boats..... | 6                        | June 7, 1900                      | K-boats.....  | 4                        |  |
| B-boats..... | 3                        | Apr. 27, 1904                     | L-boats.....  | 7                        |  |
| C-boats..... | 1                        |                                   | M-boats.....  | 1                        |  |
| C-boats..... | 4                        |                                   | L-boats.....  | 4                        |  |
| D-boats..... | 3                        | June 29, 1906                     | AA-boat.....  | 1                        |  |
| G-boat.....  | 1                        | May 13, 1908                      | N-boats.....  | 7                        |  |
| E-boats..... | 2                        |                                   | AA-boats..... | 2                        |  |
| F-boats..... | 4                        |                                   | O-boats.....  | 16                       |  |
| G-boats..... | 2                        | Do.                               | R-boats.....  | 27                       |  |
| G-boat.....  | 1                        | Mar. 3, 1909                      | S-boats.....  | 21                       |  |
| H-boats..... | 3                        |                                   | Do.....       | 20                       |  |
| K-boats..... | 4                        | June 24, 1910                     |               |                          |  |

These vessels were bought at intervals from 1900 up until 1911. I am the first down to and including the K's there. They were not built upon prepared by the Government but upon designs submitted by contractors. tonnage, surface displacement, varied from approximately 100 tons for the to 392 tons for the K-boats.

The first seven L-boats were contracted for under the act of August, 1912.

The first four of these boats were placed in commission in 1916.

Under the act of March 4, 1913, four more L-boats were appropriated for, them being in commission the latter part of 1916, and these boats were of com designs, generally speaking, with slight modifications made by the Bureau of Construction and Repair and Steam Engineering.

There were two other boats, M-1 and AA-1, contracted for under previous which were single vessels of a type built upon contractors' plans.

Under the act of June, 1914, the department contracted for the M type marines, about equal in size to the G-4, which was built under the act of 1903. The ordering of this type of submarine was in my opinion a decided backward, and during my service as submarine force commander I repeatedly pressed this opinion.

During the summer of 1915 tests were provided in the Bureau of Steam Engineering and the Bureau of Construction and Repair for officers selected for their knowledge of submarines, who were to have special charge of submarine construction and so far as pertained to these bureaus, and also to coordinate the efforts of bureaus respect to the building of the submarines under contract appropriated for or contemplation. As early as 1915 I recommended the construction of submarines approximately 800 tons surface displacement, and continued to talk upon the subject until Congress passed the act of August 29, 1916, appropriating for three vessels.

In the initial naval acts appropriating for the N boats and the first of the S boats, Congress appropriated for the O boats in March, 1915. The O boats decided improvement over anything that had preceded them, having a surface displacement of approximately 500 tons.

The R boats provided for in the act of August, 1916, were approximately larger than the O boats. It took more than two years of propaganda to bring government officials to recognize the importance of having a submarine capable of performing equal duty with the German 800-ton U boats.

The L boats, which I have previously mentioned, were the latest type placed in commission while I had command of the force up to August, 1917, and of the previous types I can speak knowingly of their practical use. Their design was good as regards machinery, with especial reference to the oil cooling and lubrication system.

Four K boats, from July 1 to October 1, 1915, were sent to sea for 10 days, and returned to the yard on account of breakdowns, for a period of three months for overhauling due to the poorly designed engines.

The L boats were but a trifle better.

The main trouble with the engines in the K and L types of boats was, as already mentioned above, due to the fact that they were of the two-stroke cycle of four-stroke cycle engines. The act that called for the building of the L called for the building of three 800-ton boats. It was decided to build them upon designs as follows:

the design of the Lake Boat Co. and the third upon the department's design. The latter was late in 1916. It was the first time, so far as I know, that the department had to provide and design completely a submarine vessel.

Between getting the submarine force in readiness for war before 1917 and 1917, there was very little that could be done to get submarines belonging to the United States in an efficient condition for any other purposes, on account of the unreliability of the designed engines.

In 1917, I received an order from the chief of operations, via commander in chief, for compliance, reading as follows:

NAVY DEPARTMENT,  
Washington, July 2, 1917.

Commander in Chief Operations to the commander in chief Atlantic Fleet.  
Submarine force, Bureau of Construction and Repair, Steam Navigation.  
Submarines on Atlantic coast for service in European waters.  
Prepare the department and prepare the 12 most suitable submarines on the Atlantic coast for service in European waters against German submarines.  
Perform all work and on all arrangements necessary to fit these vessels for transfer to European waters, and to maintain them there in active hostilities.  
The date tentatively assigned as the date when the expedition shall be in Europe.

My reply. Do you want me to read it?

CHIEFMAN. Yes.

GRANT. This is my reply.

SUBMARINE FORCE, ATLANTIC FLEET,  
U. S. S. "CHICAGO," FLAGSHIP,  
July 13, 1917.

Commander submarine force, U. S. Atlantic Fleet.  
Commander in chief U. S. Atlantic Fleet.  
Submarines on Atlantic coast for service in European waters.  
Department's letter to commander in chief Op-17-C dated July 2, 1917.  
Paragraph 14 of within letter.  
Submarines are in commission on the Atlantic coast:

| Submarine            | Engine  | Battery installed. | Oscillator. | Gun.     | Remarks.   |
|----------------------|---------|--------------------|-------------|----------|--|
| U. S. S. "Albatross" | 2-cycle | February, 1915.    | No.         | No.      | Used for instructional purposes, Officers' Submarine School, New London. |
| U. S. S. "Albatross" | do.     | January, 1915.     | No.         | No.      |  |
| U. S. S. "Albatross" | do.     | January, 1916.     | No.         | No.      |  |
| U. S. S. "Albatross" | 4-cycle | August, 1916.      | No.         | No.      |  |
| U. S. S. "Albatross" | do.     | do.                | No.         | No.      | Experimental purposes; of little military value.                         |
| U. S. S. "Albatross" | 4-cycle | February, 1911.    | No.         | No.      |  |
| U. S. S. "Albatross" | do.     | June, 1912.        | No.         | No.      | Do.  |
| U. S. S. "Albatross" | 2-cycle | do.                | No.         | No.      |  |
| U. S. S. "Albatross" | 4-cycle | August, 1912.      | No.         | No.      |  |
| U. S. S. "Albatross" | 4-cycle | July, 1917.        | Yes.        | No.      |  |
| U. S. S. "Albatross" | do.     | January, 1917.     | Yes.        | No.      | 3-inch gun being installed at navy yard, Philadelphia.                   |
| U. S. S. "Albatross" | do.     | July, 1917.        | Yes.        | No.      |  |
| U. S. S. "Albatross" | do.     | do.                | No.         | No.      |  |
| U. S. S. "Albatross" | do.     | do.                | Yes.        | No.      |  |
| U. S. S. "Albatross" | do.     | do.                | Yes.        | No.      | 3-inch gun being installed at navy yard, Philadelphia.                   |
| U. S. S. "Albatross" | do.     | do.                | Yes.        | No.      |  |
| U. S. S. "Albatross" | do.     | do.                | Yes.        | No.      |  |
| U. S. S. "Albatross" | do.     | September, 1916.   | Yes.        | 14 inch. |  |
| U. S. S. "Albatross" | do.     | April, 1916.       | Yes.        | do.      | Detection tests off Nahant.  |
| U. S. S. "Albatross" | do.     | March, 1916.       | Yes.        | do.      |  |

Philadelphia, navy yard, New York, will be ready as soon as better is installed.

2. It is from the above list of submarines that the 12 most suitable for European waters against German submarines are to be designated to the department and prepared for such service.

3. The department's order is being carried out, but it is well to consider before action is taken the following precepts or doctrine concerning war service of submarines in distant waters:

(a) No gas engine submarine should be sent away from the United States.

(b) No two-stroke (cycle) oil engined submarine should be sent away from the States if possible to avoid.

(c) No vessel not fitted with an oscillator should be sent away from the States.

(d) No vessel not fitted with a gun of not less than 3-inch caliber should be sent away from the United States.

(e) No vessel that can not submerge (flood tanks) in less than one minute, the time for the K boats is 1 minute 48 seconds, for L boats 2 minutes 23 seconds, averages are of best performances.

(f) No vessel with faulty periscopes which includes nonhousing.

(g) No vessel that does not carry fuel oil enough to make the trip across the Atlantic, taking into consideration that each vessel while en route must trim down its submerge daily, not only for drills but possibly for offensive or defensive work.

(h) No vessel under 800 tons displacement.

4. The D, E and G classes have no oscillators nor guns and with the exception of the two E's and G-3 have gas engines. These vessels may be excluded from the above list at once and consideration given only to the K and L type of submarines.

5. The 11 vessels (four K's and seven L's) are all equipped with two-stroke oil engines which in service lack sufficient reliability to warrant their use on war service. The four K boats have no guns, a 3-inch gun is being installed on the L-1, L-2, L-3, and L-4, while the installation is complete on the L-9, L-10, and L-11.

6. The table (par. 1) shows that new batteries have been installed on the L-9, L-10, and L-11, which have batteries that were installed during 1917 except for the L-9, L-10, and L-11, which have batteries that were installed last year. Each one of these vessels carry four tubes and eight torpedoes.

7. Orders have been given to expedite the completion of all repairs on the K-2, K-5, and K-6; L-1, L-2, L-3, and L-4; and L-9, L-10 by August 5 if possible in order that the crews may have 10 days for shakedown cruise to New London daily submergence trials thereafter.

8. The department is aware that the L-11 is equipped for and engaged in important tests in connection with submarine-detection work off Nahant, and given no order concerning taking this vessel away from this duty, which would completely stop all tests, leaving the department to decide whether this shall be done or not, as sufficient time will be had after Monday, July 16, 1917, to overhaul and complete work on the L-11.

9. In order to make a twelfth vessel as directed in paragraph 1, reference to the E-1 is therefore designated; attention is invited however to the fact that this vessel has neither an oscillator nor gun installed, and it is very doubtful whether these could be added to this vessel. The 12 vessels designated are: E-1, K-1, K-2, K-5, K-6, L-1, L-2, L-3, L-4, L-9, L-10, and L-11.

10. To transfer these vessels to European waters and maintain them there in an active and efficient service, the following plan is recommended:

#### FLOTILLA.

First division (tender *Bushnell*): First section—E-1, K-1, and K-2; second section—K-5, K-6, and L-1. Supply vessel Y.

Second division (tender *X*): First section—L-2, L-3, and L-4; second section—L-9, L-10, and L-11. Supply vessel Z.

*X* to be a vessel having quarters for 24 officers and 200 men, in addition to the vessel's own officers and crew; to have well-equipped machine shop; to have a room for ammunition and torpedoes; to carry fuel and lubricating oil in stores; to have spare parts for engines, etc., for six submarines.

*Y* and *Z* supply vessels: To be vessels of large stowage capacities with stowage and space for additional officers and crew if possible.

An expedition of this nature going abroad must be self-sustaining from the time they leave the coast of the United States for a period of not less than six months possible and practicable.

The two tenders and two supply vessels should carry for the 12 submarines, divided, about 3,500 tons of fuel oil, and 700 tons of lubricating oil.

including, ammunition, spares for engines, batteries, auxiliary machinery, tools, gyro compass each, periscopes, stock materials, raw materials for repair and gear for refueling submarines at sea.

must cover a period of six months.

and supply vessel should be fitted with towing gear for towing submarines

supply vessels should be armed with a battery of not less than four capable of all-around fire if possible.

the submarine service should be carried by these vessels and will man the vessels, while spare officers for submarine service would handle the vessels.

There are inclosed

to submarine force concerning "formations for cruising" which consist of three divisions, each division of one tender and three or four to these instructions are very flexible one tender or supply vessel and the submarines could form a group

signals for submarines, file 2642 F, March 31, 1917

file 2642-88-F, March 30, 1917, governs watches to be stood by supply vessels.

(d) Instructions regarding torpedo defense, etc., file 2710-S, dated April 8.  
 (e) List of spare parts, oil engines (blanks only). Date to be furnished—commander submarine force and Bureau of Steam Engineering.

15. Considering the facts concerning the 12 designated boats, principally:

(a) Unreliability of engines.

(b) All have fixed periscopes.

(c) Five of the 12 do not carry guns.

(d) *E-1* has no oscillator.

(e) Lack of habitability and radius of action. I am of opinion that should expedition arrive safely in European waters, the majority of the vessels would be up continually for repairs, as all of them have been except the *E-1* since being in commission.

Further, that the first contingent of United States submarines that should be considered for duty abroad are the eight O class of boats building at Quincy (O-10, inclusive).

16. These vessels (O boats) have the following characteristics:

Length, 172 feet; displacement, surface, 520 tons; oscillators, yes; guns, one 30 rounds; torpedo tubes, 4; torpedoes, 8; engines, 4-cycle oil E. B.; batteries, W. L. L., 29 Plante Peate; motors, electrodynamic; normal fuel-oil supply, 20,586 gallons; maximum fuel-oil supply, 20,586 gallons; lubricating oil, 1,185 gallons; water, 900 gallons; estimated radius at 11 knots, 3,000 miles; maximum radius at 11 knots, 6,000 miles.

These eight boats are on the building ways at Quincy and I was informed by the president of the Fore River Shipbuilding Co., Joseph W. Powell, that the O-10 will be launched August 15, and have her trials six weeks later—that the remainder will follow at intervals of a week or 10 days.

17. These O boats have some size and their four-cycle engines, all of the same, should prove immeasurably superior to the two-cycle engines of the K and L boats. The spare parts necessary would be interchangeable and greatly reduced in number as compared with spares for *E-1*, *E-2*, and *E-3*, five different designs; *K-5* and *L-11* of engines; *L-1*, *L-2*, *L-3*, *L-4*, *L-9*, *L-10*, *L-11*.

These vessels may do the work required but the K's and L's never. Even O boats would be no match for a German 800-ton vessel on the surface.

18. If the department decides to send the 12 above-mentioned boats to European waters, sailing August 15 or at a later date, I would recommend:

(1) That the tender X and supply vessels Y and Z be sent immediately to the yard, Philadelphia, to fit out and receive stores.

(2) That a paymaster with submarine experience be sent to the *Bushnell* and tender X.

(3) That urgent orders be issued to commandant, navy yard, Philadelphia, regarding the fitting out of these vessels.

(4) That urgent orders be issued to commandant, navy yard, Boston, Massachusetts, to complete all work, repairs, and overhaul to *L-9*, *L-10*, and *L-11*.

(5) That urgent order be issued to commandant, navy yard, New York, regarding repairs and overhaul of *E-1* and *K-1*.

(6) That urgent orders be issued to commandant, navy yard, Philadelphia, to repair and overhaul of *K-2*, *K-5*, *K-6*, *L-1*, *L-2*, *L-3*, and *L-4*.

(7) That all vessels, submarines, rendezvous at New London for 10 days' drill, date fixed for departure.

19. Attention is invited to the fact that the tenders accompanying these submarines are not provided with facilities for charging and boosting batteries, for air banks, or for providing pure distilled battery water, except the *Bushnell*. Above-mentioned facilities should either be provided on the tenders prior to departure or such facilities be provided at a base abroad.

20. Also, all experimental work with submarine *L-11* at Nahant must cease at

A. W. G.

The reliability of the submarines sent abroad may be understood better by reading the reports of commanders of flotillas upon arrival abroad. I have not got them. You will have to get them from the department.

The CHAIRMAN. Can you get them for the committee so that they can have them put into the record?

Admiral GRANT. I have not a solitary thing except from my memory. These are papers that I happen to have. I have not them from the department. That is, I have not all the reports. I have

Capt. Hart's report. He took the first five of those but there are other reports, which detail the troubles that were getting across, especially with reference to a gale they met off the Bermudas. One of them returned to Boston, one to Bermuda, and one or more of them arrived under power in the Azores. I have not the details, and do not know about that.

HURMAN. If you think it is important to put those reports next, please get them for us.

DE GRANT. They show the efficiency of the boats that were sent.

HURMAN. If you will indicate the numbers of the reports, get them from the department. You can get that later on.

DE GRANT. I will read this letter from Capt. Hart, dated Bushnell, tender, November 6, 1917:

[Confidential.]

U. S. S. "BUSHNELL," TENDER.

November 6, 1917.

Commander Submarine Flotilla Two.

Commander Submarine Force.

Re your message of the U. S. S. *Bushnell*, conveying U. S. S. *K-1*, *K-2*, *K-5*,

and in answer to Commander's letter No. 5484, of October 21, 1917.

In answer with reference, the following report is submitted:

U. S. S. *Bushnell* left Philadelphia Navy Yard, conveying U. S. S. *K-2*, on October 7, 1917, 6 a. m. The *K-5* had reported ready but was unable to get under way and had to be taken in tow within 3 miles. All three had been delayed in their preparations for sea because of the considerable delays in getting dry dock work. *K-2* and *K-6* ran to New London, Conn., satisfactorily, while *Bushnell* towed *K-5* the entire distance; smooth seas;

at New London, October 8, p. m. Submarine completing preparations for sea some training submerged. All were overweight, when full of fuel and were stripped of some equipment; took out deck anchors and chains, and deck rollers, miscellaneous small weights, and four torpedoes out of *K-2*, leaving including all K-class spares available; had their spare crankshafts, pistons, valves, spare cells, etc.; was full to capacity of fuel, oil, water, provisions, and dry supplies, and had the submarine compartment, torpedo and engine room full of K-class spares and equipment, and extra dry provisions and fuel. *K-5* lost 10 inches; her complement of boats was short by two 34-foot boats.

On October 9, p. m. *K-1* joined from New York Navy Yard. This submarine had just "thorough engine overhaul" at New York Navy Yard, had new torpedoes and engine attached to main engines, had her engines completely assembled before leaving the yard and was expected to be the most reliable submarine. She proved the least reliable. On October 10, 1917, Lieut. Commander Morrison of command of *K-5*; during the voyage *K-5* became second in reliability.

On October 11, *K-1*, *K-5*, and *K-6* got underway from New London, October 12, but were delayed four hours by fog. *Bushnell* towing *K-5*, speed 11. Proceeded into canal, cast off two and passed through, submarines following; *K-1* arrived east end of canal with both engines temporarily disabled. *K-5* and *K-6* to Provincetown and *Bushnell* towed *K-1* to the Provincetown wharf and joined the Commander Submarine Force, in *Chicago*. *K-1* requires repairs during night.

On October 13, 10:30 a. m., got underway with *Bushnell*, *K-1*, *K-2*, *K-5*, and *K-6*, with *Chicago*, latter towing *K-1* and *K-2*, the *Bushnell* towing *K-5* and *K-6*. Proceeded to Halifax; smooth seas entire distance, speed about 8; cast off two and entered harbor. *Bushnell* and submarines moored at the Wharf, October 15, 9 a. m. *Bushnell* escaped a serious accident by dropping an anchor when engine-room force failed to obey a signal. Filled submarine to capacity of water, gas, engine, and lubri-

October 25, disabled. *K-2* reported starboard engine ready and that repairs to port engine nearly completed. At 1.30 p. m. cast off *K-2* and picked up *K-1*; *K-1* under shifted at *K-2*. Proceeded as before, running steadily.

October 25, mid., to October 26, mid., proceeded as before, running steadily. Then took *K-5* in tow, lubricating oil nearly expended. Continued until *K-1* speed about 8, *K-2* and *K-6* zigzagging on bows, running one mile per hour. Landed at 7.30 p. m.

October 26, destination as above and moored *Bushnell* in the harbor October 26. Submarines moored alongside, in condition as follows:

*K-1*. Entirely ready for service, having run farthest of all of them—more than half of it in bad weather. She was at no time a source of worry or embarrassment to the *Bushnell's* protection by her continued patrol on the

harbor. Ready to run but consuming lubricating oil at an excessive rate, due to heavy piston head gaskets. Had run through all the bad weather, but port engine—mostly on starboard engine. Port engine is evidently all right and crank-shaft, however.

*K-2*. Arrived ready for service, having effected repairs but considered less reliable. Had run about 675 miles.

*K-3*. Arrived with both engines entirely disabled, having run about 550 miles. Had 2 working cylinders and pistons, one cracked scavenger-pump exhaust header, all scavenger valves badly burned and numerous other defects. Examination had been only partial and estimated time to effect repairs. Material and spares were available. The probable cause of most of the trouble was the increased back pressure caused by the exhaust at the New York Navy Yard.

*K-4*. The commander's only previous experience with submarines was with them in Hawaiian waters. Their engine reliability is such that they can usually run the last leg of this voyage within 8 days and have arrived in better condition than did the *K-1*, *K-2*, *K-5*, and *K-6*. Materially, the *K-1*, *K-2*, *K-3*, *K-4*, *K-7*, and *K-8* are about as they were completed, with alterations made by their own personnel to effect small improvements, but not properly developed. Of all the alterations made in *K-1*, *K-2*, *K-5*, *K-7*, and *K-8* are improvements but some are quite the reverse, and the effect has been more or less war-worthiness than are the other four. The funds expended in repairs appear to have been a little worse than wasted. However, *K-1*, *K-2*, *K-3*, *K-4*, *K-7*, and *K-8* are in material, quite capable of the duty they are now stationed to perform. They are now being upon their own resources and knowing they have the tools they have, will improve in efficiency. Good service can be expected from them.

October 26, mid., the commander, United States Naval Forces in European waters, reported that three submarines were ready for service. Found commander, United States Navy, in port whose orders placing him in charge of our activities. He reported to the Director Commander Division Four to report to him and submit recommendations as in touch with the situation.

October 26, 4 a. m., began unloading *Bushnell*, using the lighters and storehouse. Completed discharging at 9.30 p. m., and *Bushnell* sailed for Philadelphia on October 28, via southern route. Landed all of Fourth Division stores, including a considerable amount of supplies and approximately 500 men. Filled the submarine with water. Filled the storehouse with 1,250 gallons lubricating oil in gasoline drums obtained from the ship. No supply of fuel and oil had arrived.

October 26, 10 a. m., the submarine will moor to a sea wall on the inner face of the breakwater. The submarine will use arches in its harbor. These arches each have a concrete floor about 20 by 20 feet and are at one end; as soon as bearded up at the other they will be ready. The storehouse is across the harbor, in the city, and is not a particularly good place.

October 26, 10 a. m., the submarines intend to install themselves on the breakwater, build galley, and be as independent of tender as practicable. They will be about two days running up machinery and exercising, and in the meantime will be waiting for port in the absence of information concerning enemy submarine movements.

October 26, 10 a. m., the local officials may not be at all times satisfactory. As far as the local officials are not wrongly disposed but appear closely tied down by their duties. Perhaps the fact that there is quite a local element which openly sympathizes with the United States may influence the situation.

October 26, 10 a. m., the information concerning enemy submarine movements was of one of the submarines carrying 6-inch guns, which operated from vicinity of Madeira

northward, during first half of October; she evidently passed about 200 miles. It is considered that the first thing to be apprehended is enemy submarines attacking shipping in that harbor. The only reason they have not already made attack must be their fear of mines. But there are none and the enemy maintain that, or a submarine that has run its course and can't get home might be way of finishing his course mines or no mines.

As the *Bushnell* found the harbor, there were several ships into which a submarine could run torpedoes from outside the harbor entrance or could even enter at dark night without much chance of detection. Any submarine could enter several ships there at most any time, which would also ruin the harbor unless they were raised. The local officials are making a net; it is about 8-inch mesh but of weak fence wire; a torpedo would go through it as if it were paper.

If allied shipping is to make a considerable use of that harbor under our management it is emphatically recommended that we supply a strong torpedo net of the required length is relatively very short. There are lighters available to make a net gate; there will be required in addition to net, with its buoys and anchor, hand wrenches for opening and closing the gate. It will probably be more satisfactory, if the Government concerned will authorize it, for our forces to plant, maintain, and operate the net. Pending the installation of a net and while the harbor contains much shipping, I have given our S. O. P. in those waters my own opinion that our submarine's best field of operations is off the harbor entrance; at least there is information of enemy activity elsewhere in the vicinity.

22. *Bushnell* arrived at Philadelphia Navy Yard November 7, noon; returned via southern route. This route 350 miles farther than great circle course was taken to avoid northwest winds and get better weather for carrying out ship drills; countered considerable wind, all forward of beam. Held ship drills and conducted battle inspection. Fuel consumption was a little greater than the rather scanty amount on board indicated would be the case; economical speed is not yet known. Eventful voyage returning; sighted several merchantmen, including three steamers in company.

THOS. C. H.

Admiral GRANT. Of course during the period 1915 to 1917, there was a lot of correspondence entered into upon the subjects here mentioned, such as organization of the submarine flotillas, location of submarine bases on our coast, requirements of a standard submarine base, methods of inspecting submarines, submarine training, submarine mobilization, and various other related subjects.

The CHAIRMAN. What was the date of the trip you have just described?

Admiral GRANT. The date of this letter is November 6, 1917. I think you asked me something about plans in your previous question.

The CHAIRMAN. About what?

Admiral GRANT. Plans for war or something of that sort.

The CHAIRMAN. I asked you about the battleship situation, the general activities of the department with regard to this subject.

Admiral GRANT. I do not recall ever having received a plan from the Navy Department looking to the use of available submarines in this war. I did, however, plan to operate them from bases upon our coast. My particular efforts after taking command of the submarines in 1915 were devoted to getting the submarines afloat into operating conditions, and more particularly to getting submarines of proper tonnage and dimensions appropriated for. I was confident in my own mind that the war would continue for some time, and that we could within a reasonable period of time, 18 months, supply ourselves with submarine vessels of suitable dimensions and capabilities to meet our needs.

As Congress had appropriated in March, 1915 for 16 O boats and 2 seagoing submarines, which made 3 of the AA type, I found it very hard to get much real assistance so far as winning advocates for a larger and more efficient size type of boats was concerned. The opposition came from members of the General Board.

January, 1916. I was called before the House Naval Committee on a statement concerning submarines, and everything that I may be found on pages 1553 to 1678 of the report of the Committee on Naval Affairs, House of Representa-

tion. QUESADA. Can you give us a general idea of what you submitted to the committee at that time?

A. GRANT. Yes. It was from the members of this committee, the Naval Committee, that I received the first encouragement in building a submarine of not less than 800 tons surface displacement, except, of course, from those officers who were actually on submarines afloat.

I had constant touch with the Chief of Operations and the chiefs of the department concerning both personnel and material, and all were aware of the condition of the submarine force.

The situation was practically new, not only to the department, so far as the operation was concerned. I refer to the operation of the submarine, nearly 100 per cent of the officers and enlisted personnel were new.

The submarine is a highly technical instrument, it became necessary to get officers and men to meet the expansion of material that took place in March, 1916.

As a result of the establishment of a base and submarine school for officers and officers at New London, Conn., and the location of stations at other points upon the Atlantic coast.

In my remarks I have briefly set forth the submarine situation in the United States at the beginning of the World War. As I have previously stated, the only vessels we had in commission up to as late as 1916 were of the K type. The first of the L boats came in that year.

We did not have a submarine of the proper type and dimensions or properly trained for entering the World War, in my opinion; all this was largely due to want of education.

Q. KEYES. In order that I may understand your last statement, I am not sure I clearly understood you. Let me ask you a question.

A. GRANT. Had we any submarines in April, 1917, when we entered the war? In your opinion, were ready and suitable to meet the situation of the war?

A. GRANT. We had not.

Q. KEYES. We had none?

A. GRANT. We had none suitable for entering the war.

Q. KEYES. And when did you first begin to make recommendations for these larger boats?

A. GRANT. In 1915.

Q. KEYES. And you kept recommending from time to time to the committee that they build larger boats?

A. GRANT. Yes; I talked to everybody that had anything to say. I talked to the members of the General Board, and every member of the Naval Committee, and members of the Bureau of Construction, and of the Bureau of Steam Engineering, and officers in the department.

Q. KEYES. Did you receive any support from the department?

A. GRANT. No; I did not.

Q. PITTMAN. Did you receive any report from anywhere?

A. GRANT. Any report?

Senator PITTMAN. Any support, from anywhere?

Admiral GRANT. From the House Naval Committee.

Senator PITTMAN. That is all.

Admiral GRANT. One officer in the General Board assisted; he can not recall anyone else in Washington.

Coming to the battleship force, I assumed command on August 1, 1917, shortly after the reorganization of the fleet. This force consisted of 17 battleships assigned to four divisions, as follows:

Fourth Division: *Minnesota, Louisiana, Kansas, New Hampshire, Minnesota*, flagship.

Third Division: *Virginia, Rhode Island, Georgia, New York, Nebraska*.

Second Division: *Missouri, Maine, Ohio, Wisconsin*.

First Division: *Alabama, Illinois, Kentucky, Kearsarge*.

We have no records to refer to, but as near as I can recall, on August 3, 1917, there were two or three of these vessels that had just joined the force. The fleet had been recently reorganized and some of the vessels forming battleship force one were placed in full commission from having been in reserve. These missing vessels had been reported for duty from the navy yards. The material condition of these vessels was not good. This subject will be referred to later.

I am unable to quote the department's order concerning the primary and secondary missions of battleship force 1. My impression now is that in August, 1917, the primary mission of battleship force 1 was to prepare for and maintain itself in a state of readiness for war and the secondary mission was the training of personnel. This policy was later changed so that the primary mission of battleship force 1 became the training of personnel, with the ultimate aim to fit itself for battle. Although sadly in need of urgent repairs, none of these vessels were permitted during 1917 and the winter of 1917-18 to visit a navy yard for a longer period than 10 days, which time they were supposed to dock, have their bottoms cleaned, check sights, have performed other urgent work, and were ordered to effect repairs upon all material requiring it. In the major cases letters and correspondence concerning the numerous repairs for any of these vessels had either not been acted upon or were awaiting the arrival of the vessel at the yard for an inspection, examination, planning and estimates, approval, and orders for execution of the work. Obviously nothing was accomplished at the navy yards toward the upkeep of the vessels in question beyond routine docking work.

The commander in chief wrote the following order, file 3719, December 3, 1917, concerning the Atlantic Fleet in home waters.  
File 3719.

UNITED STATES ATLANTIC FLEET,  
U. S. S. "PENNSYLVANIA," FLAGSHIP  
December 3,

From: Commander in chief.

To: Atlantic Fleet in home waters.

Subject: Readiness for distant service.

Reference: (a) Fleet regulations, article 4.

1. Under present conditions it is possible that any unit of the fleet now in home waters may be called upon for distant service without previous warning.
2. Commander in chief desires that all units of the fleet shall be maintained in such condition that it will be practicable to proceed on distant service at any time after filling up with fuel.

and unnecessary hardship, officers and men should so arrange their private affairs that warning will be necessary in case of orders to distant service. When units of the fleet proceed to sea, commanders of units shall ask themselves the question:

"Am I under my command in such a condition of readiness that if orders are received on distant service no further communication with the United States is necessary?"

Commanders of all United States vessels shall take the initiative in carrying out this policy.

H. T. MAYO.

January 25, 1918, file 13, the commander in chief addressed the Fleet in home waters concerning the Navy Department's policy concerning repairs:

UNITED STATES ATLANTIC FLEET,  
U. S. S. "PENNSYLVANIA," FLAGSHIP,  
February 25, 1918.

Commander in chief.

The Fleet in home waters.

The Navy Department's policy concerning repairs.

The Navy Department's letter No. Mat-T-M1 20778-246, of February 12, 1918, and C. in C.'s letter to Atlantic Fleet in home waters, file 3719, of January 19, 1918.

For information and guidance of the fleet, there is quoted below reference (a), the policy of the department with regard to repairs to ships.

(a) *Less Island.* Request for repairs and inspection report.

(b) Letter of commander Division 3, battleship force 1, to commander Atlantic Fleet, file No. 69, January 27, 1918. (c) Letter of commander battleship force 1, file No. 812-33, January 28, 1918, and end. (d) Letter from commander battleship force 1 to commander battleship force 1, file No. 69, January 28, 1918.

(e) Letter from C. in C. to C. N. O., file 426, January 29, 1918. (f) Letter from C. in C. to Sec. Nav., file 426, January 21, 1918.

(g) Statements contained in the letters of commanders, battleship force 1, and it appears that there is not a proper realization of the importance of the inspection. As carried out, it would appear to be a very superficial inspection and not a real information as to the ship's condition. In the letter of the division commander it is stated:

"In regard to all items which would call for detailed examinations, it is apparent that these could be covered in the admiral's inspections in most cases only by the presence of the ship's personnel."

It is to be noted that such source of information is disregarded, the department understands the disregard of a source which would give the best information. The department depends on these reports for information as to the readiness of ships for any service, and reports which cover her readiness for service on a standard prescribed by the force commanders and the department knows nothing are of absolutely no value.

The department does not consider that lack of knowledge of its policy in the use of ships is any doubt as to what should be the ship's condition. The department and force commanders should be to keep the ship in readiness for service and this should be the standard on which material reports are founded.

The standard the department is not in position to use ships to carry on the inspection to perform by its policy. This tendency to lay faults to lack of knowledge of the department's policy is manifest throughout and can not in any way be a reason for misleading reports.

In the letter of commander, battleship force 1, it would appear that too much is placed on standard fixed by various yards as to what repairs were made.

The yards are not to fix such standards. The ship's personnel are, or should be, familiar with the needs of the ship and their standards should govern.

The knowledge as to conditions forces the yards to set standards, but the department is not to whether or not a cylinder needs boring without going to a yard and having a man caliper it for them. The department holds the ship, not the yard, for her material condition, and when differences arise as to the necessary work the department will make the decision on hearing both sides, but

the ship must present better information than they would appear to possess from the spirit of the letters referred to indicate what they are now expected to have.

"4. The *Rhode Island* was sent to the navy yard, Boston, October 3, 1916, and remained there until March 6, 1917, a period of 154 days, and it is evident that she left the yard in a poor state of repair, as the deteriorated condition revealed by her repairs can hardly be due to her 11 months' service.

"5. The department did away with the 'overhaul period' as it considered a considerable amount of unnecessary time was being taken at the yard, that the time was for ships to let repairs go, pending arrival at the yard, and not fully use the ship's facilities for upkeep. The department did not intend to keep ships at the yard when in need of repairs and can not understand how its policy can be considered a reason for ships not reporting their actual material condition. It only intended every possible effort be made to keep ships away from the yard and on work being assigned to that necessary for military efficiency. The department realizes its responsibility in the matter of sending ships to yard for repairs, but must insist on the part of the fleet responsibility in keeping the department fully informed, in having accurate information of conditions, in eliminating all work except for military efficiency, and in making every effort to doing work with fleet facilities.

"JOSEPHUS DANIEL

2. It is desired to emphasize the importance of keeping proper officials informed of the need for repairs, through channels provided for that purpose by the Navy Regulations, i. e., "Quarterly report of material readiness for active war," "Availability reports," "Reports of necessary work beyond the capacity of the ship's force," "Requests for repairs," etc.

3. It is also desired to emphasize the importance of the ship's force, carrying out their own repairs wherever possible.

H. T. M.

I read that letter because it has reference to repairs on the *Rhode Island* and calls attention to the fact that she was 154 days at the navy yard, until some time in 1917, and yet was completely ready for repair.

Her sister ship, the *New Jersey*, was in exactly the same condition. In fact, most of the vessels of the division were.

A board of investigation was held in connection with the *New Jersey*, which lasted a period of two or three months. I have not a copy of the report of that board—only from memory.

During the time from August, 1917, until the spring of 1918, the command repeatedly tried to get these ships to the yard here to effect repairs, before the 10-day limit was the order.

In April, 1918, the 10-day schedule for docking and repairs of vessels of battleship force 1 at the navy yards had been completely broken far as those vessels are concerned; but as little or no work had been accomplished upon the ships in question, the commander of battleship force 1 addressed the following letter to the commander in chief of the fleet [reading]:

UNITED STATES ATLANTIC FLEET,  
BATTLESHIP FORCE 1,  
U. S. S. "MINNESOTA," FLAGSHIP,  
April 18, 1918.

From: Commander battleship force 1.

To: Commander in chief.

Subject: Preparing ships for distant service.

References: (a) C. in C., file 3719, dated December 3, 1917. (b) Opnav 1, dated November 7, 1917. (c) C. B. F. 1, let. 2690-153 of April 17, 1918.

Inclosure: Copy of reference (c).

1. In compliance with reference (a) ships of this force have submitted lists of repairs and alterations which would be necessary to fit them for distant service.

2. In many cases these alterations though not very extensive will require approximately 30 days at a navy yard to properly complete them.

enter here, which is not in the letter, that these alterations and removal of certain intermediate batteries, for their own efficiency, contained in the repair. [Continuing reading:]

The schedule was arranged on the basis of 10 working days and important major items of work have not been accomplished, as there was no time available to warrant the yard's undertaking the work and ships of the fleet left the yards with work undone, the completion of which must be secured to insure a material readiness for distant service.

The fleet at present engaged as a primary mission in training, with an ultimate object for battle.

The fleet directs to that end it shall maintain a permanent nucleus battle complement of officers and men sufficient to keep the material in constant readiness and to permit rapid preparations for battle when battle complement is

deficient in their material readiness for battle as indicated in reports submitted by them to which reference was made in above paragraphs. When these repairs and alterations are made they will, when a battle complement is only be deficient from a point of view of material but they will have to go to navy yards for these repairs and alterations which is of inestimable value which should be, and which reference (b) should be directed to training the crew for battle.

The great military importance of this question, and to the serious consequences which may follow any misunderstanding on the part of the department in connection with the material readiness of these ships for action, I consider it fitting to bring the matter to your attention.

It would appear to be one of policy to be decided by the department, that necessary changes and alterations have been forwarded from time to time, three months after these changes have been made to train a battle complement can not be accomplished while ships are at a navy yard.

The object of this letter merely to present these facts in view of the expressed policy of Naval Operations quoted above which clearly indicates an object that these ships can, on receipt of a battle complement, immediately be directed to training, as the primary mission.

To permit it is recommended that in the order found necessary on a fleet of ships of this force be sent to navy yards to complete the repairs and necessary to prepare them for distant service, so that when their service is necessary all of the time may be devoted to training their new crew for

has been addressed to ships of this force for the purpose of obtaining a list of all work which will be necessary before being ordered on duty. A copy thereof is forwarded herewith for information.

In view of these reports, material inspection of ships will be held as found necessary all of the time may be devoted to training their new crew for

A. W. GRANT.

On 25, 1918, the commander in chief forwarded the letter to the Chief of Operations: First indorsement, "Forwarded, as follows:

[First indorsement.]

APRIL 25, 1918.

Commander in chief.

For information.

For the fleet for distant service (letter of combat for one).

For the fleet - letter No. Mat T M1 20778 246 of February 12, 1918, re: Request for repairs and inspection report.

For the fleet.

For the fleet is invited to paragraphs 10 and 12 of the attached letter. As the correspondence concerning work necessary for distant service, the fleet recommends that such work be done as early as is practicable, in accordance with the department's policy as expressed in reference (a).

H. T. MAYO.

Following the writing of this letter I interviewed personally the Chief of Operations and suggested the holding of a conference at the Navy Department. As a result, this conference was held, as directed in the following letter:

NAVY DEPARTMENT,  
OFFICE OF NAVAL OPERATIONS  
*April 25,*

From: Chief of Naval Operations.

To: Bureaus of Navigation, Steam Engineering, Construction and Repair, Ordnance, Commander in chief, Atlantic Fleet; commander battleship force 1; commander battleship force 2; commandant navy yard, Boston; commandant navy yard, New York; commandant navy yard, Philadelphia; commandant navy yard, Norfolk.  
Subject: Battleships—schedule of navy-yard work.

1. The present material condition of vessels of battleship forces 1 and 2 is to be in general very good; and this condition may be expected to be maintained. However, there has been an accumulation of authorized new installations and deferred extensive repair work that must be undertaken to bring these vessels to the highest state of readiness for battle.

2. To undertake this work and carry it out most efficiently, a general estimate of the situation is necessary, in order to lay down a general plan and schedule of work. There must be a definite list of work to be undertaken on each vessel. Preparation of plans and the assembly of material must be completed before the vessels are sent to the navy yards to begin the work.

3. It is desired that these matters be fully discussed in conference of officers representing the Office of Naval Operations and the material bureaus of the Navy Department, the United States Atlantic Fleet, and the navy yards, Boston, New York, Philadelphia, and Norfolk. The conference will be held at 9 a. m., Tuesday, May 7, 1918, in the office of operations—material, Navy Department. Officers to be present from the navy yards and the fleet will be nominated upon receipt of this letter, and their orders will be submitted to the Bureau of Navigation.

4. It is of the greatest importance that officers attending the conference be prepared to comment on all matters presented for discussion.

W. S. BRADLEY

On May 7, the commander of battleship force 1, met in conference at the Navy Department with representatives from the navy yards at Boston, New York, Philadelphia, Norfolk, Bureaus of Construction and Repair, Steam Engineering, Ordnance, and from the material section of the office of the Chief of Operations. So far as concerns repairs to vessels of battleship force 1, every item was considered, and a time estimate for the completion of the work upon each vessel was made, and the order in which the vessels were to be received at the navy yards was tentatively decided upon.

The two following letters show the schedule for the overhaul of 10 battleships at the navy yard, Philadelphia, and 7 vessels at the navy yard, Boston.

3363-132-D.

UNITED STATES ATLANTIC FLEET,  
U. S. S. "MINNESOTA," FLAGSHIP,  
*Base 2, May 12,*

From: Commander, battleship force 1.

To: Commandant, navy yard, Philadelphia.

Subject: Tentative schedule for overhaul of vessels of battleship force 1.

1. The following table shows the tentative schedule for overhaul of vessels of battleship force arranged by the navy yard, Philadelphia, Pa., May 7, 1918, following conference at Navy Department:

*Vessels of battleship force 1, home yard, Philadelphia, Pa.*

| Comb. | Tentative schedule arranged by navy yard, Philadelphia, May 7, 1918.                         | Vessels.   | Tentative schedule arranged by navy yard, Philadelphia, May 7, 1918.                               |
|-------|--|--|--|
| 1st   | May 29-June 20.<br>June 5-July 24.<br>June 12-Aug. 1.<br>June 12-Aug. 7.<br>June 28-Aug. 14. | Louisiana.....<br>Missouri.....<br>Maine.....<br>Ohio.....<br>Wisconsin..... | July 31-Sept. 11.<br>Sept. 2-Oct. 28.<br>Sept. 9-Oct. 28.<br>Sept. 16-Nov. 4.<br>Sept. 23-Oct. 31. |

returning to the fleet, and after consultation with the commander in board necessary to request the yard to alter this schedule, principally in time of arrival of vessels of this force at the navy yard. The following is the schedule, and comment is requested:

*chedule of time for overhaul of vessels, submitted by commander battleship force 1, May 12, 1918, to commandant navy yard, Philadelphia.*

|     | Number of working days     | Beginning and end of overhaul period.  | Ship.  | Number of working days.    | Beginning and end of overhaul period.   |
|-----|----------------------------|--|--|----------------------------|---|
| 2nd | 40<br>45<br>40<br>35<br>50 | June 6-July 27.<br>June 12-Aug. 8.<br>June 26-Aug. 18.<br>July 28-Sept. 10.<br>Sept. 2-Nov. 2. | Kansas.....<br>Maine.....<br>Minnesota.....<br>Ohio.....<br>Wisconsin..... | 20<br>40<br>40<br>40<br>30 | Sept. 9-Oct. 3.<br>Sept. 18-Nov. 7.<br>Oct. 1-Nov. 19.<br>Oct. 5-Nov. 25.<br>Oct. 23-Nov. 30. |

principal change appears with vessels of the fourth division, moving the *Minnesota* to later dates.

It will be impossible to carry out departmental orders if we follow the dates in the yard's schedule.

It would also seem desirable to lengthen the interval between the time of repairs of any division at the yard. No change is made in the time for the departure of the *Alabama* and *Illinois*, vessels of division one.

Reviewing the list of repairs on the various vessels, I find that there is with every ship some one controlling item that limits the period of time that it is at the yard undergoing overhaul, and it would seem at present that the most material inspection of these vessels will have the effect of possible reduction of time of work on these vessels rather than shortening the overhaul period.

A. W. GRANT.

BOSTON NAVY YARD,  
OFFICE OF THE COMMANDANT,  
May 11, 1918.

contact navy yard, Boston, Mass.

subject battleship force No. 1.

battleship force No. 1, repairs.

result of conference at the department between representatives of this force and the various bureaus concerned, and of battleship force No. 1, the following for repairs to battleships having Boston as home port, is submitted:

|       | Days required for repairs. |
|-------|----------------------------|
| ..... | 45                         |
| ..... | 30                         |
| ..... | 30                         |
| ..... | 30                         |
| ..... | 30                         |
| ..... | 35                         |
| ..... | 30                         |

2. It is recommended that the *Georgia* arrive at this yard on May 15, 1918, and that the other vessels come here in the order named, so that each ship to arrive about 10 days before the date set for completion of repairs to the ship in precession.

[First indorsement.]

W. R. E.

MAY 15

From: Commander battleship force 1.

To: Commander in chief.

1. Forwarded.

A. W. C.

These vessels required from 30 to 50 working days for necessary repairs to place them in condition for effective service. An order from the department concerning repairs to battleship force 1 is quoted herewith:

NAVY DEPARTMENT,  
Washington, June 1, 1918.

To: All bureaus; commander in chief, Atlantic Fleet; commander, battleship force 2; commandant, navy yard, Boston, New York, Philadelphia, Norfolk.

Subject: Battleships, schedule of navy yard work.

References: (a) Commander in chief's letter No. 9-C1 (15/6), June 1, 1918.

(b) Departmental letter 28577-104, June 1, 1918.

1. The following repair schedule of battleship forces 1 and 2, submitted by the commander in chief in reference (a), is approved.

| Ship.  | Working<br>days. | Period.       |               |
|--|------------------|---------------|---------------|
|  |                  | From—         | To—           |

JOSEPHUS DANFORTH

Most all of these estimated periods of time for completing the repairs were too short and had to be increased.

I am unable to quote from correspondence concerning the condition of vessels of battleship force 1 previous to 1917 as I have only briefly stated their condition as I found them. In one instance, however, an investigation was held concerning the material condition of the *New Jersey*. The board in this case made a careful investigation as to the reasons why the *New Jersey* required so much work done upon her. I think the *New Jersey* was placed in reserve

at Boston, in 1915, where little or no work was done upon the vessel took part in the militia cruise in 1916 and was then at navy yard, New York, and became the receiving ship—*Neptune*. She remained at the New York yard from about October 1916, to May, 1917. During this period practically no work was done upon her.

One of the board of investigation referred to above also saw the *Rhode Island*. The material condition of this vessel was that of the *New Jersey*. As mentioned in the department report of February 12, 1918, to the commander in chief, paragraphed above, the *Rhode Island* was sent to navy yard, October 3, 1916, for repairs and remained there until March 1917 (period of 154 days). Her material condition on August 20, 1917. To summarize the material condition of vessels forming the force in August, 1917, was not good.

Whether a single one of these vessels could have remained in service in August, 1917, had they received a serious underwater body at that time.

I am making a conservative statement when I say that few, if any, bulkheads in any one of these vessels that was not water-tight. They had all been pierced for electric steaming tubes, water piping or steam piping, or for other things. In the days of their construction, due to alterations having been made in the interior fittings in the ship and the holes made in the bulkheads throughout the vessels. The work of plugging these holes and placing the compartments under an air-tightness was undertaken and accomplished by the ship's force. Work has been made regarding the removal of the 7 and 8 inches from vessels of the *Connecticut* and *Virginia* classes of 1906. These were not removed until the latter part of the year 1917.

MR. GRANT. What measures did you take to get these ships ready to find that they were not in proper condition?

MR. GRANT. I tried to get them to the navy yards, but was unable to do so for periods longer than 10 days during 1917 and the first 1918.

MR. GRANT. And the 10 days in a navy yard would have been any case?

MR. GRANT. Except to overhaul and scrape their bottoms, it has been absolutely impossible to undertake any work on them.

MR. GRANT. Did you bring up the question of material readiness of the vessels in May or June, 1918?

MR. GRANT. Yes; I talked with the Chief of Operations, and instrumental in having him order this conference at the department which consisted of representatives from the Bureaus of Engineering, Construction and Repair, and Ordnance, to be in conference with officers representing the machinery and hulls of the navy yards at Boston, New York, Philadelphia, and to meet also in conference with representatives of the commander in chief, Admiral Mayo, and from the staff, consisting of the force engineer and force ordnance

The CHAIRMAN. That is the conference to which you have referred?

Admiral GRANT. That is the conference to which I referred.

The CHAIRMAN. And after that conference were steps taken?

Admiral GRANT. After that conference the department arranged the repairs as I have stated, giving the number of days' work, arranged with the yards the order in which the vessels were to be sent to the yards.

The CHAIRMAN. If the German fleet had succeeded in coming out and defeating the British fleet, would your fleet have been in efficient condition to meet them before that conference?

Admiral GRANT. In 1916?

The CHAIRMAN. In 1917.

Admiral GRANT. In 1917 we would have gone out and done the best we could, but it would not have been very much. We would not have had the personnel.

The CHAIRMAN. You did not have the personnel?

Admiral GRANT. We did not have any trained personnel in 1917. Let me add a little there.

The CHAIRMAN. Will you make a statement to the committee as to the condition of the personnel in your belief when you first took command?

Admiral GRANT. As I stated, the secondary mission early in 1917 was training. The only vessels that were doing any training amount to anything then were vessels of the first and second divisions. Eight vessels that were engaged entirely in training men of the Engineer force, oilers, engine drivers, firemen, men of those forces. All other vessels of the force and of the fleet, too, had begun to do so, and the number of men that were to be delivered by each one of the ships of battleship forces 1 and 2 were laid down, but we did not meet with very much success, and I do not think that any vessels of battleship force 2 did any training after I went to command except to take a certain number of men and train a unit of about 70 men, forming the turret crews and handling crews for vessels that were building, like the Idaho and New Mexico.

Battleship force 1 undertook then the training of petty officers of all rates, and on September 1, 10 days after I took command, an order was issued which covered the training of the enlisted personnel on all ships except those of divisions 1 and 2. We had been covering every rate of petty officer.

The CHAIRMAN. Schools on battleships?

Admiral GRANT. Yes; and we were required to turn out a certain number of men in these ratings periodically—boatswain's mates, gunner's mates, yeomen, coxswains, quartermasters, signalmen, radio electricians, carpenter's mates, shipwrights, shipfitters, plumbers and fitters, blacksmiths, pharmacists, storekeepers, stewards, and bakers.

This order, which I have here, covered that detail. I have another copy of it. It is No. 665-75, dated September 1, 1917, issued by commander, battleship force 1, to the force under my command.

In addition to that training, we began early training the guard crews which manned the merchant vessels fitted with two guns for antisubmarine work. Each one of the vessels of

me 1 except vessels of the first and second division had 150 on board: young men who came from the interior, who had seen a ship or salt water, were placed in the division known as the guard division, drilled and trained by two officers for a period of four weeks.

CHAIRMAN. Were those extra men or were they a part of the complement?

SEN. GRANT. They were all extra men; had nothing to do with the complement. At the end of four weeks they carried out target practice every day and night, and if successful the units were transferred to the men singly, but the entire unit, 8 men forming an armed crew, 2 crews to a ship, with a petty officer in charge, 17 or 18 men. They had to go as a unit, because, like a football team, you could not take out one man and ship him here and another one there.

CHAIRMAN. What were the petty officers who were put in charge of these units?

SEN. GRANT. They were men who were trained with the men for the particular purpose of taking charge of the armed guard crews.

CHAIRMAN. New men that you would train?

SEN. GRANT. Yes; men that we had trained.

CHAIRMAN. Did they not take some of your petty officers?

SEN. GRANT. No, sir; we had to retain some few of our petty officers in order to carry on our work. We could not dispense with them.

CHAIRMAN. But they took some of them?

SEN. GRANT. We took men that we had trained for the business.

CHAIRMAN. These men that you trained in the various schools, were they a part of the ship's complement?

SEN. GRANT. They were not a part of the ship's complement. The complement of the *Minnesota* type of vessel has approximately between 900 and 1,100 men.

CHAIRMAN. And how many did you have on board in all?

SEN. GRANT. We had on board most of the time from 1,300 to 1,400 men.

CHAIRMAN. Were the ships' complements full September, 1917, on the various ships?

SEN. GRANT. We had probably a great many more men than the complement of the ship's company, but we had but very few trained men.

CHAIRMAN. They were not trained men?

SEN. GRANT. Not at all.

CHAIRMAN. So that you did not have a trained personnel on your battleships sufficient to properly carry out the purposes for which they were intended?

SEN. GRANT. We had not the trained personnel, neither men nor officers, on any ship that I was attached to or had anything to do with.

CHAIRMAN. That was the condition in September, 1917?

SEN. GRANT. Yes, sir.

CHAIRMAN. In what condition were the ships as to ammunition in September, 1917?

SEN. GRANT. The condition of the ships as regards ammunition was good. That question may be due to the fact that I had something about removing certain guns.

The CHAIRMAN. Certain guns were removed for the armed ships, were they not?

Admiral GRANT. Oh, yes; yes, to the betterment of the ship. We removed all of the 3-inch batteries from all of the vessels, on the lower decks, and sealed the ports. The only antisubmarine guns of that caliber were high up, where we could see the submarine and fire in any seaway. The other guns that were removed from the ships, *Virginia*, *Connecticut*, and *Louisiana* were 7.6 inch guns on the lower decks, which could not be fought in any kind of a sea. However, this was not a question which came up during the war. It was a thing that had been known for 10 years. Ten years ago certain officers tried to get those guns off the vessels and seal the ports, as being entirely useless on that type of vessel. We managed to get an order sometime in 1918, I think.

The CHAIRMAN. In what condition was the personnel of the ships in regard to operating the guns, when you took command?

Admiral GRANT. Well, they needed a great deal of training. I had just come from reserve, and there were no full crews in any of the vessels, who were trained, in any of the turrets.

The CHAIRMAN. There were no full crews?

Admiral GRANT. No; no trained crews.

The CHAIRMAN. Were you given any plans to guide you in that battleship force 1 was to take in the war, when you took command?

Admiral GRANT. I mentioned that my primary mission at the beginning of the war was to prepare for battle, and a secondary mission, of training. I think that referred to the fact that one of the force divisions 3 and 4, nine ships, were training simply for officers.

The secondary mission referred to, training, referred particularly to divisions 1 and 2, the older type of battleships, that were engaged in training men for the engineer force. Those vessels carried approximately 300 men under training for these different engineer rates and lasted for a period of six weeks, one half coming at the end of the weeks, and half leaving.

Later in the war, when the nine vessels of divisions 3 and 4 were engaged in training the armed guard crews and petty officers and commissioned officers, I may add—the entire mission of battleship force 1 was changed so that its primary mission was training and its ultimate mission was to prepare for war.

The CHAIRMAN. But you were not given any general battle plan for the fleet?

Admiral GRANT. Nothing beyond that. I was fully aware—no, in the sense you mean; no. I do not think it was necessary, had it been.

The CHAIRMAN. In the case of the battleships you were under Admiral Mayo, commander in chief of the Atlantic Fleet?

Admiral GRANT. Yes.

The CHAIRMAN. So that any report you would have made would have been made to him?

Admiral GRANT. Yes, sir.

The CHAIRMAN. In the case of the submarines, under whom were you?

Admiral GRANT. I was under the commander in chief, the fleet, although the commander in chief in the winter might be down

1918. I wrote to the department direct, but I kept up communication to the commander in chief.

CHAIRMAN. But you could take matters up with the department.

MR. GRANT. Yes.

CHAIRMAN. Did you take the submarine question up with the Chief of the Navy personally?

MR. GRANT. Yes, sir.

CHAIRMAN. Did you get any satisfaction from the Secretary of the Navy?

MR. GRANT. The Secretary of the Navy—no one in the department in any such submarine as I wanted; no.

CHAIRMAN. He would not listen to your plans?

MR. GRANT. Oh, well, he would listen; but I got no assistance.

CHAIRMAN. Did you take the matter up with the Chief of the Bureau of Operations?

MR. GRANT. Admiral Benson; yes, sir. He was opposed.

CHAIRMAN. He was opposed to your plan?

MR. GRANT. Yes, sir.

CHAIRMAN. When the war broke out with Germany, Germany had submarines of the type that you wished to see the American Navy have?

MR. GRANT. Yes, sir.

CHAIRMAN. In large numbers?

MR. GRANT. I am unable to tell you the number she had. I cannot. I do not recollect now. She had a large number.

CHAIRMAN. By that time was it known that submarines were used against submarines?

MR. GRANT. There is no secret in that. Certainly.

CHAIRMAN. Admiral Sims' testimony showed that the plan was first adopted, but during the war it turned out that that was the most serviceable way of destroying submarines.

MR. GRANT. Yes, sir.

CHAIRMAN. Was that plan considered while you were in charge of the submarines?

MR. GRANT. No plan of that nature was considered; no, sir. Nothing to meet a German submarine; did not contemplate the vessels we had in commission, as late as 1917, away from the coast. They were only fit to operate from a base here, and for a few hours only. They were totally unreliable, absolutely. I considered sending those vessels abroad was a question of putting them in the hospital as soon as they got over there, and to repair them where they were ill prepared to do such work.

CHAIRMAN. That is, such as we had at that time?

MR. GRANT. Which we sent over; yes, sir.

CHAIRMAN. But if we had had larger submarines, we would have been able to send them over?

MR. GRANT. Yes, sir.

CHAIRMAN. And they would have been of use?

MR. GRANT. Yes, sir; they would.

CHAIRMAN. Was there any regular plan of the department for the use of submarines in the war, that you know anything

Admiral GRANT. Not that I am aware of; until I got that from the department directing me to pick out several vessels and send them over.

The CHAIRMAN. That was the first you knew of?

Admiral GRANT. That was the first. I did not know where we were going to, either; that is, the particular place or port. It was, of course, immaterial so far as I was concerned.

The CHAIRMAN. And you reported to the department that the plan was unfeasible?

Admiral GRANT. Not that the plan was unfeasible.

The CHAIRMAN. With the ships you had?

Admiral GRANT. That I would not acquiesce in sending vessels abroad, because I did not think they were fit for the purpose and I have no doubt, and I believe, some of them did do good over there, but it was at a tremendous cost of men and money. If our efforts had been devoted earlier in the war to obtaining proper type of submarine, and taken control of the matter, we would have had long before 1917 or 1918, a suitable type of vessel, but the fact that we had no vessels, as I say was largely due to ignorance on the part of everybody, myself included as well as everybody else. Why, we went out and ordered submarines from a contractor the same as you would go and buy apples from a man on the sidewalk. If he had some green apples you would take them. If they were red you would take those—anything he had; and the years given in that table, the years of the appropriations, show we bought some boats from 1900 to 1904 and then some in 1905 and then some in 1908. There was no plan. We did not have one. We did not understand the submarine question on this side of the Atlantic, at all.

The CHAIRMAN. But, in spite of that, you tried to ameliorate the conditions?

Admiral GRANT. Yes; we tried to get more.

The CHAIRMAN. Immediately after you took command?

Admiral GRANT. Yes, sir; early in 1915.

The CHAIRMAN. When did you first make known to the department the condition of our submarine force?

Admiral GRANT. I think the department made known to me the condition of the submarine force when they sent for me in May, 1915.

The CHAIRMAN. When they put you in command?

Admiral GRANT. Yes, sir. I think the department was perfectly well aware of the inefficient condition of the vessels of the entire fleet.

The CHAIRMAN. And immediately thereafter you tried to make changes made that would have improved matters?

Admiral GRANT. Yes, sir.

The CHAIRMAN. And those changes were not made?

Admiral GRANT. I could not get the department or anyone else to build these larger types. They were too conservative, and we had to stick to something smaller, especially members of the General Board. And as late as 1913, as I told you, they stepped back and provided for these little N boats; because they were perfectly safe, in my opinion, to operate at sea away from a base more than a few miles.

The CHAIRMAN. And you wanted the larger type boats for coast defense?

ADM. GRANT. I wanted the larger type boat for submarine work; but make any difference whether for coast defense or sea, or else. Just leave that part out—the coast defense.

CHAIRMAN. And you thought we ought to have a number of boats?

ADM. GRANT. Yes.

CHAIRMAN. So that we could compete with the enemy?

ADM. GRANT. Yes, sir.

CHAIRMAN. What was the condition of the personnel of the force while you were in command?

ADM. GRANT. We only had such personnel as would man those boats that were in commission in 1915, as I mentioned. They were men—the enlisted personnel, gunners' mates, engineers, electricians—who went to these vessels and were attached to them for a period of not less than six months, until they were capable of occupying a responsible position. Officers who were sent there were there from three to six months, picking up such work as they did; they only knew from the practical work of a submarine, no practical experience. They had very little knowledge of the work.

And that was the reason that in 1916 the department assembled in establishing the school, and I was allowed to go to New York, and I managed to get, in the Bureau of Navigation, 25 of the first class and 50 for the next.

CHAIRMAN. Did you want more?

ADM. GRANT. Well, it was not necessary to have more, because we have any vessels to put them on. I was meeting the bureau and probably not taking too large a number.

CHAIRMAN. What would you say in reference to the statements of the Secretary of the Navy in his report of 1918, that at the end of the war the Navy was ready from stem to stern?

ADM. GRANT. The Navy was what?

CHAIRMAN. Was ready from stem to stern?

ADM. GRANT. No; I would not agree to that. No.

CHAIRMAN. You would not say that it was ready in regard to battleships, or that it was ready as to battleships?

ADM. GRANT. Not that the battleship force was, or the submarine force.

MR. KEYES. Admiral Grant, you told us fully in regard to the condition of the submarines. I would like to ask you this question: In your opinion, in April, 1917, when we entered war, a battleship in fighting condition, including, of course, its full complement of trained officers and men?

ADM. GRANT. There was not a single battleship attached to the fleet that was in condition to meet the requirements.

Force 2 was composed of the vessels of the dreadnought type. I can not speak for them, because I had not been with them many years. I think that when I left the *Texas* in 1915 she was whipped anything afloat. I do not see why she could not do it in 1917. She was trained then. I do not know much about them then on those ships. I had been away from the fleet many years.

MR. KEYES. But you can speak of battleship force 1?

ADM. GRANT. Yes.

Senator KEYES. And not one of them but was not?

Admiral GRANT. No, sir.

The CHAIRMAN. Not only in September but in April?

Admiral GRANT. Yes; I know they were not in April. They were not in September.

Senator TRAMMELL. Those battleships that you were commanding in 1917 were helpless so far as any combatant value, were they?

Admiral GRANT. Not at all. They were vessels of the *Connally* type, *New Hampshire*, *Minnesota* type. The major batteries were 12-inch guns.

Senator TRAMMELL. They were not sufficiently manned, then, and not sufficiently in charge of trained officers and personnel of any value to the Navy?

Admiral GRANT. No.

Senator TRAMMELL. Were they or not?

Admiral GRANT. Yes, but their material condition was not the majority of them—

Senator TRAMMELL. Do you attribute that to inefficiency of the personnel on the ships, or do you attribute it entirely to some other cause, that they were of no value?

Admiral GRANT. The cause for it was, they were all in reserve at the different navy yards, and had been for a long while, and they did not have any trained officers on board, it was due to the fact that they were in reserve—held in reserve.

Senator TRAMMELL. This was the reserve fleet, then, that you were speaking about, and not the fleet that continued in a state of readiness for fighting?

Admiral GRANT. Some of the vessels that formed—in fact, I think all of the vessels that formed—battleship force 1, had been in reserve. I am not absolutely positive of two or three of them, but the majority of them had been in reserve; yes, sir.

Senator TRAMMELL. When a ship is in reserve; now, I plead ignorance. I do not know just exactly what that means. What does it mean when a ship was in reserve?

Admiral GRANT. You are tied up at a navy yard, say, in the Delaware channel, say, at Philadelphia, with a small number of men on board just to keep the machinery and guns and auxiliaries in condition. You have not enough men on board to man and train the entire batteries; you have in the engineer force sufficient to keep the boilers and machinery of all of the auxiliaries in condition.

Senator TRAMMELL. The ships, then, that were not in reserve were in condition or not?

Admiral GRANT. I can not speak for the condition of battleship force 2.

Senator TRAMMELL. These battleships that you commanded were very largely used for training purposes, were they, for awhile, but not for real service as war vessels?

Admiral GRANT. From August, 1917, until June, 1918, we were at sea with the fleet and formed a part of it, and did exactly the same work as any other vessels of the fleet; and we were at sea, and have made 10 trips to sea, whether they were at sea a month or longer. The primary purpose at first, as I told you, was to prepare for battle, while part of the force was trained. Later that

changed and our primary purpose was training, and the  
as to prepare for battle.

TRAMMELL. During the time you were going to sea, then,  
able of performing some service?

GRANT. They did exactly the same service as any other  
going to the Navy.

TRAMMELL. They were sufficiently equipped for that, then?

GRANT. Absolutely, as regards—

TRAMMELL. So that, so far as this war was concerned, the  
the ships you commanded was equally as valuable as the  
day, as far as effectiveness in this particular war was

GRANT. In this particular war, yes, sir; they probably

TRAMMELL. You said something about, I believe, the con-  
as to the matter of them not being able to stay afloat  
things happened to them?

GRANT. Yes.

TRAMMELL. Did any accident happen to the *Minnesota*?

GRANT. Yes.

TRAMMELL. What year?

GRANT. On the 29th or 30th of September, 1918.

TRAMMELL. What happened to her, and was she sunk or  
driven?

GRANT. No, sir; she remained afloat just because I had  
order.

On August, 1917, by listing the vessels 5 degrees, and then  
and we found the condition which I reported. I began  
by enlarging the repair crews which went to their battle  
from a few men up to 100 men, on each of these vessels.  
and the men in these different departments shores, for  
and we started in with every water-tight bulkhead and  
hole and put them under an air pressure of 4 pounds,  
security. I think it was Friday afternoon—I have  
the date, but at any rate it was in the afternoon, I was on  
*Minnesota*, and I transferred my flag to the *Pennsylvania*.  
captain of the ship and I said, "You are going to Hampton  
your ship. As soon as you are coaled I want you to leave  
pass out of Cape Henry at 6 o'clock at night or there-  
before you do it I want you to seal every hatch and every  
door, and send the first and second officers below with a  
and see that this is done; and do not allow one of those doors  
the next 24 hours, until you get inside the capes of the  
He did that; they were sealed up; they were tried; and  
The next morning about 3 o'clock in the morning  
mine, under her starboard bow. That mine blew a hole in  
that extended from somewhere about frame 6 or 8 to about  
and carried away the ship's side from the armored shelf  
and pushed the keel over to port. The vessel floated.  
from her original draft, which was about 26 forward, to 28  
aft, so that she drew 29 feet forward and about 26 aft,  
position she went into port, and she went into port be-  
bulkheads had held. They were shored. The bulkheads  
there were no leaks because we did that work on board ship;  
had not been done she would not have been here to-day.

Senator TRAMMELL. I gather from your recital of this and then, that the vigilance of the officers in command had something to do with the safety of a ship as well as the department.

Admiral GRANT. I do not think the department has anything to do with it.

Senator TRAMMELL. I just wanted to find whose fault it was that the boats were not put in proper shape so when you struck a mine.

Admiral GRANT. Every single one of those vessels had been through in that way, and we were working from 1917 until they were in that condition, and I do not think there was one that was not but what would have come through the same way. Not only that, but they caused our orders—

Senator TRAMMELL. Had those officers in command of the ships transcended their authority and gone beyond their duty in putting the vessels into condition, or were they within their authority and their duty?

Admiral GRANT. You mean these holes and things coming through?

Senator TRAMMELL. Yes.

Admiral GRANT. That had been an accumulation of years, the time the vessels were going into commission. They would make a slight alteration and pierce a bulkhead and take out a piece of something of that sort, and the place was not plugged up. They were unknown. They were not in the condition they should have been.

Senator TRAMMELL. I judge from what you say that you had a repair crew on these battleships?

Admiral GRANT. Yes, sir.

Senator TRAMMELL. And it was the duty of that repair crew, of course, under the direction of the commander, to make all these defects, where they could do it, aboard the vessels, was it?

Admiral GRANT. Probably you misunderstand what is meant by a repair crew. In action, if a mast is shot away, or something hanging overboard, a repair crew would be sent to clear away the wreckage. That is what I mean by a repair crew.

Senator TRAMMELL. You said you put 150 men on, I think you said, your repair crew?

Admiral GRANT. I had about 100 men in each. As I stated, they were at general quarters. They were not machinists; they were men that would handle shores and wedges and shore up a bulkhead, cut away a bit of anything held in that way as foul or adrift in action.

Senator TRAMMELL. They were supposed to make the repairs that could be made upon the ship, were they not?

Admiral GRANT. Yes. Well, those 100 men were not men that would do the work I referred to, too. Those would be special men, you know—rating.

Senator TRAMMELL. At the time there was some controversy as to the length of time that a ship should be in dockage, was there any element insisting that more repairing be done aboard the ship instead of running it into the dock every time you wanted to get a little of repair work done?

Admiral GRANT. No; I do not think so.

Senator TRAMMELL. I got that impression from an order that I read here. Of course my impression might have been wrong.

at the department was trying to keep the ships afloat where you were training men, instead of having them tied up in a dock so as not to neglect your training of men; and they were insisting on getting the people that commanded the ship, from the command immediately all the way up the line, to do that as far as possible.

MR. GRANT. I think you are mistaken.

MR. TRAMMELL. In other words, they were trying to help along the department to expedite the service in that way. Of course it seems to me that they were not able to do it.

MR. GRANT. Naturally we were all trying our best to keep the condition; but the point was to get the ships into a material condition in which they were not to start with, and never were.

MR. TRAMMELL. Of course, you take a locomotive engineer—I know a good deal about them; I have an uncle who has been a locomotive engineer for 45 years—a good engineer who takes an interest in his work, does a good deal of little repairs, that a fellow that is careless, and does not care, will not do, and puts his engine together much more frequently than the engineer who does a good deal of the things himself on the engine.

MR. GRANT. Yes.

MR. TRAMMELL. I do not know anything about it, but I know from what I gather from the hearing here this morning, that the disposition on the part of the department to get as many things done on board the ships as could be done, without getting the ships into the dry dock or navy yard.

MR. GRANT. I do not think that was the department's idea; they were trying to do that. It was work that could not be done on board the ship.

MR. TRAMMELL. I realize there is some of it that could not be done on board the ship; but there is a good deal of it that

MR. GRANT. I beg your pardon; there was none of the work recommended to be done at the navy yards that could be done on board ship.

MR. TRAMMELL. I did not say that there was in your particular case. Of course I am not speaking of the particular case; I am speaking of the question of general policy.

MR. GRANT. Yes.

MR. TRAMMELL. Now, the submarines; when you took charge in 1915 how many of those were of construction as late as a year before the time you took command of them?

MR. GRANT. As late as a year? Well, the latest boat that I know of—mind you, in commission—was one of the K boats, and these are the boats that went to sea that October. The act was passed June 24, 1910; five years.

MR. TRAMMELL. In other words, then, all of the boats that you were that were so deficient and so imperfect were authorized before June 24, 1910 and prior to 1910?

MR. GRANT. And prior.

MR. TRAMMELL. Prior to 1910?

MR. GRANT. Yes, sir. The C boats that I had charge of that were at Panama were authorized in 1906, and the D boats that were authorized in 1906, and the K boats in 1910.

Senator TRAMMELL. They were all authorized, then, prior to the present administration of the present Secretary of the Navy?

Admiral GRANT. Oh, yes.

Senator TRAMMELL. He entered office in 1913, was it not the early part of 1913?

Admiral GRANT. March, 1913.

Senator TRAMMELL. Yes.

Admiral GRANT. The first boats that were appropriated for, by the present administration came into power, were June 30, when they built the N boats.

Senator TRAMMELL. In 1914 they authorized the N boats?

Admiral GRANT. The N boats; yes, sir. That was, as I said before, a decided step to the rear. They were smaller. I mean, from a military point of view those little boats were a step backward. They ought to have kept going ahead; and the next year, 1915, they appropriated for the O boats, and then in 1916 came the R boats and the S boats. The S boat is the 800-ton boat.

Senator TRAMMELL. After the beginning of the World War in 1914, there was quite an awakening in the submarine proposition throughout the whole world, was there not?

Admiral GRANT. I should say so.

Senator TRAMMELL. Did our people learn a good deal about it? I mean, was there a good deal for our people to learn about it? It did not mean just one man, but the Navy, generally speaking?

Admiral GRANT. There was a great deal for the entire Navy to learn; yes, sir.

Senator TRAMMELL. As a matter of fact, of course, Germany made a good deal of progress itself in the war in submarine improvement. Did it not?

Admiral GRANT. I am not so certain that she did. I do not believe that their engines—any of their later engines, were any better than the original, especially the 4-cycle. We were trying to use a 2-cycle engine on board a submarine, and the Germans were using a 4-cycle.

Senator TRAMMELL. When did they first establish a district command of submarines?

Admiral GRANT. Will you explain that "district"; what you mean?

Senator TRAMMELL. I do not know about it; I mean putting it in command of one particular officer. I do not know what you call it.

Admiral GRANT. I think they have always done that, until recently.

Senator TRAMMELL. At the time that you succeeded to the command of the submarine flotilla, had they previously had a command with the same authority and jurisdiction that was given you at that time?

Admiral GRANT. Yes, sir; Capt. or Commander—I do not know which he was—Yates Sterling, jr.

Senator TRAMMELL. When you were called into the submarine service you received your formal order, of course, but did you receive any other suggestions or recommendations as to the question of being called to that service with the particular purpose of trying to build it up and improve the service?

Admiral GRANT. I was sent for in May, 1915—ordered by the Navy rather—to report to the department at 9 a. m. the following day. I think I was at sea at the time, and I left the ship at Newport

there and reported to the Secretary of the Navy, and Admiral Cresswell was present, and he told me he wanted me to leave the ship *Texas* and take command of the submarine force and report.

ADMIRAL TRAMMELL. He wanted you to take command and build the submarine force?

ADMIRAL GRANT. Yes.

ADMIRAL TRAMMELL. I believe you recited that in the course of efforts to increase the efficiency of the submarine force you did create a school for that purpose?

ADMIRAL GRANT. Yes, sir.

ADMIRAL TRAMMELL. Did you do anything else toward trying to get the best use you could of the service during your command; getting its betterment and the increasing of its efficiency?

ADMIRAL GRANT. I inspected every submarine we had and reported to the department and tried to have efficient engines put on board of the submarines we had; but the department, the Bureau of Steam Engineering particularly, probably for the want of money, could not get outright engines that would make them operate successfully in my opinion.

ADMIRAL TRAMMELL. In addition to that I began the propaganda, as you may call it, for building a submarine of 800-ton surface displacement.

ADMIRAL TRAMMELL. And finally they authorized some of them of that type?

ADMIRAL GRANT. The Navy Department authorized them, finally. They authorized, in the first act, I think 3 of the 800-ton type, as I recollect one to be constructed by the E. B. Co., one by the Lake Shore and one of our own design, and following that, later in that session, they added, I do not recollect whether 18 or 20, and finally 20 more, making a total of 41 800-ton boats.

ADMIRAL TRAMMELL. Even if there was a difference of opinion as to details and some policies there was a concert of action from 1917 looking toward the betterment and the improvement and increasing of the efficiency of the submarine force, was there not?

ADMIRAL GRANT. Well, I can not say that there was much concert of action because the Government had never built a submarine. It depended largely upon contractors. I was almost at the head of commandeering their establishments and starting the building of these larger, more efficient boats instead of taking what they made for us.

ADMIRAL TRAMMELL. I did not say there was a concert of action as to details or in regard to policies as to this type of boat or any other type of boat, but there was a unanimity of desires and impulses in trying to better the submarine service; that is the point I was trying to get at.

ADMIRAL GRANT. Yes; we all wanted it.

ADMIRAL TRAMMELL. Now, you say it was the policy of the Government to buy them from private institutions or concerns. When was that policy inaugurated?

ADMIRAL GRANT. I think the first submarines were bought, say, in

1900.

ADMIRAL TRAMMELL. In 1900?

ADMIRAL GRANT. That is when we bought the first A boats—I think authorized.

Senator TRAMMELL. They were authorized then?

Admiral GRANT. Yes, sir.

Senator TRAMMELL. When was the first departure from the policy of purchasing submarines from private concerns?

Admiral GRANT. We have never departed from the policy of buying submarines from private concerns. The departure I referred to was in designing our own submarines and having the contractors build them upon our designs, and not taking submarines built upon their designs.

Senator TRAMMELL. If there has ever been any departure from the old policy of being governed by the designs of a private builder, when was that departure made?

Admiral GRANT. That was late in 1916.

Senator TRAMMELL. Then prior to the year 1913, as far as it is within your knowledge, it was the general policy of the Navy Department to purchase submarines from private concerns of the design as built by the private concerns?

Admiral GRANT. Yes; up to as late as March, 1915.

Senator TRAMMELL. You consider that it was an improvement? I know that from your statements—for the department to adopt a policy of making its own designs?

Admiral GRANT. Yes, sir.

Senator TRAMMELL. According to your statement, that policy was effectuated in 1916?

Admiral GRANT. Yes, sir.

Senator TRAMMELL. Was that brought about in connection with your command of the submarines?

Admiral GRANT. I think so.

Senator TRAMMELL. I have no further questions.

The CHAIRMAN. Have you any questions, Senator Pittman?

Senator PITTMAN. Admiral, what portion of your fleet was eventually ordered to European waters?

Admiral GRANT. Of the submarines?

Senator PITTMAN. Of battleship force 1?

Admiral GRANT. None of them were ordered to European waters to act in concert with our Allies. Our battleship force were engaged in the latter part of the war, that is to say in 1918, doing coast duty from here to longitude 20, say, and return; but none of them were sent to the other side to act in concert with the Allies' fleet.

Senator PITTMAN. What battleship force was sent to European waters?

Admiral GRANT. The fifth division of battleship force 2.

Senator PITTMAN. Battleship force 2?

Admiral GRANT. Those were the *New York*, *Texas*, *Florida*, *Dawson*, and *Arkansas*. Later it was supplemented by sending the *Oklahoma*, *Utah*, and *Nevada*.

Senator PITTMAN. When did the battleships of force 1, under your command, commence to act as convoys?

Admiral GRANT. I think it was about August or September, 1917.

Senator PITTMAN. What were you doing with those battleships up to that time?

Admiral GRANT. Why, from August, 1917, up to that time?

Senator PITTMAN. Yes.

Admiral GRANT. We were engaged in training personnel and preparing for war.

MR. PITTMAN. During all of that time?

ADMIRAL GRANT. All of the time.

MR. PITTMAN. And what other vessels, outside of the battleships in this force?

ADMIRAL GRANT. There were no vessels that belonged to battle force except the battleships themselves, which, when the war started, consisted of 24 battleships; everything that we had built from 1890 to the *Connecticut* type of vessels—no, everything up to the *Carolina* and the *Michigan*, rather. Of course the training ships supplied us supplied the battleship force as well.

MR. PITTMAN. Now, I understand that prior to our entry into the war—probably prior to that time—undoubtedly prior to that time—recommended the building of these large submarines?

ADMIRAL GRANT. Yes, sir.

MR. PITTMAN. With a great cruising radius?

ADMIRAL GRANT. Yes, sir.

MR. PITTMAN. And the board did not approve of the recommendation at that time?

ADMIRAL GRANT. Which board?

MR. PITTMAN. Well, the general board?

ADMIRAL GRANT. I do not know what the general board did. I know from individual members. There was only one man on the board so far as I am aware, who believed in these larger sub-

MR. PITTMAN. What was their argument against it, Admiral?

ADMIRAL GRANT. Well, I can not tell you. I do not know.

MR. PITTMAN. In 1917, what were the principal vessels that we were building? We were building some vessels in 1917, were we not?

ADMIRAL GRANT. Battleships, do you refer to?

MR. PITTMAN. I simply want the information.

ADMIRAL GRANT. We were building battleships and submarines and were building all sorts of vessels; but unless I had something to say I could not specify the vessels under construction.

MR. PITTMAN. How many navy yards did we have at that time capable of building a superdreadnought?

ADMIRAL GRANT. The New York Navy Yard, I think, was the only one capable at that time.

MR. PITTMAN. Do you know how many navy yards we had that were capable of building destroyers at that time, on the Atlantic

ADMIRAL GRANT. You refer to those, now, being specially fitted for building destroyers and things of that sort? I do not think we had any that were specially fitted for building destroyers at that time, excepting the Philadelphia yard. I was commandant there for three years and I could have built a destroyer there. But it was not suited for building them.

MR. PITTMAN. Was it not the opinion of the British Admiralty and of the General Naval Board here that what we needed most was of the destroyers type and of the chaser type, to go out and meet the submarine menace?

ADMIRAL GRANT. I believe so.

MR. PITTMAN. And were not all of the available yards and the Philadelphia yard engaged in the building of destroyers and

Admiral GRANT. No, they were not.

Senator PITTMAN. Which ones were not?

Admiral GRANT. Well, let me see. I recollect seeing at the York yard in 1915, a large number of chasers being built. I know whether they were building any at any of the other yards or not. I had no occasion for visiting them.

Senator PITTMAN. I realize that it is very difficult to remember these things, and I do not expect you to remember all of them.

Admiral GRANT. No.

Senator PITTMAN. But what I am getting at is simply this, Admiral, that possibly the reason of some of the admirals not approving the building of these supersubmarines was because they believed the demand for other characters of vessels was more immediate there was a limit to the power of construction in this country.

Admiral GRANT. Oh, I can not agree to that.

Senator PITTMAN. Do you not think so?

Admiral GRANT. I think that if I had given an order to the E. B. Co. or to the Fore River Shipbuilding Co., I would get as many ships as you would appropriate for.

Senator PITTMAN. Was it not necessary for the Fore River with the assistance of the Government, to enlarge its plant?

Admiral GRANT. They certainly did.

Senator PITTMAN. So as to build destroyers?

Admiral GRANT. Yes, and submarines, too.

Senator PITTMAN. But they had to enlarge?

Admiral GRANT. Yes.

Senator PITTMAN. Was there any difficulty in getting laborers when they increased the size of these various shipyard shipbuilding plants?

Admiral GRANT. Yes, I think they had difficulty in getting labor; but it was not as serious as one might be led to suppose.

Senator PITTMAN. Was it not necessary for us to stop building battleships under our 3-year program by reason of that fact?

Admiral GRANT. Yes; yes.

Senator PITTMAN. You consider battleships very essential to a balanced fleet, do you not?

Admiral GRANT. Yes.

Senator PITTMAN. Do you suppose it would have been a practical unanimous verdict that we should stop building these great battleships, unless there was a shortage both of space and mechanics?

Admiral GRANT. Yes; the force in the shipyards at that time was working upon the conversion of merchant vessels, upon armed vessels, upon producing that type of vessels to carry provisions and stores abroad. But I think that if I had gone to the E. B. Co. and stopped the building of submarines for other people, and the doing of a great deal of other work in their shipyards, that they were working at that time, I could have begun to construct the submarines before we ever attempted it—long before 1917.

Senator PITTMAN. These submarines that were being built for other people, as you say, they were being built for the Allies, were they not?

Admiral GRANT. I do not know where they went.

Senator PITTMAN. You feel perfectly confident they did not go to the enemy?

MR. GRANT. I know they were building engines for Spain at a plant in Connecticut. They were not for us.

MR. PITTMAN. Do you not know that the building of all ships stopped except for the Allies and for us?

MR. GRANT. Generally speaking, yes.

MR. PITTMAN. The reason I ask you particularly about these ships is that there were some of the Naval Affairs Committee members who were very fearful by reason of the stopping of these ships for fear that the policy might be abandoned after the war; and of us who knew nothing but that one idea, were urging the cessation of the building of these battleships, and they said it was not because there were other vessels more needed.

MR. GRANT. That is right, too.

MR. PITTMAN. I believe that the question was asked you, or asked to that effect—I do not remember your answer now, but I remember what I am referring to—that if the German fleet overcame the British fleet or had gotten out of those waters, we have been in no condition to fight them, or that we could not put up a very good fight.

MR. GRANT. I referred to battleship force 1.

MR. PITTMAN. You referred to battleship force 1?

MR. GRANT. Yes; I was talking about that.

MR. PITTMAN. As a matter of fact, that never was in any form was it, during the war?

MR. GRANT. I beg to differ with you; we were training for the time.

MR. PITTMAN. I was drawing the distinction between training and—

MR. GRANT. While we were training personnel, we were also getting battle.

MR. PITTMAN. But when they ordered vessels, or battleships, to complement to the British fleet in the North Sea, they sent any of your ships over?

MR. GRANT. None at all.

MR. PITTMAN. Did you ever believe that the German fleet could overcome the British fleet and get into the Atlantic?

MR. GRANT. I did not think that the German fleet could overcome the British fleet and get into the Atlantic. I was fearful that battle cruisers would get adrift and get into the Atlantic;

MR. PITTMAN. Now, you did not have any battleships that could take care of those battle cruisers, did you?

MR. GRANT. No, sir.

MR. PITTMAN. Your policy would have been to hold as close and protect the coast, as possible, would it not?

MR. GRANT. I am not so certain.

MR. PITTMAN. Well, what would be your theory about that?

MR. GRANT. Fearful they would come out and destroy our operating vessels abroad. I did not think they would go near our battleships, if they could avoid it.

MR. PITTMAN. If they could have gotten out, what did you think would have—

MR. GRANT. That could have overtaken one of them?

MR. PITTMAN. Yes.

Admiral GRANT. I did not have anything.

Senator PITTMAN. You had no vessels in the Navy that could?

Admiral GRANT. Yes; we had vessels abroad.

Senator PITTMAN. Which could have overtaken their cruisers?

Admiral GRANT. No, sir; not which could have overtaken but which could have given them battle.

Senator PITTMAN. That is, if they had come in contact with?

Admiral GRANT. Yes.

Senator PITTMAN. As a matter of fact, your ships, so far as battle cruisers were concerned, could only have fought a defensive fight?

Admiral GRANT. No; it would have been an offensive. I never fight a defensive fight if I got into it, myself.

Senator PITTMAN. I like to hear that, and I approve of it, Admiral.

Admiral GRANT. Yes.

Senator PITTMAN. And I am perfectly satisfied that is the kind of fighting you believe in; but, as a matter of fact, the cruisers would have had to come within range of your guns or there would have been no fight?

Admiral GRANT. Yes.

Senator PITTMAN. What was the range of the guns on the battle cruisers?

Admiral GRANT. On the battle cruisers?

Senator PITTMAN. The German battle cruisers?

Admiral GRANT. Battle cruisers, did you say?

Senator PITTMAN. Yes.

Admiral GRANT. Oh, I do not know. I suppose they would go up to 25,000 yards; possibly 20,000 to 25,000 yards. I do not know what range they had.

Senator PITTMAN. You do not know what their range was?

Admiral GRANT. No, sir.

Senator PITTMAN. I was wondering how many of your battle cruisers carried guns of that range.

Admiral GRANT. It is not a question of the guns having the range. It is a matter of material construction of the turrets which would give them that range.

Senator PITTMAN. I was speaking of range.

Admiral GRANT. Yes.

Senator PITTMAN. I was led to believe that none of the battle force one had ships which had guns with equal range with the Germans.

Admiral GRANT. No; we could not get those ranges on account of the material construction of the turrets.

Senator PITTMAN. That is what I had in mind.

Admiral GRANT. That is right.

Senator PITTMAN. All of these battleships that you had were constructed years ago, were they not?

Admiral GRANT. Yes; the latest ones were the *Michigan* and the *South Carolina*. I have forgotten the year of their appropriation when they were appropriated for.

Senator PITTMAN. As a matter of military policy, did you think that we should have some battleships on this coast—on our coast?

GRANT. That we should have some here?

PITTMAN. Yes.

GRANT. Well, I had not given that a thought. It was that we should have a fleet in European waters which was to overcome without any doubt the German fleet; and at the sending of battleships abroad was useless.

PITTMAN. And do you think there was any necessity for battleships along the Atlantic coast?

GRANT. Not for our defense. I hardly thought that the Germans would ever get out and get over here to this coast.

PITTMAN. What did you think about the battle cruisers?

GRANT. As I have said, I thought that it would be for German battle cruisers to get out; but the mission of a battle cruiser would have been the destruction of trans-convoy. I think she would have avoided an engagement.

PITTMAN. Now, if we are right in the supposition that faster vessels than anything we had in the American fleet by reason of their construction they had a greater speed, would have been possible for those vessels to have carried off any of our ships?

GRANT. Yes; singly.

PITTMAN (continuing). And always have been out of range?

GRANT. Yes, singly; that is theoretically so.

PITTMAN. In that kind of a case, what would you do?

GRANT. That is theoretically so.

PITTMAN. Would you keep up a fight when the enemy's speed, by reason of this speed, to keep out of range, and yet

GRANT. Yes, if he would fight me. But they would not.

PITTMAN. That is depending, probably, upon the German fleet. I think that is all.

BAIRMAN. Admiral, while the German battle cruisers, being faster ships, could keep out of range and perhaps destroy our ships, they could not if we had three or four of our ships together, could they?

GRANT. No. I did not mention that. It did not matter much. Two or three ships operating against a battle cruiser, the features of the battle might change in 10 seconds. The wind and weather at sea might put our ships alongside, within our range or within the range of our ships, alongside theirs. I have been out here at sea with two fleets fighting and have come upon one another, in thick weather, very often. It occurs. This question was hypothetical, that is all.

BAIRMAN. After you took command of the submarine forces and about that time, was there a general feeling that the United States would probably go into the war?

GRANT. I hardly think so, as early as 1915.

BAIRMAN. When did that feeling first begin to appear?

GRANT. The *Lusitania* was sunk in May, 1915.

BAIRMAN. May, 1915.

Admiral GRANT. Even then, we felt that we might have gone to it, as I recall; but I did not think that we would, at that time. We had gone into the war as an active member, I thought the conditions were such that we should prepare ourselves for that. That I felt that we had quite sufficient time to provide ourselves with submarines of the type and character that would do the work of the German submarines. That was in 1915. I felt as though the war was going to be a long one.

The CHAIRMAN. After February 5, 1917, after the German ambassador had been given his papers, was any doubt in the mind of the Navy that we would probably be engaged?

Admiral GRANT. I do not think there was.

The CHAIRMAN. The submarine situation by that time had become very menacing?

Admiral GRANT. Yes, sir; exceedingly so.

The CHAIRMAN. At that time or prior to that time had any officer been sent abroad on behalf of the Navy Department to study the submarine situation that you know anything about?

Admiral GRANT. In 1917? I do not think any officer had been sent abroad to investigate the submarine situation in any aspect as far as I know, at that time.

The CHAIRMAN. When was an officer first sent abroad?

Admiral GRANT. The first officer that I recall, I think it was in 1918 that Lieut. Commander Grady was sent abroad, and about the same time there were other officers that were acquainted with submarines. An officer named Pierce—

The CHAIRMAN. But not until 1918, according to your recollection?

Admiral GRANT. I think, 1918. I may be mistaken, but I think those were the first two that I can recall now.

The CHAIRMAN. On February 5, 1917, did we have any submarine building in this country?

Admiral GRANT. Oh, yes; February 5, 1917. In February, there were several of the L boats that had not been delivered. The M boat was under construction. The AA-1 was under construction. Seven N boats were under construction. The 16 O boats appropriated for in March, 1915, were under construction; and on January 8, 1917, contracts were signed—appropriation having been made in August, 1916, contracts were signed on January 8, 1917—for the R boats with the E. B. Co.

On December 30, 1916, the Lake Boat Co., of Bridgeport, signed a contract for building six.

On January 9, 1917, the E. B. Co. signed a contract for building one 800-ton boat.

The Lake Boat Co. on December 30, 1918, signed a contract for building the S-2, an 800-ton boat, and the Government of the United States gave the order to build S-3, one of the 800-ton boats at Portsmouth, N. H., on November 14. Those are the only vessels.

The CHAIRMAN. So far as you know, was there any attempt to speed up the construction and delivery of any of these boats?

Admiral GRANT. Nothing that I can specifically remember and refer to. Of course we were after the contractors, and after everybody all the time. I can not refer to any particular instance.

CHAIRMAN. If after February 5 the department had taken all the proper engines in the submarines that we already put them in commission where they could effectively could they have been used to advantage in the early days of the war?

MR. GRANT. No; because we had no control over the command; we could not have gotten them.

CHAIRMAN. And the engines could not have been changed, as stated in your testimony?

MR. GRANT. I do not think so.

CHAIRMAN. So that our submarine force which we had was an ineffective force?

MR. GRANT. Yes.

CHAIRMAN. Now, when the war first began I think you stated original duties of the battleship force were to prepare for war, second, to train personnel?

MR. GRANT. That was the mission, as I recall it. I have not time to refer to, but that is to the best of my memory.

CHAIRMAN. Later that was changed?

MR. GRANT. Later it was changed.

CHAIRMAN. And their first mission was to train personnel, and to prepare them for battle?

MR. GRANT. That was the second mission.

CHAIRMAN. But still to prepare for battle?

MR. GRANT. Yes, sir.

CHAIRMAN. And Senator Trammell brought out the fact by his testimony that battleship force 1 did what it was supposed to do in the war, that is to train personnel?

MR. GRANT. It did.

CHAIRMAN. It did not have to take part in any battle, and the fact that it was not prepared for battle did not come out; it did not have taken part in a battle if it needed to do so,

MR. GRANT. Well, we would have taken part in a battle to the extent of our ability.

CHAIRMAN. But it would not have been as effective as it might have been.

MR. GRANT. Not as effective as if we had our crews and fleet in position; there is no doubt about that.

CHAIRMAN. And the fact that you did not suppose that the fleet could break through and get over into these waters, the strait was not enough for keeping our battleship forces in ineffective position over here, would it?

MR. GRANT. No, indeed.

CHAIRMAN. I think that is all. Have you anything else, Senator Trammell?

SEN. TRAMMELL. I do not believe you stated, Admiral, that all ships were in an ineffective condition, did you?

MR. GRANT. No, sir; I only referred to battleship force 1. I did not say anything about the others.

SEN. TRAMMELL. Only to your battleship force 1?

MR. GRANT. Yes.

SEN. TRAMMELL. Which were the reserve ships?

Admiral GRANT. They had been in reserve, principally. I specifically stated that there were some of those vessels, as I am unable to state specifically whether they had been in the or with the fleet or not. There had been some transfers in battleship force, the *Connecticut*, *South Carolina*, and *Oregon*, not been with the reserve, but had been in the fleet; but the of them had been in reserve.

The CHAIRMAN. Ships are not in reserve when they are in fleet, of course.

Admiral GRANT. No.

The CHAIRMAN. Then they are in active commission?

Admiral GRANT. Yes.

Senator TRAMMELL. Were those ships in as good condition to form service within their capacity as the destroyer force and chaser force and all that had been sent abroad, and a great many of them had reserves, I think? Were your ships in as good condition as they were for rendering some service?

Admiral GRANT. Yes, they would have rendered some service, not to the extent that a destroyer would or did.

Senator TRAMMELL. Your force, then, was not as capable a force that was abroad—the destroyers—and of course the destroyers as I understand were largely—

Admiral GRANT. The nature of the preparation is entirely different. The preparation of men for a destroyer is one thing and the preparation of men for a battleship of the Michigan type is another. It is an entirely different proposition. You can not liken the two in any way—I do not think you can.

Senator TRAMMELL. One of the faults, then, was the particular type of the ships and the complements for the two. That seems to have been one of the faults.

Admiral GRANT. The training of a destroyer's crew to fire guns in opposition to a submarine, or the training, after they were used as detectors, to drop bombs on them, was one thing; but to train men on a battleship with a thousand men on board, and the preparation of handling crews and fire control and engineer force, everything of that sort, is an entirely different proposition. You can not liken the two in any way.

Senator TRAMMELL. These ships were some of them antiquated; they were not the more modern type of ships?

Admiral GRANT. Yes; they were the predreadnoughts.

Senator TRAMMELL. The degree of the efficiency—of these ships that you commanded—was due to quite an extent, then, to the particular construction and type of the ships, was it not?

Admiral GRANT. To the old vessels; certainly it was.

Senator TRAMMELL. When were they constructed?

Admiral GRANT. Well, I told you the oldest vessel that we had that came to me in May or June, 1918, for training the engineer force, was the *Indiana* and *Massachusetts* and *Iowa*, appropriated for about 1894, and the latest was the *Michigan* and *South Carolina*, appropriated for, I should say, about 1908—something like that. I do not recollect. I can not tell you.

Senator TRAMMELL. I suppose at the time they were built they were considered—

Admiral GRANT. Nothing finer in the world.

TRAMMELL. Yes; all right.

GRANT. Of each type.

TRAMMELL. There seems to have been some progress in the  
of war vessels.

GRANT. Yes.

TRAMMELL. As well as everything else. No particular  
to anybody for the construction of these ships of that  
type at the time they were constructed.

GRANT. The *Indiana* and *Massachusetts*, that type of ves-  
wonder of the world when they were contracted for and  
we have advanced.

TRAMMELL. However, they were constructed prior to the  
of the present Secretary of the Navy, were they not?

GRANT. Twenty years before, nearly: yes, sir.

RYAN. Admiral, you may be excused now, and the com-  
stand adjourned until to-morrow morning at 10 o'clock.  
at 1 o'clock p. m., the subcommittee adjourned until  
Tuesday, March 30, 1920, at 10 o'clock a. m.)

## NAVAL INVESTIGATION.

TUESDAY, MARCH 30, 1920.

UNITED STATES SENATE,  
SUBCOMMITTEE OF THE  
COMMITTEE ON NAVAL AFFAIRS,  
Washington, D. C.

The subcommittee met pursuant to adjournment at 10 o'clock  
in room 235, Senate Office Building, Senator Frederick Hale

present. Senators Hale (chairman), Keyes, Pittman, and Trammell.

TESTIMONY OF REAR ADMIRAL H. T. MAYO, UNITED STATES  
NAVY.

Admiral Mayo was sworn by the chairman.)

CHAIRMAN. Admiral Mayo, will you state to the committee  
positions you held in the Navy from the beginning of the  
war to the present time?

ADMIRAL MAYO. I was commander in chief of the Atlantic Fleet  
from the beginning of the war until June 30, 1919. Since that time  
I have been on duty as a member of the General Board at the Navy  
Department.

CHAIRMAN. Will you give the committee any information  
you may have about the preparation and conduct of the war  
in the Navy which you may deem pertinent to this investigation?  
You make your statement in your own language?

ADMIRAL MAYO. I have a statement, and, with your permission, I  
will make it.

First, that my opinions and conclusions regarding the points  
which have been raised by Admiral Sims may be clearly understood,  
it is advisable to summarize briefly my duties, work, and  
activities in connection with the preparedness of the Atlantic  
Fleet and its activities during the war.

Second, that under the general heading of "Period of the war  
by this letter" and "Motives for my letter," Admiral Sims  
has the following statements:

"It is a very essential feature of my letter which seems to have failed in  
being recognized and understood. It is very important. An examination  
will show that the period which it covers is almost wholly concerned  
with the months immediately preceding our entry into the war and for  
the fear or loss of our participation. In considering the letter, therefore,  
it must not be confused with the conduct of the war as a whole.

"It covered it (the war) with no well-considered policy or plans and with our  
not in the highest state of readiness.

Any consideration of the general question of the preparedness of the Navy for war should cover a period of several years prior to our entry into the war; therefore, I shall begin this summary at the date of my assignment to the fleet in 1913.

In November, 1913, I was detached from duty as aid for personnel to the Navy Department, and in December, 1913, I reported to the commander in chief of the Atlantic Fleet for duty in command of the Fourth Battleship Division, hoisting my flag December 28, 1913, on the U. S. S. *Connecticut*, off Vera Cruz, Mexico.

My division was dispersed and in conjunction with other divisions was doing gunboat duty. By gunboat duty is meant the protection of American interests in Central American ports. This dispersion of the main units of the battle fleet for gunboat duty not only prevented the training of the battle fleet as a whole, but to some extent also prevented routine target practices and the engineering training of the crews. This dispersal of the battleships had a very detrimental effect on the fleet and the efficiency of many of the ships was greatly reduced.

In April, 1914, practically the entire Atlantic Fleet, including the destroyer flotilla, was rushed to the Mexican coast, and Vera Cruz was occupied. After the Army had taken over Vera Cruz and the hostilities had quieted somewhat, many of the ships returned to their home ports; nevertheless, a few battleships continued on detached service.

War had broken out in Europe in August, 1914, while the fleet was still dispersed. This situation forced attention on the poor condition of the fleet, and plans were made to assemble the fleet and put it into as good shape as possible.

In the fall of 1914, when Admiral Fletcher became commander in chief, I was assigned command of the first battleship division of the battle fleet.

The attention of the division was invited to the fact that a high standard of efficiency was readily obtainable and that necessary action should be taken by all concerned.

At this time there was a strong feeling among all officers of the Atlantic Fleet should be prepared for any duty and that as many ships as possible should be in full commission. In December, 1914, the department issued instructions to all navy yards to so far as possible to authorize work that all battleships could assemble in June, 1915, for the work in Cuban waters. The policy with regard to routine overhauls was abandoned. Thus certain ships failed to receive their routine overhaul. The new policy was to the effect that ships should not be sent to a yard for an overhaul unless there were evident signs of deterioration. In this connection, the experience of the war have demonstrated that the facilities available for repair and upkeep can best be used if there is a routine for examination and consequent overhaul as found necessary.

The desire to keep a large number of vessels in commission to develop a well-rounded fleet, emphasized the fact that as many personnel was not sufficient. If ships were given a small complement a larger number of ships could be kept in commission, if they were given a large and adequate complement then the reverse was true. The larger the number of ships in commission, the better the efficiency of the higher commands of the fleet; that is, the flag officer's individual units could never obtain their maximum efficiency if adequate complements were not allowed. This subject; that

problem became acute and was discussed and considered by the President and the Congress. This discussion continued but resulted in the addition of any adequate number of trained men to the fleet prior to our entry into the war.

Orders of the department of December, 1914, resulted in the sending of the fleet in Cuban waters in 1915 for exercises.

A general increase in the number of vessels attached to the fleet and reorganization of the fleet in order to relieve the commander of numerous details and to insure flexibility of command.

The reorganization was made effective in July, 1915, and I was placed in command of the battleship squadrons, consisting of all the ships on active duty, and with the additional duty of second in command of the fleet.

There was a very general feeling that the training should be intensified and every effort spared to get the ships ready for war. The subject was discussed with the division commanders and instructions regarding the subject were issued.

In accordance with general instructions issued by the Commander in Chief, Admiral F. F. Fletcher, very thorough and detailed inspections were held by special and routine boards of inspection. Interest was maintained and the improvement in general efficiency was very marked during the summer and fall of this year; that is, 1915.

From time to time special instructions were issued to cover certain phases of the training in order to coordinate all effort and to crystallize the subject. These instructions were revised from time to time as more and available information from the war might dictate. It is almost needless to say that accurate information as to the progress of the war was difficult to obtain, as this country was strictly

neutral. The completion of the target practices in the fall of 1915 a strategic problem assigned by the department was carried out by the fleet. Such exercises were and are essential for the development of the fleet and its defenses. In view of the dispersal of the fleet on gun boat duty the number of such problems had not been as great as they had have been.

The reorganization proved very effective and was continued in that the fleet could have been more effective if more vessels had been available, goes without saying.

I also recalled that the general subject of preparedness was discussed throughout the country at this time and was an active one.

Following year, that is, 1916, a very large building program was authorized; also in August, 1916, additional personnel was authorized. Our entry into the war came before these increases were effective.

At the beginning of 1916 the Atlantic Fleet, under command of Admiral Fletcher, proceeded to Cuban waters in accordance with the schedules for training. Owing to the shortage of personnel, many ships were in reserve and not with the fleet.

The shortage of personnel was acute as before, nevertheless, very good progress in the training was made.

Large and strategical problems were held en route to and from Cuba and during the stay there.

Upon arrival at home yards in April instructions were issued to the department in accordance with the recommendations of the commander in chief to proceed with authorized work on vessels to complete all major and important items, especially on battleships in the active fleet. This policy was abandoned a few weeks later when the department issued orders to prepare the units of the fleet for instant service. It was understood that these orders were the result of a study of the international situation arising from the sinking of the *Sussex*.

These orders could not be literally carried out because practically all the vessels were disabled and undergoing overhaul, as previously noted. The urgency apparently passed and certain work was accomplished.

Before the fleet reassembled, and in June, 1916, I relieved Admiral F. F. Fletcher as commander in chief, hoisting my flag on the battleship *Wyoming* at New York on June 19, 1916.

There were attached to the active fleet when I assumed command the following vessels:

#### BATTLESHIP FORCE.

Predreadnoughts (including *Michigan* and *South Carolina*), 7.  
 Dreadnoughts: Coal burners, 7; oil burners, 2.  
 Cruiser force, 14.  
 Destroyer force (2 tenders), 24.  
 Submarine force: Submarines, 19; tenders, 10.  
 Mine force, 4 ships, 4 tugs.  
 Training, 10.

It will be noted that there were two oil burning and seven coal burning (not including the *Michigan* and *South Carolina*) predreadnoughts attached to the fleet.

It is obvious that officers generally felt that no effort should be spared to:

- (1) Train intensively.
- (2) Increase the personnel.
- (3) Increase the number of vessels with the fleet.

The two latter matters were not within the power of the commander in chief.

The fleet was reassembled in July and intensive training was being taken into consideration available information regarding the likelihood of the war. As previously stated, information was difficult to obtain; nevertheless we did our best to picture the conditions existing in the war zone and planned the work of the fleet accordingly.

Shortly after the fleet was assembled definite instructions were issued regarding the "scope of training and the preparation of the fleet for war."

It is necessary to quote only the first paragraph of these instructions, which is as follows:

In order to attain the desired degree of battle efficiency and to make proper preparation for war, proficiency in the following exercises must be obtained and maintained.

This letter pointed out to each force the nature of the duties which they were to devote special attention.

The instructions to which I refer were issued by the commander in chief.

Senator TRAMMELL. About what date?

J. MAYO. This was about August, 1916.

J. TRAMMELL. August, 1916?

J. MAYO. Yes. The details of training were left to the force commanders, except that they were instructed to follow as closely as possible the departmental and other approved instructions, which were considered authoritative.

These reports of operations and inspections were carefully studied and the training directed accordingly. A typical example of orders that were issued as found necessary is as follows:

OCTOBER 20, 1916.

*For submarine force.*

That very little gunnery training is being done by the surface vessels and force, and that few plans have been made for such training.

That a small amount of daily training be undertaken and that this be carefully systematized in order that the maximum benefit be derived

from necessary instructions and on December 13, 1916, report what action has been taken.

During this period the organization put into effect the previous one. Admiral Fletcher was developed, and force commanders were urged to take the initiative in their work. Tentative instructions covering the general policies were issued, and after a trial in the early months of 1917, they were embodied in a revision of the Fleet Regulations.

A few paragraphs of these instructions are quoted to show approved principles of command were in use and that the readiness for war was always emphasized in the fleet:

The principle of efficient organization is that there shall be due subdivision of responsibility and corresponding decentralization of responsibility among subordinates, and that the officer in the chain of command which he can perform adequately. The central control and coordination of subordinate parts for the common end.

The fleet is to maintain itself in a state of readiness for war which includes material readiness but also readiness of the personnel to operate

The fleet must be as nearly self-sustaining as possible and shall endeavor to reduce dependence on a navy yard to a minimum.

Adjustments or arrangements shall be made which tend toward limitation of the mobility of the fleet or the component parts thereof.

A reserve in reserve or with reduced complements shall be maintained as a cruising basis so far as practicable.

The service of the fleet was reorganized as the fleet train. This enabled the most efficient use to be made of the auxiliaries, such as supply vessels, colliers, oilers, tugs, hospital ship, and one hospital ship.

It is noted at this point that the training and development of the fleet was somewhat retarded because there were no mine tugs attached to it. Tugs were fitted and trained as mine tugs, not engaged in towing targets and in dispatch and delivery. The progress made by the mine force under Capt. [Name] was exceedingly gratifying. Although it consisted of small vessels, the lessons and experience gained by this unit were reflected in the successful development and laying of the mine field ever known.

After I assumed command of the fleet, the reserve fleet was placed under the commander in chief, and its relation

to the active fleet was given consideration. Considering the able personnel, officers and men, progress was made in preparing this force for active service. There was inadequate personnel available to place these ships in anything like the condition in which though they were able to perform the duties required of them at our entry into the war. Had these ships been required for more than the training, convoy, and patrol work to which they were assigned, time would have been needed to get them into shape.

In the fall of 1916 there was an authorized increase in the enlisted personnel, and plans were made for the more active employment of the vessels in reserve, especially the destroyers and battleships. These plans were made in conference with the Chief of Naval Operations and his assistants and enabled the best use to be made of the new personnel that became available when war was imminent.

The CHAIRMAN. Who was the Chief of Naval Operations at that time?

Admiral MAYO. Admiral Benson. The department's staff problem was conducted during this period, and the mission assigned by the department to the force under my command was accomplished—that is, a constructive landing of troops was effected on the coast in the vicinity of Far Rockaway. The vessels of the Reserve Force were manned largely by Naval Reserves and Naval Militia.

After the holidays, 1916, the fleet proceeded to Cuban waters in accordance with the annual schedule for the employment of the fleet, carrying out such exercises as were considered essential for the preparation of the fleet for any emergency. As previously, instructions regarding such exercises were issued shortly after the beginning of the year, and I assumed the command of the fleet. Force commanders were directed to and did submit comment on the suitability of these exercises for the preparation of the fleet for war, and the instructions were modified accordingly.

X | The international situation and our own foreign relations were daily becoming more confused and complex. On February 2, 1917, the press news received from the cable station at Guantanamo was to the effect that the text of the appendix to the note received by the United States Government from the German Government. The text of the appendix was such that it appeared probable that diplomatic relations with Germany would be broken off.

In order that the work, duties, and responsibilities in the preparations of the fleet for war may be clearly understood, the following activities will be considered practically daily from this date, February 2 until April 6, 1917.

In view of the previously received press reports of the activity of German submarines in the Gulf of Mexico and in South American waters, a consideration of the defense of the fleet in Guantanamo against surprise attack by German submarines was immediately taken up.

It was decided that the situation did not warrant the suspension of the program of training, but that the fleet should be guarded against this training to as great an extent as possible.

Guantanamo Bay offered inadequate area for the conduct of training operations and is very difficult to defend against submarine attack without an adequate supply of antisubmarine aircraft and torpedo nets which were not available.

therefore decided to shift the fleet base to the Gulf of Mexico as soon as the fleet had completed taking provision and had finished long-range day-spotting practice, which the entire fleet, unless the department ordered to the

for the defense of the fleet in Guantanamo Bay was pre-  
it was decided that upon February 5 the fleet would com-  
movement to Guacanayabo.

At 3. at 1.36 a. m., Six Alnav. was received, as follows:

In present international situation, take every precaution to protect Gov-  
and vessels.

Active fleet with the flag consisted of the following vessels:  
12; destroyers, 22; training ships, 3; cruiser (destroyer  
1; destroyer tenders, 2; the cruiser, *Seattle*, carried sea-

At 5 a. m. the commandant of the naval station informed the  
chief that unofficial information had been received  
that diplomatic relations between the United States and  
had been broken off.

At 6 a. m. a fleet campaign order was issued putting into effect  
for defense of the fleet in Guantanamo Bay. The necessary  
of berths and preparation for defense was completed during  
the day.

At 6 p. m. received orders to "Mobilize naval communica-  
tion in effect, was placing communications on a war basis.

At 7 p. m. received "Alnav. availability," which directed all  
to report their actual readiness for war; the reports submitted  
were later.

At 7 p. m. received "German ambassador has been given his

preparations indicate that the preparedness of the  
fleet was proceeding in accordance with a prearranged plan.  
At 4 at 3.59 p. m. sent following to operations:

Operations are received to the contrary, propose to shift fleet base to Gulf  
after spotting practice, February 5, then proceed with schedule of  
operations.

At 5 p. m. received the following from operations:

It is well known to everybody. If considered advisable on account of  
to move to Gulf of Guacanayabo or elsewhere at discretion. Inform  
the fleet.

A remarkable coincidence that the message from the com-  
mandant to the department stating his intention to shift the  
base to Guacanayabo antedated the message from operations  
to shift of base by just 10 minutes. The two messages  
came simultaneously. The message "Alna. availability"  
to report as to the condition of the fleet for active service.  
The covering general conditions was made by dispatch.

The message is quoted below as it indicates in general terms the  
condition of the active fleet:

1. Active fleet command

2. Active fleet command

3. Active fleet submarine, cruiser, reserve, forces instructed report direct  
information regarding active fleet follows:

Battleships have full ammunition allowance except antiaircraft guns. U. S. S. *New York*, U. S. S. *Florida*, U. S. S. *Utah*, lack antiaircraft guns. *Oklahoma*, U. S. S. *Nevada*, have only half searchlight equipment; condition unknown. U. S. S. *Arkansas*, U. S. S. *Utah*, U. S. S. *Arizona*, known to department; battleships present with flag have adequate fuel, provisions, and stores.

Mine force have full ammunition allowance except U. S. S. *Sonoma*, *Ontario*, which also lack guns.

These were the tugs.

Conditions machinery U. S. S. *Baltimore* known to the department, other force will have adequate fuel provision by 6 p. m. Sunday; condition U. S. S. *Leonidas*, not known accurately.

Train all vessels attached to fleet ready for sea except U. S. S. *Culgoa*, *Kanawha*; taking cargo U. S. S. *Mcumee* 6,400 tons; U. S. S. *Cyclops* has 600 tons; U. S. S. *Neptune*, U. S. S. *Jupiter*, U. S. S. *Celtic*, empty, now proceeding. U. S. S. *Kanawha*, U. S. S. *Cyclops* lack guns and ammunition; condition unknown to department.

Destroyer force practically full ammunition allowance except *Fanning*, *Porter*, lack machine-gun ammunition; *Cassin*, *Cummings* defective main valves; *Jarvis* condenser needs retubing; *Dunkin* cracked steam cylinder in board main air pump; *MacDougal* evaporator shell needs renewing; condition *Cushing*, *Davis* known to department; *Wilkes* evaporator inadequate. Destroyers present will have adequate fuel provisions stores but *Dixie* stock stores, depleted to 15 per cent. Destroyers not present estimated have full ammunition allowance, fuel condition unknown, armament believed ready except of commission, machinery estimated ready as follows: *Flusser*, February 15, 30 days' work; *Reid*, March 1, 20 days' work; *Perkins*, *Roe* March 1; *Sterns*, *Burrows*, ready; *Terry* June 1; *Beale*, *Patterson*, *Jouett*, *Warrington*, defective water drums; *Henley*, *Mayrant*, *Dotnes* need new engines; *Ammen* April 15; *Benham*, February 15; *Paulling*, March 15, *Salem*, *Chester*, *Jacob Jones*, known to department. *Birmingham*, 30 days' work, provisions stores of destroyers not estimated, 50 per cent capacity; *Montana* ready. Letter follows. 16304.

U. S. S. "PENNSYLVANIA"

A letter was sent to force commanders present, reading in full as follows:

In so far as the Atlantic Fleet is concerned, the commander in chief desires the earliest possible moment, that force commanders make report in two categories: (a) Ships present with the flag. (b) Ships not present with the flag.

For category A make report on actual readiness of material for war service, stripping ship, having regard for the same items as in paragraph above.

A radiogram was addressed to the commanders of the submarine force, reserve and cruiser forces, directing them to report on Albatross Force. The reports in detail from the commanders of the battleship force, destroyer force, and train are appended to this statement, "B"

February 5: The department was informed of the contemplated movement of the fleet to Guacanayabo.

The department directed that the *Olympia* and *Machias* be ordered to the Danish West Indies to observe conditions in and about especially as regarded existence of German submarine base. *Olympia* and *Machias* ordered.

The fleet left Guantanamo for Guacanayabo, except the *Arkansas*, which was left to guard the naval station. The *Arkansas* remained at the fleet at sea.

At 9 p. m. issued radio orders for disposition of fleet and defense force at Guacanayabo.

The defense of the fleet in Guacanayabo Gulf consisted of a destroyer patrol from Cape Cruz to Lavissa Bank; picket boats

practicable for submarines: airplane reconnaissance of sea area in the vicinity, twice daily.

May 9: Dispatch was received indicating dates submarines available for service. The condition, according to this appeared to be good, but the submarines were considered unreliable except for work near their shore bases. Admiral Grant, who was in command of the submarine force, can give their actual condition. A copy of this dispatch appended, marked "C."

May 10: The condition in the navy yards was not definitely stated by the commander in chief, but the following radio indicated that they had not been adequately expanded to meet the needs of the nation for war. The radio was:

"Submarine in navy yards New Hampshire, Vermont, Illinois, and Maine can operate there. Ordered to report to fleet for such work as can be done with submarines."

Vessels had been operating in Mexican and Caribbean waters since complements. Upon their arrival at Guacanayabo mechanics from other battleships were detailed to assist in getting them in condition.

May 11: The commander in chief was informed that the design reserve and reduced commission in the Pacific would be in the Canal Zone as soon as they could be gotten ready.

May 12: On this date received the following radio from Chief of Operations:

"Is it that the fleet is properly protected from possible submarine attack. If not, what do you suggest. Do you advise bringing the fleet north or not?"

Message was answered as follows:

"U. S. Pennsylvania.

to Washington.

"In accordance with per campaign order 3 of February 6 as complete as practicable to be open to commerce. Ships fleet carrying out target practice schedule, starting at 10 a. m. frequently and darkening except during gunnery work. Fleet must remain south for the present. *Paducah* join fleet for channel work. Designated dispatch vessel Haiti, San Domingo. U. S. S. *Hannibal*, *Albatross* be immediately fitted to join mine force. Visit Colon, Panama, be first northern rendezvous be Long Island Sound. Army arrange to close waters and to protect Block Island Sound. Commander cruiser force be in duty governor to devote himself to development cruiser work. 22,412.

May 12: Panama had been on the approved fleet schedule.

May 12: I issued an order in regard to taking special precautions for the preservation of the military integrity of the vessels of the fleet. Copy appended marked "D."

May 13: The decision with regard to the fleet was received, and was:

"Remain south for the present. Visit to Panama settled later depending on results. Surviving vessels referred to engaged in important work. If necessary, will order any or all to report to you at once.

May 16: The *Drayton* and *Aylwin* having been in a collision against submarine activities, were ordered to Charleston.

May 16: The situation in Cuba was serious, a revolution existing. Government had seized the city of Santiago de Cuba, and it was necessary for the commander in chief to send vessels to assist. Each vessel so detailed from the fleet reduced.

effectiveness of the protection against submarines should the enemy endeavor to attack the fleet before or upon a declaration of war. The commander in chief recommended that no further vessels be detailed from the fleet for duty in connection with the insurrection.

In view of the unsettled conditions in Cuba, the following vessels were to some extent diverted from their training: Battleships, destroyers, cruisers, mining vessels, and survey vessels.

February 20: Information was received that orders had been issued to put destroyer flotillas 1 and 2 in material readiness for service.

February 23: Received letter from Secretary of the Navy regarding fleet campaign order No. 2, as follows:

FEBRUARY 13

To: Commander in chief, Atlantic Fleet, U. S. S. *Pennsylvania*, flagship.  
Subject: Fleet campaign order No. 2, February 5, 1917.

1. In the Atlantic Fleet campaign order No. 2, of February 5 it is noted in paragraph 3 (a) direct the scouting force to "clear Quatro Reales Channel of submarines and mines." The order to "clear" the channel of submarines has been interpreted as authorizing the use of force against any submarines found in the channel. The department assumes that it was the commander in chief's intention to search for possible mines and to search for and report submarines, not to use force offensively against them.

JOSEPHUS DANFORTH

Reply was sent as follows:

Secnav. letter February 13, subject fleet campaign order No. 2 of February 5. In C. in C. intention was to distinctly authorize use of force against such vessels in the vicinity of Fleet or approaching to fleet.

Similar orders are now in force and are considered essential safety fleet as in any such vessels assumed hostile if found as above.

March 2: Information was received that destroyers of flotillas 1 and 2 would be required by the department for neutrality duty and would not be available for duty with the fleet.

March 3: The *Illinois* and destroyers *Jarvis*, *McCall*, *Wright*, *Ericsson*, *McDougal*, *Tucker*, *Duncan*, and *Cushing* ordered to home yards for repairs, leaving 14 with the fleet.

March 8: Received following radio from Operations:

Trip to Panama will not be made. About what date can fleet finish all exercises South and depart North? What do you recommend?

Reply was sent as follows:

From: U. S. S. *Pennsylvania*.  
To: Opnav, Washington.

15008. All gunnery exercises finished before April 1, on completion fleet exercises Guantanamo Bay for benefit personnel. Recommend start north about April 18602. 08409.

Flag "PENNSYLVANIA"

March 11: An order was received to send north 30 guns crewed by armed guard duty. A copy of this order from the Bureau of Navigation is appended. This order, issued by a bureau, reduces the military efficiency of the antitorpedo defense of the battleships. The policy on which such order must have been based was not known to the commander in chief except by inference from bureau order.

Under the law, the Bureau of Navigation has cognizance of personnel matters, and was acting within its province in directing

of personnel. It was assumed that the policy had the approval of the Chief of Naval Operations.

Transfer of such a large number of officers and men led to a question of the future situation with regard to personnel. It was noted that the active fleet contained the major part of the personnel of the service, and that it would have to supply men for personnel for armed guard and other duties, hence hearty cooperation was then and subsequently given the Navy Department in its great work of expansion.

Gun crews for armed guard duty were sent by destroyer to Key West from which place they went north by rail.

March 24. Thirty more gun crews ordered north by the Bureau of Naval Affairs.

March 25. Received information that the department contemplated sending a detachment to Guacanayabo with 800 enlisted men for active duty. The personnel did not reach the fleet until its arrival in Key West Roads, due to the fleet's orders to proceed north.

Information was handed to the reporter on March 31 with a request to publish page 20 of Admiral Mayo's manuscript:)

Immediately 30 trained torpedo defense gun crews consisting of two gun officers, one platoon leader, gun captain, each crew. Above crews to be divided into three groups, each group to consist of 30-men crews. Detail immediately from each group a competent man to command each group three guns. Detail from each group's mate, one petty officer for each group of three guns. Above personnel to be placed aboard United States merchant vessels as armed guard for convoys of merchant submarines. The above personnel to be detailed from the fleet's command force now with flag. Send above personnel to receiving ship at Key West by destroyer to Key West and rail to New York. Radio probable date of arrival New York. Be prepared for additional details. Acknowledge.

March 26. The commander in chief was directed to proceed with the fleet to Key West Roads.

March 27. The fleet base was shifted to Guantanamo preparatory to moving north. The dispositions for defense of the fleet at Guantanamo were much the same as before the fleet moved to Key West Roads, no additional facilities having become available.

March 28. The submarine force, although carried on the organization as part of the Atlantic Fleet, had been operating independently because of the conditions which prevented their active participation in the fleet.

Reports were made, as a rule, direct to the department. This condition, though faulty, had been accepted, due to the small number of units whose material condition was not good, and the restricted operations of which this force was capable.

The situation is indicated clearly by a dispatch sent from Operations to the commander submarine force on March 22, as follows:

Message to be sent of additional submarines New London for training purposes. In view of present conditions it appears to department advisable entire submarine force to be sent there immediately. Make recommendation by dispatch.

Message was not sent to the commander in chief, nor was authorization requested. This was expected, more or less, as the commander submarine force had constantly been in direct communication with the department.

March 29. The battleships and most of the destroyers sailed from Key West Bay for Hampton Roads.

The estimate of the situation with regard to the movement of the fleet north, indicated:

(a) That if enemy submarines were preparing to strike the fleet without warning and were informed of the probable movement of the fleet to the north, they would probably lie in wait for the fleet in the Crooked Island Passage where the passage is narrow, and maneuvering of a large number of ships to avoid submarines is possible.

(b) That the number of destroyers with the fleet was inadequate for its efficient protection if it proceeded in one formation at low speed.

It was, therefore, decided to proceed with the active battleships and available destroyers at maximum sustained speed via the Chesapeake Channel, and to permit the train, mine force, and old battleships to proceed in company via the Crooked Island Passage at a later date.

The battleships and destroyers arrived at Hampton Roads at 10 a. m., March 27; the train, mine force, etc., on March 30.

March 28: Upon arrival at Hampton Roads destroyers were stationed in the lower bay to act as lookouts. When the mine force arrived it was assigned to cooperate with the fifth naval district in placing antisubmarine nets in the entrance to Chesapeake Bay at Hampton Roads.

I proceeded to Washington to consult with the Chief of Naval Operations with regard to possible activities.

March 28-31: No written plan or policy was given to me at that time, but from conversation I understood the policy as follows:

The Atlantic Fleet to be maintained in readiness for active operations. Navy to be sent to navy yards unless in need of major repairs. Fleet to continue training of gun crews for armed guard duty.

I was directed to shift the fleet base to York River, Va., in accordance with my recommendation.

Information was received in Washington of the contemplated reorganization of the patrol force, consisting of vessels from the several fleet forces.

The formation of a fleet force to do a task was an entire change from the organization policy. The basis of previous fleet organization was that vessels of a type would form a force.

April 3: The fleet base was shifted to York River, Va., and preparations for the defense of the fleet against possible attack and against mines were put into effect. Patrols were also established on the river, and in the river, the latter consisting merely of armed launches and the battleships.

April 4: Orders were received to organize the patrol force on the river and to assign all destroyers that could be spared to this force.

An increase in the mine force was recommended to permit the fleet to accomplish its assigned task of placing antisubmarine trap nets. The department asked what destroyers with the battle fleet could be spared for duty with the patrol force. I replied that all then present were required with the fleet, and also recommended that destroyer flotilla 3 be kept intact for use with battle fleet.

In this connection it should be noted that no policy with regard to the future service of the battleships had been decided upon, except as previously noted. In view of the possibility that the fleet might be called upon as a fleet, I considered it essential that at least one of destroyers remain with the battleships.

No orders for the patrol force having been received, inquiries were requested as to the mission to be assigned to the force. The answer to this request was:

"The orders for the patrol force will be issued by the department through the commander."

It was the start of what the commander in chief believed to be a new policy, namely, control of active operations of subordinate forces by the department. In view of the fact that at this time I was in the area of operations to be covered by the patrol force, it was in my opinion, should have been assigned to me, with the use of such of my forces as might have been required to do so.

The following remarks cover the preparedness of the fleet upon entering the war, April 6, 1917.

"The active fleet arrived in Hampton Roads about the 1st of May after its training period in Cuban waters, it was in the best state of preparedness that it had ever been, and there was a feeling of confidence in the personnel of being able to cope with any emergency. The personnel was, however, on a peace basis and the transfer of personnel for armed guard and other duty was already making a decrease in efficiency. The destroyers that were sent to the war zone, though they were assigned to operations, they had not been specially trained, showed the results of their general training by the efficiency with which they adjusted into their new duties.

It should be pointed out that this fleet was lacking in vessels essential to efficiency, such as battle cruisers, scout cruisers, and fleet submarines; and, furthermore, there were none now available.

"The general readiness of the active fleet was from good to very good. Such was the condition, was demonstrated again and again by the duties performed by the vessels during the war. The details of this condition is stated in detail in the several despatches and reports which are a part of this statement.

"The following remarks apply to the readiness of the available fleet and to the soundness of the methods of training and the results at the time.

"I quote a few paragraphs from a letter which was addressed to the commander in chief regarding certain phases of the work in Cuban waters:

"The active fleet. Gunnery exercises, spring, 1917.

"I have read the reports of gunnery exercises held during the spring, 1917, and have just considered. Notwithstanding the many interruptions in the exercises and the conditions under which the exercises were necessarily held, the fleet made steady progress in the ability and confidence of the personnel to maintain and control the fire of the different batteries under varying conditions. It is believed that the final analysis of the scores will show a marked improvement in the accuracy of fire and a reasonably satisfactory increase in accuracy.

"The following extracts from the reports are very gratifying to the commander in chief. They show an understanding and appreciation of the efforts which have been made to improve the battle efficiency of the fleet:

"The fleet have been accomplished during the past gunnery year than ever before. The results of which stands to prove that present methods, while not complete, are fundamentally sound.

"It is noted that torpedo officers have derived from the work on the *Montana* in the flotilla, and the time has now arrived when destroyers be prepared to meet the enemy fleet in day as well as night engagements.

"Day individual practice is merely an exercise of battle procedure, in ammunition is limited and the ship hedged short with certain other restrictions, none of which, however, interfere in the slightest with ordinary battle practice."

"Day action procedure is well standardized now and it is a pleasure to visit ship during a major caliber fire control drill and be able to tell what she is doing without asking countless questions."

4. The commander in chief has watched with great pleasure, the steady growth of the efficiency of the fleet, and he takes this opportunity of extending to the officers and men of the fleet his appreciation of their loyal support and assistance, and is confident that the entire fleet will be ready in the near future to render service on the scene of active operation in the same spirit as those units of the fleet which have already responded quickly and effectively to the sudden call for service against the enemy.

H. T. M.

In this connection, see my annual report dated December 17, 1917, especially remarks on personnel, copy appended, marked "E."

The operations of the fleet during the period, April 6, 1917, to October 23, will now be considered. October 23, 1917, is set down as the date on which I again hoisted my flag on the U. S. S. *Panama* after my first inspection and observation of conditions and forces in European waters.

April 6: At 1.33 p. m. received 16 Alnav, "The President signed act of Congress which declares that a state of war exists between United States and Germany."

A signal was immediately sent to the fleet: "War has commenced."

At 5.50 p. m. orders were received as follows:

Mobilize for war in accordance department's confidential mobilization orders of March 21. Particular attention invited to paragraphs 6 and 8.

Paragraph 6 assigned rendezvous of various forces, and paragraph 8 instructions with regard to fitting out at navy yards.

As has been indicated previously the disposition for the protection of the fleet at anchor in York River had been in operation during the period of strained relations.

The policies of the department with regard to the use of the fleet with which I was conversant were:

(1) The fleet will supply armed guard personnel and training for all ratings for general service.

(2) A patrol force has been formed to patrol the Atlantic coast.

(3) The battleship force will be maintained intact. At this time I had no information as to any contemplated employment of battleships in European waters in cooperation with the Allies.

Under these conditions, no modification of existing conditions of the fleet were required except the establishment of censorship of the commencement of war diaries. These points had been covered by fleet orders and were put into effect with the order to mobilize.

Under the existing conditions the adopted general mission of the Atlantic Fleet was as follows:

To efficiently train the increased personnel required by the Navy for war, to maintain a patrol of the coast, without seriously reducing the efficiency of the fleet.

April 8: The patrol force was formed under command of H. B. Wilson, United States Navy. Its mission had been assigned to the department, as follows:

To give the maximum possible protection to the trans-Atlantic commerce of the United States and of friendly powers in the area to seaward of and contiguous to areas guarded by naval district forces.

an submarine trap net at entrance to New York River was composed of the mine force.

Information was received that Vice Admiral Browning, Navy, and Rear Admiral Grasset, French Navy, would arrive at Roads morning April 10 for conference with the Chief of Operations, commander in chief, and commander patrol force.

Organization of naval forces, dated March 21, 1917, made no mention of the United States Atlantic, Pacific, or Asiatic Fleets, and no scout force which had not previously existed. There were no questions of command left unsettled, and consequently the commander in chief communicated with the department and received instructions which materially changed that part of the mobilization plan relating to command. (Letters appended marked "F" and "G.")

A conference with foreign officers was held at Hotel Marlborough, representatives of Governments as follows: Admiral W. S. Benson, United States Navy; Admiral H. T. Mayo, United States Navy; Capt. H. B. Wilson, United States Navy; Vice Admiral M. Browning, Royal Navy, Great Britain; Rear Admiral Grasset, French Navy, France.

At the conference Vice Admiral Browning explained the mission of the fleet and read a communication from the British Admiralty stating the representatives of the United States as to the nature of assistance the United States Navy was prepared to render, and the desire of the British Admiralty for assistance, especially in mine craft. Rear Admiral Grasset explained the mission of the French fleet and requested that the United States assist in the patrol of the Caribbean.

Admiral Benson stated that the present policy of the United States was to maintain the fleet intact and to assist in the patrol of the Atlantic and Gulf coasts of the United States and waters adjacent thereto. The conference adjourned to meet the following day in Washington to take up the suggestions of the foreign Governments. The Secretary of the Navy, as Vice Admiral Browning considered the suggestions required a conference with the Secretary of the Navy.

The conference adjourned to meet the following day in Washington to take up the suggestions of the foreign Governments. The Secretary of the Navy, as Vice Admiral Browning considered the suggestions required a conference with the Secretary of the Navy.

Conference held in Navy Department.

Present: Mr. Daniels, Secretary of the Navy; Admiral W. S. Benson, United States Navy; Admiral H. T. Mayo, United States Navy; Vice Admiral M. Browning, Royal Navy; Rear Admiral Grasset, French Navy; Capt. H. B. Wilson, United States Navy; members of the general board.

Subjects discussed were similar to those of the previous day. The following decisions were reached:

Although the present policy of the United States required that the fleet be kept intact, a division of destroyers will be sent to the Atlantic waters to cooperate with the allied antisubmarine forces in the patrol of the Atlantic.

The United States to patrol off Atlantic coast of United States and to assist in the patrol of Caribbean Sea and Gulf of Mexico.

Instructions were received to prepare six destroyers for duty by selecting those boats which were most reliable from the point of view of material.

April 16: Fleet exercised in antisubmarine operations. Submarine division 5 operating in York River to train personnel in observation and fire control.

April 18: Information was requested of Operations as to determination of destroyers fitting for distant service in order that orders might be issued.

The department directed that orders be issued to the commander of destroyer division 8 (fitting out for distant service) to proceed as directed by the department. Orders were later issued to this division by the department.

Destroyer division 8 left Boston 5.30 p. m. en route to Queenstown, Ireland, to cooperate in antisubmarine operations with the British force at Queenstown.

April 26: Orders received to direct six destroyers proceed to home yards to fit out for distant service.

No change in policy was received. The order to send six additional destroyers gave no information or plan on which this was based.

April 28: Orders received to send six more destroyers and minesweepers to home yards to prepare for distant service.

System for intensive training of engineering personnel was put into effect.

While in Washington, I was informed of the new policy relating to assignment of destroyers to assist in antisubmarine operations in cooperation with the British.

I, also, at this time, made an oral recommendation to the Chief of Naval Operations that the commander in chief should proceed to European waters, as the United States forces which would be assigned there would in all probability be the only forces to see active operations. This was not concurred in.

May 1: Twenty-four additional destroyers and *Dixie* ordered to home yards to prepare for distant service.

May 4: Destroyer division 8 arrived Queenstown. The commander of this division had orders to communicate his orders regarding operations to Rear Admiral Sims at London, and to be guided by such instructions as he might give.

Beginning in May a number of torpedo defense guns were removed from battleships to make the guns available for arming merchant ships defensively.

The instructions under which I acted in sending destroyers to home yards to fit out for distant service were such that it was impossible to retain the previous division organization. Had the problem been settled earlier the division organization could have been maintained, thus adding to efficiency.

May 5: Up to this time I had received no definite statement of the department's policy in regard to material readiness of the battleships for possible active service in European waters.

In order that the policy might be definitely stated, and in order that the department might have the latest information in regard to the material defects which existed in the active battleship force, on May 5, 1917, I addressed a letter to the department from which I will quote several paragraphs (full copy appended, marked "H—").

1. The material condition of battleships of divisions 5, 6, 7, and 8 when they were at the navy yards in January last for the winter's drills and exercises was, in general, good, although all had some uncompleted authorized work at the time of departure.

in detail in correspondence forwarded to the department by the commander in chief, first indorsement, file 124, of February 27, 1917. Requests for repairs have been submitted by all these vessels from time to time since that date, but except in some few cases—*Arkansas* turbine work, for example—report of this additional work has been made to the department. When the battleships went South, the commander in chief, in his letter, file 124 of 1313, March, 1917, in reply to the department's letter of February 27, stated that no work was necessary in the immediate future, but that they were to be put in condition for war service at some indefinite future date, if work was required, as was specifically mentioned in the letter above.

The commander in chief in this letter also invited the department's comment on the material readiness of the fleet as follows: "In case of war the commander in chief assumes that the department, under whatever conditions, will determine the policy to be followed—whether to be first put in the best material condition or whether all ships are to keep the sea are to do so from the time of mobilization." The commander in chief is without definite information as to the department's policy on material matters and therefore considers it necessary to present certain facts for consideration.

The battleships are not expected to "keep the sea" or to do any long-distance work for some time to come, but what may be required of them is problematical. While the vessels mentioned can continue based at the enclosed waters, or could operate near our coasts, if necessary, they cannot be done at navy yards, they are, in general, not now in proper condition to permit them to operate indefinitely from some foreign base. Repairs may be required, but conditions may demand just that. All repairs to the navy yards at once, nor should any vessel be sent to a yard unless the yard is fully prepared to undertake all authorized work. If repairs are deferred, and a demand is made later for one or more divisions of the fleet, they would necessarily be sent to navy yards and there would be a considerable delay in readiness for service that could be avoided if they are kept at home, so time as the yards can handle the work.

Even in a local emergency immediately existing, the vessels are able to keep them away from the Atlantic coast to operate for an indefinite period in their present condition advisable. To send any vessel away with her engine out of all, or engine, or with any of her fittings or appliances in any way defective would be a mistake, as breakdowns after arrival, even if within the limits of the force to make good, would impair efficiency at a time when it is most needed. There is hardly a vessel in the four divisions mentioned, however, without a number of items of authorized work on each vessel, and without bringing any immediate action, can not be made good under present conditions will not improve even, as is hardly possible, should they be. Except for training the personnel, there is at present no demand for them, and there may be a demand for them as fighting units later on. Now, if they are available opportunity, they should be put in the very best material condition.

For the above, the commander in chief recommends that the department consider a policy by which work on the battleships may be taken up at the earliest practicable date.

H. T. MAYO.

Recommendations were renewed that all destroyers not on patrol force be assigned to the destroyer force in order that they be ready and also be available to operate with the battle force.

Recommendations were renewed that all destroyers were still assigned to the patrol force.

Recommendations were made in regard to submarine force. It was recommended that the mine force be relieved of duty except in vicinity of fleet bases. Letter appended.

Recommendations were made that destroyers attached to patrol force were detached and ordered to the destroyer force.

Recommendations were made that converted yachts were ordered prepared for distant

June 3: Received from Operations the following dispatch:

11501. Rear Admiral Gleaves has been given full verbal instructions of which department wishes vessels of destroyer force assigned.

Rear Admiral Gleaves had been ordered to Washington by tions, and given instructions as to the use to which a portion fleet was to be put without the commander in chief being co or informed of the probable use to which the destroyer force required. Conditions with regard to the proper exercise of co were unsatisfactory as the department was handling many tions of fleet units direct from Washington.

June 4: The department had gradually detached collier oilers from the fleet train until at this time no colliers and o tanker was assigned to the train.

June 7: The first troop convoy was assembling at New York. The details of this expedition were learned while I was in Wash.

Copies of department's confidential orders to Vice Admiral reorganization of United States forces operating in European and to Capt. W. B. Fletcher, re patrol duty off French coast received.

June 13: The first convoy expedition was known to be assembling at New York under Rear Admiral Gleaves, and a detachment of yachts was assembling in New York for duty on the French coast under Capt. W. B. Fletcher. I was not properly informed of activities, nor the status of the various commanders to whom the department was issuing orders direct.

In order that the status of all concerned might be determined, I understood the commander in chief addressed the following to the department:

File 1445.

UNITED STATES ATLANTIC FLEET,  
U. S. S. "PENNSYLVANIA," FLAGSHIP  
June 14, 1917.

Confidential, 28754-20-46.

From: Commander in chief.

To: Secretary of the Navy (Operations).

Subject: Status of naval forces operating in the Atlantic.

References: (a) C. in C. let. No. 1445, April 9, 1917; (b) Secnav. let. No. 22, April 14, 1917; (c) Dept. mobilization plan, dated March 21, 1917; (d) conf. let. No. Op-10 to Vice Admiral Sims, dated June 6, 1917; (e) C. E. let. No. Op-19 to Capt. W. B. Fletcher, dated June 1, 1917; (f) Secnav. conf. let. No. 2808-178, May 29, 1917; (g) Secnav. conf. let. No. Op-14, May 9, 1917, to Admiral W. B. Caperton, C. in C., Pacific Fleet.

1. The status of certain naval forces operating in the Atlantic is not quite understood by the commander in chief, Atlantic Fleet.

2. The naval forces in question are those operating in general as follows:

I. European waters.

II. Convoy operations in the Atlantic.

III. South Atlantic waters.

3. Reference (a) made certain inquiries regarding the department's mobilization plan dated March 21, 1917. Reference (b) is the department's reply thereto. Paragraph 2 of reference (b) is explicit in regard to the jurisdiction of the commander in chief Atlantic Fleet, in so far as concerns forces and units existing in the Atlantic at that time (Apr. 14, 1917).

4. Practically all destroyers in the Atlantic Fleet, except destroyer divisions, have been ordered to home yards to fit out for distant service by April 30, 1917. Destroyer tenders *Melville* and *Dixie* had similar orders. Certain destroyers are not generally composed of the same destroyers as laid down in reference (a) given orders direct by the department to proceed to European waters, re-

under the Vice Admiral Sims for duty, copies of the orders being furnished to the Commander in Chief Atlantic Fleet. It is understood that at the present time several divisions for service under the orders of Vice Admiral Sims are operating in reference *d*, but these divisions are at present operating under the orders of Rear Admiral Gleaves, who in reference *f* was designated as commander of United States convoy operations in the Atlantic; in addition to his duties in reference *c*, there was constituted a force designated as "United States forces operating in European waters," to be composed largely of vessels which were originally assigned to the patrol force, Atlantic Fleet.

It is requested that the department constitute a force to be known as "United States forces operating in European waters," under the general command of Vice Admiral Sims. It is composed of "United States destroyer flotilla operating in European waters," under the command of Vice Admiral Sims, and "United States patrol force operating in European waters," under the command of Capt. W. B. Fletcher. The force is described in paragraph 1 above.

United States destroyer tenders, yachts, and the recently ordered fuel vessels are assigned to the Atlantic Fleet and have never been formally detached to the force, although intent to do so might be inferred from the fact that no mention of responsibility of the "Commander of United States forces operating in European waters" to the commander in chief Atlantic Fleet is made in reference *c*.

United States forces in convoy operations in the Atlantic are likewise largely under the command of the force assigned to the Atlantic Fleet, some of them evidently being assigned to "United States forces operating in European waters"; the force is organized and operated by Rear Admiral Gleaves, designated as commander of United States convoy operations in the Atlantic" in reference *f*; orders and instructions received direct from the department. The commander in chief Atlantic Fleet has only a very general knowledge of the activities of the force.

The department constitutes a "Scout force on distant service" for operations in the Atlantic composed chiefly of vessels which appear in reference *c* as part of the force assigned to the Atlantic Fleet. No mention is made therein of responsibility of the commander in chief Atlantic Fleet. Two fuel vessels assigned to the force have been ordered by the department to service in supplying the force.
